Lou Erhardt's Shoot.

ATKINSON, Kan., April 17.—Airy Lou Hardt's shoot is over, and if a large attendance is any criterion to go by in gauging the success of a tournament, then this was certainly one of the most remarkable events of its kind ever held in this section, and Erhardt has good cause for feeling elated. On the opening day of the shoot it looked as if all the shooters in the West had met in Atkinson; when the entries had closed for the first amateur event the record showed 103 entries. In addition to the amateur element there was also a goodly delegation of trade representatives, who were debarred from taking part in these contests; otherwise the entry list would have been much larger. For the benefit of the professionals there were four events each day open to all. In all these events the entry list was heavy, No. 2 on the opening day closing with 71 shooters.

The tournament was held at the race track, about two miles from the city; this made them rather hard of access, as there was no line of cars that could be used in getting to them. At the grounds themselves ample preparation had been made for the large crowd. Four sets of empire traps were in position; two were used exclusively for amateur events, the other pair being devoted to running off the open events. This enabled everybody to get all the shooting they wanted. As soon as the regular events had been disposed of, extras were gotten up to suit the whims of those present, every known style of shooting being indulged in during the tournament. Jack Parker managed the shoot, and did it in his best style.

Shooters began to arrive on Sunday, and it was my good fortune to fall in with the Joplin delegation at Kansas City. This delegation, twenty strong, traveled to Atkinson in a special car, elaborately decorated, making it the center of attraction at every depot along the line. There was a streamer on each side of the car, running the entire length, that bore the inscription: "\$1,275.00 added. Joplin Gun Club Tournament and Owl Shoot, April 23, 29 and 30. \$1,275.00 added." The Joplin boys are evidently determined to keep their shoot before the public; and are succeeding admirably in doing so. They are going to give "a dead square shoot" for glory only.

The number of new faces I met at this shoot fairly floored me, and it is more than possible that I have not been able to get acquainted with all of them. Below is a list of those who were there, and if I have omitted any names, I hope I shall be pardoned:

THESE MEN WERE THERE:

J. D. Van Eman, Ottumwa, Ia.; T. H. Keller, Plainfield, N. J.; T. A. Marshall, Keithsburg, Ill.; Taylor Cox, G. Stevenson, W. G. Sergeant, C. W. Greene, E. D. Porter, B. F. Wilson, Thos. R. Kimmouth, Amos Freeman, A. R. Huntley, John Donehoo, Frank Felix, J. G. Rusk and Tim Molloy, Joplin, Mo.; W. S. Ferguson, Atchison, Kan.; J. W. Sexton, Leavenworth, Kan.; A. G. Courtney, Syracuse, N. Y.; C. M. Grimm, Clear Lake, Ia.; Chas. Budd, Des Moines, Ia.; Hugh Leeman, Galena, Kan.; W. N. McMillan, Herbert Taylor and Wm. M. Shiras, St. Louis, Mo.; A. D. Mermod and E. E. Trape, Canon City, Col.; L. G. Morse, Pueblo, Col.; C. W. Raymond, E. D. Rike and R. O. Heikes, Dayton, O.; J. A. R. Elliott, Kansas City, Mo.; G. F. Miller, Alma, Neb.; F. E. Rogers and W. H. Clark, Hiawatha, Kan.; L. Martin, Highland, Kan.; F. S. Johnson, John Prosser and W. D. Alexander, Milford, Neb.; H. F. Talbot and A. H. Barlow, Waterville, Kan.; J. P. Smead and Frank S. Parmelee, Omaha, Neb.; O. J. Pease, Rose Hill, Kan.; C. M. Sumner, Galena, Kan.; A. P. Bigelow and J. M. Browning, Ogden, Utah; R. H. Arkhurst and A. B. Weakley, St. Joe, Mo.; Tom Hyde, Lincoln, Neb.; F. O. Harwood and M. E. Sharpe, South Cedar, Kan.; G. Rogers, Lincoln, Neb.; Lem Clay, Frankfort, Kan.; W. F. Keller, John Friery and G. W. Giff, Leavenworth, Kan.; T. H. Snow, Brophy, O.; W. J. Dillon, J. W. McWhorter, Chris S. Gottlieb, T. F. Norton, Lill Scott, A. T. Rickrue, Dave Elliott, Wm. Cosby, Bob Ostertag and J. J. Cornett, Kansas City, Mo.; J. P. Easton, Monroeville, O.; C. D. Lindeman, Adams, Neb.; F. Miller, Berwyn, Neb.; F. W. Sharpe, Lincoln, Neb.; J. W. Den, Arapahoe, Neb.; A. D. Renfro, Valley Falls, Kans.; Ted Ackerman, Stanton, Neb.; W. F. Duer, Hastings, Neb.; A. Goerke, J. E. Johnson, J. M. Leaty and J. C. Jones, Stanton, Neb.; H. M. Davis, Richmond, Mo.; N. D. Gardner, J. M. Sampson, T. B. Curtis, J. V. Waller and Henry Dittmore, De Kalb, Mo.; C. F. Reust, B. F. Rie and J. M. Rhodes, Frankfort, Kans.; E. G. Reynolds, Savannah, Mo.; L. G. Clark, Carrollton, Mo.; C. E. Latshaw, St. Louis, Mo.; Dave Hedrick, Belleville, Kans.; T. H. Cochran, Pleasant Hill, Mo.; C. E. McGee, Easton, Kans.; J. W. Budd, Pemberton, N. J.; J. L. Beidle, Valley Falls, Kan.; H. W. Koehler, Leavenworth, Kan.; H. Bailey, Valley Falls, Kan.; Milt Lindsley and Wanda, Cincinnati, O.; Dr. Hungate, Weeping Water, Neb.; W. H. Hees, Concordia, Kan.; D. W. Edwards, Severance, Kan.; S. F. Anderson, St. Lawrence, S. D.; J. F. Hartwell, St. Joe, Mo.; Dr. Dinsmore, Troy, Kan.; Andy Fulton and J. J. Gray, Severance, Kan.; H. Kennedy and W. J. Gregg, Frankfort, Kan.; J. Logue, Council Grove, Kan.; J. Hodges, Olathe, Kan.; W. H. Snodgrass, A. Robinson and Dr. Jas. A. Lane, Frankfort, Kan.; W. A. Evans, Leavenworth, Kan.; J. C. Clarke and C. O. Morton, Topeka, Kan.; J. A. Durne, Rockford, Ill.; W. B. Spear, Morrison, Ill.; Harry Marlin, New Haven, Conn.; of the Marlin Firearms Co.

WIND AND DUST AGAINST THE SHOOTERS.

The weather during the shoot was fair, with the exception of a little rain on Monday, which did not stop the shoot. On three of the four days the wind was blowing a gale, making targets take all sorts of erratic turns; the dust, too, was something awful, being perfectly blinding at times. Under the circumstances, therefore, it is not surprising that very high averages were scarce. On the first day Charlie Budd was in the van in the professional class with 96.2 per cent. out of 80 targets shot at. Dick Merrill led the amateurs with 91.8 for 160 shot at. On the second day Heikes and Fred Gilbert tied for first place in the professional detachment with 91.7 for the 80 targets shot at; Tom Marshall and Ed Rike were high among the amateurs with 89.3. The next day, however, Merrill led the whole army with a percentage of 95, making no less than four straights. On the last day Sergeant, of Joplin, did some remarkably good shooting, making 5 clean scores, 4 of them in the regular events and 1 in the extras; he was high average with 94.3.

HEIKES ON TOP, OF COURSE.

But when it comes to figuring up the general averages it will be found that there are only six men out of all those that shot in this tournament that have a percentage of 90 or better. Rolla Heikes, of course, leads them all with an average of 92.5. Next to him comes Fred. Gilbert with 90.9, Charlie Budd being third in that class with a fraction over 90 per cent. In the amateur class Tom Marshall leads with 90.8; Merrill is second with 90.6, and Rike third with 90 per cent. The tables of the scores tell the rest of the story. In each of these tables the first four events are the open ones, the last four those open to amateurs only.

SCORES OF THE FIRST DAY, APRIL 14.

With a total of 132 shooters taking part in to-day's events, the work of the squad hustlers and other officials was by no means light. The fact that with this enormous number of entries the entire programme was shot out proves that the management must have drilled its assistants in a most able manner, and also proves that the empire traps and targets were fully equal to the emergency.

There was some tall scoring during the day. Charlie Budd broke 77 out of 80—an average of 96.2; Rolla Heikes scored 77 out of 80—95 per cent; Heer registered 92.5 per cent. for 74 broken out of 80 shot at. Of those who shot out the full programme, Dick Merrill led with an average of 91.8, Ed. Rike, of Dayton, O., being next to him with 90 per cent. All the scores follow:

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. {
SIX MONTHS, \$2.

NEW YORK, SATURDAY, MAY 2, 1896.

{ VOL. XLVI.—No. 18.
No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page viii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

NORTH AMERICAN BEARS.

THE paper on the North American bears recently published by Dr. Merriam, of which we give an abstract in another column, cannot fail very greatly to surprise and interest those of our readers who have given any attention to this remarkable group of animals as found in this continent.

Up to the present time naturalists have been substantially agreed in dividing the bears found in the United States into two groups, each of which contained a single species. Individuals of either of these types might be of almost any color, but the bears with short claws on the forefeet were all black bears, and those with long claws were all grizzlies. This, however, was not the opinion of hunters, who made as many species of each type as there were colors—half a dozen of the long-clawed sort and a less number of the short-clawed, with a few hybrids and undescribed species thrown in for good measure. Such are the cinnamon grizzly, the pine nut bear, Nessmuk's swamp bear and others.

Besides these two United States forms, there was in British America the barren ground bear, believed to be a good species, and, of course, the polar bear, found in the Arctic regions. To these four species Dr. Merriam now adds six others, besides a number of subspecies with which he threatens us, but which as yet are announced only as possibilities.

This avalanche of new bear material is a shock, and we may naturally feel injured that our long-cherished beliefs about this group are so rudely overthrown. We must remember, however, that Dr. Merriam is one of the most competent men in the world to decide on points like this, and that his conclusions are based on an amount of material far greater than any other naturalist has ever had an opportunity of examining.

The very wide range of individual variation in the skull characters in the bears—even of the same age and sex—to which Dr. Merriam calls attention, might at the first thought seem to shake the reader's faith in his conclusions, but on the other hand he tells us that, while this variation exists, it has limits beyond which it does not pass, and that he finds good characters for the divisions that he has made.

Dr. Merriam tells us, too, that this is a mere preliminary paper, and that it will be followed by a more comprehensive treatise on our bears. Such a treatise will be anxiously awaited, and will no doubt furnish answers to the many questions which suggest themselves in reading over the synopsis which has just been published. One of these questions of very great interest, and which will be asked by all naturalists, is as to the relations which our bears hold to the brown bear of the Old World (*Ursus arctos*) and other Old World species. Dr. Merriam's paper is full of suggestion, and while it is a review only, and a strictly technical production, based entirely on descriptions of skulls, it is yet a most valuable contribution to the literature of sport as well as of science.

What could be more interesting than to know that there

is found on this continent the largest bear in the world, and that he has two near relatives here that are almost as large? The description of the glacier bear, quoted from Dall, although unsatisfactory, is enough to stir the imagination by its account of the creature's beautiful fur. Surely there is material enough in this paper to load a vessel with enthusiastic bear hunters bound for Alaska.

BATTLE ROYAL.

The term "battle royal" is very commonly used to convey the meaning that a struggle between two men or two stags or two alligators or other combatants is a severe and long-drawn conflict in which both contend with all their might and main and acquit themselves in a way to inspire terror in the soul of the beholder. For instance, we used the term in a recent issue in a note on a fight between two buffalo bulls in the National Zoölogical Park.

We are advised by a kindly but captious critic that such use of the expression is erroneous, for a battle royal signifies a conflict in which more than two are engaged. As the dictionary defines it it is "(a) a fight between several game cocks, where the one that stands longest is victor; (b) a contest with fists or cudgels in which more than two are engaged."

It will be seen then that according to the dictum of the lexicographers we were in error in describing as a battle royal the great fight of the two buffalo bulls, and our correspondents are none the less at fault who have used the term. We are inclined to believe, however, that this is one of those cases where usage should be accepted as authorizing the employment of the term as we ourselves and our correspondents have used it. In fact, if the dictionary makers of the day, who are running a neck and neck race to surpass one another in the number of words and the number of definitions given in their rival works, shall require sufficient authority for a new definition of the term battle royal, they may find it in the FOREST AND STREAM.

MARTHA'S VINEYARD HEATH HENS.

A SENTIMENTAL interest attaches to any species of game which, formerly abundant, has become extinct or threatens to be exterminated. The passing of the American buffalo has been deplored by thousands of people on purely sentimental grounds, for if the buffalo were still roaming the plains the great majority of these persons could derive no possible advantage from the existence of the great game; they could not hunt it, nor even see it, nor eat of its flesh, nor protect themselves with its robes. Their deploring its extermination is purely sentimental.

It is of more account to take note of the lessening supply of a species which has not yet passed beyond the possibility of perpetuation. One of the most interesting of such species is the heath hen found on the island of Martha's Vineyard in Massachusetts. It will be remembered that a few years ago there was some discussion in our columns respecting the identity of this bird, and it was shown that the heath hen was indigenous to Martha's Vineyard and had persisted through all the years of pursuit, while other birds of the same species in other parts of the Eastern States had long been exterminated; and at that time we pointed out how desirable it was that the bird should be given every protection that its race might be perpetuated. In his report to the Massachusetts Fish and Game Commission, Deputy Game Commissioner Thos. A. Dexter, of Edgartown, reports that the heath hen is having a hard struggle for existence. It is systematically hunted by non-residents of the Vineyard, who come to the island ostensibly for rabbit hunting, but with the real purpose of seeking the heath hen. Foxes have been introduced for the purpose of affording material for fox chasing, and this vermin preys upon the birds all the more successfully because the fox was not an indigenous species on the island, and the birds have not inherited from their ancestors the ability to protect themselves from it.

The result of this harassing is very evident in the rapidly lessening number of birds, and Mr. Dexter makes a very reasonable plea for the services of a special deputy to be detailed to look after the preservation of the heath hen particularly. It is reported that the English ring-neck pheasants which were put on Martha's Vineyard two years ago have multiplied and are becoming very abundant. It would be a pity if an exotic species could be given opportunity to thrive while the native heath hen should be driven out. We trust that the Massachusetts

Commission may provide the necessary protection for this bird, or if this shall be beyond their power, that the matter may be taken up by some of the public-spirited residents of the Vineyard. A bird which has kept its hold so far as this should not now be wiped off from the face of the earth by inconsiderate shooting.

THE AUDUBON SOCIETY.

THE Audubon Society movement projected and carried on by this journal some years ago has ceased to be an active force in itself, but its influence is still shown in the several societies here and there springing up first in one quarter and then in another and assuming the name of the original institution. We recorded in our issue of April 18 the formation of an Audubon Society in Boston, having for its special purpose the discouragement of the wearing of bird plumes as elements of woman's dress. We are in receipt of several communications from different parts of the country requesting us to renew our activity in this direction. While this is impracticable at the present time, we extend our good wishes to those who are promoting the work, whether under the name of the Audubon Society or other titles, and bespeak for them the practical encouragement they so well deserve.

SNAP SHOTS.

This is the time of the year when the amateur scientist gets out his gun and bags the unwary song bird to make certain its identification, that he may know beyond peradventure that it occurs in the locality where he kills it. The fact that it occurs there may be well known, and may have been well known since many years before he was born; but this counts for nothing with the youthful scientist. Though a thousand text books record the fact, he must learn for himself by a new sacrifice of bird life. The fewer the individuals of a species, the more eager is he to shoot one of them; the rarer the specimen, the more certainly does it fall to his gun. The scientific pretensions of small boys and of grown men are quite often farcical in the extreme, but however slight rarely fail to afford self-justification for a bird slaughter which is altogether profitless and indefensible.

Some years ago the Agriculture Department at Washington, and later Pennsylvania, appropriated a large sum to investigate the food habits of hawks and owls with special reference to their relations to agriculture as destroyers of vermin and insect pests. The result of the inquiry was to show that the hawk and the owl were useful allies of the farmer, and because of this were deserving of protection. The report to this effect was published in an elaborate volume, and the information thus conveyed to the public. Now comes the Luzerne County Sportsmen's Club with an offer of prizes to competitors who shall score the highest number of scalps of certain species of animals and birds, including hawks and owls. The club offers money for the destruction of birds whose usefulness the State expended funds to demonstrate and declare. Manifestly some one is blundering here, the State's ornithologists or the club's bird scalp competition promoters.

What shall be said of him who writes of the odious skunk cabbage? Odorous it may be, but odious never—not to the fisherman. For the homely plant is one of the signs of spring; it unfolds its green banners as signals on the banks of newly released trout streams, and is associated in the angler's memory with the first outings and the first fish of the year. Other vegetation of March and April may have sweeter fragrance, but all malodorous as it is, the skunk cabbage is not to be set down as odious by one who has the poetry of angling in his soul.

The New York Legislature adjourned on Thursday. At this (Tuesday) writing the result of the session's fish and game legislation cannot be given, for most of the measures under consideration have, as usual, been left to be disposed of in the rush of the last days. The session has been marked by a multiplicity of bills mainly inimical to protection. The spearer, the netter, the market dealer have been given ready hearing.

The Brackett bill in the New York Legislature, which proposed to hand over to a commission of lumbermen and wood pulp manufacturers a generous slice of the Adirondacks, has met its death by exposure. It was one of those creatures which can live only in the dark, and quickly die when exposed to the light.

The Sportsman Tourist.

TWO NIGHTS IN A SIERRA NEVADA SHEEP CAMP.

SINCE the time of its occurrence it has often crossed my mind to write this experience up, and at last I have got the *cacoethes scribendi* so badly that I will indulge my pen.

My friend B. and myself had arranged our usual summer outing in the mountains, and all was ready for the start, when suddenly there was a relocking of the business ball and chain around B.'s leg, which necessitated his remaining at home another week.

This was a sore disappointment to both, but as long as I was ready to start I determined to go and put in the time until his arrival at a little mountain resort near our summer cabin. I knew that I could get some good deer hunting there, and would be ready to settle down to the serious business of trout fishing by the time of B.'s arrival. And, surely enough, when I got there I found the son of the proprietress spoiling for a hunt.

I had taken along my faithful little bodyguard, Skip, a black and tan terrier, both wise and courageous. He would run and bay a deer, worry a bear, and whip twice his own weight in wildcats, or tame ones either. A more faithful companion man never had, nor a more interesting one. Alert and eager, he was ready for anything. He was always expecting an adventure, and stood ready to do his part.

Well, the young man above spoken of had a hound called Turk, and the two dogs made a good team. In fact, these two were hard to beat on a deer hunt, as has been described before in these columns.

For three days following my arrival Will and I went out and hunted faithfully, but without success. We could start nothing but does, and these we would not shoot. On the evening of the third day, on our return, we found a sheep herder at the house who had come down for a fresh supply of salt for his sheep and flour for himself. He had a saddle horse and two pack animals, and was just starting out when we arrived. On hearing of our ill luck, he invited us to come up to his camp next day, saying that deer and bears were both plentiful on the range. We agreed to go, but did not set the day, as Turk's feet had got sore with his three days' fruitless hunting and we would have to await their healing. He told Will where the camp then was, and Will said he knew where to find it, and that we would start in two or three days. This was on Wednesday, and B. was coming on the Sunday stage. I wanted to get my hunt over before his arrival, and kept Will washing and dressing Turk's feet all next day to get them in condition. On the following morning Turk showed up as good as new and we concluded to start. It was a very hot morning in the cañon, and we had an eight mile climb before us over very brushy mountains, and we knew we had our work cut out if we wanted to eat a noon dinner in the camp. I was pretty stiff with the unaccustomed exercise of the previous days, but the one day's rest had partially relieved me, and I thought I could make it all right. I had not reckoned with the trail though. It was the one followed by the pack animals, and was simply a short cut across two spurs, and then a steady climb up a mountain covered with brush that was almost impenetrable. To make matters worse, Will lost the trail—what there was of it—and we traveled about two miles out of our way. This led us into a thicket of thornbush that almost brought us to a standstill. It is leg-wearying work to make one's way through this growth. The winter snows beat it down flat, and when summer comes it rises about 18 in. high, with its tops all pointed down hill. The only way to get through it is to lift one foot straight up as high as possible, then stride out and do likewise with the other one—actually walking over instead of through the thorny tangle. One hour of this kind of work will pretty well fag out anyone who is not in daily practice of mountaineering. The unaccustomed labor became very distressing to me, and I wished myself back. My legs ached unbearably, my breathing became labored and painful, my heart throbbed, and my head seemed ready to burst, while the beating of the arteries in my ears shut out all external sounds. Nothing but pride kept me going. Had it not been for that, I would have called the expedition off. All things have an end, and this bit of bad country had also. After resting and picking the thorns out of our persons we resumed our upward way, and at last topped the mountain. Here we found a wide timbered plateau, marked by numerous shallow ravines, which lower down became cañons. This plateau was covered with bunch grass, and divers kinds of succulent grasses and plants, upon which the sheep fattened. We turned down ones of these ravines, expecting to find the camp, but it proved that Will was wrong in his notion of where it lay, and we had another weary tramp of a mile down and up for nothing. At last we came to traces of sheep, then to sheep themselves, and after exploring two more ravines, tired and hungry, we found the camp at 4 P. M.

The two herders were away after the sheep, and there was nothing to be found to appease our hunger excepting some cold boiled potatoes. We searched the camp exhaustively, but could find nothing else that was quickly available. There was plenty of flour and raw potatoes, but no bread or bacon. So we started a little fire and fried our potatoes, or at least warmed them, and stayed our stomachs for a time. We then started out to find a deer before the shades of evening should fall, as we concluded it was going to be a case of deer or no dinner. We took opposite sides of a ravine running north toward the American River, and tramped along for about two miles without the dogs giving notice of anything being in the mountains but themselves. We were upon the point of giving it up and returning empty handed when Turk gave tongue among the willows in the bottom of the ravine, which had now become a shallow cañon. Will ran down the side of the cañon to head the dog off, and I ran up higher to reach a spur which jutted out. Just as I reached it a fine buck broke cover and ran diagonally up the opposite side of the cañon, giving a distant but open shot. I estimated the distance and shot for the top of the head, stopping him at the crack of the rifle with a bullet through the lungs, which cut some of the large blood-vessels. He turned and went staggering down the hill right into the mouths of the two dogs, who pulled him down. I was truly sorry for the noble fellow when I saw

him come down, and for a moment wished I had missed him; but my empty stomach rejoiced within me. Will came at my call, and we galloped and hung the buck up, taking only his liver with us, as we were both too tired and hungry to do anything more. On our return to camp we found it surrounded by over 3,000 sheep. The herders had returned and had killed a fat wether; had baked a pan of camp biscuit, boiled some potatoes, had the coffee pot boiling, and were ready to fry some very fresh mutton chops. To these were added our liver, and we soon sat down to a royal feast. Being so very hungry, I ate heartily and drank a cup of strong black coffee—a beverage that always disagrees with me.

The herders stated that on the previous night a bear had killed one of the sheep. He had not eaten all the carcass, and would be sure to return to it that night. They therefore took a strong bear trap, and we all went to the place where the remains of the sheep lay and carefully set it. It was at a point about 200 yds. from camp. It was now pitch dark under the pines, and we sat around the camp-fire smoking and yarning for a while before retiring.

The two herders were in marked contrast with each other. One was a German, quick and impetuous in speech and action; the other was an Englishman from the hills of Yorkshire, slow and quiet. The one was like a fox terrier, the other like an old collie. They were both encouraging in their reports of game. Said the German, "Dis morning, as I was going down de rawine mit de sheep, two pig pucks shumps a clump of villows oued, and runs ofer de moundain." Said the Yorkshireman, "Day-afore-yesterday Oi seed twa big boocks. They got oop fra their beds as Oi coomed doon the hill an' didna rin awa, but joost toorned aboot an' lyuked at me, an' raxed* oot their hin'legs like stirks in a byre."

Well wearied with the fatigues of the day I soon retired to our blankets, which were spread in the open under the pines. No shelter is ever erected by herders, as they are constantly changing camp, as the sheep soon eat all the herbage in one locality and have to be moved further on upon the range at frequent intervals. In fact, shelter is seldom needed, as during the summer months, while the sheep are upon these mountain ranges, no rain falls excepting a very rare thunderstorm of short duration.

Our blankets were spread side by side, and Will and the herders said they would soon retire so as not to disturb me after I had gone to sleep. I had no sooner got composed, however, than I dropped into sound slumber. Their retiring awoke me and I found it impossible to sleep again. The strong coffee got in its usual work on my nerves, and I lay and stared the stars out of countenance. I counted the stars, repeated the multiplication table, counted the swaying branches of the pines, the number of my respirations and the snores of the Yorkshireman, all to no effect. "The everlasting silence of the hills" was all around and took hold upon me. Then I got to thinking of the bear trap, and waited with listening ear for the savage growl of pain that would accompany the shutting of its cruel jaws on bruin's foot. The occasional cough of a sheep, and the tinkle of a bell on the neck of one of the bell-wethers, were the only sounds that broke the stillness of the brooding hills.

Suddenly my little dog, who lay on the blankets by my side, raised his head and growled, and then rushed yelping into the darkness. There was a sudden thunder of the feet of 3,000 sheep rushing in wild terror from an unseen foe. Then bedlam broke loose! The hound and the three collies of the camp joined Skip in his charge into the darkness. There was a great crashing of dead underbrush, a rapid flight, the coughing and excited stamp of the frightened sheep, and jangling of the hundred bells borne by the leaders of the flock, all accentuated by the yelps of the excited dogs, and dominated by the deep-chested baying of the hound. Will and I sat up in bed, and the herders muttered "bears" and went to sleep again.

Now this was getting a little exciting, and I thought it might be as well to get my rifle and lay it where it would be handy. Not that I was at all nervous about the proximity of the bears! Oh no, only just in case of accident, you know. Suppose a bear should come snuffing around looking for the carcass of mutton that had been killed by the herders the previous evening, and which now hung cooling upon the branch of a pine near our beds, why, how handy it would be to have the rifle near by to take a shot at him!

It was a curious coincidence that the same thought seemed to strike Will just at that instant too, for we both broke for our rifles, which stood against a neighboring tree.

The dogs soon returned, and the camp sank into quiet again. But if I was wakeful before, I was worse now. But I had a companion in wakefulness. The novelty of the situation had caught Will, and every few moments I could detect him quietly cocking his ear in a listening attitude.

From this time on to 3 A. M. this same proceeding was enacted about every half hour. Skip would give the warning, the sheep would shake the earth with the rush of 12,000 feet, the dogs would all join in an excited baying, sleepy oaths would emanate from under the herders' blankets, and finally quiet would reign once more.

At last the effects of the coffee passed away, and the novelty of the situation having worn off, I dropped asleep. About 3 A. M., however, everyone was brought out of their blankets. Even the case-hardened herders came suddenly upon their feet.

A stealthy stalk and determined rush had been made by the bears upon the sheep, while one of their number had boldly invaded the camp after the fresh mutton hanging upon the tree. It was too dark to see, but I could hear him snuffing and scrambling around the tree upon which it hung. The dogs had all rushed after those attacking the sheep excepting one of the collies, which had a litter of puppies at the back of a log upon which the camp supplies were piled. She made a vicious and determined assault upon bruin, and I feared to shoot lest I should kill her. I crouched upon the ground hoping to catch a glimpse of him against the sky line, and finally succeeded, as he climbed the log. A fierce growl followed my shot, and the other dogs rushed to the spot and joined in the chase. Down the cañon they all ran, until their voices were lost in its depths.

During the mêlée we had heard a tremendous crashing of dead branches, accompanied by angry growls, coming from the neighborhood of where the trap had been set.

* Stretched or reached.

Matters had become decidedly exciting, and we determined to dress and investigate, as dawn was now rapidly approaching. We therefore dressed and built a fire, and by that time the shepherd dogs had returned.

The crashing of branches in the locality of the trap had ceased for some moments, but was suddenly renewed. The bitch made a charge toward the sounds, followed by the other two collies, and the devil was to pay again. We could hear a rush and a crashing of branches, and the clank of the heavy trap chain, equal to the noise of a chained elephant crashing through its native jungle.

One of the dogs soon received a cuff that sent it yelling back to camp, closely followed by the others.

We had all grabbed our guns and were making for the bear when this happened, and afterward we heard no sound. It seemed as if the earth might have opened and swallowed up all but ourselves, so suddenly did quiet reign.

We went to where the trap had been set, but it was gone. It was still too dark to see the trail, so we returned to await daylight. Meanwhile Turk and Skip were still absent. We called and whistled for them in vain. We wanted them badly to take the trail of the trapped bear.

Finally, as daylight came on and they did not return, one of the herders started in upon the breakfast, the other took the sheep to their range, and Will and I started upon the trail of the bear.

It proved plain to follow and soon ended. He had evidently fought the trap for some time in a small patch of thorn brush. When the dogs had attacked him he made off and had caught the dog between two stout saplings, and after some frantic fighting had pulled clear, leaving two toes in the trap as the sole mementos of his capture.

We returned to camp much chagrined, as we had been sure that we were going to capture him. The herders were loud in their anathemas upon the dogs for frightening him, as they wanted revenge for the many head of sheep that had been destroyed. They said they had lost sixty-nine head thus far that season by bears. They thought that if the bear had been let alone he would not have pulled clear, and that he might have been quietly traced to his lair. I did not think so, as I considered that they made a mistake in attaching their clog to the chain. They made it too long and drove it through the ring on the trap chain clear up to its middle. It therefore caught too readily against growing saplings that stood a considerable distance apart, and could not fail to become entirely fast, and give the bear a chance to pull against an unyielding substance.

While awaiting breakfast we examined the vicinity of the camp and found the tracks of seven different bears that had visited us in the night. Had it not been for the dogs they would undoubtedly have rooted us out of our blankets. One of them left an immense footprint, 11 in. wide. Strange to say they got none of the sheep, spite of their determined efforts.

After breakfast one of the herders and myself took a pack horse and went after the deer I had killed the previous evening, and Will took the trail of the bear and the dogs down the cañon, for still the dogs were absent.

It was the little German that went with me, and his tongue ran with the even flow of an electric dynamo. I kept trying to check him, hoping to see a deer in the early morning, but it was useless. The most of herders become taciturn after they have followed the vocation for a time, but it seemed as though this one's years of bottled-up loquacity had just been uncorked and was boiling over. At last I quit him and climbed the ridge after giving him full directions as to where to go, saying that I would be there as soon as he.

No sooner had I reached the crest of the ridge than I saw a fine three-prong buck standing some 100 yds. further on, intently watching the progress of the herder and his horse. I dropped upon one knee, and taking steady aim fired at him. He took one convulsive leap in the direction he was looking and fell in a heap, in a clump of chemical.

The herder saw me and came to the spot, all excitement.

"Py shiminy! dat's goot luck," he panted. "Shust a leedle while after you leafs, dot yellow shumps up in vront of me und runs de hill up, und I was looking righd at him ven you shoots."

"Py cracios! I vas shust saying to mines'lf, 'vot a fool dot mon vas, to go away from de blace vere de teers vas,' ven, pangs! I hears de guns, und down comed de teer."

While he was running on with this, and much more in the same strain, he galloped the buck, which was a very fat one, and we threw it over the saddle and went down to the bottom of the ravine again. There we hung the carcass until we should return.

I was now well satisfied with the results of my hunt, and did not care whether I got another shot or not. It is just at such moments that luck crowds in upon one. When one has got a basket filled with trout, one is sure to reach a part of the stream where the big ones are rising the fastest, and it seems a sin to stop fishing, and surely is a sin to keep on.

Ah, well! if we are hogs upon some rare occasions there are many others upon which we can't be even if we wanted to, so I guess things break about even in the long run.

Sometimes we hold "fours," "fulls" and "straights" all the way through, and on others we can't get anything higher than a "busted flush."

This was one of the days when luck ran my way. We had not gone more than 500 yds. when a noble buck, with a splendid pair of antlers, sprang out of a patch of brush and ran about twenty steps up the side of the cañon. There he stopped, right out in the open, and turned to look at us. He was only about 60 yds. away, and I dropped him in his tracks with a bullet through the brain. He was one of the largest black-tailed deer I ever killed, and we now had too much of a load for the pack horse.

We hung him up to cool, for a second trip, and went on. As we neared the locality where the deer of the previous evening had been killed, I hastened ahead to locate the spot. As I neared it I caught sight of a moving body on the hillside, and turned and held up my hand in warning to the herder. He saw me and stopped, and a moment afterward a half-grown lynx came into full view. I rolled him over with a shot through the back, and as I did so a second one leaped out in the same spot and watched the dying struggles of her young, with hair on end, blazing eyes and bared fangs. I never saw a finer picture of mad fury in my life. She was

UNCLE LISHA'S OUTING.—XX.

An Inland Exploration.

OF the remaining inmates of the tent Uncle Lisha was the first to arise, for after three-score years of partial disproof he was still a believer in the maxim that inculcates the benefits of early rising. He lighted the fire and made a trip to the waterside, returning therefrom in the glow of recent ablution and the exertion of lugging a pail of water up the steep path before his companions came stumbling forth, yawning and blinking in the secondary stage of reviving consciousness.

"Bah gosh! Onc' Lasha, Ah guess you'll was try for ketch nudder waum dis mornin', a'n't it, hein?" Antoine asked, rubbing his eyes with one hand and searching his pockets for his pipe with the other.

"If you an' the worm ever meets, he'll haftu du the s'archin'. Come, Ann Twine, le's git us suthin' t' eat, time 'nough tu call it breakfus stid o' dinner. You an' Jozeff go an' wash ye whilst I git the taters on. What is't this mornin', duck or fish?"

"Feesh was de quikes", 'cause he all ready for jump on de pan."

"An' best, seem's 'ough, arter duck so contin'al?" said Joseph. "I'm kinder thinkin' ducks wouldn't be much 'caount if 't wa'n't for the feathers, that is for a stiddy thing. But I du luffer shoot 'em though."

"I should like tu know haow you know you du," said Uncle Lisha, counting out the potatoes from the sack. "Three for Ann Twine—come, hyper, an' when you git back I'll tell ye what we'll du tu-day—tew for Jozeff, an' one for me."

In due time the fish was fried, the potatoes boiled, the tea brewed, and the little company gathered around the stone table.

"What I was a cal'latin' was," Uncle Lisha began, and then deferred speech while he cooled the tea in his tin cup with a gusty blast accompanied by a vigorous shake, "at we'd take a rantomscot over west tu where we was stationed time o' the war. I kinder want tu see the place ag'in, an' it 'ould be interestin' tu you an' Ann Twine, an' we c'n take aour guns along an' mebbey shoot suthin' 'nother, an' a bag, an' pick up some wa'nuts, which they'd be a proper good treat tu the folks up hum. What d' ye say to it—mongst ye?"

"Ah'll a'n't want for go feeshin's, an' Ah'll a'n't want for go hunt on de crik, an' Ah'll willin' for go loafer 'long to you, Onc' Lasha."

"Most anything 'll suit me," said Joseph, "if it hain't goin' in a boat, which it don't seem as 'ough I would du under no circumstances exceptin' in the case of a reg'lar ol' Noer flood, an' then I b'lieve I'd climb the last tree 'fore I'd trust myself tu any tarnal boat, he or she, small-er'n the ark or a steamboat, which I do' know nothin' 'baout, or leastways a canawl boat, 'at I hev ventured ontu."

So, being of one mind, when breakfast was eaten and the act by courtesy called dishwashing had been performed, they set forth westward across the fields and by the woodside, where ferns and asters invaded the grass land and the timothy and clover crept into the shadow of the woods. As, advancing abreast, they climbed a knoll and their heads arose above its crest, Antoine's quick eye caught sight of a gray squirrel running from the woods to an outlying hickory.

"S-s-h!" Antoine whispered, "go sofftle till he gat on de tree, den we supprise him an' kill it."

These tactics were successfully carried out as far as the surprise, but the beleaguered squirrel hid so closely among the topmost leaves that the besiegers were unable to discover it. A random shot was fired into the thickest bunch of leaves and the frightened squirrel sprang to the ground. Recovering in an instant from the shock of the desperate leap, it scudded away to the cover of the woods at a rate that defied the pottering aim of two guns, and their futile charges raked the turf far in its rear. Of course the event reminded Antoine of one man in Canada whose adventure he proceeded to relate, while the others, crawling on their hands and knees, gathered the fallen nuts.

"You see, seh, boy, he'll was huntin' jus' sem lak we was, honly he was hunt for bear an' he was 'lone, jus' one poor leetly Frenchmans 'stid of two fat hol' Yankee an' one big hugly Frenchmans. Wal, seh, he yankee bear tracks where it go in hole, an' he'll was si' do'n for wait of it come off de hole so he can shot it. W'en he'll set t'ree, probly two haour, he beegin for gat dry, an' he stan' up hees gaun 'g'in' tree an' go on de brook for drink, an', seh, de bear happen for gat dry too, an' it come off de hole an' gat raght 'tween de mans an' de gaun, bah gosh! An' dat mans he'll had for run home an' lef' hees gaun. What you t'ink for dat, hein? But dat a'n't so funny lak 'nudder man Canada. He was gat bag jus' sem we was, honly gree' deal more bigger, an'—"

"Oh, shet your head, Ann Twine. You'd a dumb sight better be a-pickin' up wa'nuts 'an tu stan' there a-makin' up lies."

"Dat jus' what Ah'll was goin' for do, but you an' Zhozeff gat it all pick up. Dat was too bad! Hoorah, le's go scare some more squiry."

Going forward they soon came to the head of the bay, which was memorable as the scene of Uncle Lisha's and Joseph's first duck shooting. To-day its only visible occupant was a solitary heron so slowly wading the glassy shallows that he scarcely broke the perfect contour of his mirrored semblance. He was in long range of a clump of cedars, under cover of which Antoine made a stealthy approach, and was just on the point of firing when he was discovered by the wary heron, who launched himself upon the air in a long upward slant of labored flight. Antoine followed him with uncertain aim, and only pulled trigger when the bird was hopelessly out of range and a hundred feet above the lake. But to the wonder of the three beholders, as the shot whistled past the heron he turned a half somersault, and with beak back drawn for a stroke came tumbling and sprawling downward in apparent helplessness. Antoine raised a shout of triumph, Joseph began to congratulate himself on a handsome addition to his stock of feathers, and Uncle Lisha had already upon his lips a rebuke for the wanton destruction of a harmless and worthless bird, when to his delight, the others' disgust and the amazement of all, the heron was seen to recover himself after a tumble of 20ft. and resume his even flight. The sudden terror that seized him, when to his ears the whistle of the hurtling shot was the rush of an eagle's pinions, was relieved when he saw no foe above him to repel, and with regular wing beats he

climbed the long incline of retreat, till indrawn neck, broad vans and trailing legs were blurred in a wavering speck of gray that vanished behind a cedar-crowned headland.

"Bah gosh," Antoine ejaculated, recovering speech and suspended respiration, "what yo' s'pose mek dat feller git over be keel so quik, hein?"

"I'm dumb gland on't, Ann Twine. What d' ye w'ntu pester that poor ol' lunsome crane for? He aint wuth the powder he burnt, an' don't trouble nob'dy."

"Seem's 'ough he kerried off a mess o' feathers 'at I'd ortu had," Joseph sighed.

"Ah'll bet you head he's gone off for die."

"Of ol' age, I hope, said Uncle Lisha."

Going a little further they came to a small rock-walled cove, where a rude fireplace and an inverted washtub gave evidence of a family washing place. Here they sat down to enjoy a restful smoke. They were aroused from their reverie by shrill outcries of distress arising from a little distance, and hastening forward through the fringe of woods to learn the cause, they discovered a girl of 10 or 11 years with a younger child on a great pine stump in the middle of the field, where they were besieged by a gaunt old ram, who, uttering hoarse bleats, made frequent circuits of the tower of refuge, which now and then he butted with blows that sounded like the strokes of a beetle.

Uncle Lisha and his party advanced to the rescue with loud shouts, which at once attracted the attention of the ram, but did not daunt him in the least, for no sooner did he find himself threatened by an attack in the rear than he charged upon his assailants so fiercely that Joseph and Antoine fled with all speed to the shelter of the woods, whither the ram followed in hot pursuit. Antoine climbed nimbly up a low-branched tree, while Joseph sought refuge in a thicket of cedars, wherein he was assisted, as he scrambled on all fours, by a blow that drove him into the evergreen curtain quite out of sight of his pursuer.

Having routed the main body, the doughty champion turned and charged upon Uncle Lisha, who, as unable as he was indisposed to run from an enemy, still held forward to the rescue of the children. He had almost reached them when the elder child cried out in great alarm,

"O, look out. Look out, mister, he'll hit ye. O, dear."

As Uncle Lisha faced about his antagonist was close upon him, coming at full speed with lowered head and assured aim, but the old man stepped aside and dexterously caught the ram by one horn as he passed. The sheep made vicious sidewise thrusts and struggled desperately for liberty, and though his captor was made to take some unusually lively steps his hold could not be loosened.

"Say, sissy," Uncle Lisha called in broken words and sentences, "you git daown—consarn yer ol' picter—an' fetch me a club er a—O, you won't git away erless your horn comes off—stun an' I'll give him all the hommerin' he wants. You dasn't. Wal, then, you an' bubbey git daown an' clipper fer the fence. I won't let the ol' torment git away. Clipper, naow. Ann Twine! Jozaff! Come 'ere an' fetch me a club er a stun. O, you plaguey fraid-cats. I wish't I c'd sick him ontu ye. I'd let him drive ye int' the lake, I swan I would."

"Seems's 'ough you might kinder tie his laigs, Uncle Lisher," Joseph suggested, venturing to peep from his hiding place.

"Tie yer granny. I don't kerrey ropes around wi' me."

"Put it on de bag, Onc' Lisha, an' tie de bag," Antoine shouted.

"Fetch me the bag and I swan I will," Uncle Lisha responded.

"It bes' was you hol' him hees hin'leg of it an' Ah'll shot it, bah gosh!" Antoine now proposed.

"Honh! You want tu pay for him? Well, I hain't a buyin' mutton. O, you dumb slinks! You hain't spunk 'nough tu break up a settin' hen! Come along here, you tarnal ol' serpent," and despairing of receiving aid, Uncle Lisha led his captive about the field while he searched for a suitable weapon. This he found at last in the form of a good-sized stone, wherewith he belabored the ram's nose till the fight was quite taken out of him and his only desire was to escape. When this became evident to Uncle Lisha he released his prisoner, who made a speedy retreat for a short distance and then partly turned about as if with some intention of renewing hostilities. The old man hurled the stone with such true aim that it struck him full on the ribs, knocking the breath out of him with the last vestige of valor, and he retreated on the ends of his toes, with his back humped and his head violently shaken, and his stumpy tail wiggling till it imparted a tremor to his whole body.

"There, dumb yer ol' meriner picter, hev ye got 'nough on't?" Uncle Lisha shouted, while his victory was cheered with cries of delight by the children, who had watched the progress of the battle through the rails of the fence, and by Joseph and Antoine with more discreet celebration, less likely to attract the attention of the ram.

"I guess you might ventur' aout here naow," Uncle Lisha called as the two men edged along the border of the woods, and he picked up the gun which he had dropped at the beginning of the encounter. "Oh, I'm 'shamed on ye," he continued when with frequent backward glances they rejoined him and led the way toward the fence. "Tew gre't grewed up men' afeared of a poor, ins'nificant sheep."

"Wal, seh, Onc' Lasha, Ah'll goin' tol' you, Ah'll a'n't was be 'fraid of it, but Ah'll know 'f Ah'll was gat mad, Ah'll keel it, me, an' Ah'll a'n't wan't it for pay it. Ah'll glad Ah'll a'n't gat mad. But Ah'll 'mos' was w'en up dat tree."

"Wal, I never had no knack o' gittin' along wi' sheep, never seemed's 'ough I hed," said Joseph. "I couldn't never drive 'em ner call 'em. Don't you cal'late they be terrible con'try critters, Uncle Lisher?"

The victorious champion vouchsafed no answer but a contemptuous snort, and now that the fence was crossed took the lead in the direction of a rambling old gray farmhouse whither the children had gone.

"That 'ere's the haouse where aour officers got the' put-up-punce," he said, presently recovering his usual tranquility of temper. "We common folks slep' in the buildin's when we wa'n't aout on the p'int. We'll g'about there w'en I git me a drink, for it's turrible sightly. The' use' tu be a good well o' water here twenty-five year ago, an' if it's here yit I want some on 't, for I got consid'able he't up tusslin' wi' that ol' rip."

only about 30yds. away, and I could see every motion. She was "fighting mad," and didn't care who knew it. She had not yet seen me, but heard the noise of the approaching herder, who had resumed his way after my shot. She crouched for a charge and I immediately fired, but I undershot, cutting one of her hindfeet almost off. She at once made for me like a fiend unchained, and I pumped two shots at her without effect. The last one, however, checked her as she was almost upon me; the powder must have burnt her. This gave me a chance and I shattered her brain with a third.

I confess that I was somewhat rattled, for the attack was wholly unexpected. I had never heard of the like before; in fact "didn't know she was loaded!"

This was getting decidedly interesting! What was to come next?

Well, I wasn't long finding out! As I stepped to the sapling where the deer hung, I almost fell over myself at the sudden br-r-r-r that came from almost under my feet.

If there is anything on earth that "rattles" me it is a rattlesnake, and no pun intended, either. It always makes me fighting mad too.

I circled slowly around the big wild currant bush in which the snake was hidden, getting closer and closer all the time. At last I began pushing aside the branches with the muzzle of the rifle, when like a streak of light he struck at me, but fell short. By that time I was as angry as he was and began pumping lead into the bush as fast as I could, until the empty click of the hammer denoted an exhausted magazine. I stopped to crowd in more cartridges, but the creaking rattle had ceased. I had struck him just below the head with one of the bullets, and he lay writhing in a sordid looking heap under the mutilated currant bush. He had eleven rattles, all perfect, and beautifully tapered—as fine a specimen as one could look upon.

This ended my shooting for the day. We loaded the buck, returned to where the first one of the morning's work hung and loaded that also, the herder coming back later on for the large buck.

On our arrival at camp we found Turk and Skip, but Will had not got in. It was near noon, so I cleaned my rifle while the herder skinned the deer. We prepared dinner, and the Yorkshireman coming in at noon, we sat down to it with good appetites.

After our meal the herders departed, one to look after the straying flocks, the other after the big buck, and I departed—to "the land of nod."

About 4 o'clock Will and the herder returned with two deer upon the horse; Will having run across the man and taken him to where he had one hanging up, that he had shot in a side ravine on his way home to camp. This was great luck indeed! We both felt highly elated, even if we had got no bear.

But now for Will's story. Preliminary to telling it he took a piece of a fresh bone out of his pocket and asked me what I thought it was. It was very hard and dense in structure, and smooth as ivory externally. The fragment was a scale about 2in. long and nearly lin. wide. I said I thought it was a piece out of the thighbone of a large animal.

He said it was "out of the leg of a bear"—exact locality not determined.

Said he: "When I first started out I looked all around where the bear was when you shot at him, and just back of the log I found blood and this bit of bone. It was easy tracking him, for he cut a wide swath down the mountain when he first started out, leaving blood at every step. In two places I found where he had stopped, as I thought, to fight the dogs. Wherever he had stopped he had bitten and torn the surrounding brush, being evidently in a terrible rage. He had no use of one of his hindlegs, as I could find but three footprints anywhere. In some places I could see where the other foot dragged through the sand, and I always found the blood on that side of the track. Finally the blood got lesser and lesser in quantity until it ceased entirely, but I still followed the trail, hoping I would find him up a tree, or corralled in some cane by the dogs. I trailed him for about five miles, and finally lost him in a dense thicket of willows which covered several acres. Here he walked on the recumbent trunks of the willows, and left no trail. I had never heard or seen anything of the dogs all this time, so gave it up and started for camp. On my way back I started the buck I shot, and got him the first try. But it is too bad that we lost the bear, for he was a big one!" was the emphatic way in which Will ended his story.

"Ve'll get von to-night yet!" was the commentary of Dutchy. "Ve vill again dot drap set, undt bait it mit a shoulder of muddon, undt cotch von of dems, sure!"

According to his suggestion we reset the trap, and also set a spring gun in another place.

That night the herders placed the sheep a little distance from the camp, so that the thunder of their hoofs when disturbed, their coughing, sneezing and jangling of bells would not keep us awake, and after supper and a smoke we went to bed with anticipations and slept undisturbed till morning. Not a bear came within a mile of camp, as far as we could judge, the sheep having rested without a movement all night.

And so we got cheated out of our bear after all. Since that time I have been going back after those bears—in my mind—every returning season, but have never got there yet, and, *entre nous*, I fear I never will.

Our hunt was over, so leaving one of the bucks for the use of our kind entertainers, we took the others upon a couple of pack horses, and with Dutchy to drive them, started for home.

That afternoon my friend arrived upon the stage, and the next day the really serious work of our outing—trout fishing—commenced.

AREFAR.

In the Indian Strip.

Loco, I. T., April 21.—Game of all kinds is more plentiful than it has been for three years. The quail have wintered finely and are now nesting everywhere; they are numerous, notwithstanding the netters and market-shooters have both been with us all along and many birds have gone "over the road." I do wish the market-hunters and netters could be sent "over the road." There are many curlews, etc., and the *hoo-hoo, hoo-hoo*, of the prairie fowl can be heard every still morning. There is more small bird life here than I ever knew anywhere; one can scarcely hear of mornings for their noise.

L. D. W.

As they approached the house a comely young matron came to the open kitchen door, welcoming them with a pleasant smile and a cheery voice, while her keen eyes made a quick but comprehensive survey of the group.

"Good mornin', gentlemen. You're the ones 'at drove that cross ol' buck away from the children?"

"Yes, ma'am," said Antoine, coming to the front with his politest manners; "we was be de zhomeans."

But Joseph had not the effrontery to claim much of the glory for himself and Antoine, and said, jerking his thumb toward Uncle Lisha, "He done most on 't, ma'am. Ye see, he kind o' seemed tu hev the fust chance, an' so he took it."

"Yes, I know," the young woman said, growing red in the face with suppressed laughter; "Janey here told me all about it," and the little girl retired from view behind her mother, who continued addressing Uncle Lisha. "I'm drefilly obleeged tu you, sir. But set your guns in the shed an' come right in, all of you, an' have a fried cake an' some cider."

"Thank you, marm, I guess we won't go in," said Uncle Lisha; "but I wouldn't go ag'in a nut cake, for I hain't seen one for a week, and I be turrible dry, which fetched me here; but you needn't put yourself aout tu git cider, water 's good 'nough for us."

"T ain't no trouble," and the woman bustled in, closely followed by the children, and returned with a heaped pan of doughnuts, fresh and hot from the kettle. "Naow jest help yourselves whilst I go an' draw some cider."

"Don't ye," Uncle Lisha expostulated, "water 's plenty good enough for us."

But the hospitality of their hostess was not to be restrained, and she presently brought a brimming pitcher of cider to the great satisfaction of two of the party.

"I'm afeared these fried cakes hes soaked fat," she said, breaking one and examining it critically when her guests were served. "They be," she declared in a grieved tone, "but mebbey they'll go better'n none, if you hain't had none lately."

"Queen Victory couldn't make no better," Uncle Lisha declared, "nor yit the President's wife, an' I da' say nary one on 'em gits so good, for I s'pose likely they depends on hired gals tu make 'em." And his companions heartily seconded the praise.

"It looks consid'able nat'ral raound here," he said, as his eyes roved over the old house and its surroundings, "on'y jest a leetle older'n it was twenty-five, mebbey thirty year ago—time o' the war, anyway—when I was here 'long wi' the m'lishy."

"You don't say!" his hostess cried. "Why, I can jest remember a-seein' the soldiers here all raound, an' haow scairt I was! My!"

"It hain't possorble! You don't look as if you could ha' be'n borned then," Uncle Lisha gallantly declared.

"Wal, I was then," she answered with a pleased little laugh, "an' I remember seein' the soldiers here an' the British boats 'way acrost the lake an' hearin' the cannons firin' over tu the P'int." And so the two fell to telling of scenes that had been impressed distinctly on the memory of one in the prime of manhood, and no less so on the infantile mind of the other.

"Wal, we shall haftu be a-goin'," Uncle Lisha said, turning away reluctantly, "I want tu take these men aout ont' the P'int here, where they can see the broad lake."

"An' you want to go to the landin'. It's got tu be quite a place, with a hoss boat a-runnin' on the ferry to Grog Harbor."

"A hoss boat? You don't say! Wal, that's suthin' I never did see, ner these men nuther, I'll warrant. We're a thaousand times obleeged tu ye for the nutcakes an' cider, marm."

"An' so be I tu you," said she, heartily. "I tell aour folks they'd ortu kill that ol' torment. He's treed me onte, an' naow I take a club when I go where he is; but aour folks say he ain't cross, on'y notional jest."

"Darn sech notions," said Joseph, caressing his recent bruises; "I wish't he'd got 'em aouten his head 'fore I met him."

"Why, Jozeff, you didn't exactly meet him, he kind o' overtook ye," said the old man, with a merry twinkle in his eye. "Wal, good day, marm," and they strolled away to the woods and the end of the point where the sheer wall bears its green crown of cedar high above the lake.

The broad bay lay before them, and beyond the bold promontories of Thompson's Point and Split Rock the broader lake stretched far north to reach the sky. The lake was ruffled by a northerly breeze, and the white sails of the sloops and schooners running before it, or beating against it, gleamed against blue waves and sky, but among them all not one such imposing tower of canvas as Uncle Lisha had seen when the British brigs were swooping down on their expected prey.

"Why, they looked julluk meetin' haousen, a-comin' over the water, an' the gunboats swarmin' 'raound 'em looked sassy, I tell ye. I s'pose aour folks was afeared they might land a mess o' sojes here an' go over cross lots tu where aour ships lay in t' other crik an' destr'y 'em, an' that's why we was posted here. But they never come a-nigh us an' kep' right on to where the 'twas a good lickin' a-waitin' for 'em, an' they got it tew."

When Joseph had crept to the verge of the cliff and ventured one brief glance downward where the waves chuckled wickedly in the low-roofed caves, he was ready to go and they wended their way to the ferry just in time to see the horse boat come splashing into port, the four horses plodding their unprogressive journey on the revolving wheel, whose foothold always slid away beneath and behind them, and continually returned in a perpetual round of monotony.

A drove of cattle in the first day of their long journey on the hoof to Boston markets crowded the deck with their drivers and a few other passengers, while the captain steered his craft in austere silence till he shouted "Whoa!" to his crew, who was the driver of the horses and passed the command to them, whereat they stood still and the boat surged up to the wharf with a bump that jostled all her animate freight and shook some profanity from the lips of her commander.

When the boat was made fast there was a stir of preparation in the group of prospective passengers on the wharf, while the cattle swarmed ashore, urged by their drivers and followed by their other fellow voyagers edging after them, step by step, in slow impatience, and all regarded with impartial interest by the little company of spectators.

These presently turned their attention to a tin-peddler, bound on a trading expedition among the foreigners of the other shore, who was driving his red cart aboard. A bunch of brooms stuck upright in the hinder end of it, like the banner of the Dutch admiral, yet emblematic only of a peaceable conquest of housewives' hoarded rags and dried apples, some spoils of which were already gathered in sacks and bales on the roof of the cart. The peddler was a much less important figure in the world than either the sharp-faced wool buyer or the oily old cheese speculator who now led their horse and buggy aboard, but he and his red cart with its visible proof of traffic were greater objects of interest to the spectators, as was the grizzled old hunter who had outlived the deer of Vermont, and with his gaunt hounds, so long-eared and sad-faced that Uncle Lisha regretted Sam's absence, was on his way to put his long rifle to its old use in the still happy hunting grounds beyond the lake.

After the ferryboat had waited awhile for a possible additional fare, which indeed came at top speed from the door of the stone tavern, the captain gave the order to the crew, the crew cracked his whip and shouted to the horses, who began their stumbling tramp, and the boat paddled off on her course.

As the loungers dribbled away, some to the socialities of the bar-room, others to their homes, and the lowing of the cattle and the shouts of the drovers were blended in the distance, Uncle Lisha and his comrades strolled in the direction of the farmhouse.

"I do' know but it's ridin' a free hoss tew fur, but I'm a-goin' tu ask 'em for a pocketfull o' them apples 'at's a-layin' on the ground," the old man said. "Looks 's if the 'was more 'n they knowed what tu du with."

"All raght, Onc' Lasha, Ah'll go on de lake an' wait for you an' Zhoeff, an' mebbey Ah'll shot some 'dawk." So saying, Antoine skirted the orchard on his way toward the shore, while the others went to the house. There they lingered a while to talk with their hostess, and then, their request being cheerfully granted, they filled their pockets with mellow apples and went on to join Antoine.

Their steps were hastened by the roar of his gun, and they found him rejoicing over three plump teal which were the result of the shot. After giving the particulars of the exploit Antoine shouldered the bag, which had grown plethoric since he left them, and picking up his gun and game, set forth toward camp.

"Why, Ann Twine," Uncle Lisha remarked as the Canadian trudged on before him, "you hev be'n spry tu git three ducks an' sech a snag o' wa'nuts sen you left us. You hain't shucked 'em, I know by the bulge on 'em, but it don't seem 's 'ough you'd ortu took quite so many 'thaout askin'."

"Was Ah'll ask it de squirly? He was all de one gat it," was the laconic answer.

Arriving at camp without further incident, Antoine flung down his burden with a sigh of relief, exclaiming as he straightened his shoulders:

"Bah gosh, dat happle pooty heavy for carry!"

"Apples!" Uncle Lisha repeated in surprise. "Is them apples? Where on airth did you git 'em?"

"Wal, seh, Onc' Lasha," said Antoine, with an air of supreme satisfaction, "Ah'll was peek it up while you was ask for it. Ah'll tink dat was save tam prob'ly, an' if dey'll and give it, dat was save de happle. Hein, Onc' Lisha?"

"So you went an' stole them folkses apples," cried the old man, indignantly. "You tarnal mean, mis'able cree-tur, I'm a good min' tu make ye kerry 'em right stret back. I be, I swan!"

"Ah'll can' do it, Onc' Lasha; Ah'll too tire, me. But if you'll want for carry it, Ah'll was help you load it on you back."

"Ann Twine," Uncle Lisha roared with kindling wrath, "you pick up them apples an' kerry 'em stret back where you got 'em, or I'll shake ye aouten yer boots!" and the flash of fire in the gray eyes implied certain execution of the threat.

Antoine at once swung the bag up on his shoulder and started off with it in sullen silence. It is probable that he went no further than fairly out of sight, and then emptying its ill-gotten contents spent the hour of his supposed journey in a comfortable nap; but Uncle Lisha's conscience was relieved.

The remainder of the day was spent in idling about camp, till at sundown the party repaired to the landing to watch for Sam's return.

ROWLAND E. ROBINSON.

Natural History.

THE NORTH AMERICAN BEARS.

In the proceedings of the Biological Society of Washington there is published a preliminary synopsis of the American bears, a paper read before the society by Dr. C. Hart Merriam, whose eminence among the naturalists of the world needs no remark. The paper, which takes an entirely new view of this group, will be of extreme interest to all the hunters of big game in this country and in the world.

As is pretty well known, it has hitherto been the custom to classify the bears of North America in three groups—the polar bear, which stands by itself, the black bear and the grizzly bear. Some years ago Dr. Merriam's attention was attracted to remarkable differences in the skulls of various bears which were labeled as belonging within the same one of these three groups, and on the suggestion given by these differences he began the collection of bear skulls from all parts of North America. This collection, amounting to more than 200 skulls, including about thirty-five skulls of the huge bears of the Alaska coast region, has convinced him that the classification hitherto adopted is inadequate, and has led him to add four strongly marked species to our fauna. These new species are, first, the huge fish-eating bear of Kadiak Island and the Alaska Peninsula (*Ursus middendorffi*, Merriam); the large brown bear of Yakutat Bay and the slopes of the St. Elias Alps facing the coast (*Ursus dalli*, Merriam); the large brown bear of Sitka and the neighboring islands, and possibly of the adjacent mainland as well (*Ursus sitkensis*, Merriam); and the Florida black bear (*Ursus floridanus*, Merriam).

Dr. Merriam's study of this material has brought to light a number of remarkable characters presented by these new forms, and has led him to rearrange the bears of North

America. This he does by classing them in five superspecific groups, or types, as follows:

1. The polar bear type, genus *Thalartos*, Gray.
2. The black bear type, subgenus *Euaretos*, Gray.
3. The grizzly bear type, *Ursus horribilis* and its allies, subgenus *Danis*, Gray.
4. The Sitka bear type, *Ursus sitkensis*, Merriam, and *Ursus dalli*, Merriam.
5. The Kadiak or Alaska Peninsula bear, *Ursus middendorffi*, Merriam.

These five groups do not all bear the same relations to each other. The polar bear (*Thalartos maritimus*, Linn.) stands by itself as the type of a genus and has not been subdivided. It inhabits the arctic shores and islands of both continents. The black bears also stand apart, and have characters which Dr. Merriam is inclined to regard as of sufficient importance to entitle them to be placed in a subgenus by themselves. He says that they must be separated into at least four species, which have more or less circumscribed geographic ranges. These species are (a) the common black bear, *Ursus americanus*, Pallas; (b) the Louisiana bear, *Ursus luteolus*, Griffith; (c) the Florida bear, *Ursus floridanus*, Merriam; and (d) the St. Elias bear, *Ursus emmonsii*, Dall. Dr. Merriam thinks that some of these may be found to intergrade, and that *Ursus americanus* may be still further subdivided. He has not seen *Ursus emmonsii*, described by Dr. Dall last July from skins, and is inclined to regard it as a distinct species. The bears of the grizzly, Sitka and Kadiak types seem to be more nearly related to each other than they do to the polar bear or the black bear type. The grizzly group includes four more or less well marked forms: (a) the true grizzly, *Ursus horribilis*, Ord, from the northern Rocky Mountains; (b) the Sonoran grizzly, which Prof. Baird called variety *horrius*, which is probably only a subspecies; (c) the Norton Sound grizzly, probably another subspecies; (d) the barren ground bear, *Ursus richardsoni*, Mayne Reid. It is possible that the great grizzly bear of Southern California may be separated from the Sonoran form.

The type represented by the Sitka bear and the Yakutat bear is very distinct. They are like the grizzlies in the flatness of their skulls, but are much larger, different in color, have more curved fore claws, and the cutting teeth are different in shape. The Yakutat bear is much larger than the Sitka bear and has different teeth.

The Kadiak bear (*Ursus middendorffi*, Merriam) is the largest of living bears, and differs markedly from all other American species. It is similar to the great brown bear of Kamchatka (*Ursus beringiana*, Middendorff), which it slightly exceeds in size.

The present paper recognizes ten full species of North American bears; these are the polar bear (1), the grizzly group (2), the big brown Alaska bears (3) and the black bear group (4).

Besides the fine series of skulls of big bears in the National collection at Washington, and those in Dr. Merriam's private collection, several well-known sportsmen and contributors to FOREST AND STREAM have loaned him others for study. Among those who have thus aided him are Mr. Archibald Rogers, Hyde Park, N. Y.; Mr. W. Hallett Phillips, of Washington, D. C.; and Mr. John Fannin, Curator of the Provincial Museum, at Victoria, B. C. Mr. Chas. H. Townsend and Mr. J. Stanley Brown, who are in the employ of the Government, and Mr. Rudolph Neumann, of the Alaska Commercial Company, have also assisted Dr. Merriam in securing material.

Dr. Merriam explains that the present paper is to be regarded only as a preliminary announcement of the results of his study, and that it will be followed later by a more comprehensive treatise on our bears. This paper is based almost wholly on a study of skulls and teeth. Additional material is greatly desired, particularly from northern British Columbia and the coast region of Alaska south of the Alaska Peninsula. The entire lack of any series of skins of bears in any museum in the world makes it impossible at the present time to study the external character of this group, nor can this be done without the assistance of collectors in many parts of the country.

The bears present a surprisingly wide range of individual variation in the characters of skulls and teeth, and the sexual differences are also great, the males being much the larger and possessing heavier teeth. The material at Dr. Merriam's disposal has the great advantage of containing large series from single localities, and such series show, in addition to the variations due to sex and age, a large range of individual variation in the size, shape and proportion of the cranium and the teeth; but they show also, Dr. Merriam tells us, that this variation, great as it is, has definite limits, beyond which it does not pass, and that excellent and constant characters exist by which the several species and subspecies may be recognized.

Although most strongly marked in the grizzlies, sexual difference in size is conspicuous in the black bear also. In the latter the disproportion is greater in the teeth than in the skull, the molar teeth in the female being much smaller, narrower and less massive than in the male.

A list of bears described in this paper, with some few remarks on them, is given below:

Kadiak bear (*Ursus middendorffi*), new species. This is the largest of living bears, being slightly larger than the great brown bear of Kamchatka, which is the only one with which it needs comparison. It has a higher, more swollen forehead, and the zygomatic arches are more strongly bowed outward; the claws of the forefeet are long and much more strongly curved than those of the grizzly. Dr. Merriam has examined sixteen skulls of this bear. From Kadiak Island, Alaska.

Yakutat bear (*Ursus dalli*), new species. This bear is very large, being only a little less in size than the Kadiak bear. There are differences in skull and teeth which are considerable, and a notion of these differences may be had by looking at the figures of the skulls of the two species. Dr. Merriam has examined five skulls from Yakutat Bay.

Sitka bear (*Ursus sitkensis*), new species. In general appearance this species resembles the Yakutat bear, but it is smaller and there are marked differences in the teeth, which in some respects show a slight approach to those of the black bear. Dr. Merriam has examined seven skulls of this form.

Grizzly bear (*Ursus horribilis*, Ord). This is the common form of the Rocky Mountain grizzly. Dr. Merriam tells us that specimens from Norton Sound, Alaska, differ slightly from those taken in the Rocky Mountains, and

that this Norton Sound form is probably a subspecies, which he proposes to name *Ursus horribilis alascensis*.
Sonora grizzly (*Ursus horribilis horriceus*, Baird). This is the grizzly of the southern Rocky Mountains, and perhaps of the Southwest generally, including Arizona, Northern Mexico and Southern California; though Dr. Merriam thinks that the great grizzly of Southern California may be a different subspecies, to be called *californicus*.
Barren ground bear (*Ursus richardsoni*, Mayne Reid). This is the smallest of the big American bears. It is a perfectly good species, differing from the grizzly and from all the other large bears.
Dr. Merriam is disposed to place all the black bears in

the subgenus *Euarctos*, proposed by Gray in 1864 for the common black bear of America. To this group he assigns the four species given below:
Common black bear (*Ursus americanus*, Pallas), found throughout eastern North America, and of course well known.
Louisiana bear (*Ursus luteolus*, Griffith), which is found in the southern United States, especially in Louisiana and Texas. This form resembles the Florida bear in the great length and narrowness of its skull, but differs in other points. It will be remembered that a year or two since Dr. Merriam referred to this species a bear described in FOREST AND STREAM by Mr. Arthur Erwin Brown, and by him considered to be the cinnamon bear of Audubon

curiosity, as that species of bird is seldom seen in that vicinity.
A. L. L.

Bird Notes.

INDIAN ROCK, Me., April 13.—We have only 4ft. of snow in the woods and but very little bare ground in open land. There are a few sparrows and chip birds. I saw one nut-hatch or tomtit about the buildings last evening and this morning. He was very tame. I saw one small blackbird the 10th; heard a robin yesterday, the 12th; heard several this morning. I think they will find slim feeding. Have not heard of any deer being killed since close time, and we have not much fear of wolves. Saw only one

and Bachman. The skull of Mr. Brown's specimen, examined by Dr. Merriam after his paper had been published, shows that the Philadelphia bear does not resemble either of the two groups of bears inhabiting the United States. Dr. Merriam believes the specimen, whose history was a little vague, to have come originally from the Ural Mountains of Russia, and to be *Ursus cadaverinus*.
The Everglade bear (*Ursus floridanus*), new species. Dr. Merriam has examined several skulls of bears from the Everglades and regards the species as a good one. It seems to be nearest to the Louisiana bear.
Glacier bear (*Ursus emmonsi*, Dall). This species, described by Dr. Dall in 1895, seems to be known only from pelts. The fur is described as being in color like that of the silver fox, and, while not very long, is said to be remarkably soft. The under surface of the belly is grayish white; the claws are small, curved and sharp.
The reader will be able to get some notion of the differences in the skulls of these bears by an examination of the accompanying illustrations.

Bald Eagle in New Jersey.

ALLENWOOD, N. J., April 23.—A few days since, while Will Frazee was hunting near Manasquan River, he shot a bald eagle measuring nearly 6ft. from tip to tip of its wings. The bird showed fight with a vengeance, as only its wing was broken at first shot. The eagle was quite a

bluebird last year and none this, but am in hope that they will be here.
C. J. RICHARDSON.

NORTHWOOD, N. Y., April 18.—*Editor Forest and Stream*: Swallows were seen to-day for the first time this spring. Will Lovel caught seven fine trout, the only ones taken in this vicinity. Fishing is not very good on account of high water.
BAIT POLE.

A Wild Goose Chase.

WILD geese are flying northward. That calls up the story of Russell Galloway, of Wilcott, N. Y. Last Tuesday Galloway, who had been watching the flight of geese, thought he saw one in his neighbor's pasture. He gave chase with his gun, and after considerable trouble killed it and brought it home. In the afternoon his neighbor Prindle's bright son came around hunting for his missing pet goose and identified the remains as his. Galloway paid for the goose. Then another Prindle came over with the old gander, claiming it was no good to raise goslings with alone. Galloway paid for the gander, and now the man on whose land the tragedy occurred is after him for violation of the game law in trying to shoot a wild goose.

WHEN Sir F. Chantrey caught two salmon in one morning, "his sense of self-importance exceeded twentyfold that which he felt on the production of any of the masterpieces which have immortalized him."—Sir Walter Scott.

Game Bag and Gun.

ADIRONDACK GUIDES' ASSOCIATION.

SARANAC LAKE, N. Y., April 23.—The third annual meeting of the Adirondack Guides' Association was held at the Opera House, Saranac Lake, N. Y., Wednesday evening, April 22. Two hundred guides, representing every section of the region, were present, and with the associate members and citizens in sympathy with the objects of the organization the number was swelled to over 300, making unquestionably the most representative Adirondack gathering that has ever taken place.

Oatman A. Covil, president of the Association, called the meeting to order and introduced Dr. J. C. Russell, president of Saranac Lake village, who spoke for twenty minutes on the rapid growth of the Association, the enormous popularity it has attained during the past year with all classes of men, and the increasing influence it has exerted in the propagation and preservation of the fish and game of the Adirondack lakes and woods. He congratulated the organization on its high character and good name, by which it is known throughout the State, so that many of its most important citizens, among whom are statesmen, lawyers, editors, millionaires and others, have considered it an honor to be identified with it as associate members. The Doctor read letters received by the acting secretary from many prominent men, among whom were Hon. Warner Miller, A. G. Mills, President of the Adirondack League Club; Col. Wm. F. Fox, Superintendent of State Forests; Hon. Frederick D. Kilburn, Superintendent of State Banks; J. Warren Pond, Chief Fish and Game Protector; Mr. S. R. Stoddard, publisher of *Adirondacks*, Glens Falls, and others, all of which expressed deep regret and profound sorrow at the recent untimely death of the late secretary, Mr. John Herbert Miller, and contained words of praise for what the Association had accomplished as well as many wise and practical suggestions for its future action. The following letter from Hon. Verplanck Colvin, Superintendent of the State Land Survey, honorary president of the Adirondack Guides' Association, was also read and received the close attention of all present:

STATE OF NEW YORK, OFFICE OF STATE LAND SURVEY, ALBANY, April 20.—*E. E. Sumner, Esq., Secretary pro tem. Adirondack Guides' Association, Saranac Lake, N. Y.*—My Dear Sir: Your letter of the 16th inst. informing me of the death of John H. Miller, Secretary of the Adirondack Guides' Association, has been received.

By the death of Mr. Miller your Association has lost an energetic officer, who has labored faithfully to maintain in your organization those qualifications for membership which are so necessary to the safety of travelers and for your own reputation. I do not doubt that the Adirondack guides will continue to maintain their high reputation for integrity and trustiness. New conditions, however, are rapidly closing in upon the region which was so recently all wilderness. The inclosure of large private parks, the reservation of the forests, the narrowing limitation of laws relative to the wild forest game, all indicate a changed condition of affairs. The old guides are passing away. Of the scores of men who have worked for me so faithfully for twenty or more years, but few of the older ones now remain, and the woodsmen of the present hardly realize how severe were the toils of the guides who carried the boats, provisions and instruments and cleared the trails in the explorations at the commencement of the State Survey. Some of these men are dead. Others have sought wilder regions, amid the gorges of the Rocky Mountains or on the Pacific coast, while the wilderness where they once followed the tracks of wolf and panther now trembles under the iron wheels of the locomotive. The gorges of the mountains of the Coughsa-gra-ga, of whose unknown locations men once held long debates, are now the sights of corduroy roads and carriage ways, and Saranac village, once the frontier post, now has its streets brilliantly illuminated at night with electricity.

These great changes are, however, only an indication of still greater modifications in your surroundings and in the conditions which will speedily control your destiny and the future of the interior districts of northern New York.

Had the great Adirondack park been created in 1870, when I urged it upon the public, when these lands were almost valueless and the forest still so magnificent, the destructive conditions which are now tending to reduce to pulp wood even the small timber remaining would not now exist. These recommendations were not heeded and thus the new condition of affairs has come about.

Under these conditions the Adirondack guides and travelers are confronted by the concentration of land controlled in many localities by clubs, associations and wealthy private owners, while the ownership of the State in many of the fairest sections of its forest possessions is being attacked by parties claiming to have other title in obscure and technical ways.

The question now arises, "How are the forests to be preserved to the public, and what condition of affairs will be most beneficial to all who are interested in the woods and waters of the Adirondacks, and how are improved conditions to be secured?"

It is clear that the problem is no longer the simple one of a quarter of a century ago.

Much more complicated business and legal difficulties now exist, and the purchase of private lands is no longer a question of hundreds of thousands, but of millions of dollars.

Evidently the matter is one requiring more than casual consideration, nor can any useful conclusion as to the best public policy be arrived at without general consultation leading to mutual concessions between the State, the great land holders and those whose sentiments are more keenly enlisted in the question, the traveler and the guide.

The question is therefore too complex to be immediately solved, or solved at all without a knowledge of what the State authorities and private owners will agree upon.

To reach such an agreement, public agitation of these questions in a careful, thoughtful, considerate way will be necessary, and the Adirondack traveler, tourist or sportsman, each in conversation with his guide, can during the summer season acquire much of the information

which is so necessary. To have this information brought before the Legislature from a popular standpoint no better means exists than to increase your associate membership, each guide getting the gentleman he guides to become an associate member and patron of your society, and the associate members meeting in New York at some time after election in the fall, about Dec. 1, to consult and agree upon a line of policy to be pursued for the protection of the woods and waters.

Trusting that this may be done, and that employers and guides may continue to work together in these matters of mutual interest, I remain very truly yours,

VERPLANCK COLVIN.

Hon. James H. Pierce, of St. Armand, was the second speaker of the evening. He delivered an eloquent address on the possibilities of the Adirondacks, and said that the members of the Association should be proud of their calling and of the beauty and grandeur of the noble Adirondacks, the extent of which he believed they themselves scarcely realize. "You are the guardians and protectors of the Adirondacks and all which they contain," said Mr. Pierce. "By means of your profession, your long experience and intimate knowledge of the forests, you are by far the best men that can be named for game protectors. You would see that the fish and game laws were obeyed, because it is to your interest, not less than to the hundreds of tourists and sportsmen who annually visit here, and to the State, that the fish of these waters and the game of these forests be zealously guarded and preserved, and not wantonly destroyed." He expressed the hope that the Legislature would speedily pass a law providing for the appointment of game protectors to be chosen from the membership of the Adirondack Guides' Association. Mr. Pierce's address, which occupied about thirty minutes, was interesting throughout, and received frequent and hearty applause.

Rev. R. G. McCarthy was the next speaker introduced, and he delivered a touching eulogy on the late secretary of the Association. He spoke of his friendly acquaintance with him, of his earnest and successful efforts for the advancement of the organization, and said, "His memory will be kept green in our hearts in all passing time." He then discussed the subject of guides, and said they should have purpose and character; that their purpose should be excellence in accomplishments; and spoke of the relationship between the guide and sportsman. He talked of the vastness of the Adirondacks, and said, "They contain 3,500,000 square acres of land and 18,000 lakes." Mr. McCarthy's remarks were interesting and instructive, and were generously applauded.

The following resolutions were read and unanimously adopted:

Whereas, It has pleased Almighty God in his infinite wisdom to call from our midst our beloved friend, companion and counselor, John Herbert Miller, and

Whereas, John Herbert Miller was one of the founders and chief instigators in promoting the success of this organization, and

Whereas, Under his personal influence and leadership the Adirondack Guides' Association has become well and favorably known with all classes of men throughout the State, having been brought by his efforts to such a high standing that men of great wealth and of high official positions consider it an honor to have their names placed in its list of associate members, and

Whereas, By his own exertions the treasury of the Association has been brought to a sound condition, which fact demonstrates the rare qualities he possessed, and

Whereas, In all his intercourse with his brother members he was always pleasant, courteous and considerate of the feelings of those with whom he associated, generous in his praise of their efforts for the advancement of the Association, and anxious at all times to promote the interests of every member, and

Whereas, He possessed the rarely combined qualities of a familiarity with the rules of parliamentary procedure and a capacity for leadership among his fellows, which rendered it comparatively easy for him to succeed in carrying through any desirable resolution or motion; be it therefore

Resolved, That it is but justice that we who were his associates and who are called to take up the work which he so faithfully pursued should put on record our admiration for the qualities which he exhibited, for the conspicuous and increasing power which he gave the Association and our personal affection for him

Resolved, That the members of the Adirondack Guides' Association deeply and profoundly mourn the loss of their faithful friend and adviser. To some who have been closely associated with him his death is a grievous sorrow; to all it is a personal loss.

Resolved, That in the death of John Herbert Miller this organization has lost a staunch friend and honored member, whose memory will be cherished in our hearts not only as a personal friend and comrade, but as a true man and honored citizen.

Resolved, That these resolutions be entered upon the records of the Association and that they be published in the Adirondack *Enterprise* and in the *Franklin Gazette*, and that the president be requested to transmit a copy of them to the wife of our friend, to whom he will express our sympathy in that sorrow which no human affection can assuage.

Resolved, That it is the sense of this Association that it would be for the best interest of the State, the people of the Adirondacks and the members of this Association, that the Legislature pass a bill providing for the appointment of special game protectors, to be selected from the membership of the Adirondack Guides' Association.

Resolved, That a petition to this effect, stating the special qualifications of the guides for such an office, signed by the members both active and associate, be forwarded to our senator and member of assembly, and that they be requested to use their utmost endeavors to push forward measures tending toward the enactment of such a law.

The following petition was signed by about 200 active and associate members:

"I, the undersigned, a member of the Adirondack Guides' Association, of, would respectfully recommend that the Legislature pass a bill at the present session providing for the appointment of special game protectors to be selected from the membership of the Adirondack Guides' Association.

"The Adirondack Guides' Association numbers among its members the best guides in the State, and it is believed that such members are better qualified, by reason of their long experience and intimate knowledge of the forests, to serve as game protectors than any others. Each member of this Association is bound by oath to obey the game laws of the State.

"While knowledge of every violation of the law almost invariably comes to some member of this Association, it is not practical for them to report such depredations unless in the pursuance of duty. The appointment of certain members as special game protectors would confer the necessary authority and would impose a duty."

Whereas, There have been numerous measures introduced in the Legislature to amend the present fish and game law of the State of New York, and intended for the protection, preservation and propagation of the birds, fish and wild animals in the State of New York and the different counties thereof, now therefore be it

Resolved, That the Adirondack Guides' Association heartily indorses and recommends the bill introduced in the Senate by Mr. Malby which provides that "traps or any other device whatsoever to catch or entice deer, including salt licks, shall not be made, set or used, and deer

shall not be caught, hunted or killed by aid or use thereof. No jack light or any other artificial light shall be used in hunting or killing or attempting to kill any deer." It is further

Resolved, That it is the sense of this Association and we do hereby petition the Legislature to enact a law making the open hounding season from Oct. 1 to Oct. 15, both inclusive. It is further

Resolved, That copies of these resolutions be forwarded to our Senator and Representative in the Legislature, and that they be requested to use their strongest influence to advance measures in sympathy with these resolutions."

The report of the secretary showed a membership of 215 active members and 53 associate members. Many branch associations have been organized during the past year, until every section where guides reside is represented in the general association.

The election of officers and organization for the coming year were taken up and the following officers elected:

Honorary President, Verplanck Colvin, of Albany; President, Oatman Covil, Saranac Lake; Vice-Presidents: Peter Solomon, Saranac Lake; Thomas Redwood, Paul Smith's; Miles Kennedy, Lake Placid; Isaac Seabattis, Long Lake; Charles McCaffery, Saranac Inn; Ernest H. Johnson, Tupper Lake; C. W. Blanchard, Blue Mountain Lake; Halsey Sprague, Duane and Meacham Lake; Richard Crego, Fulton Chain; Jerome Wood, Raquette Lake; H. B. Marden, Childwold. Secretary, Edwin E. Sumner, Saranac Lake; Treasurer, Warren J. Slater, Saranac Lake; Executive Committee: George Mussen, R. T. Manning, Thomas Healey, Saranac Lake; Douglas Martin, Ross Hayes, Fred. Rorke, Paul Smith's; Albert Billings, Marshall La Moy, Lake Placid; Jed Farrington, Saranac Inn; Espen Jensen, "Denmark," Blue Mountain Lake; Charles C. Robinson, Long Lake; George Selkirk, Duane and Meacham Lake; Charles Gibson, Indian Lake; John E. Ball, Fulton Chain; John W. Hinkson, Childwold.

The regular membership was increased materially and the names of several prominent men were added to the list of associate members.

The convention adjourned at a late hour amid great enthusiasm, and all united in declaring this to be the most important and successful meeting the Association has ever held.

SEAVER A. MILLER.

THE ENGLISH RING-NECKED PHEASANT.

Editor Forest and Stream:

Mr. Brackett's criticism of my letter to you, which appeared in your issue of April 4, is so evidently that of a man who has but just commenced the study of pheasants that it would not be worth replying to were it not for the position that he holds in his State, which gives to his opinions a weight far beyond their deserts.

He says that he does not know what I mean by the Chinese pheasant, as there are thirteen varieties in China, and persists in writing about the Mongolian pheasant. Now I have occupied many columns in your paper during the past few years, proving that the term Mongolian pheasant, as applied to *Phasianus torquatus*, which is the species so common in Oregon, is quite erroneous and misleading. By all English writers of real authority its proper name is the Chinese pheasant. *Phasianus Mongolicus* can be translated Mongolian pheasant, but it is only a variety of *Phasianus torquatus*, and I much doubt if there are any of them in this country. The name for a local variety cannot be used as that of an entire class. I do not claim ever to have had any Mongolian pheasants, therefore Mr. Brackett is quite correct in stating that the emissary he sent did not find any on my place. I expect that this error in nomenclature first arose by baldly translating the French name for the Chinese pheasant, which they call *Faisan de Mongolie*. But as we use the English tongue we must use English terms if we wish to be correctly understood.

As regards the Chinese pheasant (to give it its right name) I have never bred from Oregon stock. I have had several of them sent me from different places that had got the pure strain direct from that State, and I never saw a worse stamp of pheasant. Of course, Oregon will swear by them, for they are ignorant of the English ring-necked pheasant in those parts. If there were no other pheasants obtainable, I would gladly shoot the Chinese bird, on the principle that half a loaf is better than no bread; but an unprejudiced sportsman has but to compare the English ring-necked pheasant with the Chinese bird such as Oregon produces to see the truth of my remarks. Moreover I have placed specimens of these two varieties in juxtaposition as an object lesson, to use Mr. Brackett's expression, and everyone who had eyes in their head could observe the superiority in size and bearing of the English ring-necked pheasant. However, I felt certain that the Chinese pheasant from Oregon was not so fine a specimen of that breed as could be obtained with a little trouble. I therefore imported some Chinese pheasants which have every distinguishing mark of their species correct, but weigh at least a lb. more than their Oregon brothers and have a far prouder carriage. If Mr. Brackett will again favor me with a visit from the "man who is familiar with the birds," I will give him an ocular demonstration on the spot about these matters that will increase even his familiarity with them.

I wish that Mr. Brackett when he honors me by quoting my words would do so correctly. He will note that in my letter of April 4 I never used the words "English pheasant," but "English ring-necked pheasant." He says "that it is well known that the English is a mongrel bird and semi-domesticated," and that it is the English pheasant that I have for sale principally. Mr. Brackett will neither be the first nor the last to find out that a little learning is a dangerous thing. The English pheasant is most assuredly not a "mongrel." It is a pure and distinct breed, classically known as *Phasianus colchicus*, and is found throughout Europe and Asia Minor without a taint of foreign blood. I certainly have the pure, dark-necked English pheasant, but not in large quantities, nor do I recommend it for stocking New England preserves. The English ring-necked pheasant is what might be termed a "mongrel," being the cross between the pure English and Chinese birds. The combination of these two strains has created the best game bird for this country, where the winters are so severe, though in Europe, as a rule, all trace of Chinese blood is barred from preserves. Therefore I must beg Mr. Brackett not to drag a red herring across the scent by misquoting me, and thereby making me appear to be talking of a bird I was not alluding to at all.

Mr. Brackett's man may be the full equal of his master in the knowledge and care of pheasants, but I was ignorant of the fact that when he was inspecting my place I was entertaining an angel unawares. I think it would have been in better taste if this critical person or his master had told me on whose behalf he came. I note that he does not approve of my method of feeding young birds. I am never over anxious to teach what has cost me time and money to learn to every inquisitive chance comer, and it is more than likely that I was not sufficiently fascinated by him to teach him "free gratis all for nothing," and that I took care he should gain as little information as possible. I may mention that it was while on a visit to my pheasantry that Mr. E. A. Stiles, whom Mr. Brackett and others quote with approval, learned about feeding young pheasants with custard, etc., and he gave me the order of supplying English ring-necked pheasants to the Liberty Hill Club, of which he is manager. Moreover, it is the most absolute nonsense to talk of English ring-necked pheasants requiring different treatment from Chinese or pure English birds. In fact, if this is a sample of Mr. Brackett's vast knowledge of pheasant rearing, it shows the full value of the advice he is now so kindly dispensing abroad.

Mr. Brackett remarks that as I had "handled 100,000 English pheasants during the last twelve years" I have been occupied in this business, "they should have been enough, if worth anything, to stock the whole United States." First of all, I never wrote "English pheasants," but "pheasants of all varieties." Secondly, my letter was comparing the "English ring-necked pheasant," a different bird, as I have shown, with the Chinese variety. Thirdly, seven of the twelve years during which I have interested myself with pheasants were spent in France, where I used to sell 70,000 eggs a year, and supplied most of the big preserves, including those of the president of that republic.

But it is very hard to argue with Mr. Brackett, because he will not keep to the point, and whether from ignorance or perversity will insist on trying to prove me wrong by running down the English pheasant. Now, I have never recommended the English pheasant for the New England States, but the "English ring-necked pheasant;" and I will stand by all I have said, and reiterate it, that the pure Chinese pheasant, as produced in Oregon, cannot compare with the English ring-necked pheasant as an all-round game bird. Its wandering propensities alone are sufficient to show how unsuitable it is for an ordinary game preserve. I have no knowledge of Mr. Brackett's sources of information, but I have sent English ring-necked pheasants all over the States, and where judiciously treated they have thriven as well as even the Chinese pheasant did in Oregon. I sold one gentleman a few hundred birds four years ago, and in spite of making large bags among them every autumn, he has now between 2,000 and 3,000 of them, owing to self-increase alone. On Long Island they reproduce so fast in a wild state that a few birds at liberty raised tenfold their number when the shooting season came round again. I can prove all I have stated in favor of the English ring-necked pheasant up to the hilt with like instances were it necessary. In addition, whenever any one has gone in seriously for making a large game preserve and stocking it with pheasants, in nearly every case the birds are English ring-necked pheasants which I have supplied. Witness the successful experiment of the Ohio Game Commission with these birds, which I sold them. I have now one order for 500 to be supplied next September. Therefore absolute fact and proof positive completely annihilate Mr. Brackett's statements that the English ring-necked pheasant is a failure. But, as I say, it is so hard to know what Mr. Brackett means, because he will not keep himself to the point under discussion. I suppose he recognizes his arguments to be weak and his statements untenable, and so tries to evade the question by confusion of names, as some fish when cornered foul the water that they may escape in the opaqueness they have created.

Now, Mr. Brackett states that out of a correspondence amounting to 100 letters every one of them but three recommended the Chinese pheasant and not the English ring-necked bird. I can quite believe it, because it was not till my arrival in this country that many people knew of the latter kind. It was, in fact, for the most part an unknown bird to local sportsmen, who had read in their papers wonderful accounts of the Chinese pheasant in Oregon. This was the only variety they had ever heard of and their information about it even was not very extensive. I am glad to say that during the past few years I have been able to propagate quite different and truer ideas, and I sell now a thousand English ring-necked pheasants to a dozen Chinese.

Mr. Brackett lays well deserved stress on Judge Denny's knowledge of the *Phasianidae*, and says that the judge had nine out of thirteen varieties, and selected the Mongolian (to continue Mr. Brackett's incorrect appellation) as the best all-round game bird. Very likely so, but Judge Denny never had the advantage of comparing the English ring-necked pheasant among them, because it is a cross bred bird first originated in England. In fact, none of Mr. Brackett's arguments can hold water, and force the conclusion that he does not know much about his subject.

Mr. Brackett refers to the rapid increase of Chinese pheasants in Oregon as a proof of their superiority. All right. In fifteen years they have spread over that State. Now, the English ring-necked pheasant was scarcely introduced into the States or known of till I brought them forward, and that but a very few years ago, and they have already completely ousted the pure Chinese pheasant from the attention of all sportsmen who are stocking their preserves seriously. I have not the permission of my numerous clients to mention their names, nor is it necessary, as investigation will prove the truth of every word I have written. In presence of recorded facts Mr. Brackett's arguments and statements are worthless, and can only mislead those who put any faith in them.

I cannot now enter into all the subjects Mr. Brackett has referred to, such as prices, which vary each month and season; and I would like to have touched on the feeding of pheasant poult.

To sum up, it resolves itself into this: Has Mr. Brackett the experience sufficient to warrant him in insisting so forcibly as he does that he is a competent judge of the management and habits of pheasants? He remarks that I have much to learn and I quite agree with him, and I hope to continue to gain knowledge about these birds to my dying day. However, having gained a widely extended reputation on the other side of the ocean, I was

pressed to come over here to spread their culture in the States. I came over in '90, and in my first year penned 250 birds. Now I find among some letters I received from Mr. Brackett in '94 one asking me to let him have "a trio of Mongolian or ring-necked pheasants, as while I have but little time to devote to it, I would like to experiment with these birds and learn what I can about them." I was unable to supply his orders, and he wrote further that he had "a fine brood of ring-necked pheasants hatched from a setting of eggs presented to" him. Therefore, before '94 Mr. Brackett knew nothing whatever about these birds, and during that year his experience was gained with one sitting of eggs. As this season is only just commencing, it leaves but the year of '95 in which Mr. Brackett can have absorbed that fund of experience and knowledge that has raised him superior to any other authority, and justifies him in setting down those who have devoted all their time to the care of pheasants for many years. All my arguments are based on the opinions of world-wide authorities, with whom, however, I completely coincide. In fine, I pity those who look to such a blind leader of the blind for safe guidance; who accept as of any value the dicta of a gentleman with one year's experience, or two if we count the solitary brood in '94, and "having but little time to devote to them"; and who believe that Mr. Brackett, in spite of his position, knows more than the merest smattering about these birds, concerning which he lays down the law with such assurance after the briefest possible study of their nature and care.

VERNER DE GUISE.

MARWAH, N. J.

CHICAGO AND THE WEST.

Big Bags of Snipe.

CHICAGO, Ill., April 25.—The weather hereabouts for the last few days has been of the sort that makes a man glad he is alive, and everybody who is anybody and who has had any time at all has been out of doors enjoying the first air it had been safe to breathe for the past six months. The jacksnipe have entered cheerfully into the conspiracy to deprive the city of its working population, and the tall office buildings of Chicago have been left silent and deserted, the smoke curling idly up, from force of habit, from the thousands of chimneys overlooking streets once busy, but now abandoned. Of course a great many gentlemen do not believe in spring shooting, and could not consistently go shooting in the spring; but most of them reserve the great North American privilege of being consistent only when they feel like it, and so go shooting on the Rip Van Winkle principle of exceptional instances. I am clear in my own mind about spring shooting of ducks, but as to so disreputable a *vaurien* as the jacksnipe I sometimes almost have my doubts practical as against convictions logical. This more especially when one is left alone in an abandoned city whose inhabitants have all gone out after meat, and when one is out of meat himself.

Some very heavy bags of snipe have been made within the last few days of the snipe flight. Charlie Antoine and a friend, shooting on the famous grounds at Koutts, Ind., which I believe are the very best snipe grounds of the West, bagged 134 snipe in a couple of days. His partner, Oswald von Lengerke, a few days later bagged 115 in two days with the aid of a friend part of the time. At Mak-sawba grounds Billy Mussey and John Watson shot leisurely for a couple of days and part of a third day, and got between them 125 snipe. All these bags were along the Kankakee in Indiana, and were made about a week ago. Since then the birds have moved on north, and have spread all over the country immediately adjacent to this city. Nearly everybody who has visited the natural snipe grounds lying for thirty miles parallel with the city and about fifteen miles west, has had abundant sport. Good shooting was had by a few near Evanston, though others who went out there complain the birds were not to be found. Far to the south of Evanston, along the Sag, some of the lucky ones got in a good day, though that region is hunted to death and is very capricious. At Fox Lake, at the north side of the State, very good shooting has been going on for four days—so says the deputy warden, who has been up there (and who, by the way, reports no violations of the fish or game laws to be detectable this spring). Between the State line and a point say forty miles south of that, there are a series of warm hills and interlying sloughs of soft black bottom which have time out of mind been favorite feeding grounds of the snipe. Crystal Lake, Diamond Lake and a number of smaller bodies of water, not often heard of by Chicago sportsmen, all have feeders or adjacent streams which spread out into high-lying sloughs among the farming lands, and in this strip of country, about forty miles square, and lying to the northwest of Chicago, is some of the best shooting ground of this part of the country, though I believe this fact is not generally known to our shooting public. It is not a great marsh like the Koutts marsh, and does not consist of any one slough or series of sloughs, but the shooting is to be picked out, little by little, here and there, over a very wide piece of country, so that a shooter gets a good walk or ride during his day's sport.

A great many shooters do not understand the habits of jacksnipe, and because they often find these birds near or on wet marsh think they should always hunt for them there and nowhere else. They should stop to reflect that a snipe is like any other tramp, and will stay where he can most easily get something to eat. He eats worms, and worms like a warm black mud and not a cold, wet mud. When the marsh mud is warm and soft enough, the worm is fat and happy and accessible, but when the wet is too abundant he is absent and so is the snipe. In such cases the latter is very often out in the high corn-fields, around little soft wet places, where the worms are not drowned out. Hummocky meadows are for these obvious reasons notoriously good places for snipe, but let a cold rain fall, or too heavy a warm rain, and these meadows which were good yesterday may be deserted to-day. The easy variety of country offering feed has made this region above mentioned a sort of promised land for the jacksnipe, and they still hang about it, right upon the outskirts of Chicago, even at a day when one would think it absurd to expect any game at all so near a great city. Roughly speaking, this region is the farming country lying between Chicago and the Fox River, from Aurora on the south to the Wisconsin line on the north. There are a great many wet grounds in lower Wisconsin which look as though they should be good snipe grounds,

but which do not carry these birds, because the water is supplied by cold springs. A worm does not love ice water.

All along the short Fox River marshes good shooting has been had this week at jacksnipe. From Libertyville south, and of course further to the south, along the Illinois River, the shooting was good earlier, though now it is too late at the Illinois River points. A gentleman lately back from Wilmington, about a hundred miles down in the State, reports only a half dozen birds to his gun during a hard day's walk. It may be held pretty sure that the flight of snipe is now working steadily on up, and that a few days at the outside will see the last of it for this section.

Eddie Bingham, widely known as a soothsaying shooter in Chicago, came in from a shoot at Arlington Heights the first of this week, and first asking what was the largest bag reported to any single gun this season, calmly stated that he had killed ninety-two snipe himself, alone and unaided, with his good right arm; and all that in one day, in the territory immediately contiguous to Arlington Heights. The latter suburb being only twenty-two miles from the heart of the city, the above bag meant a phenomenal flight of jacks. I carefully investigated the record and found that the party who killed the snipe consisted of Eddie and his friend J. E. Isgrigg, also of Montgomery Ward & Co., and their friend Charlie Klehm, of Arlington Heights, who acted as guide and head huntsman. The party killed nineteen jacksnipe, and the rest were of that small and less valued variety known as gray snipe, flock snipe, sand snipe, prairie plover, or grass plover. These accommodating little birds have a habit of sitting in bunches, so that a fellow can kill about a hundred at a shot sometimes, and I learn that Eddie developed a skill at pot shoots on these insects which did indeed lay some foundation for his statements in regard to ninety-two "snipe." Charlie Klehm says that on sitting birds Eddie is a very steady shot.

There are three of the Klehm brothers who live at Arlington Heights, George, Charlie and Henry, and they are all sportsmen and all good shots, and find time enough to get out over the fields occasionally. The Klehm family own one of the largest and finest greenhouses near Chicago, and grow the American Beauty roses which fellows wish they could buy for their best girls about Christmas time. The real occupation of the boys, however, seems to be to take Eddie Bingham out hunting, or else to entertain the men who come out to investigate Eddie Bingham's hunting stories. I had never met any of the family when, with a friend from the city, I called on them the other day, the said friend having borrowed my scatter gun to kill himself a mess of sand snipe. It was only the bond of sportsmanship which made the faintest obligation thereto, yet the Klehm boys took care of us as though we were lifetime friends. Charlie went out to show where the sand snipe abounded, and to point out the places where Eddie made his best shots. Then they kept us over night, and sent us home in the morning with a box full of American Beauties, and another box full of mushrooms, and another box full of snipe, mostly of the Eddie Bingham snipe, and made us feel as though we had met friends indeed. Once in a while one strikes an instance which makes him think it is a good thing to be a member of the human family, even if he can only be a sort of foster member of the Klehm family. Therefore I may call it well that Eddie Bingham went out there and became needful of investigation, and even forgive him for forgetting to specify the kind of snipe which constitutes his specialty. Our sand snipe, mushrooms and roses we divided equitably with my bank teller, who is behind the bars among stacks of money, chained to business and probably more or less hungry; so on the whole I feel sure Eddie's naughty deed shines somewhat in this good world after all.

The Plover Flight.

I have earlier mentioned the fact that the golden plover have appeared in this latitude, and the weather has been of a sort to bring them on in numbers, but they are not yet really due at their best. The plover flight appears here at about the time the jacksnipe leave, usually about May 5, and it lasts at its height only for three or four days, during which time very heavy shooting is often offered. Charlie Klehm told me he had known of 75 to 100 birds killed in a day by three guns on the fields to the north of Arlington Heights. These birds cross this region on the line of country lying between Gilman, Summit and Arlington Heights. We saw one flock on a field near the latter place, and the grass is now about of the height it has when they usually appear. The following week should see sport at the plover. The upland plover (Bartramian sandpiper) is all over the country now, and has been for more than a week. The farming country hereabout now looks very green and beautiful.

Bass Fishing.

Bass are biting this week at McHenry, on the Fox River, and very probably at the points below, such as Elgin, St. Charles, etc., though I have no word from there. At Fox Lake several good catches of bass and pickerel are reported, but this is on the spawning beds and one does not hear the news so gladly. If anglers would put back the gravid fish it would not work so much damage, nor do I think the river fishing would be so destructive as the spawning bed fishing in the shallow water of the lakes, where it is easier to locate the bass and keep on catching the female fish, which will snap at anything disturbing them on the beds.

A Record on Swans.

On Koshkonong Lake, in Wisconsin, recently, Ezra Bingham made what is no doubt the record killing on swans for that locality or any other in this part of the country. He saw four swans light out in the lake, and paddled out after them, with two guns. He succeeded in getting up close before the birds flew, and then killed the entire four with the four shots from his two guns.

Away after Tarpon.

The sport of tarpon fishing grows in favor among Chicago anglers, and each year sees an increase in the numbers who go to Florida in the spring after this sort of fun. Among those who have made such trips this spring the best reports come up from Mr. Owen F. Aldis, who went to Punta Gorda some three weeks ago, and who has been having some fine sport. The tarpon is the favorite fish with this gentleman, who each spring makes a pilgrimage to certain favorite grounds of his own on the Florida coast.

Pewaukee Improvements.

Mr. Louis Auer, well known to many Chicagoans as a Milwaukee sportsman of push and pleasantness, is engaged with Messrs. Fred Wolber and A. S. Hathaway in the enterprise of improving the surroundings at Pewaukee Lake, one of the most popular Milwaukee pleasuring spots. They have incorporated the Pewaukee Yacht Club and have entered upon a campaign for sport, comfort and pleasure at that pretty body of water.

Chicago Big Game Features.

Chicago keeps up her record as a big game center. This week three young tigers were born in a circus here. The mother, however, did not like their looks, and accordingly began to put them out of sight. She ate up two of them entire, and was going after the third when discovered at her unnatural meal. The third baby tiger was taken away before it could be eaten, but its back was broken and it died in a little while.

1206 BOYCE BUILDING, Chicago.

ADIRONDACK DEER.

Editor Forest and Stream:

Here is a man who says in FOREST AND STREAM of April 4 that by deer jacking comparatively few deer are so killed, "meaning by comparatively few that no greater percentage of the living supply than that supply will allow without permanent decrease." In other words, he admits that jacking alone would keep the deer supply down, without the aid of other kinds of deer killers.

There are of course some things liable to happen to prevent a jacker getting a deer. He has got to exercise due care and caution. Well, rather. Still one can "hitch a team of 2-year-old oxen to a wagon wheel," with hay "to keep them quiet." He can drag a clumsy home-made scow to the lake with "noisy wiggings and howlings." He can build a smelly "smudge to keep the punkies off." He can use a home-made candle jack, "throwing a few sickly rays of light." He can haul up his gun with a jerk to be told in loud whispers, "that's a rat," or "that's but a log; don't shoot." With this scow of his he can paddle up to the deer. He can wobble the shotgun for awhile as he aims at the deer. There is no particular hurry about it. Then he can pull the trigger and have the G. D. cap snap like a .22 short. Even then "the deer looks astonished" long enough for the paddler to pick up his rifle. "He's dead, let's go ashore." This argument "breaks the spell" that I've had, thinking that jacking was dead easy. I begin to realize that it is hard—dead hard—to get a deer that way. You mustn't dance, sing, play on bass drums or other noisy instruments.

"I saw two men drive past with a boat on their wagon; next day they drove back with two deer;" they got nothing next time.

Then the two boys go jacking. Their gun misses fire; no matter. "With a snort the deer is off, * * * but there is no accounting for some things." The deer stopped, not wishing to make any bad feelings with its friends, the floaters, and, of course, got killed. What else could you expect?

The arguments of floaters and hounders of deer beat me. Will somebody please explain.

RAYMOND S. SPEARS.

BROOKLYN, N. Y.

GLOVERSVILLE, N. Y., April 22.—*Editor Forest and Stream:* One day last week in the village of Rockwood, which is about five miles west of this place, a deer was seen by some of the residents of that place running across the fields, and being in an exhausted condition (presumably from having been chased by dogs) it fell to the ground and gave birth to a pair of fawns. Game Protector Leavitt, hearing of the occurrence, notified persons having the deer in charge to put them in a barn and feed them, which was done, and it is reported that they are doing well. A doe and fawn have been seen several times within the last week or ten days almost within the city limits, and on two different occasions have been chased by hounds; but as Game Protector Lobdell, of Northville, has become interested in the case and through our local papers has notified all owners of hounds to keep them secured against pursuit of the deer, under penalty of having the dogs shot, it is hoped that the deer will escape and go back on the mountains, whence they were undoubtedly driven by some stray hound. Last week (Thursday) we received from the State hatchery at Caledonia 20,000 brown trout fry and 15,000 brook trout fry, which came in excellent condition and were properly distributed in our neighboring trout streams.

CAYADUTTA.

Charles Fenton, of Number Four, Lewis county, writing to President Davis, of the Fisheries, Game and Forest Commission, in favor of the pending bill to prohibit the hounding of deer, says: "During a residence of over sixty years in the woods and among the deer, I have never seen such a slaughter of deer by dogs as has taken place here for the past three weeks. I have had from two to four men constantly in the woods to hunt dogs. But it seems impossible to get at them. We have been able to wound only one. They are as wild as wolves. I think they are dogs which were lost during the last hounding season. It is safe to say that fully 200 deer have been slaughtered by these dogs in the past three weeks. We know that ten deer were destroyed in one day by one dog before we overtook the dog. But the dog escaped before a head could be drawn on him. I wish that I could take every legislator in the woods here now. I think I could take the party over the mangled carcasses of forty deer in a half day.

"Deer are poor and weak at this time of year, and does heavy with fawn. It is the worst thing that ever has happened here. The dogs are still at large and to-day (April 18) killed two deer to my knowledge. Snow is still deep, and the dogs can easily catch every deer they start after. If the legislators could witness this awful slaughter, I do not believe that a single one would vote to permit the hounding of deer."

The bill pending before the Senate was amended in the Assembly by reducing the hounding season to two weeks. The advocates of the abolition of hounding feel that this is the best measure that can be secured this season, because of the lateness of the session. Next year they propose to present such a strong case that the majority of the legislators cannot withstand their appeal.—*Albany Journal, April 23.*

RIFLE CALIBERS AND GAME.

MONTPELIER, Ind.—*Editor Forest and Stream:* I noticed in FOREST AND STREAM of March 17 that some one prefers a .45-90-300 and says that it is adapted only to the 300gr. ball, and that with a 405gr. ball it will throw from 5 to 10in. high at 100yds. This is one of the most unusual things I have ever seen. I have used a .45cal. rifle for five years, both North and South, for hunting large game, and have made many tests with it, and have always found that when the ball was increased in weight it would shoot low and when lessened in weight would throw high. At 100yds. I have found that in reloading shells for target practice, if one will use a round ball or a bullet in place of the ordinary ball used in breechloading rifles, either single shot or magazine, it will shoot about 10 or 12in. high at 100yds. I, for one, prefer a large caliber, using a .45-85-285 Colt's, in my opinion, the best gun for large game yet used. I have used it at long range and never was it found wanting, throwing very flat and yet very long-ranged and strong. As for shooting moose at 200yds. with a .44-40, I would prefer to take my chances at closer range or have a larger gun. I, for one, would prefer a .38-40, as it would use a 180gr. ball, which is 20grs. smaller than the .44-40, which has a 200gr. ball, and, as a matter of range, would shoot further than a .44-40. I, for one, have had enough of the .44-40, as I have not the least idea that they are the gun for large game at a greater range than 75yds. I have shot turkeys at 125yds. with them, and at one time a goose at 149 good long steps; but on both occasions I was obliged to take care and hold well up on my game and use good judgment, which is by no means the pleasantest way to shoot, as one feels as if convicted on circumstantial evidence; and when he has bagged his game must say that "my judgment was pretty good on that shot after all."

Anything smaller than that now in use by me would be a .38-59 Colt's rifle, unless I was going to find turkeys, and then I would surely use a .32-40, as in my opinion they are a very fine all-round gun.

.45-85.

The Man Behind the Gun.

OKANOGAN, Wash.—*Editor Forest and Stream:* In the discussion of what constitutes the right caliber for a hunting rifle the boys must not lose sight of the main issue, that there is more difference in the man than the rifle. I cannot account for Mr. Newberry's failing to kill the buck in the water with the .44-40, unless he shot too low and the bullet had too much water to pass through. I have used almost all kinds of rifles, from the double-barrel express, .50cal., 54drs. Curtis & Harvey diamond grain powder, to the .22cal., 6grs. black powder, and have made some remarkable shots, both alone and in company with others. In 1867 I got a Winchester .44-24, rim-fire cartridge, and with that rifle I killed thirty-two elk, seventy-two deer and eight mountain sheep, besides several bears, wolves, coyotes and grouse. Once in the presence of John Riggins, of Grangeville, Idaho, I shot five times and killed four elk; the nearest was 150yds., the furthest was 225. With my .22 I have killed three deer, one at 130yds. and the other two at 150, and in the presence of Mr. Beal, of our place, one goose, 300yds. I have now a .38-55, which I have shot at seven deer and twenty-three grouse, and have got them all. On my .22 I use a Lyman sight and on the .38 a telescope, and let me tell Dick of Connecticut that not a grouse was shot in the body.

LEW WILMOT.

Waupaca Rod and Gun Club.

WAUPACA, Wis., April 9.—*Editor Forest and Stream:* The Waupaca Rod and Gun Club is the name of a sporting club recently organized here, with a very comfortable club house situated upon the Wolf River, about twelve miles from this place, on the Wisconsin Central Railroad. Our club consists of fifteen members, and will file articles of incorporation soon. Shooting is very poor in this locality this spring, principally on account of the extreme low water. But fishing is very good, and will improve as soon as the weather gets warmer and the season advances. The game laws are very rigid, and are being looked after by the sportsmen and wardens throughout the State more closely than heretofore.

O. T. HAMBLETON, Sec'y.

Minnesota Game.

HUNTLEY, Minn., March 28.—The shooting prospects are very good around here now—better than they have been for years. There are lots of quail. Chickens are more plentiful than they have been for years before.

ELI C. MAIBERS.

Sea and River Fishing.

DAYS ON THE NIPIGON.

[Continued from page 336.]

I WAS awakened in the morning by the Indians gathering wood and building a fire and their continued chattering. Finally the old chief beat the tom-tom upon the bottom of the dishpan, and Joe Eskimo came over and rapped on the tent pole and said, "Get up; breakfast will soon be ready." This was our first night out of bed and in the woods, and the feathers of our bed were not all of one size nor all laid straight, so it took some time before we concluded we would get up, but when we did and went outside we found the weather very cold and our heavy clothing acceptable. The grass and bushes were all covered with heavy dew and everything was wet, but just over the mountain tops the glorious sun was peeping, and we sat down to a tempting feast of speckled brook trout caught the night before, with breakfast bacon on the side and a good large slapjack bread cake, together with both coffee and tea, butter and some other delicacies, while the Indians ate their breakfast off to one side by themselves. The taste of those trout, so fresh, so sweet, delicious and nicely browned, still lingers in my mouth.

Joe told us of the little stream which we had crossed the night before and said if we would go out the trail for half a mile and then take a side trail through the woods to the west we could reach the creek within a half mile and get some trout. This intelligence quickly dispelled the cold from our frames and we skipped around like a lot of frisky colts, every one getting his red, lines and flies ready for the coming feast. When everything was

in shape Young Chief led the way and we followed quickly behind him.

As we reached the bottom of land, we were making our way to the creek, when a familiar sound caught our ears, and stopping quickly, we looked about us and in a few moments discovered a pack of grouse, some on the trees or small brush, and others on the ground. I should judge there were about two dozen of them and as tame as barnyard fowls. A few took wing, but the rest remained, and we walked on. An opening of the creek was soon found, and into it we went. A few casts were made and some 8 and 10in. trout were taken. Those unhurt were returned to the water, while the injured ones were kept for lunch. As we were not after fingerlings, we divided, some going up stream and some down. I went up as far as a falls and crawled out on some wet, slippery rocks and sat down. The air was yet chilly and I did not relish a wet seat, so a piece of bark was used as a chair. A large tree was behind me and a wild pool of rushing water before me. The pool was about 20ft. in diameter, into which the water from the falls fell, and which gave it a circular motion, and in the center was a cap of froth as large as a bucket. Having for about two minutes restrained myself from making a cast, I deemed my time had come, so I made one near the froth, and slowly saw it go to the right around the pool and sink, and as it got to the far side I slowly drew it toward me across the pool, but it was without reward. This I repeated several times with the same results, and wanting to keep up my reputation, I concluded that I must discover what these beauties were taking, so I changed flies and then added a live grasshopper, but with it all I got no returns—never a strike; so I concluded that either there were no trout in the pool or else I had the wrong bait; so I put on a piece of the old-fashioned and much-despised angle worm and renewed my efforts. This time I cast just where the water fell into the pool furthest away from me. In an instant I got a strike, and a good, vigorous one at that. Not knowing anything about the character of the sides or bottom of the place, I was anxious to land the fellow, so I struck hard and fastened him, as I supposed, good and deep; but after I played him a good while and he turned upon his side, I was puzzled to know how to get him out of the water, as I was some 5 or 6ft. above it, and the landing net was with the other part of the camp and there was no way to get them up. I attempted to get down the side of the slippery rock, having set the rod in the rocks, and catching hold of the line I started down, when my feet slid from under me and I clutched wildly at the uneven surface of the boulder; but it was no good, down I went, until fortunately my feet struck a log which projected out into the pool. I did not take the bath that I expected, but was just as much surprised when I found my fish out of sight. He had recovered, shaken the hook out of his mouth, and fanned me good-by with his tail and disappeared. As my fish was gone I was now confronted with the problem: How will I get up that rock? For a while it did look as if I would have to swim for it, but finally I succeeded in getting a foothold that sent me high and dry. Reeling up my line and recovering my hook, I said, "Of course there is no use for me to fish in there again, but perhaps there may be two, and possibly the other may take hold; at any rate I shall try it." So I made another cast, and sure enough down the line goes with a jerk and a rush. I struck this time to kill, and my trout was hooked strong and deep; and after playing him to my satisfaction I landed him on top of the rock and cut his throat to make sure he would not get away. Several other casts brought little trout, and I retraced my steps down the stream.

Wanting to make sure of the character of these trout I made several experiments with them. I made long casts with the fly over all the water that I could reach, and if I did not get a strike I shortened my line; then put on either a grasshopper or angle worm, and then cast into the little pockets of water as I went along. In this way I found trout of 8, 10 and 12in. long where I would not have suspected them. Some I caught, but the most of them I played with as long as I could induce them to play. Some would follow the fly, some the worm, and others the grasshopper.

Having remained here all alone I retraced my steps down stream by wading the water and taking the other side of the stream, and by continuous casting I got a large number of strikes, all of which were small, and when taken were thrown back. In a short time I reached the others, and found them in clover—or paradise, just as you wish to term it. Fred—jovial Fred—was in the middle of the stream, and every once in a while he would utter a whoop, until I thought the Indians of that region had gotten him down and were about to scalp him. There he stood, and when I got where I could clearly see him I discovered some 50ft. down stream the cause of his trouble, as the water of the current splashed higher in places and the bright, sparkling sides of a brook trout reflected back in many colors the bright rays of the sun. Fred was in his glory. The Young Chief was on the bank stringing the trout. As Fred would swing them on his side of the creek toward him, he would land them with the net and then string them. I discovered the Judge upon the shore indulging himself by pouring a cloud of smoke around him from a marsh Toby, and around him lay a circle of dead mosquitoes, killed by its fumes. He too was having great fun; he landed several fine trout, one of which must have weighed 4lbs., and none of the rest that he had would weigh less than 2½lbs. I think he had about eight or ten all told, and was as happy as could be. If you ever saw a picture of contentment it was when you looked at him as he sat on the creek bank in the shade of the great forest trees, and almost covered up by the overhead underbrush at the end of the pool formed by the rush of water from the falls above. He remained all the time at this one spot, and said the fishing here was as good as he wanted, and he would not bother wading the stream.

I was the most unfortunate. My flies would not attract the trout. I cast long and lightly, but no matter if they fell as lightly as down, the trout would not take hold upon my line, while the rest were having bites all the time. Fred undertook to find out the cause of this, and when he had examined my flies said: "Just wait, and I will fix you a bait that will give you something to do," and he did. Taking the gullet out of one of the small trout he fixed that upon my hook and then a small fin, and in using that I did have lots of fun. A trout would grab it, and in the swiftly flowing water he would hang on while I would play him from side to side, and when h

got tired he would go and swim away; and when I would cast again another one would repeat this until I got tired and quit. Sometimes a large one would take hold, and if it was of the size to eat he would be taken in, to serve for the next two or three meals. As it approached near the noon hour we heard the signal from Joe that he was ready to move, or dinner was ready, so we gathered up the spoils of the morning's trip and found that we had about 80 lbs. of nice large brook trout, the genuine *Salvelinus fontinalis*. These we ate in the next meals because we did not make much of a catch, as will be related hereafter. The string made rather a heavy load for a man to carry to the main trail, and when we got to camp the Indians set up a yell of victory and immediately began to clean and cook them for dinner. As we had been working hard and exerting ourselves all morning we were indeed hungry, and we did not waste a single flake of the fish.

The portage from camp Alexander to the river at the head of Cameron Pool and the foot of Lake Jessie is two and one-half miles long, and the fall is 137 ft. in this distance. Lake Nipigon is 915 ft. above the level of the sea. You can form some conception of the rapids with this water coming from such a height and with the immense lake at its back.

After cleaning up the dishes we embarked in our canoes and started north through Lake Jessie to the Narrows, four miles away, and on the western shore landed, pitched our tents and prepared for the night. The Indians cut down brush for bedding, made fires and prepared the evening meal; in the meantime we got our rods, lines, etc., ready to draw in some leviathans of the deep. To our minds these waters could not contain any small fish, when the brooks yielded such large trout to our morning catch. Nor did it enter our minds that we, after our triumphs of the morning, would fail to gather in some monsters right away. But alas for human hopes, they are not always fulfilled and I am free to confess that ours were not. We fished up, we fished down, we fished across and back, with short lines, with long lines and with every kind of bait, and the best we could do was one fish apiece to the Judge and me and two to Fred, the boss fisherman, and they were small, even smaller than what we killed in the brook. The fog began to fall and the chilly atmosphere drove us to camp, to the side of the warm log fire, and after our evening devotions we slowly departed to the downy couches, prepared by the red men, where we again went through the sports of the day just passed.

J. W. HAGUE.

[TO BE CONTINUED.]

NEW ENGLAND SPRING FISHING.

BOSTON, April 27.—Monday, April 20, was observed as a holiday, Patriot's Day coming on the 19th, which was Sunday. Many of the devotees of rod and reel were out. The day was a beautiful one; not a cloud in the sky, with the sun bright and warm enough to cause the trout to take the fly almost for the first time this year. The streams and preserves were well patronized along the South Shore, with several pretty good records. Mr. Henry Thompson went down the Cape on Saturday and was back in Boston on Monday, with a record of about twenty trout, the largest nearly 2 lbs. in weight. He says they took the scarlet-ibis fairly well, but angle worms were better received. The name of the brook is carefully not mentioned. He says that some of the cranberry bog streams in the neighborhood of Sandwich are in good shape for fishing, and a permit from the owner ought to give the sportsman a good showing. Along the North Shore there was a good deal of fishing, almost for the first time this season. The brooks in Ipswich were given a good whipping, with a result of many fine trout. Charlie Bailey and Claude H. Tarbox—they are usually together—were over from Byfield early in the morning with a team, and Bull Brook gave them some good sport. Fourteen trout were set up to Claude's credit and thirteen to Charlie's. On their way back they came across a local angler who, as usual, had the big trout of the day. It must have weighed nearly 2 lbs., and its owner was very proud of it. He would not give away the spot where he took it, and the other fishermen were inclined to believe that he might have spirited it from the town reservoir, which is stocked with trout, but closed to fishing at present. Tarbox and Bailey came along with their team on the way home. The fellow had the trout on display and was inclined to strut a little. Bailey asked to see the fish, and its owner, unsuspecting, passed it up to the men in the buggy. Tarbox says, "I could not resist the temptation of hitting the horse a cut with the whip, and away we went down the hill, trout and all. The fellow looked surprised, then ran after us, calling us about all the names in the dictionary in as many minutes. Did he swear? Don't you think he didn't. We drove nearly out of hearing, and he was still gesticulating. Then we turned about and drove back. This surprised him fully as much as our driving away with his fine trout. We handed him the fish with several nice cigars, when it suddenly dawned upon him that it was all a joke. He smiled all over and then joined in the laugh with us."

The ice is out of Sebago, the Maine celebrated landlocked salmon lake. It started Sunday and the lake was clear by Tuesday—about six days later than a year ago, those waters having been all clear on April 16, 1895. In 1894 the ice went out on April 6. This opens the landlocked salmon season, and a number of Boston anglers are off. Mr. John G. Wright started Thursday, and will be the guest of Mr. Robinson at South Windham, as usual. Mr. Rodney P. Woodbury, one of the most enthusiastic anglers in the country, reached South Naples, on the Sebago, Wednesday evening. He fished Thursday, with the result of three landlocked salmon—one of 3 lbs., one of 3½ lbs. and one of 5 lbs. Up to that time Mr. Woodbury was high line of the season at Sebago, and was a very happy man. He hopes for still larger fish and a number of them.

Mr. John Fottler, Jr., well known to the FOREST AND STREAM as a salmon angler, and for his efforts in the direction of game bird distribution, has a letter dated at Gaspé, P. Q., April 11, where the salmon river of which he is one of the chief owners is located—the St. John's. The letter mentions a most remarkable snowstorm in that region. It began snowing on Good Friday and did not stop till Easter Sunday. There were 4 ft. of solid snow on the level. This snow, in addition to that already on the ground, promises to make one of the most remarkable freshets for years. To the salmon angler the

prospect for spring freshets that greatly stir up the rivers means excellent fishing. "Great freshets are invariably followed by good fishing," they say, and their reasoning generally proves true for both salmon and trout.

The ice is out of Dan Hole Pond, Ossipee, N. H. It went out Thursday, and Richard O. Harding and his party were off Friday afternoon. In the party were E. H. Wakefield, Edward Brooks and W. B. P. Weeks. Mr. A. J. Salfridge and Mr. C. P. Stevens were hindered till the next day, and Mr. Beggs was hindered by business. Mrs. E. H. Wakefield was scarcely able to undertake the trip, the weather being too cold.

At this writing the ice is about all out of Lake Auburn, Auburn, Me., and there are hundreds of anglers in the two cities, Lewiston and Auburn, anxious for the lake to be clear. A great deal has been done to stock that lake, one of the State hatcheries being located there, and excellent fishing has resulted for several years, improving each season. There is a special law for that lake, which provides that no fishing shall be done till the lake is "clear of ice." Already a dispute has arisen concerning the wording of the law. A citizen baited his hook with a smelt the other day and trolled in a part of the lake that was "clear of ice." Immediately he hooked and landed a 4 lbs. landlocked salmon, and was a good deal proud of his luck. But a fish warden came along and arrested him for illegal fishing. He was taken into court, his lawyer claiming that he had right to fish, as the lake was "clear of ice" in the part where he fished. He put in no other plea and made no denial of the facts; was a member of the local fish and game association, in fact. The court held that the meaning of the law is that the lake shall be entirely clear of ice, and fined him \$10 and costs. The fisherman appealed and gave bonds for his appearance at a higher court.

Up to to-day there is no news of the clearing of the celebrated trout lakes, Moosehead and the Rangeleys. The warm weather experienced in New York and Boston early last week evidently did not reach that more northerly region. Letters and newspaper reports mention thick ice and rather cool weather. Nothing but unseasonably warm weather, or a warm rain, can remove the ice from those lakes before May 10 at the very earliest. Boston sportsmen are anxious, but after all there is not the enthusiasm that once might be noted here. Many of the old parties have changed. Death and business changes have done their work, and old age creeps on to the angler, though perhaps not quite as rapidly as on to people that do not enjoy that recreation. A number of fishermen are waiting for telegrams that the ice is out of Moosehead and out of Rangeley, but the early parties will not be what they were a few years ago. Many, owing to the general popularity of those lakes, the coming in of railroads, the newspaper booming, etc., have sought and found more distant fishing waters, where the scream of the locomotive and the dress suit does not trouble them.

SPECIAL.

Monday, April 20, was a holiday in Massachusetts, and many of the anglers about Boston took advantage of the day to take an outing with the trout. T. A. Smith, of Everett; J. J. Gilligan, of Malden, and H. H. Palmer, of Somerville, joined forces in a visit to Lakeville and vicinity. They did not get many, but Mr. Gilligan says those they did get were all gold-plated, and therefore they seemed valuable.

Another party consisted of Winslow, Frank G. and Eben A. Thacher, W. A. Rich, R. G. Raymond and a Mr. Graves. They were down at Hyannis on the shore of Vineyard Sound. They fished both pond and stream near Hyannis and caught a few nice trout. Shooting sheldrake formed a part of the morning's pastime, and they had quite an adventure while crossing Lewis Bay in a small, leaky boat. When near the shore the boat filled and two of the Messrs. Thacher jumped overboard and pulled the frail craft to the shore just in time.

The best holiday catch that I have heard of fell to the lot of two gentlemen of Waltham, Mr. Fred. Gilbert and his friend, Mr. Barnes. They came home with forty-two trout, all taken in stream fishing. Just where it was—well, that is to be kept quiet, but they had the fish, and that is enough said.

C. S. Anthony, auditor of the Fitchburg Railroad, and F. H. Carter went down to Sandwich and fished a private stream. They could see a good many fish, but the most luscious bait they had would not induce them to rise, and consequently a rather small string was the fruits of the day's sport.

That old and reliable fishing club of Worcester, the Nessmucks, consisting of Chas. L. Allen, O. A. Benoit, C. Harry Morse and Edw. Dodge, went out on Monday, and this year proved no exception to the general good luck of the club. Forty odd trout were their catch, and they were all taken from streams not far from the city. It is a rule with the Nessmucks for the club members to do the cooking, and since they have been taking their own medicine for the last six or seven years and still live, it looks as though it was well done.

Other gentlemen who made Monday a day for fishing were William Brewster and a friend, of Boston, who went well up in the country to fish a very hard stream, and E. J. Brown and son, who fished Mr. Brown's own stream near Sandwich on the Cape with good success.

A Worcester man tells me that the big trout taken out of Lake Quinsigamond, which I mentioned in FOREST AND STREAM of last week, was speared by a game warden who said he could not tell him from a sucker. I wonder if this is one of the qualifications necessary for appointment to this office. The same gentleman informed me that brook trout of 3 to 5 lbs. are fairly plentiful in Quinsigamond, and some of this weight were taken by parties while fishing through the ice last winter.

Out at Winchester, Game Commissioner Brackett has some Mongolian pheasants under his care. Occasionally a bird who gets out of the inclosure fails to return, and Mr. Frazer, the taxidermist, of Boston, has had one sent in to mount which was killed at the lower pond in West Medford, about four miles from its home. This is the second one he has had, the first being sent in last fall. It seems too bad to shoot these stray birds, and surely they are too conspicuous in plumage to be taken for any native bird.

A Bangor gentleman who has been visiting in Boston for a few days past tells me that the ice went out of Green Lake about one week ago, and since then several landlocked salmon have been taken. This lake is situated on the Mt. Desert branch of the Maine Central R. R., only a

few miles from Bangor, and is a favorite resort for the anglers of that city. It is quite a large body of water, being nearly seven miles long, and salmon have been taken from it beyond the earliest recollection of those who live near it. The United States Government established a hatchery on the east shore about five years ago, and now the lake is used as a reserve to draw from for the purpose of stocking other waters. No fishing has been allowed through the ice since the Government built the hatchery, and as a consequence of this care the fishing has become very reliable. The salmon run to large size, 15 lbs. being not an uncommon weight. From this same gentleman I hear that the Moosehead Lake ice is rapidly softening, and he predicts clear water by the first week in May.

Excitement runs high among Massachusetts anglers just now, and everybody is waiting anxiously for that telegram which will tell them that clear water is once more visible in the lakes where they delight to lure the bulky togue and the clean-cut salmon. The ice left Ossipee Lake and Dan Hole Pond in New Hampshire on the 23d. For the former a large party from Haverhill leaves to-morrow, while for Dan Hole there are several parties already en route. H. H. Moses, of Exeter, N. H., fished there very steadily last season and expects to get away on Saturday or Monday to try his luck again. Sebago Lake, near Portland, has been open for some days, but it is of no account to Boston fishermen, as only natives of Maine, or rather residents of that State, can fish there before May 1. The new Portland club, whose formation I mentioned in FOREST AND STREAM a short time ago, are already there, but I have not yet heard how well they are doing. From reports which I have at hand the Newfound and Winnepesaukee ice will give up the ghost in a few days. An unusual number of people will visit Newfound this year owing to its solid reputation for success, which has been growing steadily for the last few seasons.

Harry M. Pierce writes me from King and Bartlett camps that he is building new cabins at Big Spencer Lake to accommodate his guests this season. This is a much-needed improvement, as Big Spencer is one of the most picturesque spots in Maine, and the single cabin which graced its shores last year was totally inadequate to provide for the many guests who wished to visit from the main camps of the preserve. Mr. Pierce has a reputation for that Yankee accomplishment, good guessing, and he asks me to record the fact that he prophesies King and Bartlett lakes will be clear of ice on May 10. I have made a mental score of his guess and we will see.

A friend asked me to read a letter the other day which he had received from a gentleman to whom he had written regarding the financial ability of a man who wished to purchase some goods of him. It was really only a note, but was a composition as showing the genuine good feeling brought about by companionship as fellow sportsmen, and rich in that good-natured chaffing which so often exists between men of this kind. It read: "Your favor of the 14th received. The only objection to Mr. — is the fact that he wears yellow whiskers. I have fished in the same boat with him for upward of sixteen years and never knew him to dodge a bill. Should he do so in this instance please charge his purchase to me." It is needless to say the goods were sent. HACKLE.

ANGLING NOTES.

Lake Trout Trolling.

THE season has arrived when anglers are preparing their tackle and arranging for surface trolling for lake trout when the law permits, on May 1. This year the ice will remain in the northern lakes nearly to the opening day for this kind of fishing, and consequently the fishing should be excellent.

A correspondent in Orwell, Vt., writes: "I wish to ask you a few questions about trolling for trout. [I assume that he must mean lake trout.] I know of a small lake where there are plenty of these fish, but they are seldom caught. I am a new hand at the business, but have caught a few trout, although I rarely get more than one or two in half a day. I have been thinking that perhaps I did not have my tackle just right. I use a gang of ten hooks and a No. 5 hard braid linen line, but use no leader. Would it be better to use a leader? I tie the sinker line on about 20 ft. from the gang. Would it be better to have it nearer to the gang? For bait I have used Lake George shiners, chubs and small perch, skinned. I have had as good luck with the perch as with any other of the baits. The water in the lake is from 80 to 100 ft. deep where we troll. I have caught several trout about July 1, using a sinker of 17 oz. Last May I tried these on top with a 4 oz. sinker and got no strikes, but put on 8 oz. and got one. Are the trout not supposed to be near the surface at that time of year? I have never caught one before 3 o'clock in the afternoon."

No one that I know has a dead open and shut patent on catching any kind of fish at a particular time, if the fish are not in a mood to bite what is offered them, and if an angler had a sure thing in the way of catching fish angling would lose something of its charm. It is the glorious uncertainty in fishing, as in litigation, that makes it so attractive for humanity. If I could always get one or two lake trout in half a day's fishing I would think I was in the biggest kind of luck, for I have trolled many a day all day long, until the boat seat seemed to have worn my vertebra up to my shoulder blades, without getting a single strike to encourage me to broil and blister in the sun. One year two friends trolled near me daily for about ten days and neither of them got a strike, while I caught a few fish every day. The gangs were all of my own making, the bait and tackle were the same, and we trolled in the same water, where we could talk from one boat to another. The next season they trolled about the same number of days without a strike, while I caught fish every day. There was no good reason why they should fail and I succeed unless it was fisherman's luck. The tackle mentioned by the correspondent is what is generally used for deep trolling in the summer months, except that I would use a leader for any and all kinds of angling. The sinker line is properly placed. As to baits, there was a time when it was thought that a Lake George gold shiner (which is the bream) was the only thing that was sure to attract lake trout. To-day the whitefish of the lake is considered the orthodox bait, while the silver chub or fall fish has come and gone between the day of the gold shiner and that of the whitefish. No matter what the bait may be, if it is not properly adjusted on the

gang, so it will whirl, and whirl as it should, it is not a good bait. A yellow perch with the skin removed from one side makes one of the very best of baits, as the trout can see it a long distance away, and that is the object of all whirling baits, to make them visible and give them the semblance of life.

Lake trout come to the surface of a lake in the spring as soon as the ice disappears, and they do so because their food is then at the surface. The natural food of the lake trout is the whitefish, of which there are many species, the round whitefish or Adirondack frost-fish perhaps being the most common in northern New York waters. When the trout are at the surface no sinker is required in trolling, and that is the only time that trout trolling can be classed as sport, in my opinion. Even when the trout are "on top" they may also be caught at the bottom or part way down to the bottom. I have known of lake trout coming on to shoals and on the shores in August for yellow perch when there was a dearth of food in deep water. Last year I saw the trout breaking all around my boat, and as far as the eye could reach on the surface of the lake, and while they were apparently feeding they would not touch my troll or the trolls of friends fishing with me. I mean that out of hundreds breaking I could get only once in a while a fish. Feeding fish would roll over my line and break near my bait, scattering schools of whitefish, and leave the bait itself severely alone. I used to think if a trout broke within reaching distance, so I could swing the bait over him before he went down so far he could not see it, he was my fish. Not so now, and the change has been brought about by an abundance of food planted in the lake, and the trout no longer have to hustle for a meal, as food is all about them, and a single whitefish impaled on a gang is lost in a myriad of other whitefish with no gang attachment.

I once read an article written to prove that lake trout would not feed before 8 A. M.—I think it was, although it may have been 8:15—and did not feed after a fixed hour in the afternoon. This conclusion was arrived at by examining the stomachs of a large number of trout, and by figuring on the time required for the gastric juices to get in their certain work in digesting the trout's food. I think the argument would have convinced most any one who had never seen or caught a lake trout that it was correct in theory, but those who have caught lake trout at all hours of the day, from daylight in the morning until after dark at night, would scarcely accept it as true in practice.

When trout are at the surface in the spring they can be heard breaking in the night when the water is still, and there is no doubt but they are feeding. A lake trout "breaks" the water by courtesy only, it is rather a roll at the surface, making a boil such as is made by the blade of an oar. In more than thirty years' experience I have seen but two lake trout jump above the surface, when dashing into a school of small fish to prey upon them.

"Opening Day."

The 16th of April is the opening day of the brook trout season in all parts of New York State except Long Island; and as it is quite the fashion to have laws passed to suit various parts of the State, or rather to regulate the fishing in different waters of the State, I have wondered and still wonder why all anglers in northern New York do not combine and ask the Legislature to open the brook trout season not earlier than May 1. Brook trout fishing in April in northern New York is a delusion and a snare. The brooks are high and the water thick, and as a rule the fish are obtained only by fishing as one would fish for suckers on the bottom. In fact, one angler who caught some suckers when fishing for trout this year told me the suckers were more game than the trout when hooked. To some people a trout is a trout, no matter how or when caught, but it is a mockery to catch ill-conditioned fish in April that give as much play as a pressed brick, and call it sport. By the time that the season should open every brook has a well-worn path beside it.

I was out in Washington county planting trout the day before the fishing season opened this year, and every brook was over its banks with muddy snow water, and they could not have afforded anyone pleasure to fish there next day. It may be said that this season was exceptionally late, but in 1894 the ice went out of Lake George on April 1, although the lake was partly open after March 19, and never before was the ice known to go out so early, as it does not usually go out until after April 15 and sometimes not until the last of April. In 1894 I fished an early brook on May 2. I caught nine trout and reeled up disgusted; not a single trout was in perfect condition and only one in fair condition. One trout 12 in. long looked as though it had been fasting on a wager and starvation was about to claim it. They were thin, slimy, poor, miserable things, with no snap in their wasted bodies.

Warm rain, insect food and a visit to the sun-kissed gravel of the rapids would have made them a joy to behold and a pleasure to catch. The season has been open four days and I have learned of but one trout being taken that came to the surface to take the bait offered. Anyone who likes that kind of fishing can have my share of it for nothing, and I will wait for any that may be left to rise to a fly. I opened the season by sending a lot of rods to the maker to be varnished and they will be back before I will have any use for them.

Albino Trout.

I think I have learned not to show surprise at anything I may hear about fishes, no matter what I may think. The reason for this is that I have heard of such a number of seemingly improbable things in connection with fish that have proved to be absolutely true, that I have found it to be good policy not to question any statement, except such as crossing the jellyfish with the shad to eliminate the bones. When I first heard that albino trout were being bred in Minnesota, I thought a good deal, but said nothing. Next it came pretty straight that Supt. Watkins, of the Minnesota Fish Commission, had thirty-nine albino brook trout fry and had reared thirteen to maturity, and from these had hatched 147 fish, forty-nine reaching maturity, and from these again had sprung 700 albino trout. I made a memorandum of this, for it pointed to the fact that albinos would breed truer than was generally supposed. A few days ago I met a gentleman fresh from St. Paul, and he told me that he had seen the albino trout. He described them as cream white rather than pure white, with the usual red spots of the brook trout on the sides, but no other spottings or markings of the brook trout. He could not recall whether there was any indica-

tion of the vermiculation of the brook trout on the back, but the fish had pink eyes and pinkish fins, and were altogether the handsomest fish he had ever seen. It is said that albinism tends to become hereditary and this case seems to prove it, but it would be of interest to know if all the spawn of the albinos produce albino fish, if not what proportion lack the coloring matter in their skins which causes albinism?

Apparently they are not as hardy as the trout with natural coloring, and it would also be of interest to know definitely about it, and to have an analysis of the water in which they are bred.

Natural Food for Fish.

The propagation of fish by artificial methods has made wonderful strides since Jacobi, the father of fishculture, first hatched trout in 1741 by artificial means in the province of Varenholz, Germany, and even since V. P. Vrasaké, a Russian, discovered the method of dry impregnation of fish eggs in 1856; but I think all who are unbiased will admit that fishculture should go hand in hand with fish-food culture to make the first a complete success in all its parts, and round out the science as a perfect whole. Say that nature impregnated but 2 per cent. of salmon eggs (as I once told in this journal from actual count of the eggs in a Canadian salmon stream) and man hatched over 95 per cent. of the same kind of eggs, taken artificially, what provision does man make for feeding the increase upon nature's methods? A farmer would not exercise good judgment should he turn 100 cows into a pasture that had food only for ten, and it is the same with a fish breeder when he turns more fish into a stream than the stream will provide food for. Furthermore, a fish breeder should know when he turns fish out whether the water has food to sustain the life of the fish just as certainly as a farmer knows when he turns his cows out whether they are turned out in grass or a ploughed field. Cows will not live on air, neither will a fish live on water.

But this is a subject too great to discuss in a single note in this column. Candor compels me to admit that Europe has devoted more time and thought, judging from results, to rearing natural food for fish than we have on this side of the Atlantic.

In fact, except Superintendent Atkins, of the U. S. Fish Commission, I know of no one who has pursued the subject systematically beyond experimental stages. For several years I was in correspondence with an Austrian fish breeder who claimed, after thirty years of experimenting in rearing natural fish food, to have accomplished such astonishing results that I have been mentally paralyzed at times when I have tried to comprehend them, and I have tried to paralyze Mr. Atkins at second hand.

François Lugrin, of Geneva, Switzerland, is a fish breeder, and for twenty-five years, while rearing and selling trout fry and yearlings for stocking ponds and streams, has investigated and studied the natural food of the fish he reared. Unlike my Austrian friend, Mr. Lugrin is not a miracle worker, as I look at it, and what he has done in the way of rearing fish food has been described in the Bulletin of the U. S. Fish Commission and the Proceedings of the American Fisheries Society; but how he does it is quite a different matter.

Mr. G. W. Parkhurst, one of the trustees of the Adirondack League Club, is now and has been for some time in Europe, and he has investigated, so far as he could, M. Lugrin's methods on the spot where they are practiced, and of his observations he writes to Mr. Boardman, the secretary of the club, and I am permitted to quote from the letters, which I will do only briefly. Mr. Parkhurst says at the outset, "M. Lugrin thinks, and so do I, that he has discovered the natural food of the fish, and that such food can be raised at the same time and place as the fish." I shall not describe the food rearing apparatus, as it has already been described in the publication mentioned: "He had his man with a net or scoop take from the water in a trench, similar to and by the side of those in which the fish were kept, samples of the food which he used. The scoop brought up a quantity of mud matted with a mossy substance which was fairly alive with squirming crevettes or tiny prawns, and screeves or crawfish. He also showed us other varieties of living food, living in similar conditions with those just named. These last he put into a large glass jar, which he then placed in a square box in the sides of which he had large magnifying glasses, through which we looked at the kicking, squirming mass. The small creatures were daphnia; the others were long and very slender worms, not unlike our angle worms. All these varieties of food he raised on the spot, and the manner of their raising and feeding is his secret, or what he calls the 'Procédes Lugrin.' That the 'procéde' is successful I have the evidence of my senses. He feeds his trout nothing but the above natural food. He has tried meat, but discarded it long ago, and said he had lost many fish by feeding meat. We saw some beautiful specimens of trout in all stages of development, from fry up to 3 lbs. He advises those who are charged with stocking ponds and streams to give preference to fingerlings from 6 months to a year old from the time of the absorption of the vesicle in order to get good results."

Mr. Parkhurst writes in a later letter: "M. Lugrin said there were numbers of other piscicultural establishments in France cultivating fish for stocking purposes, the proprietors of which had endeavored to convince the French Government that younger fish than yearlings were equally valuable for stocking ponds, and in maintenance of his belief in using yearlings only had refused to sell younger fish to the Government; and now the Government had come to his terms and was buying from him. Lugrin said nothing in relation to any attempt on the part of the French Government to purchase his secret and throw it open to the world, as intimated in the Bulletin of the U. S. Fish Commission. He says numbers of people have visited him, learned what we have learned and no more, and have gone away and experimented on their own lines."

M. Lugrin's plant has a capacity for rearing 100,000 yearling trout annually, and the food for the fish is carried from the food basins to the fish basins or troughs; but in a new plant he would transfer the fish instead, and breed a new stock of food in the basin from which the fish were taken. He rears twelve kinds of insects, and all but the daphnia are reared in running water, and even the daphnia are not reared in stagnant water. This system of rearing natural fish food is applicable not only to hatching stations where fish are reared to fingerlings or yearling

before they are turned out into wild waters, but the insect food can be reared and transplanted to the wild waters to insure an addition to the natural food supply of a pond or stream, and this, in my opinion, is quite as important as rearing a cheap and nutritious food for the fry in a hatchery.

By feeding natural, live food fish grow faster and they must be in better condition in consequence, and evidence shows that the mortality is less than when an unnatural food is forced upon the fish. A. N. CHENEY.

UNITED STATES FISH COMMISSION.

Editor Forest and Stream:

I notice that you are inclined to question the wisdom of the appointment of Commander John J. Brice as U. S. Commissioner of Fish and Fisheries by President Cleveland. Of course, you are actuated by only the best motives, but would it not be better to withhold criticism in this matter until the new Commissioner has had a chance to demonstrate his fitness for the position?

In view of the past record of the U. S. Fish Commission, it would be well enough to wait for future developments, in order that a just comparison may be made between the old and the new order of things. Heretofore, as everyone knows who has given the subject any consideration at all, the U. S. Fish Commission has been in a manner subservient to the Smithsonian Institution and U. S. National Museum. This was to be expected from the fact that the first Commissioner, Prof. Baird, was also Secretary of the Smithsonian Institution. In consequence of this arrangement the U. S. Fish Commission has never been, *de facto*, an independent bureau.

Thousands of dollars of the Commission's appropriations have been diverted from their lawful and legitimate uses and applied to the technical study of the marine invertebrates and to bathymetrical observations; which work, while deserving of the highest commendation, and of great interest to the institutions named and to science generally, should not have been paid for by the U. S. Fish Commission, except by special act of Congress or specific appropriations.

If as much time and money had been spent in studying the habits of our food fishes—their food, reproduction, migrations, etc.—we would not be so lamentably ignorant in this respect as we are at present; and if more attention had been devoted to the cultivation of the commercial food fishes and less to that of the brook trout and Atlantic salmon, which should be the work of State commissions, the interests of the whole people and the intention of the law would have been better subserved.

Even Prof. Baird, for whose memory I have the greatest respect and veneration, and whose eminent scientific attainments gave an enviable and world-wide reputation and standing to the U. S. Fish Commission, failed to give sufficient interest to the fisheries and fishculture from an economic standpoint. During the first ten years of the Commission thousands of dollars were spent in transplanting California salmon, lake trout, pike-perch and other deep or salt water species to the interior and shallow streams of the Mississippi Valley and other equally unsuitable waters. But his most unfortunate mistake was the introduction of the German carp, a perfectly useless fish, which has now become a positive nuisance, and the worst spawn eater we have. Its introduction is on a par with that of the English sparrow and Shanghai chicken—evils from which we will never fully recover. Other, if not equally unfortunate, mistakes have been made by his successors.

I was, with Commander Brice and others, a candidate for the position he now holds; and I must believe that the President for some good reason preferred him to the rest of us. Let us wait, therefore, until the new Commissioner has had an opportunity of putting into practice his own views and methods, and not endeavor to thwart or forestall him by adverse criticism in advance.

JAMES A. HENSHALL.

TAMPA, Fla., April 21.

THE BIG TROUT OF THE KOOTENAY.

A TOLEDO correspondent sends us this extract from a letter received from a friend in West Kootenay, British Columbia. It was written in August of 1895:

I tried the "katoodle bugs," and found them very deadly, so much so that I am getting some tied in Vancouver. I had three weeks' fishing on Vancouver Island on the Cowichan Lake and river, and had wonderful sport. My best day was five salmon of 15 lbs., 14 lbs., 11 lbs., 8 lbs. and 4 lbs., taken spinning from the boat, and thirty-five trout of 4 lbs. This was pretty good business, but it is absolutely nothing compared with the fishing here on the Kootenay River. I hardly like saying anything about it, as it sounds like exaggeration. I have been camping down the river lately, and have got tired of catching fish. Below the falls here the fish average between 1½ and 2½ lbs. We tried our hardest one day to get some small ones, as they are so much better eating, but we couldn't get any. Such creels as sixty trout of 90 lbs., forty-eight trout of 72 lbs., fifteen trout of 31 lbs. seem impossible, but anyone can do it here now. The fact of the matter is that they are too easy to catch at present, and the river is so broad and swift that only one side is fishable, so that it could never get overfished. I never had such sport in my life.

You ought most certainly to come here next season. From July 20 on is the best time, and the C. P. R. R. have built three neat little wooden shacks at the side of the river, and within 50 yds. or so of the railway, that would accommodate a party of three or four. You can get a good Chinaman as cook, and have a rattling nice holiday down there.

I got several big charr in the rapids from 7 lbs. upward, spinning with a small gold spoon. They fought well in the 20-knot current. I suppose you have a deal of fishing at your club. The fault of Kootenay is that you have only got to flop a string of flies into the water to catch a fish, and if it is evening fishing it is any odds you will get a 2-pounder on each fly, and then the fun begins. Many thanks for the photograph of your Castalia Club.

Maine Fish Commission.

LEROY T. CARLETON has been appointed Commissioner of Inland Fisheries and Game, succeeding Thomas H. Wentworth.

The 10-Pounder.

Editor Forest and Stream:

The name of the west Florida fish to which F. S. J. C. refers in your issue of the 18th is probably big-eyed herring of the Fishery Industries, Sec. I., page 611, pl. 218, upper figure. It is there described also as the 10-pounder. At Fort Macon it has been called the horse mackerel.

The 10-pounder has a very wide distribution and must have received many common names. No one seems to have praised its qualities as a food fish, but it is shapely and graceful, with an ample mouth and a body designed for speed, hence its charm for the angler.

The hake mentioned by F. S. J. C. is the kingfish (*Menticirrhus*), and that well-known species rejoices in a medley of common names; for example, it is the hake of the

THE 10-POUNDER OR BIG-EYED HERBING.
(From "Fisheries Industries.")

New Jersey and Delaware coasts, the tomcod in some parts of Connecticut, black mullet in the Chesapeake, sea mink in North Carolina, and whiting in some localities of the South.

The study of local names of fish is very instructive, and it is calculated to teach unscientific persons forbearance with ichthyologists, who are often obliged to change scientific names in accordance with the state of their information upon the subject. TARLETON H. BEAN.

NEW YORK, April 20.

Quannapowitt Pond.

MR. J. C. HARTSHORNE, chairman of the fish committee of the town of Wakefield, Mass., writes to the local *Citizen and Banner* of the supply of fish at hand: "Old Quannapowitt and Smith's Pond are full of fine, edible fish. It is a fair estimate, I think, which places the total weight taken last year from these Wakefield lakes at two and one-half tons, from April 1 to Nov. 1—seven months—or 5 000 lbs., which, at 10 cents per pound, yielded \$500 worth of fresh, wholesome food. By this estimate the average daily total catch was only 25 lbs.—a very small average, it would seem, when the large flotilla of boats used, and the scores of domestic and foreign anglers, who gave the fish no rest, are considered. One single instance of last season will illustrate the matter. Two men, trolling, took fifty-two pickerel weighing from 1 lb. to 4 1/2 lbs. each, and the next day they took twenty more. Fishing is free to all, and hundreds of pounds of fish are taken away by strangers from far and near. Old Quannapowitt is a splendid fish pond, and although it is impossible for alewives to run up from the sea by reason of detective fishways, yet the lake is well supplied with food for the big fish by the prolific spawn of the German carp and of other fish which are natural to the waters. The carp is a vegetable eater and his appetite is insatiable. The *fin de siècle* carp, if he has good luck with the monstrous mass of weeds in this lake, and does not meet an untimely death, should weigh, according to all previous records, at least 25 lbs. May we all be there and catch one."

Trout in Central New York.

ITHACA, N. Y., April 26.—The brook trout season opened with some streams in good condition and others high and turbulent. Many local anglers were early a-stream and some fairly good creels were reported. Dr. Lockerby scored a total of twenty-one trout. Messrs. Wilson and Post twenty. Several smaller scores were made. However, better results may be looked for shortly. Reports from Cortland way state that the streams in that locality are rapidly assuming their natural conditions and will be in finese shape in a fortnight. Cortland, McClean, Hurford Mills, Slaterville, Speedsville and Homer are all located in close proximity to good trout streams.

Prof. —, of Cornell University, has discovered sixty distinct varieties of fish in Cayuga Lake.

The shutting down of the Esty tannery and the consequent cessation from the constant pollution of local waters is expected to improve very much the fishing at this extremity of Cayuga Lake. One indication of this improvement was furnished on the 24th, when Milo Wally and a Mr. Bradley in two hours' fishing caught 120 perch. Black bass fishing was unusually good last season, and for the reason above stated is expected to be still better the coming one. The crop of bullheads, suckers and carp is said to be enormous. A 22 lb. carp poses as the record heavy fish taken in local waters.

Fyke net fishermen are said to be very much in evidence at various points along this end of Cayuga Lake.

M. CHILL.

Salmon Fishing Lease.

THE New Brunswick authorities are to lease the fishing privilege of the Crown Lands on the Nepisquit from Tide Head to the Eleven Mile Tree, which is several miles above Pabineau Falls. It will be offered at public auction at the Crown Land office, Fredericton, on Wednesday, May 6; upset price, \$100. There are in this leasehold about three and one-half miles of salmon water above Pabineau Falls—both banks of the river being included in the lease. Below the falls there are about two and one-half miles on the right bank from the Indian Reserve downward and about one and one-quarter miles on the left bank. Now that first-class salmon fishing privileges are so hard to obtain this ought to be eagerly sought after. The reason why it is in the market is on account of the bankruptcy of the former lessee, a St. Louis, Mo., gentleman.

American Fisheries Society.

BATTERY PARK AQUARIUM, New York, April 25.—The twenty-fifth annual meeting of the American Fisheries Society will be held in the Aquarium, Battery Park, New York, May 20 and 21. Members of State Fish Commissions are invited to read reports of their work during the past year, showing the methods employed and the results accomplished, as a basis for general discussion. Titles of papers to be presented should be sent promptly.

TARLETON H. BEAN, Recording Secretary.

That Out of Sorts Feeling.

PROVIDENCE, April 22.—One day last week, feeling out of sorts with myself and everybody else, I took my canoe and paddled four or five miles up the Ten Mile River. It

was a beautiful, warm afternoon, and the songs of the birds and the smells of the growing things in the damp earth and the sight of a mink and several muskrats soon put me to rights. C.

Fish and Fry for New York Waters.

STATE OF NEW YORK FISHERIES, GAME AND FOREST COMMISSION, Albany, N. Y., April 20, 1896.—All persons who desire to obtain fish or fish fry from the Fisheries, Game and Forest Commission, for planting in public waters of the State, for under no circumstances are fish furnished by the State to be planted in private waters, should apply to the Secretary of the Commission at the office in Albany for blanks to be filled out for this purpose, at the same time stating the kind or kinds of fish desired. Three different blanks are furnished: Blanks for trout fry, blanks for fish fry (including all fish furnished by the Commission other than trout and black bass), and blanks for black bass. A separate blank must be filled for each kind of fish applied for. All applications for trout fry (including brook, brown, rainbow and lake trout), whitefish, ciscoes, Adirondack frost fish and smelts, must be filed in the office at Albany on or before Feb. 1, each year.

Applications for tom cods must be filed on or before Jan. 1. Pike-perch and mascalonge applications may be filed as late as April 1, and applications for black bass as late as May 1.

Most of the species of the salmon family reared by the State spawn in the fall and are hatched the following spring, and are ready for delivery from March to May, depending upon the season and the situation of the hatchery. The spring spawning fishes, like the mascalonge, pike-perch and black bass, may be delivered in May and June. Applicants for fish are notified in advance of the shipments of fish assigned to them. Applications for fish received after the dates fixed by the Commission for that purpose must be rejected for that year, as assignments once made are final. The clerical work of filing applications and assigning millions of fish is so great that it cannot be reviewed for re-assignment before distribution begins.

By law, no fish, fish fry or spawn, other than trout, salmon and frost fish, can be planted in the waters of the Adirondack region, and the penalty for violating the law is \$500. The law further provides that no trout of any kind or landlocked salmon shall be taken from any waters of the State for stocking a private pond or stream.

A. N. CHENEY, State Fishculturst.

Salmon Fishing for Sale.

FREEHOLD, on the best fishing waters of the southwest Mirimichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York city.—Adv.

The Kennel.

FIXTURES.

BENCH SHOWS.

May 6 to 9.—Pacific Kennel Club's fifth annual show. H. W. Orear, Sec'y.
May 9.—Hamilton Kennel Club's one-day show, Hamilton, Ont. W. J. Tulk, Sec'y.
May 13 to 16.—Seattle Kennel Club's third annual show. C. B. Yandell, Sec'y.
May 20 to 23.—Alameda County Sportsmen's Association's show Oakland, Cal. H. W. Newton, Sec'y.
Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.
Sept. 22 to 25.—Milwaukee Kennel and Pet Stock Association's second annual show. W. W. Welch, Sec'y.
Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. W. W. Welch, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Sept. 9.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.
Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.
Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials P. T. Madison, Sec'y.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. C. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

Mr. J. B. Stoddard has settled at Newton, N. C., for a while and will give his dogs some training there. He is undecided in respect to a trip to the chicken country this season.

THE BOSTON SHOW.

As Patriots' Day this year was on Monday, April 20, the management selected that day for the commencement of the New England Kennel Club's bench show, and a delightful spring day it was—too fine, probably, for the best interests of the dog show, as the people seemed to favor the outdoor amusements, and patronized them most liberally. The baseball season also opened on that day, and the national outdoor game and bicycling and other amusements diverted many thousands of people, of whom many otherwise might have attended the dog show.

Wednesday and Thursday were unfavorable days, being more or less stormy; but whether the weather was pleasant or otherwise the attendance was light—far too light considering the quality of the show, the prestige of the club and the support which such a large city can give, and previous years have demonstrated that it contains. There were thus indications that there would be a deficit in the receipts—a regrettable possibility.

The management made special effort to make the event a pleasant one for the exhibitors over and above the business considerations of the competition or the honors of it. The club gave an enjoyable lunch to the exhibitors, judges and newspaper men on Monday, and were most solicitous in the interest of the exhibitors and courteous at all times. Messrs. Brooks, Hammond, Curtis and Loveland were busy in attending to the show affairs. Mr. David E. Loveland, the efficient secretary, was superintendent.

Mr. James Mortimer judged bloodhounds, mastiffs, St. Bernards, Great Danes, Newfoundlands, Chesapeake Bay dogs, bull dogs, pugs, whippets, schipperkes and miscellaneous. He also judged fox terriers in the absence of Mr. H. W. Smith, of Worcester, who had consented to judge them. The latter was mistaken in the date of opening, he supposing it was on Tuesday, as heretofore.

Mr. Chas. H. Mason judged deerhounds, greyhounds, Russian wolfhounds, spaniels, Bassets, dachshunde, poodles, collies, sheep dogs and terriers other than fox and Boston.

Mr. Alex. L. Goode, Boston, judged Boston terriers.

The veteran, Mr. John Davidson, judged foxhounds, pointers, setters and beagles.

The catalogue contained 717 entries, but of these upward of 100 were duplicates, and there were a number of absentees, so that there were but few more than 500 benched. Of these the larger was from the Boston terriers, which numbered 74, fox terriers 71, spaniels 69, pointers 43, beagles 48, Scottish terriers 39, Irish terriers 38, poodles 25, foxhounds 37, bull dogs 26 and dachshunde 17.

As to the judging, there were about the average number of grumbles, which goes to show that the personal interest in personal affairs still obtains. As this show is near the close of the season, nearly all the dogs have been already repeatedly noticed.

BLOODHOUNDS were six in number, most of them dogs now well known. Kaween had no competition in the challenge class, and there were just dogs enough to take the three prizes in the open dog class, of which the well-known Simon de Sudbury won first, Alchemist second. There were two bitches. She, winner of first at New York, was first.

MASTIFFS numbered nine. Emperor William and Lady Diana took the challenge honors without competition. In open dogs, Black Prince Brampton took first; second and third going to two ordinary specimens, Rob L. and Gen. Gomez. In bitches, Vere took first, and Nellie Bly, a light-bodied bitch, took second.

ST. BERNARDS were good in quality. Nearly all the winners are well known. In rough-coated dogs, challenge class, Altoneer was first, Eboracum second. Lady Livingstone had no competition in open bitches. Leed's Barry captured first, Jim Blaine, Jr., second and Sir Hugh third. The two well-known smooth-coated dogs, Alton, Jr., and Melrose King, competed in the challenge class, the former winning.

GREAT DANES numbered six, and were only a fair lot.

DEERHOUNDS were mostly shown by Mr. John E. Thayer, he owning six of the seven shown.

GREYHOUNDS.—In the challenge class the well-known Southern Rhymes had a walkover. Bestwood Daisy beat Southern Belle in the class for bitches. In open dogs, first went to Davy Garrick; second went to Electric, poor in head; third to Toronto, a coarse dog. In bitches, first was won by Lucy Grey, an ordinary bitch, and second was withheld, the remaining bitch being of the weedy kind.

FOXHOUNDS were a superior lot, and good in number. Songster, well known, was first in the open class for English dogs and bitches. Friendly and Winsome, also well known, were second and third. Bowsprit, without competition, took the honors in the challenge class, American hounds, dogs and bitches. In the open dog class, American hounds, first went to Duke, inferior in many respects to Dock, third, a dog of exceptional soundness and symmetry. Rock, second, is also a sound hound, plain in head, ears too short. Piper, the reserve, also is a very good dog, though somewhat short in neck and ear. Veracity, a tidily built bitch, won first in the open bitch class; second going to Primrose, a fairly good bitch, and third to Flirt, too light in bone, though snugly built, and well built in body. In a good puppy class, Veracity, already mentioned, won first; Scott, flat in ribs, short in ear and plain in head, took second.

CHESAPEAKE BAY DOGS were two in number, Deacon and Daisy, each without competition.

POINTERS were of mixed quality, good and poor. Molton Banner was alone in challenge class, heavy-weight dogs. In the heavy-weight open class, Twinkle, quite a good pointer, not in first-rate coat, well shaped head, body and neck, took first, second going to Glendower, the latter carrying some lumber. Third went to Speedaway, a trifle coarse, though still a fairly good dog. The reserve, Duke, is coarse in head, otherwise fair. In heavy-weight bitches Ightfield Diana was easily first. She is a large bitch, soundly built, excellent in symmetry and pointer character. Alice Leslie, second, is light in barrel and lacking in symmetry. Urada, third, is flat in skull, does not stand squarely in front, yet is quite a good bitch. In challenge dogs under 55 lbs. Ridgeview Comet had no competitor. The corresponding bitch class contained three of superior merit. Devonshire Pearl took first, Miss Rumor the reserve, while Wild Lily took vhc., though what meaning vhc. has in a challenge class it is difficult to explain, since a dog in a challenge class is supposed to have long since been above the vhc.

stage. In open dogs under 55lbs., Shotaway, head short, too much cheek, well built otherwise, took first; the Philadelphia wifher, Prince's Boy, taking second, and third going to Ned, short, light muzzle, good body, legs and feet. In bitches under 50lbs. there were six competitors. Cyrene, short and light in muzzle, head not clean cut, took first. Princess Trilby, light and narrow in head and light in build, took second. Kent's Kate won third; she is weak in head, being short and light in muzzle. Furlough Jim, a bit leggy, won first in puppies, dogs; second going to Dick of Lynn, light in bone and shallow in chest. In bitch puppies, first went to a pretty, symmetrical bitch, very small for her age. In the field trial class Ightfield Diana won with something to spare over Duke of Kent II.

ENGLISH SETTERS were light in numbers. Sheldon was first in the challenge class, it containing four, Glendon being reserve, The Earl vhc. Cactus was the remaining dog. Maid Marion had no competition in the challenge bitch class. Albert's Ranger, first in the open dog class, might be better sprung in ribs. Count F. was second, and Black Rock, showing better than at Philadelphia, was third. In bitches, Flower of Sulphur, a pretty, tidily-built bitch, though a little light in body, took first. Albert's Moll, strongly built, plain in head, took second; third going to Pet Bondhu, light in bone and plain in head. In the puppy class, The Duke, light in head, took first; Trim A., too broad in back and ribs, second.

IRISH SETTERS showed a light entry. Kildare was alone in the challenge class for dogs, Queen Vic and Norna, first and reserve in the bitch class. In open dogs, Chief Red Cloud and Kildare Malt were first and second, as at Philadelphia; third going to Garnet, plain in head, yet a fairly good dog. In bitches the winners were Pride's Beauty, Lady Finglas and Duchess, winning in the order mentioned, the two former exchanging the positions awarded at Philadelphia. There were no entries in the puppy classes.

GORDON SETTERS numbered nineteen of fair quality. Highland Yola, well known, had a walkover in the challenge bitch class. In the open dog class, Wanoosnac Prince, straight in stifle, head not clean cut, neck too short, good black and tan color, won first; second going to King B., an upstanding dog, better in head than the winner, though not so good in coat, and he might be better in short ribs. Highland Boy won third. In bitches, first went to Highland Leola, light in thigh, short in head, deficient in short ribs, an ordinary bitch. Nellie B., second, is not well shaped in head, might be better in shoulders, tan somewhat smudgy, good legs and feet. Esta Morse, third, is light in bone. Angenette, reserve, was heavy in whelp, is light in muzzle, yet in many respects is better than first.

SPANIELS were excellent in number and quality, though most of the winners are already well known. There was some discontent over some of the awards, as might naturally be expected where the competition was so excellent, so keen and so close. The Mepal Kennels carried off the honors for the best kennel of four, while the Swiss Mountain Kennels were most successful, winning first in black cocker class for dogs with Brother S.; first with Gabrielle in the open bitch class of fourteen competitors; first with Goldie S. in the open dog class for red or liver, their Middy receiving reserve to Woodland Prince in the challenge class for black or liver dogs. Andrew Laidlaw made a good showing with his Ken, winning second in dogs; Miss Phyllis, second in bitches; Fauntleroy, first in dogs any other color than red, liver or black, and first with Woodland Trilby in the corresponding class for bitches.

IRISH WATER SPANIELS had one entry, Mike C., a fairly good dog.

BEAGLES were noticeably good in quality and the classes were well filled. Ringleader won in the challenge class for dogs, Lonely in that for bitches, neither having competition. Harker, first in open dogs, carries lumber, is a bit short in neck and heavy in shoulders. Pulboro Crafty, second, was too fat, a good beagle, showing age. Raffler, third, is a good all-round beagle. Phantom, reserve, is long and light in barrel. In bitches, Nellie R., short in leather and soft in coat, a fair beagle, took first; second going to Lufra, light in bone and thick in shoulders; third to Mag R., one of the best beagles in the class, better in coat, bone and form than the winner. In dogs, 13in. and under, Laick's Boy took first, Peterkin second, a fairly good beagle; and Sultan third, light in bone. In the bitch class, under 13in., Frances won first, Marjory second, Actress taking third, all fairly good beagles. In the puppy class, dogs, Robino II., a good sound puppy, excellent legs and feet, body well shaped, and excellent beagle character, won over Bradford, the latter also a trimly built, good puppy.

DACHSHUNDE were uncommonly good in number and quality. What's Wanted won the Venlo Challenge Trophy for the best dog or bitch. The entries numbered seventeen.

COLLIES were twenty-nine in number. Woodlawn Park Kennels captured all the firsts save one and won the kennel prize for the best four. Woodmansterne Trefoil was without competition in the challenge class. In quality the class was an average lot.

POODLES were in good number, there being twenty-five in the different classes. Emperor was first in open dogs, and Mr. H. H. Hunnewell, Jr., captured nearly all the other prizes.

BULL DOGS were quite good in quality, though in the puppy class, three entries, the prizes were withheld.

FOX TERRIERS were good in quality, most of the winners being well known. Thornfield Nora distinguished herself by taking first in her class.

LIST OF AWARDS.

BLOODHOUNDS.—CHALLENGE—Bitches: 1st, C. A. Lougest's Kaween. MASTIFFS.—Dogs: 1st, J. L. Winchell's Black Prince Brampton; 2d and 3d, C. A. Lougest's Rob L. and Gen. Gomez. Bitches: 1st and 2d, C. A. Lougest's Vere and Nellie Bly.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st, E. H. Moore's Altoner. R. Belle Isle Kennels' Eboracum. Bitches: 1st, E. H. Moore's Lady Livingstone. OPEN—Dogs: 1st, Swiss Mountain Kennels' Leed's Barry; 2d and R. I. W. Comey's Jim Blaine, Jr., and Dictator; 3d, Seaforth Kennels' Sir Hugh. Bitches: 1st, Belle Isle Kennels' Artilia; 2d, I. W. Comey's Lady Elizabeth. R. Sara C. Dudley's Peg Woffington.—PUPPIES—Dogs: 1st, Mrs. A. L. Churchill's Nobleman; 2d, withheld. Bitches: 1st, withheld; 2d, P. F. McGuinness's Flossie May.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, E. H. Moore's Alton, Jr. R. Seaforth Kennels' Melrose King. OPEN—Dogs: 1st, E. A. Perry's Couch; 2d, C. A. Lougest's Nicobe; 3d, E. H. Moore's Lord Belmont. Bitches: 1st, G. W. Patterson's Eulalie II.; 2d, C. A. Lougest's Notre Dame; 3d, G. B. Noyes's Lady Brighton. PUPPIES—Bitches: 1st, W. Miller's Prince Columbus. ROUGH AND SMOOTH-COATED—NOVICE—Dogs: 1st, I. W. Comey's Gov. Russell; 2d, Seaforth Kennels' Sir Hugh. Bitches: 1st, E. A. Perry's Gipsy.

GREAT DANES.—Dogs: 1st, C. E. Ward's Marcus Antonio; 2d, H. L. Robinson's Beau Brummel; 3d, F. W. White's Tom Reed. Bitches: 1st, L. Blackstone's Elsa; 2d, H. Kammerer's Empress.

DEERHOUNDS.—CHALLENGE—Dogs: 1st, J. E. Thayer's Hillside Warrior. Bitches: 1st, J. E. Thayer's Hillside Romola. OPEN—Dogs: 1st, 2d and 3d, J. E. Thayer's Hillside McGregor, Hillside Highlander and Stag. Bitches: 1st, J. E. Thayer's Hillside Ruth; 2d, P. Sterling's Psyche.

GREYHOUNDS.—CHALLENGE—Dogs: 1st, Dr. J. H. Lyke's Southern Rhymes. Bitches: 1st, Dr. J. H. Lyke's Bestwood Daisy; R. Weeks & Turner's Southern Belle. OPEN—Dogs: 1st, M. Barrymore's Davy Garrick; 2d and 3d, Weeks & Turner's Electric and Toronto. Bitches: 1st, Week's & Turner's Lucy Grey; 2d, withheld.

RUSSIAN WOLFHOUSES.—CHALLENGE—Bitches: 1st, Weeks & Turner's Svodka. OPEN—Dogs: 1st, G. M. Keasbey's Optimist; 2d, Weeks & Turner's Prince Galetzin. Bitches: 1st and 2d, Weeks & Turner's Lady Deitz and Queen Catherine. Puppies: 1st, Week's & Turner's Col. Rigo.

FOXHOUSES.—ENGLISH—1st, W. A. Bragdon's Songster; 2d, B. F. Lewis, Jr.'s, Friendly; 3d, J. Gibney's Winsome. AMERICAN—CHALLENGE—1st, Muskunder Club's Bowsprit. OPEN—Dogs: 1st, N. Q. Pope's Duke; 2d, G. E. Carr's Rock; 3d and R. W. A. Bragdon's Dock and Piper. Bitches: 1st, J. Gibbs's Veracity; 2d, Dr. A. C. Heffinger's Primrose; 3d, N. Q. Pope's Flirt; R. Muskunder Club's Skylark.—PUPPIES: 1st, J. Gibbs's Veracity; 2d, W. A. Bragdon's Scott; R. Dr. A. C. Heffinger's Plunder. NOVICE—1st, W. A. Bragdon's Dock; 2d, G. E. Carr's York III; R. B. P. Williamson's Walker's Louis.—FIELD TRIAL CLASS—1st, N. Q. Pope's Clay; 2d, G. E. Carr's Rock; R. W. A. Bragdon's Dock.

CHESAPEAKE BAY DOGS.—Dogs: 1st, Oak Grove Kennels' Deacon. Bitches: 1st, Oak Grove Kennels' Daisy.

POINTERS.—CHALLENGE—55LBS. AND OVER—Dogs: 1st, Glen Rock Kennels' Molton Banner. OPEN—55LBS. AND OVER—Dogs: 1st, Glen Rock Kennels' Twinkle; 2d, G. E. Armstrong's Glendower; 3d, G. W. Lovell's Speedway. R. S. Frost's Duke. Bitches (50lbs. and over): 1st, G. J. Gould's Ightfield Diana; 2d, R. M. Beale's Alice Leslie; 3d, F. J. Lenoir's Urada. R. J. Abbott's Mollie Abbott.—CHALLENGE—Dogs (under 55lbs.): 1st, G. J. Gould's Ridgeview Comet. Bitches (under 50lbs.): 1st and R. G. J. Gould's Devonshire Pearl and Miss Rumor. OPEN—Dogs (under 55lbs.): 1st, G. W. Lovell's Shotaway; 2d, W. G. Brokaw's Prince's Boy; 3d, Glen Rock Kennels' Ned. R. A. H. Houghton's Houghton's Bang. Bitches (under 50lbs.): 1st, G. W. Lovell's Cyrene; 2d, Tallman & Davenport's Princess Trilby; 3d, F. J. Lenoir's Kent's Kate. R. N. L. Chaffin's Daisy.—PUPPIES—Dogs: 1st, G. J. Gould's Furlough Jim; 2d, G. W. Lovell's Dick of Lynn. R. T. K. Lothrop, Jr.'s, Dusty Bob. Bitches: 1st, G. J. Gould's Furlough Madge; 2d, Tallman & Davenport's Princess Trilby. R. T. K. Lothrop, Jr.'s, Little Hel.—NOVICE—Dogs: 1st, G. W. Lovell's Shotaway; 2d, T. K. Lothrop, Jr.'s, Pastime. R. Glen Rock Kennels' Ned. Bitches: 1st, Tallman & Davenport's Princess Trilby; 2d, W. G. Brokaw's Fanny Davenport. R. A. Lavery's Lady Bang II.—FIELD TRIAL CLASS—1st, G. J. Gould's Ightfield Diana; 2d, Glen Rock Kennels' Duke of Kent II.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Warwick Kennels' Sheldon. R. E. F. Burke's Glendon. Bitches: 1st, J. Brett's Maid Marion. OPEN—Dogs: 1st, Warwick Kennels' Albert's Ranger; 2d, Oak Grove Kennels' Count F.; 3d, P. P. Lewis's Black Rock. R. J. Gavin's Roger's Don Juan. Bitches: 1st, H. A. Belcher's Pet Bondhu; 2d, E. E. Haines's Fad Bondhu; 3d, J. Abbott's Mollie Abbott. R. J. Brett's Flower of Sulphur.—PUPPIES—Dogs: 1st, Victoria Kennels' The Duke; 2d, G. W. Lovell's Trim A.—NOVICE—1st, H. A. Belcher's Pet Bondhu; 2d, P. P. Lewis's Black Rock. R. E. E. Haines's Fad Bondhu.—FIELD TRIAL CLASS—1st, H. L. Keyes's Montell.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Oak Grove Kennels' Kildare. Bitches: 1st and R. Oak Grove Kennels' Queen Vic and Norna. OPEN—Dogs: 1st, Claremont Kennels' Chief Red Cloud; 2d, Mrs. W. Sutton's Kildare Malt; 3d, G. A. Tenney's Garnet. R. H. G. Braithwaite's Kistal. Bitches: 1st, Claremont Kennels' Bride's Beauty; 2d, A. Von Catzhausen's Lady Finglas; 3d, Oak Grove Kennels' Duchess. R. Muckross Kennels' Rosamond.

GORDON SETTERS.—CHALLENGE—Bitches: 1st, C. C. Hendee's Highland Yola. OPEN—Dogs: 1st, N. P. Hamlen's Wanoosnac Prince; 2d, C. T. Brownell's King B.; 3d, C. C. Hendee's Highland Boy. R. Dr. H. Wheeler's Royal Shot. Bitches: 1st, C. C. Hendee's Highland Leola; 2d and R. C. T. Brownell's Nellie B. and Angenette; 3d, H. A. Morse's Esta Morse.—PUPPIES—Dogs: 1st, G. F. Roberts's Ned Potts. Bitches: 1st, M. W. Murray's Fanny II.; 2d, C. T. Brownell's Nellie B.

SPANIELS.—ALL BREEDS OVER 25LBS.—CHALLENGE—Dogs: 1st, Miss A. Green's Dennis. R. R. P. Keasbey's Coleshill Rufus. Bitches: 1st, T. A. Carson's Marguerite. R. R. P. Keasbey's The Shrew.

FIELD SPANIELS.—BLACK, OVER 25LBS.—Dogs: 1st and 2d, Miss A. Green's Fashion and Wardleworth Sweep. R. R. P. Keasbey's Black Knight. Bitches: 1st, Miss A. Green's Meg.—ANY OTHER COLOR, OVER 25LBS.—Dogs: Prizes withheld. Bitches: 1st, R. P. Keasbey's Moonlight Hele.

COCKER SPANIELS.—BLACK OR LIVER, NOT OVER 25LBS.—Dogs: 1st, J. E. Green's Woodland Prince. R. Swiss Mountain Kennels' Middy. Bitches: 1st and R. Mepal Kennels' Baby Ruth and Woodland Princess.—ANY OTHER COLOR—CHALLENGE—1st, G. L. Tarr's Blinn. R. G. Greer's Bambo.—OPEN—BLACK—Dogs (not over 25lbs.): 1st, Swiss Mountain Kennels' Brother S.; 2d, A. Laidlaw's Ken; 3d, Mepal Kennels' Commodore. R. J. P. Willey's Paro. Bitches: 1st, Swiss Mountain Kennels' Gabrielle; 2d, A. Laidlaw's Miss Phyllis; 3d, J. P. Willey's Hunter Stanley. R. G. Greer's Woodland Belle.—RED OR LIVER—Dogs (not over 25lbs.): 1st, Swiss Mountain Kennels' Goldie S.; 2d, Belle Isle Kennels' Cherry-Boy III. R. A. Laidlaw's Red Robin II. Bitches: 1st, Belle Isle Kennels' Gaiety Girl; 2d, J. P. Willey's Diana Miskel. R. Swiss Mountain Kennels' Zuleika.—ANY OTHER COLOR—Dogs: 1st, A. Laidlaw's Fauntleroy; 2d, W. H. Walton's Walton's Bang. Bitches: 1st, A. Laidlaw's Woodland Trilby; 2d, F. H. Topham's Beut. R. G. Greer's Cigarette.

IRISH WATER SPANIELS.—1st, T. A. Carson's Mike C.

SPANIEL PUPPIES.—ANY VARIETY—Dogs: 1st, Miss Anabel Green's Darkest Africa; 2d, A. Laidlaw's Ken. R. J. P. Willey's Little Don. Bitches: 1st, G. Greer's Woodland Duchess; 2d, A. Laidlaw's Winsome. R. F. H. Topham's Fantasie.

BEAGLES.—CHALLENGE—Dogs: 1st, J. Lewis's Ringleader. Bitches: 1st, J. Lewis's Lonely. OPEN—Dogs (over 13in.): 1st, G. F. Reed's Harker; 2d, Waidingfield Beagle Kennels' Pulboro Crafty; 3d, J. Lewis's Raffler. R. A. D. Fiske's Phantom. Bitches: 1st and 3d, G. F. Reed's Nell R. and Mag R.; 2d, Waidingfield Beagle Kennels' Lufra. R. S. Smith's Silverina. Dogs (13in. and under): 1st, Mrs. Nellie A. Smith's Laick's Boy; 2d, C. F. Haven's Peterkin; 3d, J. T. Flannely's Sultan. Bitches: 1st, Glenwood Beagle Kennels' Francis; 2d, Waidingfield Beagle Kennels' Marjory; 3d, M. S. Tyson's Actress. R. G. F. Reed's Sniffer.—PUPPIES—Dogs: 1st, J. Lewis's Robino II.; 2d, A. D. Fiske's Bradford. Bitches: 1st, G. F. Reed's Kate R.; 2d, Pulley & Cooper's Gladness.—NOVICE—Dogs: 1st, J. Lewis's Robino II.; 2d, A. D. Fiske's Phantom. Bitches: 1st, Waidingfield Beagle Kennels' Marjory; 2d, G. F. Reed's Mag R.—FIELD TRIAL CLASS—1st, G. F. Reed's Nell R.; 2d, A. D. Fiske's Phantom. R. A. Washonk Beagle Kennels' Zeno.

DACHSHUNDE.—CHALLENGE—1st and R. Windrush Kennels' Janet and Jay. OPEN—Dogs: 1st, Windrush Kennels' Jade; 2d, J. Lythgoe's Jantyr. R. A. Froembling's Blitz. Bitches: 1st, A. M. Lythgoe's Lucetia; 2d, Windrush Kennels' Princetts. R. G. Schirmer's Flossie.—PUPPIES—Dogs: 1st, Windrush Kennels' Jade; 2d, J. Lythgoe's Tekkel. R. Venlo Farm Kennels' Venlo Buck. Bitches: 1st and 2d, J. Lythgoe's Victoria and Mollie. R. Venlo Farm Kennels' Venlo Squaw.

BASSET HOUNDS.—1st and 2d, M. S. Tyson's Turk and Drayman.

COLLIES.—CHALLENGE—Dogs: 1st, Woodlawn Park Kennels' Woodmansterne Trefoil. OPEN—Dogs: 1st and 3d, Woodlawn Park Kennels' Hadfield Don and Hempstead Chief; 2d, Windleblough Kennels' Kris Kringle. R. G. A. Fletcher's Otterburn Fox. Bitches: 1st and 2d, Woodlawn Park Kennels' Scottish Gem and Stratford Queen; 3d, J. McDonald's Hereford Dinkie II.—PUPPIES—Dogs: 1st, W. E. Cox's Alan; 2d, C. Y. Ford's Otterburn Harvard. Bitches: 1st, Woodlawn Park Kennels' Stratford Queen.

OLD ENGLISH SHEEP DOGS.—EON-TAILS—Dogs: 1st, Woodlawn Park Kennels' Boxer III. Bitches: 1st, Woodlawn Park Kennels' May-oress of Newport; 2d, J. Caswell's Trilby.

POODLES.—CHALLENGE—1st, W. Hitchcock's Lion. R. H. H. Hunnewell, Jr.'s, Diamond.—OPEN—CORDED—Prizes withheld.—CURLY—BLACK—Dogs: 1st, H. G. Trevor's Emperor; 2d, F. Brooks's Sam. R. Mrs. W. C. Gulliver's Perot.—OTHER THAN BLACK—Dogs: 1st, 2d and R. H. H. Hunnewell, Jr.'s, Hill Hurst Punch, Hill Hurst Ploppion and Jocko. Bitches: 1st, 2d and R. H. H. Hunnewell, Jr.'s, Hill Hurst Fluff, Hill Hurst Gyp and Hill Hurst Yvette.—PUPPIES—Dogs: 1st, Mrs. Wm. Gulliver's Perot; 2d and R. H. H. Hunnewell, Jr.'s, Hill Hurst Ploppion and Hill Hurst Ponto. Bitches: 1st, 2d and R. H. H. Hunnewell, Jr.'s, Hill Hurst Yvette, Hill Hurst Hilda and Hill Hurst Coquette.

BULL DOGS.—CHALLENGE—Dogs: 1st, Woodlawn Park Kennels' King Orry. Bitches: 1st, Woodlawn Park Kennels' Hacknell Gipsy. OPEN—Dogs (45lbs. and over): 1st, Woodlawn Park Kennels' Facey Rumford; 2d, T. Morse's Rustic Sultan; 3d, C. G. Hopton's L'Ambsador. R. Phelps & Davis's Irish. Bitches (40lbs. and over): 1st, Woodlawn Park Kennels' Miss Mischief; 2d, J. Coles's Rosette; 3d, T. Morse's Rustic Dowager. Dogs (under 45lbs.): 1st, C. A. J. Smith's

Heathen; 2d, H. E. Converse's Heathen II.; 3d, T. Morse's Rustic Crib. R. T. W. Lawson's Puts. Bitches (under 40lbs.): 1st, C. G. Hopton's Lady Monarch; 2d, J. H. Day's Daisy Belle; 3d, T. Morse's Rustic Anthia. Puppies: Prizes withheld.

BULL TERRIERS.—CHALLENGE—Dogs: 1st, R. S. Huidekoper's Cardona. R. H. F. Church's Little Flyer. Bitches: 1st, F. F. Dole's Starlight. OPEN—Dogs (30lbs. and over): 1st, T. S. Bellin's Tommy Tickle; 2d, C. Wolfe's Trafalgar; 3d, F. C. Haskell's Mike. R. F. F. Dole's Masterpiece. Bitches (30lbs. and over): 1st, F. F. Dole's Greenhill Empress; 2d, H. F. Church's Young Miss Giddy. Dogs (under 30lbs.): F. K. Stevens's Ben Brush; 2d, Miss E. R. Catlin's Monte. Bitches (under 30lbs.): 1st and 2d, H. F. Church's Sabatia and Camden Duchess; 3d and R. T. Holden's Ruby and Bonnie Belle. Puppies: 1st, T. S. Bellin's Tommy Tickle; 2d, withheld.

BOSTON TERRIERS.—CHALLENGE—1st, M. C. D. Borden's Topsy. R. Mrs. B. Pope's Spider. OPEN—Dogs (25lbs. and not over 35lbs.): 1st, T. C. Hollander's Peter; 2d, Glorcy Kennels' The Bauble; 3d, Bayonne Kennels' Bingo. R. T. Plant's Tom Sayers. Bitches: 1st, Duchess Kennels' Tot; 2d, F. H. Topham's Daisy; 3d, F. L. Cheney's Clytie. R. Bayonne Kennels' Bess. Dogs (under 25lbs. and not under 15lbs.): 1st, M. C. D. Borden's Commissioner II.; 2d, W. G. Kendall's Squanto; 3d, Bayonne Kennels' Dandy. R. J. E. Kenyon's Punch. Bitches: 1st, Muckross Kennels' Pansy; 2d, J. F. Holt's Puss; 3d, W. H. Carroll's Fanny. R. R. C. Dean's Fun.—PUPPIES—Dogs: 1st, W. G. Kendall's His Nibs; 2d, Phelps & Davis's Consul; 3d, Duchess Kennels' Rascal. Bitches: 1st, R. J. Clark's Dot; 2d, G. A. Rawson's Vixen. R. S. H. Blodgett's Lorna.—NOVICE—Dogs: 1st, W. G. Kendall's Squanto; 2d and R. Bayonne Kennels' Baron and Pilot. Bitches: 1st, Duchess Kennels' Tot; 2d, J. F. Holt's Puss. R. R. J. Clark's Dot.

FOX TERRIERS.—SMOOTH COATED—CHALLENGE—Dogs: 1st, L. & W. Rutherford's Warren Safeguard. Bitches: 1st, L. & W. Rutherford's Warren Capture. OPEN—Dogs: 1st, B. S. Horne's Prisoner; 2d, W. Wheeler's Beverly Victor; 3d and R. J. E. Thayer's Hillside Domino and Hillside Dominican. Bitches: 1st and 2d, L. & W. Rutherford's Warren Sentence and Warren Dusky; 3d, B. S. Horne's Dudley Saunter. R. C. Rathbone's Beverwyck Daze.—PUPPIES—Dogs: 1st, L. & W. Rutherford's Warren Crack; 2d, J. E. Thayer's Hillside Skedaddle. R. C. Rathbone's Beverwyck Patricia. Bitches: 1st, L. & W. Rutherford's Warren Sterling; 2d, Weeks & Turner's Springhill Daisy.—NOVICE—Dogs: 1st, W. Wheeler's Beverly Victor; 2d, A. Brierley's Holster. R. L. & W. Rutherford's Warren Crack. Bitches: 1st, L. & W. Rutherford's Warren Sterling; 2d, G. M. Carnochan's Primula. R. Weeks & Turner's Springhill Daisy.—WIRE-HAIRED—CHALLENGE—Dogs: 1st and R. H. H. Hunnewell, Jr.'s, Cribbage and Oakleigh Bruiser. OPEN—Dogs: 1st and 2d, Toon & Thomas's Endcliffe Nailer and Endcliffe Sensation; 3d, G. W. H. Ritchie's Mr. Great Snap. R. G. M. Carnochan's Brittle Bright. Bitches: 1st, G. M. Carnochan's Thornfield Nora; 2d and 3d, H. H. Hunnewell, Jr.'s, Bushey Bramble and Hill Hurst Brunette.—PUPPIES—Dogs: 1st, Toon & Thomas's Endcliffe Teaser; 2d, G. W. H. Ritchie's Mr. Pig. R. Weeks & Turner's Springhill Proof. Bitches: 1st, G. W. H. Ritchie's Mistress Lucy; 2d, Weeks & Turner's Trilzie.—NOVICE—Dogs: 1st, Toon & Thomas's Endcliffe Nailer; 2d, H. H. Hunnewell, Jr.'s, Hill Hurst Trick. R. G. W. H. Ritchie's Mr. Pig. Bitches: 1st, G. M. Carnochan's Thornfield Nora; 2d, G. W. H. Ritchie's Mistress Lucy. R. Rochelle Kennels' Brittle Bee.

AMERICAN FOX TERRIER CLUB'S HOME BRED STAKES FOR 1896.—1st, L. & W. Rutherford's Warren Crack.

DANDIE DINMONT TERRIERS.—Dogs: 1st, W. Parsons's Rhoderick Dhu. Bitches: 1st, Toon & Thomas's Lothian Judy.

REDLINGTON TERRIERS.—CHALLENGE—1st, C. W. Lougest's Mount Vernon Tibbie. OPEN—Dogs: 1st, C. W. Lougest's Mount Vernon Wonder; 2d, Mr. James's Hard Tack. Bitches: 1st, Toon & Thomas's Endcliffe Hornet; 2d, C. W. Lougest's Mount Vernon Rose.

SCOTTISH TERRIERS.—CHALLENGE—Dogs: 1st and R. Brooks & Ames's Tiree and Rhudunan. Bitches: 1st and 2d, Brooks & Ames's Cublean and Wankie Diana. OPEN—Dogs: 1st and 3d, Newcastle Kennels' Bellingham Bailiff and Ashley Crack; 2d and R. Brooks & Ames's Kilree II. and Wankie Caddie. Bitches: 1st, 2d and R. Brooks & Ames's Wankie Nettle, Miss Ted and Vorda; 3d, Newcastle Kennels' Bellingham Brandy.—AMERICAN-BRED—Dogs: 1st, 2d and R. Brooks & Ames's Kilree II., Wankie Tam and Wankie Caddie; 3d, G. S. Hatch's Kilrain. Bitches: 1st, 2d and 3d, Brooks & Ames's Wankie Nettle, Wankie Ted and Wankie Diana. R. Newcastle Kennels' Bellingham Brandy. Puppies: 1st, Brooks & Ames's Wankie Nettle; 2d and R. Newcastle Kennels' Bellingham Brandy and Bellingham Bustle.

IRISH TERRIERS.—CHALLENGE—Dogs: 1st, Toon & Thomas's Briggs's Best. R. Hopkinson & Dole's Merle Grady. Bitches: 1st, Toon & Thomas's Gessella III. OPEN—Dogs: 1st, O. Ames's Tory; 2d and 3d, Toon & Thomas's Briggs's Worst and Red Hot. Bitches: 1st and 2d, O. Ames's Brat and Bridget; 3d and R. Toon & Thomas's Brickdust and Endcliffe Fussle.—AMERICAN-BRED—Dogs: 1st and 3d, Toon & Thomas's Briggs's Best and Briggs's Worst; 2d, O. W. Donner's Milton Pagan. R. S. D. Parker's Tubb. Bitches: 1st, Toon & Thomas's Gessella III.; 2d, T. T. Doggett's Mavourneen; 3d, S. A. Parker's Irish Lass.—PUPPIES—Dogs: 1st, Spilling Bros.' Brian Boromke; 2d, O. W. Donner's Milton Pagan. R. P. H. Lombard's Tim the Tinker. Bitches: 1st, O. Ames's Bridget; 2d, Toon & Thomas's Endcliffe Baby. R. C. Uggla's Icy.—NOVICE—Dogs: 1st, O. Ames's Tory; 2d, Toon & Thomas's Red Hot. R. Spilling Bros. Brian Boromke. Bitches: 1st, 2d and R. O. Ames's Brat, Bridget and Banshee.

BLACK AND TAN TERRIERS.—CHALLENGE—Dogs: 1st, S. D. Ripley's Glenwood. Bitches: 1st, S. D. Ripley's Surry Gemen.—OPEN—Dogs: 1st, Rochelle Kennels' Rochelle Tatrap; 2d, D. S. Gillies's Darkey. Bitches: E. Boney's Queen of Spades.

SKYE TERRIERS.—1st, Hampstead Farm's Wheel of Fortune.

YORKSHIRE TERRIERS.—Dogs: 1st, L. Cullen's Prince; 2d, J. Carroll's Santa Claus. R. G. M. Smith's Dede. Bitches: 1st, Augusta Prestcott's Judy; 2d, Mrs. C. S. Tuck's Butsey.

TOY TERRIERS.—Dogs: 1st, Miss E. Goode's Johnnie; 2d, E. E. Ford's Tuffie. Bitches: 1st, Parson & Sullivan's Nellie.

PUGS.—Dogs: 1st, C. Y. Ford's Otterburn Treasure. Bitches: 1st, J. Lewis's Pearl H.; 2d, C. Y. Ford's Otterburn Sapphire.

KING CHARLES SPANIELS.—Dogs: 1st, C. S. Tuck's Tuff; 2d, C. H. Palmer's King Jet. Bitches: 1st, Glynn Bros.' Belle; 2d and R. Mrs. W. Borrowdale's Dora and Rosy.

BLLENHEIM SPANIELS.—Dogs: 1st, O. P. Knoblauch's Bob Osborne.

PRINCE CHARLES AND RUBY SPANIELS.—Dogs: 1st, Miss B. Pierce's Rudolph; 2d, Miss M. H. Catlin's Snob; R. Miss S. E. Tuck's Hector.

JAPANESE SPANIELS.—Dogs: 1st, K. E. Silsbee's Ito; 2d, Mrs. J. R. Monroe's Oota. Bitches: 1st, Mrs. J. R. Monroe's Tomo; 2d, R. Russell's Daisy Bell.

ITALIAN GREYHOUNDS.—Dogs: 1st, J. Lewis's Spring.

SCHIPPERKES.—Dogs: 1st, Toon & Thomas's Blazer; 2d and R. F. W. Connolly's Skipper and Cople Sophia.

WHIPPETS.—Dogs: 1st, Toon & Thomas's Endcliffe Flyaway. Bitches: 1st, S. Hunt's Hunt's Mary; 2d, J. A. Boutelle's Wellington Black Bird.

MISCELLANEOUS.—25LBS. AND OVER—Prizes withheld.—UNDER 25LBS.—Equal 1st, G. A. Van Zandt's Blink Bonny and A. Laidlaw's Black Prince.

SPECIAL PRIZE LIST.

Best four bloodhounds, C. A. Lougest's. Best bloodhound, Bruno. Best four mastiffs, O. A. Lougest's. Best four St. Bernards, I. M. Cowey's. Best four deerhounds, John E. Thayer's. Best four greyhounds, Weeks & Turner's. Best four Russian wolfhounds, Weeks & Turner's. Best four foxhounds, W. A. Bragdon's. Best four pointers, George J. Gould's. Best four Irish setters, Oak Grove Kennels'. Best four spaniels, Mepal Kennels'. Best American-bred sporting spaniel, Baby Ruth. Best brace black field spaniel puppies, Darkest Africa and Zulu. Best brace cockers under one year, Ken and Winscma. Best brace field spaniels, Fashion and Meg. Best brace cockers, Baby Ruth and Woodland Princess. Best four beagles, Joe Lewis's. Best field trial beagle bitch, Nell R. Best beagle dog, Ringleader. Best dachshund, What's Wanted. Best dachshund puppy owned by exhibitor, Venlo Buck. Best four collies, Woodlawn Park Kennels'. Best four poodles, H. H. Hunnewell, Jr.'s. Best four bull dogs, Woodlawn Park Kennels'. Best American-bred dog, L'Ambsador; best American-bred bitch, Daisy Belle. Best four bull terriers, F. F. Dole's. Best four Boston terriers, Duchess Kennels'. Boston Terrier Club's trophy, won by Pansy. Boston Terrier Club's challenge trophy, 1st, Tot; 2d, Puss; 3d, The Bauble. Best four fox terriers, L. & W. Rutherford's. Grand challenge cup won by Warren Sentence. Best four Scottish terriers, Brook & Ames's. Best American-bred dog and bitch, Kilree II. and Wankie Nettle. Best four Irish terriers, O. Ames's.

Up to 6 o'clock on Wednesday night, April 23, in consequence of the muzzling regulations now in force in London, about 11,399 dogs had been received at the Dogs' Home at Battersea. Of these 9,450 were destroyed, the new crematory being run to its full capacity, day and a large part of the night. The number taken each day is gradually decreasing, and of those taken but a small part are really well bred.

Brunswick Fur Club.

A SPECIAL meeting of the Brunswick Fur Club was held at Mechanics Hall, Boston, Mass., on April 20, President Heffenger in the chair.

The report of the committee on the revision of the constitution and by-laws was accepted. Messrs. W. C. Duff, Boston, Mass., and Roger D. Williams, Lexington, Ky., were elected to active membership.

It was announced that Dr. A. C. Heffenger would give a hunting medal, Mr. W. A. Bragdon a trailing medal, Mr. A. B. F. Kinney an endurance medal, and Mr. O. F. Joslin a speed medal, to be competed for at the coming field trials of the club. Adjourned.

BRADFORD S. TURPIN, Sec'y.

POINTS AND FLUSHES.

The advisory committee of the A. K. C., at its recent secret meeting, suspended Mr. George Bell for one year. The protest against Furlough Mike on the ground of under weight, made by R. B. Morgan at St. Louis, was sustained. Dr. Bigelow and B. Alton Smith were suspended. Such are the rumors floating about concerning the recent doings of said committee, the profound wisdom displayed by the A. K. C. in enjoining secrecy being so self-evident that comment is not needed.

The conditions of the tenth annual Derby of the Manitoba Field Trials Club are announced in our columns this week. The club's trials are held in a fine chicken country and afford the best of competition. Full information can be obtained of the club's secretary, Mr. John Wootton, Manitou, Man.

Mr. John W. Munson, of St. Louis, was an interested visitor at the Boston show. He has been in Boston several months in the interest of the Munson Stencil Machine Co., and though deep in business interests his affection for the dogs lives on.

The muzzling order passed by the Massachusetts Cattle Commissioners expired on April 23, it having been in force three months. The order was the outcome of a rabies scare, and applied to Newton, Cambridge, Watertown, Belmont, Somerville, Arlington, Medford, Malden, Everett, Chelsea and Revere.

Mr. W. B. Stafford, secretary of the U. S. F. T. C., announces in our business columns the club's trials for 1896. The Derby entries of the fall meeting close on May 15. Pointers and setters will run separately. Mr. Stafford says: "Field trials are taking on a better outlook, and if the papers will do their part I think some of the old-time enthusiasm will return. You will notice that the U. S. Club is the only one that now runs separate stakes."

Nachting.

THAT yachting, even in the most costly craft, is not all fun, is shown by the experience of the cutter *Aïssa*, which was threatened by Riflian pirates while becalmed off the coast of Morocco, only escaping through a fortunate breeze. The motives of the Riflians, it is supposed, were purely patriotic, the protection of Algerian designers and-builders from foreign competition.

A rumor was set afloat last week that is probably untrue, but which we hope may prove to have a foundation in fact. It is said that W. K. Vanderbilt, the principal owner of Defender, and who is understood to have recently bought the interests of Messrs. Morgan and Iselin, met with Mr. McCalmont, owner of the steam yacht Girola and part owner of Valkyrie III., on his recent cruise in the Mediterranean, and these gentlemen arranged to test the two yachts by a series of races. It would be most valuable from a technical standpoint, and also most useful in allaying the mutual imitation caused by last year's contest, if a thorough trial of the two yachts could be made for suitable stakes. Valkyrie III., under Lord Dunraven's management, was certainly not seen at her best, and it is also most probable that Defender is capable of further improvement. Before any more money is thrown away in contests over the America's Cup, it is in every way desirable that the yachts already built should be tested to the full limit of their capabilities—a thing which has not been done with either the second or third Valkyrie.

THERE was buried last week at New York one of the last of a type of American shipbuilders which, it is said to say, has been for some years extinct. These men, who flourished nearly half a century ago, asked no protection against any foreign competitor for the good reason that they had made competition impossible by the excellence of their work. The American warship, the American clipper and the American yacht were alike recognized in 1850 as the finest of their respective classes, unequalled in the world.

The American shipbuilder of to-day is built on different lines; failing entirely in the effort to outbuild his foreign competitor in a particular class of vessel, he comes before Congress with a bill designed to "protect" him from the legitimate consequences of his own ignorance, cupidity and lack of foresight. There is, to us, in this whole matter something cowardly in the extreme, and, we believe, thoroughly un-American.

The American steam yacht, which the Payne bill is designed to protect by the exclusion of all foreign-built craft, is a discredit to the enterprise and mechanical skill of the nation and a laughing stock outside of a small circle immediately interested in construction. The largest and most pretentious, the Nourmahal, might readily be mistaken for a Reading collier if her yacht signals were not flying; the famous Atalanta was a complete failure, in spite of her heavy cost, as she came from her builder's yard, requiring immediate alteration and a lengthening of 15ft. to fit her for use. The homely Electra, slow at best, was still slower when first built, her original engines being soon replaced by new ones, and finding their proper place in a tugboat. Of the newer yachts, Wadena had to be rebuilt after trial, with 15ft. added amidships to correct the original faults of design; the Comanche, though comfortably fitted below, has the bows and topsides of a British tramp steamer. As to the less pretentious wooden yachts, such as Narod and the new Anita, they are beneath comparison.

Two of the worst examples are the new and costly yachts *Columbia* and *Thespia*, steel craft built in 1894 and 1895. The former is an absolute failure; in spite of the puffery of a certain clique of American papers, it is generally known that in appearance she is second to some of the New York tugs, that her internal space has been sacrificed to engines and boilers that fail to drive her at the guaranteed speed, and that she is practically useless to her owner.

There are some facts about this particular yacht which are most interesting. In the first place her owner asked for bids from British designers and builders, who declined to guarantee the desired speed.

The order was then placed with American builders, the newspapers were filled for months with the promised achievements of this new marine wonder, and after all she failed on her speed trial, not making the guaranteed 18 miles. Her owner, having no use for her, has chartered her for short intervals whenever it has been possible, and one of the charterers, Mr. Eugene Higgins, is also one of the four Americans against whom the Payne bill is especially aimed. If American steam yachts are indeed the finest and fastest afloat, why is it that Mr. Higgins, after actual trial of the Columbia, placed his order with a yacht designer on the Cyle instead of a building firm on the Delaware?

The Columbia was supposed to be of the latest design, a modern yacht in all respects. After her failure her builders, when again called upon, did not venture on any new departure, but sought safety in the duplication of the design of a yacht a dozen years old; the Stranger, one of the best of American steam yachts in her time. The result, as shown in the new Thespia, nominally completed last year, is a failure as complete and thorough as is in the Columbia.

FROM the standpoint of protection to American industry, the American steam yacht is a fraud of the worst kind, in that the design, if it can be called such, is usually made by some German or Scandinavian ship draftsman employed at low wages in an American shipyard. The builders of American steam yachts have not yet learned that the designing of such craft, each involving an expenditure of several hundred thousand dollars, is a specialty, not to be rashly undertaken by men entirely unfamiliar with it, but demanding long training and practice that is deserving of a fitting remuneration. While money is lavished on the decorator, the furnisher and the maker of ice and electric light plants, neither builder nor owner are willing to pay a fair fee to a competent designer.

THE present condition of affairs in steam yachting is precisely paralleled by that existing fifteen years since in sailing yachting. Had the efforts then made by a few fanatics to exclude all British yachts been successful, such American craft as *Gracie*, *Fanny* and *Arrow* would still be sailing about as representatives of American yachting, and the designing of yachts would still have been in the hands of the old builders instead of such men as A. Cary Smith, Herreshoff and the late Mr. Burgess. All the wonderful progress of recent years has come from just such fair and wholesome competition with foreign builders as the Payne bill is designed to stop. With British yachts excluded, such craft as *Columbia* and *Thespia* may sail about our home waters undisturbed in their claims of superiority to everything afloat, and those who continue to patronize steam yachting will have to put up with what the builders choose to give them.

Looking alike to the interests of American yachting, American designers and American shipyards, we hope that the attempt to apply to yachts that system of exclusion which has driven the American flag from the high seas, filled every American port with foreign tramp steamers, and produced just two ocean steamers of American build in forty years, may fail; and that the present condition of affairs may continue. We have no doubt whatever that as soon as both owners and builders learn to appreciate the true facts of the case, and the designer is recognized and recompensed as he should be, a type of American steam yacht will be produced that will be in every way fitted to stand beside the modern American sailing yacht.

New Yachts.

For two years past the firm of Samuel Ayers & Son, at one time located on Water street, New York, and later at Bay Ridge, where the cutters Liris and Kathleen and many steam craft were built, have been established on the Hudson River at Nyack, where a large three-story shop has been built, with a basin and railways, giving excellent facilities for building and repair work. This spring the firm is busy with several peculiar craft, two steamers and one electric launch, all designed by C. D. Mosher, of New York. The larger steamer, for E. B. Warren, of Lake George, is of 80ft. length and intended for high speed, the hull being of very light construction, but to carry powerful engines. The yacht is narrow, with a flat bottom and long straight sides; the bottom rising in a concave curve over the wheel. The stern is of peculiar form, of the hourglass type, a difficult piece of construction in wood. The planking is double, the frames being of 1x1½ in. steel angles, with channel bar keelsons and diagonal steel strapping, sheer strakes, etc. The planking is fastened with ¾ in. Tobin bronze screw bolts with iron nuts, thousands of these specially made bolts being required. The yacht, which is building in a special shed erected for her, is now planked up.

On the main floor of the large shop is the electric launch, 75ft. long, for John Jacob Astor, a handsomely modeled craft, with much more curve to the sides than the other yacht, but with a similar stern. In this yacht the frames are of oak, part steamed and part sawn, while the planking is also double. The frame throughout is an excellent piece of work. One of several peculiar features is the use of two centerboards, working in the usual way through the middle of the oak keel, the yacht being fitted with sails in case of a failure of the electric power. She will be the largest electric craft yet built in this country.

The third yacht is just under way, a 45ft. high speed launch for

George B. Magoun, of New York. The construction, model and engines will be of novel design.

On the second floor of the large shop there is now ready a fleet of five new 15-footers for the Tappan Zee Y. C., all from one design by C. E. Davis, of New York. They are of the skipjack type, wide, roomy boats, the beam carried well aft. They have good overhangs at each end, large cockpits, and promise to be very handy and shipshape craft. All are rigged alike with boom and gaff mainsail and jib, and steel plate centerboards. The price is about \$185 each.

On the same floor are two new 20-footers designed by W. P. Stephens, both bulb-fins. The first one, Bogle, for C. J. Stevens, which has been ready for launching for a couple of weeks, is 30ft. over all, 10ft. l.w.l., 6ft. 3in. beam and 11in. draft of hull, the Tobin bronze fin with its 550lbs. of lead making a total draft of 5ft. The yacht is lightly but very strongly framed, with part sawn hackmatack frames and part steamed oak, a very light bent frame of steamed oak being spaced in between each pair of regular frames to take the fastenings of the double skin. The inner skin is of white cedar, the outer of clear, comb-grained yellow pine in single lengths. The planksheer is of oak and the deck of $\frac{3}{4}$ in. white pine in narrow strips, the seams payed with Jeffrey's marine glue. There are the usual two watertight bulkheads of diagonal construction and a watertight cockpit about 4in. above the water, the fin housing in a trunk, the bed-plates running well fore and aft and forming a keelson. The keel itself is in one piece from stemhead to transom. The frame is strengthened at the chainplates and runners and below deck at the partners by Tobin bronze straps.

The rig is the same as in Scarecrow and Ethelwynn, a leg o' mutton mainsail and a jib, the latter set on a short bowsprit, about 3ft. outboard. The spars are hollow, made by the Outing Goods Co., and the rigging is of phosphor bronze wire rope.

The second boat, now in frame, is very similar in model and rig, but with 1ft. more overhang forward and 3in. more beam; she will carry the same rig, but without the bowsprit, the jib being tacked to the stemhead. The same arrangement of fin and bulb will be used. Both yachts show up well above water, with their long ends and well-lined sheer; and the fore and aft lines are all very easy.

Koko, Bulb-Fin Racing Yacht.

DESIGNED BY W. P. STEPHENS.

The bulb-fin Kokoi was designed in 1894 for W. G. MacKendrick, Esq., of Toronto, by W. P. Stephens, yachting editor of the *FOREST AND STREAM*. Mr. MacKendrick, who is an old canoe sailor and member of the A. C. A., was desirous of exchanging the sliding seat of a canoe for something rather more stable and capable of carrying a passenger or two of an afternoon and at the same time fit for racing, so a bulb-fin boat for the existing 21ft. class of the Lake Yacht Racing Association was determined on. Through an unforeseen change in

his business after the boat was commenced, he has had very little leisure during the racing season for the past two years, and has never been able to give the necessary time to sailing and keeping the boat in the best of racing form. She has, however, proved fast and made an excellent record about Toronto and Hamilton. The yacht was named after the small boy who was such a general favorite at the A. C. A. meet of 1890, at Jessup's Neck.

The dimensions are:	
Length, stemhead to taffrail.....	28ft. 6in.
Overhang, bow.....	4ft.
stern.....	5ft.
Length, l.w.l.....	19ft. 6in.
Beam, extreme.....	6ft. 6in.
l.w.l.....	5ft. 11in.
Draft, hull.....	11in.
with fin.....	5ft.
Freeboard, bow.....	2ft. 2in.
lowest.....	1ft. 2in.
stern.....	1ft. 6in.
Displacement, cubic feet.....	40.24
fresh water.....	2,607lbs.
Coefficient of curve of areas.....	.55
Area of midship section.....	3.76sq. ft.
lateral plane, hull.....	12.50sq. ft.
scag.....	1.72sq. ft.
fin.....	25.63sq. ft.
	39.84sq. ft.
Fin, ⁵ / ₁₆ in. steel.....	240lbs.
Bulb, lead.....	830lbs.
C. B. from stem at l.w.l.....	10.55ft.
C. L. R. from stem at l.w.l.....	11.15ft.
C. E. from stem at l.w.l.....	10.00ft.

The bulb as originally designed was to weigh but 775lbs, being of the same form as that of the Scarecrow, but this weight was increased in building to about 880. The table of offsets is to the outside of hull, the thickness of deck and planking being deducted after the lines are run in on the floor. The waterlines are spaced 3in. apart, the stations ft. 7 1/2in., and the buttock lines 9 3/4in. A special scale is given to reduce the design to the 15ft. class.

KOKO—TABLE OF OFFSETS.

SULTANA.

YACHTING NEWS NOTES.

The opening of the 15ft. racing about New York will be under the auspices of the Huguenot Y. C., which will hold a special race on May 16 off New Rochelle. Entries may be sent to Vice-Com. C. M. Connolly, 757 Broadway, New York.

Intrepid, steam yacht, Lloyd Phoenix, passed Cape Espartel, near Tangier, on April 21, bound East.

Triton, schr., E. C. Clark, arrived at Norfolk on April 23, after a winter cruise in the West Indies.

The Ohio Y. C. will hold two open regattas off Turtle Island, one in June and one in September.

The Fox Lake, Ill., Y. C. will hold its races on June 9, June 24, July 4, July 21, Aug. 4 and Aug. 8. The sailing courses of the club have been much improved by dredging and the removal of weeds.

An unknown yacht was reported wrecked on April 23 between Galveston and Tampico, in the Gulf of Mexico. No details of the supposed disaster are given.

Viking, schr., has been sold by Col. J. M. Loomis, of Chicago, to Com. James D. Smith, of New York, owner of the famous sloop Pocahontas. Though an old boat of cruising model and build, Viking has been noted under Col. Loomis's ownership not only for her comfortable and luxurious fittings, but as one of the best kept up yachts in the fleet, both in the discipline of the crew and the condition of the vessel. Her fierce dragon figurehead is well known in all the Sound ports. Pocahontas is now offered for sale.

Comanche, steam yacht, has returned to New York from the West Indies.

Eidolon, cutter, has been sold by Mr. Crosby to Com. C. E. Diefenthaler, Riverside Y. C. The yacht has been re-rigged, her mast being moved forward.

Chas. Olmstead, designer of Trilby, 15-footer, has in hand a 15-footer for several members of the Riverside Y. C. and a 20-footer for Henry Crosby, Jr., of the same club.

Suit has been brought in the Supreme Court of New York against Col. S. V. R. Cruger, owner of Allegra, steam yacht, by the relatives of James Gill, the fireman of the yacht, one of the two men who were killed by the bursting of a tube on Sept. 13, 1893. The damages claimed are \$5,000, the statutory limit at that time.

The Stamford Y. C. will have three new 15-footers under its flag this season, one being a Herreshoff boat owned by F. M. Hoyt, owner of Norota, cutter. Another is for H. K. McHarg, and a third, designed and built by Seabury & Co., will be named Seghaya by her owner, Vice-Com. H. C. Smith.

The new 15-footers built by L. D. Huntington, designer of Question, are Hope, for Adrian Iselin, Jr.; Willada, for W. G. Newman, and one for Sherman Hoyt, owner of the sloop Ola. The latter boat will be of a different model from the others, with a round bilge.

The Pewaukee Lake Y. C., of Wisconsin, has just been incorporated by Messrs. A. L. Hathaway, Louis Aner, Fredk. Wolber and other Milwaukee yachtsmen.

Navorch, steamer, has been sold by Com. Merrill, South Boston Y. C., to Com. J. M. Richmond, Rhode Island Y. C.

Scionda, steam yacht, has been chartered by A. W. Booth to J. J. Phelps.

A number of New York pilot boats, displaced by the recent substitution of steam craft, are now advertised for sale, and one, the Ezra Nye, has been purchased by F. Manin Crawford, of the New York Y. C., who will use her as a yacht in the Mediterranean. She is now fitting out at Poillon's.

Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Red Dragon C. C.

THE Red Dragon C. C., of Philadelphia, is looking forward to a lively season, though the interest will center in the new 15-footers and not in canoe racing. The sailing canoe no longer figures in the club's races and but one race is scheduled. The fixtures are as follows: Saturday, June 6, 15ft. class; Saturday, June 20, annual spring regatta; Saturday, July 11, 15ft. class; Saturday, Sept. 5, club trophy, canoe sailing race; Saturday, Sept. 12, 15ft. class and annual fall regatta.

Between July 4 and 18 the club will hold an invitation race for 15-footers and mosquito boats. The club has some five canoe yaws in commission and a class will be made for them in their races. Some six or seven new 15-footers will be ready for the first race. A spring freshet in the Delaware carried away the seawall and flagstaff, but the wall has been rebuilt and a new pole with topmast set up on the wharf. Though canoe racing is exciting little interest, members are preparing for canoe cruises to Hopatcong and other places.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

* Military rifle.

San Francisco Riflemen.

SAN FRANCISCO, April 12.—Last Sunday, in a pouring rain, was held the spring shoot of the California Schuetzen Club at San Rafael. The shoot was open to all and many non-members competed, probably 150 rifle men in all contesting. Notwithstanding the unfavorable shooting conditions, some good scores were made. The cash prizes were \$40, \$30, \$20, \$17, \$15 and so on down to \$1; tickets of four shots \$1 each.

Winners: A. Ehrenpfort, first with 94 rings; Dr. L. O. Rodgers, second with 93; M. F. Attinger 93, J. Utschig 92, D. W. McLaughlin 92, N. Ahrens 91, etc.

Honorary target, 3 shots: H. H. Burfeind 74, J. Dornbier 74, A. Strecker 71, F. Kuhnle 71, J. Utschig, D. W. McLaughlin, N. Ahrens and A. Gehret, 70 each, etc.

Over \$1,000 cash was taken in for tickets.

To-day the shooters congregated at Shell Mound Range for the various monthly medal shoots. The weather conditions were good. Following are the scores, 20 shots, 25-ring target:

San Francisco Schuetzen Verein, for monthly medal: champion class, William Glimmermann, 428 rings; first class, F. P. Schuster, 440; third class, H. Wicker, 415; fourth class, J. D. Heiser, 370.

First best shot, H. Huber, 25; last best, D. B. Faktor, 24.

Germania Schuetzen Club, for monthly medals: champion class, Dr. L. Rodgers, 429 rings; first class, G. Alpers, 429; third class, H. H. Burfeind, 409; fourth class, C. F. Rust, 369.

First best shot, A. Mocker, 24; last best shot, G. Alpers, 24.

Norddeutscher Schuetzen Club, monthly bullseye shoot: F. Schuster 142 points, G. Schulz 332, D. Hense 403, A. Mocker 422, L. Brune 547, H. Hellberg 575, J. Lankenau 590, H. Burfeind 614, A. Hagedorn 642, J. Thode 731, G. Alpers 846, W. Garms 898, H. Stelling 937.

Columbia Pistol and Rifle Club, Columbia Target: Rifle, 200yds., Unfred diamond medal, 3 shots: Dr. L. O. Rodgers 10, D. W. McLaughlin 13, F. O. Young 12, A. Strecker 13, E. Jacobsen 22.

Champion class, 10 shots: F. O. Young 61, D. W. McLaughlin 75, Dr. Rodgers 78, A. H. Pape 84.

First class: J. E. Klein 74, A. B. Dorrell 82, F. Baumgarten 101.

Second class: J. E. Gorman 82, O. H. Breimer 83, F. E. Mason 86, G. Burley 91, E. Jacobsen 101, L. Pinger 120, W. F. Unfred 147.

Pistol, 50yds., 10 shots, champion class: J. E. Gorman 46, C. M. Daiss 52, A. H. Pape 57.

First class: F. Baumgartner 54, L. O. Rodgers 57, A. B. Dorrell 59, D. W. McLaughlin 61.

Second class: A. Fetz 63, G. M. Barley 64, E. Jacobsen 76, W. Unfred 121, L. Zimmerman 132.

Pistol, Blanding medal, open to all comers, 3 shots: A. H. Pape 8, J. E. Gorman 10, F. O. Young 10, C. M. Daiss 10, Dr. L. O. Rodgers 10, F. Baumgartner 17, A. Fetz 23.

Revolver, Carr medal: F. O. Young 36-42, M. J. White 39.

22-cal. rifle, 50yds.: W. Unfred 48.

ROEL.

Excelsior Rifle Club's Tournament.

JERSEY CITY, N. J., April 25.—The tournament of the Excelsior Rifle Club, of this city, closed to-night after a successful three days' shoot. The number of contestants was quite large, probably over 200 rifle men taking part in the shoot. The winners in the various events were:

German 25-ring target: Michael Dorrier, Greenville R. C., 72 73—145; Louis Flaach, Zettler R. C., 72 73—145; Dr. Henry J. Boyken, Harlem R. C., 72 73—143; Wm. Rosenbaum, Empire R. C., 72 72—144; Louis Busse, Empire R. C., 72 72—144; Harry Krause, Excelsior R. C., 71 72—143; Louis P. Hansen, Excelsior R. C., 71 71—142; Walter C. Collins, Greenville R. C., 71 71—142; Henry Mahlenbrock, Hudson R. C., 70 70—140; Geo. Purken, Greenfield R. C., 68 70—138; John Speicher, 71 64—135; Oscar C. Boyce, Excelsior R. C., 67 68—135; Geo. Oberst, Essex Amateur R. C., 69 65—134; and Wm. J. Hennessey, Excelsior R. C., 66 67—133.

Premiums for the most rings: Louis P. Hansen, Excelsior R. C., first prize; Harry Krause, Excelsior R. C., second prize.

Bullseye target: Thomas Hughes, Excelsior R. C., 5½ degrees; Charles L. Pinney, Cottage R. C., 7; Louis Flaach, Zettler R. C., 7½; Michael Dorrier, Greenville R. C., 8½; George Oberst, Essex Amateur R. C., 9; Harry Krause, Excelsior R. C., 9; Louis Busse, Empire R. C., 9½; Wm. Rosenbaum, Empire R. C., 10½; Wm. Worn, Williamsburgh Shooting Society, 12½; Dr. Henry J. Boyken, Harlem R. C., 13; Colin Boag, Greenville R. C., 23; Wm. J. Channing, Excelsior R. C., 16½; John Speicher, Excelsior R. C., 29; Walter C. Collins, Greenville R. C., 14½; Patrick O'Hare, Cottage R. C., 30½; James Hughes, Excelsior R. C., 33½; Wm. Watts, Essex Amateur R. C., 41½; John Bandler, Excelsior R. C., 36½; Wm. Hennessey, Excelsior R. C., 12, and Richard H. Duff, Excelsior R. C., 17½.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-6.—BEDFORD, Ind.—Annual tournament of the Bedford Rod and Gun Club. R. E. Braxton, Sec'y.

May 5-6.—ALGONA, Ia.—Annual tournament of the Algona Gun Club.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 7.—SPRINGFIELD, O.—Tournament of the Home City Gun Club. Targets.

May 15-16.—HACKENSACK, N. J.—Tournament of the Oritani Field Club. Targets.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 23-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 22-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. H. B. Shoop, Sec'y.

Oct. 7-9.—NEWBURN, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The question of loss of form at the traps is something that has engaged our attention more of late than for some time past. One often hears that so-and-so is "clean off." It has never yet been satisfactorily explained to us what causes this going off in form; the subject feels physically fit as a fiddle, to use an accepted phrase, but cannot point his gun right. He tries shoot ahead, behind, over and under the targets, and then right at them; the result is the same, a distressing plethora of ciphers that makes his score look like that of a novice. Col. Heber Breintnall was off in his shooting for some time and very nearly got disgusted and quit; he persevered, however, and now smiles with the rest of the boys who claim straight scores. George S. McAlpin was another of the same kind, only his slip-up was shorter lived than Col. Breintnall's. What caused the trouble? Another shooter who cannot now make over 50 per cent. was last year, and for some years past, shooting a 90 clip. Here's his story of the case: "I feel all right, and think I'm pointing my gun right, but the shot goes every where but where the target is, punching holes in the air all round the target. I practice and try to get back into form, but it's no use. The other day I went out and thought I had it at last. I broke 18 straight and then missed a right-quarterer. I called to the boy to leave the trap that way and let me have another. He did, several more of them; I missed 13 straight and quit. Never felt better in my life, and am shooting live birds all right. What's the matter with me?" We can remember the time when it took phenomenal shooting to beat Billy Wolstencroft. Then, although always a good shot, Billy could not keep up his gait. At times he shot as well as ever, notably at the Pennsylvania State shoot of 1894 at Altoona, Pa., the very day after he had described himself in the annual meeting as a "has been." Now things are coming his way again, and he is shooting as well as ever he did. If he keeps up his gait and enters for the championship at the E. C. tournament some of those better known to the younger generation of trap-shooters will have to take a back seat. What caused his loss of form? And what brought it back?

H. B. Shoop, secretary of the Pennsylvania State Sportsmen's Association, and also secretary of the Harrisburg (Pa.) Shooting Association, writes that the State shoot will be held at Harrisburg on Sept. 8-11. Mr. Shoop says that the Harrisburg boys intend to give "one of our old-time shoots." Harrisburg is centrally located in Pennsylvania, and should have a good attendance, as the club there is a strong one. Members of the State organization will no doubt receive formal notice from Mr. Shoop of the importance of a good representation at the annual meeting, which will be held on the night of Sept. 8. The Pennsylvania State Sportsmen's Association made a strong effort in 1895 to remedy some of the evils in the existing game laws, and were very nearly successful in the attempt. The failure of 1895 should serve as a stimulant to still stronger work in 1897.

A correspondent of ours in Pittsburg, Pa., who is noted for his veracity, sends us the following: "From present indications the tournament to be given by the Pittsburg Gun Club, June 23-26, will be one of the most successful ever given by the club, and that is saying a great deal. We have already had many inquiries in regard to programmes, etc., and, as usual, most of the shooters in Western Pennsylvania, West Virginia and Eastern Ohio are practicing for the event. Paul North and his 'bicycle trap' will be the novelty at this tournament in the way of throwing bluerocks. Old Hoss and McPherson have been appointed a committee of two to welcome the visiting sportsmen; if they do not discharge their duties satisfactorily they will be fired from the grounds and the club." Seriously speaking, this shoot will be a most popular one in all respects.

George F. Day, secretary of the newly organized Usbridge (Mass.) Gun Club, writes us under date of April 23 as follows: "It may be of interest to the shooting fraternity to learn that there was born last Saturday at Usbridge, Mass., an infant gun club. The little fellow starts out on his career auspiciously. Plump and healthy, a membership of 9 with the assurance of as many more for the first shoot next Saturday, a balance to the good in the treasury of more than enough to provide paraphernalia, and wideawake nurses, viz.: President, W. E. Rawson; Vice-President, E. A. Mansfield; Treasurer, E. A. Ford; Secretary, G. F. Day." The above sounds like a proper addition to our present large family. The more of such a sort the merrier.

The Oritani Field Club will shoot a race with a team from Princeton on Saturday afternoon, May 2. This will be a kind of double event, a team of baseball players from the college being booked to play a match with the club's baseball team the same afternoon. The tournament of the Field Club, announced for May 15-16, should be a popular affair; the club says that it will do all in its power to make things pleasant for its guests.

The Sistersville Rod and Gun Club, of Sistersville, W. Va., was organized on April 16. The officers of the club are: President, D. M. Wallace; Vice-President, John F. Eckert; Secretary-Treasurer, Edw. O. Bower. The club has excellent prospects for a large membership and a prosperous future.

The spring tournament of the Bedford, Ind., Rod and Gun Club, which is announced for May 5 and 6, will be held under the management of W. T. Irwin. The programme calls for 165 targets each day, all known traps and angles.

The twenty-first annual tournament of the Nebraska State Sportsmen's Association will be held at Lincoln, Neb., the fourth week of April, 1897. The officers elected for the ensuing twelve months are: President, Geo. W. Rogers, of Lincoln; Vice-President, W. H. S. Hughes; Secretary, R. M. Welch, of Lincoln; Treasurer, G. W. Loomis, of Omaha; the executive committee consists of the president, secretary and Frank S. Parmalee. A new constitution and by-laws, ordered at the meeting in 1895, and prepared by N. P. McFarlane and W. S. Hughes, the committee appointed for that purpose, were read and referred to the executive committee for revision, with instructions to have same ready for adoption at the next annual meeting.

Lieut. A. W. du Bray, the popular representative of the Parker gun, added another laurel to the chaplet already gained by that gun this year by winning the individual championship contest at the Texas State Sportsmen's Association's tournament at Houston, Tex., on April 23. Du Bray made a bad start, losing his first two birds dead out of bounds; he then ran 18 straight, tying with three others, whom he shot out by killing 10 more straight. Of course Du Bray was shooting a Parker pigeon gun, Whitworth fluid steel barrels; he used E. C. powder in U. M. C. trap shells.

Next week will witness one of the greatest gatherings of trap-shooters ever seen in this country. We refer of course to the tournament of the E. C. Powder Co. at Guttenburg race track. There has never been a tournament with any large amount of added money held in the East, and for that reason it is hard to forecast with any degree of certainty the probable average number of entries. From what we can hear—and we have received communications on this point from all parts of the United States—we look for something very nearly approaching a record breaker.

The Knapp cup, value \$350, donated to the Carteret Club by J. P. Knapp, is now the property of H. B. Wright. Mr. Wright has won the cup four times—the number necessary to call it his own. The record of the seven contests and the winners stands as follows: Dec. 26, George Work, 27 out of 29; Jan. 8, J. P. Knapp, 19 out of 22; Jan. 22, Wright, 20 straight; Feb. 19, Fred Hoey, 19 out of 20; Feb. 26, W. W. Watrous, 32 out of 35; March 11, Wright, 21 out of 23; April 8, Wright, 22 out of 23.

The many friends, Northern and Southern, of George S. McAlpin will wish him well when they learn that he is about to become a benedict. The noon hour on Wednesday next, April 23, will settle it, that being the hour fixed for the termination of his bachelorhood. The future Mrs. George S. McAlpin is at present a Miss Morrow, of Brooklyn, N. Y. At the New Jersey State League shoot last week McAlpin was quite busy—breaking straights and receiving congratulations.

Mr. Armin Tenner, writing from Schöneberg, Berlin, Germany, says: "The championship meeting of the Deutscher Jagd und Schiess Klub will be held in Berlin, Germany, on May 19-23. The first three days are set aside for clay pigeon-shooting; the fourth for shooting at a running hare target, and the fifth for shooting at a running wild boar target for sporting rifles. Americans visiting Berlin on the dates mentioned are cordially invited to participate in this tournament."

The editor of this department is necessarily out of the city a good deal. News has to be hunted, and FOREST AND STREAM wants the news. For this reason correspondents should address news matter to Forest and Stream Publishing Co., and not to the editor of the trap department. This rule should always be strictly observed, particularly during the next two months or so; otherwise, matter that should see light will be liable to be sidetracked for good.

E. D. Miller, secretary of the Union Gun Club, of Springfield, N. J., writes that his club claims July 4 as the date for its annual tournament at targets and live birds. The Union Gun Club has always since its organization held a tournament on the above date, and this year will be no exception to the rule. Miller promises the boys a good time and plenty of shooting.

The officers of the Worcester, Mass., Sportsmen's Club are: President, N. P. Roach; First Vice-President, J. T. Mascroft; Second Vice-President, R. C. Walls; Secretary, V. D. Kenerson; Treasurer, F. M. Harris; Executive Committee: E. W. Ide, A. L. Gilman, George McClellan, Frederick Bucklin.

The variety of guesses hazarded as to who will be the champion of the world at inanimate targets on Friday evening, May 8, shows what a really open contest such an event is. The winner, whoever he may be, will scarcely be allowed to rest on his laurels for long without fighting to retain them. Challenges are to be expected, and all such contests will be fraught with much interest.

W. R. Hobart, secretary of the New Jersey Trap-Shooters' League, informs us that the prize-soliciting committee of the League reports that it has received additional prizes in the shape of twenty 1lb. cans of hard grain Schultz powder from Messrs. Von Lengerke & Demold.

On Thursday of last week, April 23, Frank Class and T. W. Morley shot a match at 25 live birds, Long Island rules, gun below the elbow, 21yds. rise. The match was for \$25 a side. The birds were said to have been a good lot. Class defeated Morley by 18 to 17.

The Limited Gun Club, of Indianapolis, Ind., has issued the programme for its annual tournament on May 26-28. Owing to the late hour at which our copy reached this office, we are unable to do more in this issue than just acknowledge its receipt with thanks.

The Nebraska State shoot at Omaha last week was another specimen of the excellent series of tournaments booked in the Southwest for the month of April. It's Joplin this week.

On Thursday and Friday of this week, April 30 and May 1, there will be a two-days' shoot at Dexter Park. First day, targets; second day, live birds.

APRIL 28.

EDWARD BANKS.

Echoes from Atchison.

On Monday, April 13, Rike was the only shooter to average 90 per cent. He shot consistently during the whole shoot, failing only on one day to touch 90 per cent., while his general average for the week was just that mark.

It was not long after Paul North had arrived in town that everybody was aware of the fact. Blue rock buttons blossomed from every coat.

There was general disappointment at the fact that the original Arkansas traveler, John J. Sumpter, Jr., of Hot Springs, could not be present at the shoot. He writes he will catch on at Omaha.

That farmer boy, Heer, caused much dismay with his rainmaker. For awhile he kept the boys guessing as to whether he would ever drop a target. He ran 46 straight and was the only one out of 108 shooters in the first amateur event to score 20 straight. After each event he would go down to the creek and swab out his gun, much to the amusement of "the gang."

Frank Parmalee tells Fred Gilbert that his voice is too full choked, and advises him that he should have it bored a true cylinder.

Rolla Heikes is having the stock of his gun artistically carved. In addition to his own initials, there are the initials of many others on it, and by the time it has gotten around the circuit Rolla will have to have an extension made to it in order to gratify all those who may desire to record their initials on the stock of "Old Sarah."

Young Rhodes shot a great gait on Thursday. He was a member of the Frankfort team when it won the State championship.

When Fred Quimby came on the ground and began to cut some of his usual capers, a man in the crowd said in Fred's hearing, "That fellow acts as if he had wheels in his head." Fred heard it and turned round with "That's right, my friend, I sell the Hunter!"

Taylor Cox, a member of the Joplin delegation, is a one-armed shooter. He shot throughout the entire shoot, and managed to score several straights.

It's pretty hard to play second fiddle to one's little brother. Jim Elliott knows how it feels since Dave beat him on Wednesday.

Straights paid well all through the shoot. Many shooters were lucky enough to drop into first alone with a straight score.

All the shooters that stopped at the Byram House soon knew the bill of fare by heart; it was "the same thing over again" every day.

I. W. Budd, of Pemberton, N. J., shot here under the name of Dukes. He scored a couple of straights on Wednesday morning.

Clay and Corham were the colored gentlemen that took in this shoot.

Jack Parker attributed the loss of a target to a cow getting in line with it just as he was firing. The cow was grazing on a hillside away on the outside of the ground. When Parmalee heard the excuse, he fell over a barbed wire fence and suffered laceration of the feelings.

Harry Marlin, of the Marlin Firearms Company, dropped in on us and showed the boys that he could break targets as well as sell rifles.

The King's Smokeless tent was a center of attraction during the shoot. Milt and Wanda made lots of friends for themselves and the company they represent.

Tom Keller gave an exhibition of bicycle riding, borrowing a wheel for the occasion. It was a complete exhibition too, for Tom showed the boys how to fall with elegance.

One of the local papers ran Harvey McMurchy's picture for Dick Merrill's photo, adding that Merrill's wife would hardly know him. Naturally there was much truth in this statement.

President G. M. Walden, of the Missouri State Game and Fish Protective Association, came here with the Kansas City delegation. Mr. Walden is very enthusiastic over the prospects for the coming State shoot in Kansas City, and expects great things for it. The championship cup will be a beauty with no strings to it.

W. G. Sergeant, of Joplin, made the longest straight run of the

tournament. He ran 71 straight, and also scored 168 out of the first 175 he shot at on the last day.

Lou Erhardt kept open house and turned his store over to the boys to do what they liked with. The store is still there!

You will hear from me at Omaha.

PAUL R. LITZKE.

Preparations for the E. C. Tournament.

DURING the past week Elmer E. Shaner and Noel E. Money have been very busy at the Guttenburg Race Track putting everything in order for the coming tournament of the E. C. Powder Company. Jack Parker, who will assist Elmer Shaner in managing the tournament, is now in the city, and has taken up the thread of preparation for the shoot which was broken by Elmer's departure for Birmingham, Ala., where the Interstate Association held a tournament this week. By noon on Monday, May 4, shooters will be able to get all the practice they want for the big four days' work of May 5-8.

HOW TO GET TO GUTTENBURG.

Guttenburg Race Track is easily reached from this city. There are many different ways of reaching it, all very simple to anyone that has a tongue in his head and knows where he wants to go. It depends a great deal where a shooter is stopping in New York which is the best and quickest way for him to go. Those who are downtown will find the Barclay Street Ferry to Hoboken very convenient; a horse car from Hoboken Ferry to Fourteenth Street Ferry in Hoboken connects with electric cars that run direct to the track, letting passengers off at the park gates. Ferries at the foot of Franklin street (downtown) and at the foot of West Forty-second street run to Weehawken and make close connections with electric cars that transfer passengers to the above-mentioned cars on ordinary occasions; on the days of the shoot cars will be run direct to the race track from Weehawken in connection with the early boats; this will make the trip from the foot of West Forty-second street about 30 minutes. To those shooters who make the Hotel Metropole (headquarters for shooters during the tournament), Forty second street and Broadway, their abiding place, this will make a most convenient route. The ferry at the foot of West Fourteenth street, New York, runs to the foot of Fourteenth street, Hoboken, and electric cars that run from there land their passengers at the park gates without a change of cars.

It will be seen that there are plenty of routes to get to the scene of the great shoot. Any one of the routes mentioned will land the shooter at the track within a little over an hour from the center of the city. Once at the park gates, there is a walk of about 300 or 400yds. to the grand stand, in front of which are lined up the four sets of traps for use in this tournament. There is ample accommodation for shooters and spectators, the betting hall being set apart for the use of shooters exclusively. It is an immense, well-lighted, cool hall that would accommodate ten times the number of shooters that one can reasonably expect to be present at the E. C. shoot. The cashier's office is just in front of the betting hall, being nothing more nor less than the space inclosed by a set of storm doors that protect an entrance into the betting hall. Spectators will find the seats of the grand stand a most convenient and comfortable vantage ground for witnessing the shooting.

FOUR SETS OF TRAPS.

There are, as stated above, four sets of traps: two sets of bluerock traps, under the direct supervision of Paul North, and two sets of empire traps that will be looked after by Charlie Hebbard. Elmer Shaner and Jack Parker will divide the cares of looking after the shooters at the four sets of traps, and will have an able squad huster in the person of Seth Clover. A line of rope will be stretched parallel with the score, but about 15ft. to the rear of it, nobody but the shooters in the act of firing their strings, and the next squad, being allowed within the lines. This will prevent spectators from crowding the shooters in the smallest degree. Each set of traps will, of course, have its own blackboard, which will be located just to the right of each score.

The traps face about northeast, we believe, hence the light, except perhaps during the early hours of the morning, will be of the best. The sets of traps are numbered from north to south, No. 1 set being to the extreme left of the score, No. 4 to the extreme right. The background is something that we can hardly speak authoritatively on, not having seen a target thrown from the traps as yet. We believe, however, that it will be found to be all right, a little preliminary practice being sufficient to acquaint shooters with whatever peculiarities there may be connected with it. Except in a few instances it will be a clear sky background or very nearly so.

HOW THE EVENTS WILL BE SHOT OFF.

Events Nos. 1, 2 and 3, all 20-target events, will be started each morning on Nos. 1, 2 and 3 sets of traps respectively, each event being shot off on its own set of traps. On No. 4 set events Nos. 5 and 6 will be decided, as these events will necessarily consume a considerable amount of time; expert rule and pairs. Event No. 4 will probably be started on No. 1 set as soon as event No. 1 has been completed. Nos. 4, 5 and 6 constitute the championship events each day, and as No. 4 set of traps is located immediately in front of the grand stand, the general public will have an excellent chance of witnessing some very fine work at the most difficult styles of shooting known.

So far as we can see, everything has been done to look after the comfort of the shooters and spectators. Unless the weather is extremely hot or wet we cannot imagine any other conditions of weather that would cause shooters any discomfort. It must be borne in mind that shooting commences each morning at 8:30. An early start is absolutely necessary if the entry list is as large as we hope and believe it will be, and if the programme is to be shot through.

THE WORLD'S CHAMPIONSHIP.

The championship events will, of course, cause very great interest. Inanimate target shooters have never had a real championship event at all the styles of shooting generally recognized by trap-shooters. The three styles adopted—unknown angles, expert rules (one man up standing in the middle, the five traps down) and pairs—were chosen as representatives of the three most generally recognized styles of target shooting in this country. In certain portions of the States reversed order is very popular, but it is not very generally shot. For that reason it was felt to be unfair to include that style of shooting among the other championship conditions for the present. If that style continues to increase in popularity at the present rate it will not be long before, after due notice has been given, 100 targets, reversed order, will have to be included in the conditions governing the Inanimate Target Championship of the World. America, as the birthplace of inanimate target shooting, can fittingly claim the right to inaugurate a world's championship.

At the coming tournament of the E. C. Company the shooter who makes the highest aggregate score in events Nos. 4, 5 and 6, on all four days of the shoot, will indeed be worthy of the title of champion. He will have beaten his opponents at three different styles of shooting, 100 targets at each style. FOREST AND STREAM, as the daddy of the championship, feels extremely well pleased with the future prospects of its babe.

May the best man win.

Lynchburg Gun Club.

LYNCHBURG, Va., April 21.—The regular weekly shoot of the Lynchburg Gun Club was held to-day. The attendance was small, only 5 shooters in all taking part in the six 20-target events decided during the afternoon. The scores were:

W. J. BLACK, Sec'y.

The Nebraska State Shoot at Omaha.

The twentieth annual tournament of the Nebraska State Sportsmen's Association, that was brought to a close on April 24, was a success that its promoters, Messrs. Loomis, Read and Parmalee, may well be proud of. Compared with other tournaments of this Association, I feel safe in saying that it is the best it has ever held.

With such a trio for its managers, the shooters of the State naturally felt that they were under obligations to attend, and did so in large numbers, as a perusal of the list that is given below will show. And shooters did not come only from within the confines of the State of Nebraska. There was the Utah delegation that came all the way from Ogden, headed by J. M. Browning, one of the inventors and patentees of the Winchester repeating shotgun and rifle. From Joplin, Mo., came Sergeant, Kinmouth and Wilson. Leavenworth, Kan., sent J. W. Sexton, who is now shooting in something like his old form. Others from outside the State were: B. O. Running and Airy Lou Hardt, Atchison, Kan.; F. L. Cotterill, Milo, Ia.; E. A. Leach, Tripps, S. D.; Wm. Mitchell, Perry, Ia.; J. M. Higgins and E. D. Trotter, Kingsley, Ia.; George Peterson, Ocon Rapids, Ia.; A. Miller, New Boston, Ill.; W. B. Spears, Morrison, Ill.; I. W. Budd, Pemberton, N. J., shooting under the name of Dukes; I. M. Crabill, from Iowa; P. G. Hitch, Fort Madison, Ia.; J. Schuff, Davenport, Ia.; Charlie Grimm, Clear Lake, Ia.; C. W. Budd, Des Moines, Ia.; R. E. Merrill, Milwaukee, Wis.; Tom Marshall, Mayor of Keithsburg, Ill.; Charles Young, Springfield, O.; J. P. Easton, Monroeville, O.; G. M. Walden, of Kansas City, president of the Missouri Game and Fish Protective Association, etc.

REPRESENTATIVES OF THE STATE.

The list of shooters hailing from Nebraska was naturally a large one. Among the number were: C. D. Linderman, of Adams; T. A. Weatherhead, Malvern; A. D. McCandless, Wynnewood; F. Miller, Berwyn; E. W. Hamilton, Pawlet; A. Loeke, Stanton; W. S. Duer, Hastings; J. B. Smith, South Omaha, a colored representative; G. A. Schroeder, Columbus; W. T. Den, Brownville, to whom all of us raise our hats, as he is the oldest man on the circuit, having commenced shooting in 1858, and it is he who first taught Rolla Heikes how to shoot; Wm. McCraith, South Omaha; Dr. J. B. Hungate, Weeping Water; R. M. Welch, Lincoln; A. A. Glade, Grand Island; A. B. Robertson, Scribner; J. W. Den, Arapahoe; J. C. Hilbery, Beaver Crossing; Tom Clyde and Geo. W. Rogers, Lincoln; C. E. Latshaw, the banjo artist, and Ted Ackerman, Stanton.

AMONG THE PROFESSIONALS.

were: R. O. Heikes and J. A. R. Elliott, representing the Winchester Repeating Arms Co.; T. H. Keller, of Plainfield, N. J., the representative of the United States Cartridge Co.; Milt Lindsley and Wanda, now of Cincinnati, O., expounding the merits of King's Smokeless and Peters's reinforced shells; Jack Parker, of Detroit, Mich., who represents the Cleveland Target Co. and the E. C. Powder Co.; Dan Tucker, of Meriden, Conn., of the Parker Bros. Gun Co., of that city (Tucker had the satisfaction of seeing one of the guns he represents carry off the honors in the State live-bird championship contest); Col. A. G. Courtney, of Syracuse, N. Y., telling us all the merits of the new Le-fever ejector; and last, but by no means least, Fred Gilbert and his chokebore voice, from Spirit Lake, Ia., giving an object lesson in killing live birds and snuffing out targets with Du Pont's Smokeless.

GROUND IN IOWA.

The club's grounds are very accessible indeed, being only eight minutes' ride by electric cars that pass the door of the Paxton Hotel, the cars crossing the river and landing shooters right at the gates of the grounds, which are located in Iowa. The inclosure is seven acres in extent, and the arrangement of the grounds was a surprise to all the visitors. In every respect they are as up-to-date as any in the States. In front of the club house are placed two sets of empire traps, wire pulls, with a board walk extending the entire length of the two sets and stretching back to the club house. At the upper end of the grounds are the live-bird traps, King's latest. Over the scores for the target traps awnings can be raised or taken down at will, as occasion demands. The background is very good, except that perhaps the ridge to the left of Nos. 1 and 2 in the lower set of traps may be deceiving. The flight of the targets themselves was very erratic; some high, some low, some fast and some slow. They kept fooling the boys all the time, and to this erratic behavior of the targets may be attributed several of the comparatively low averages. The catering of Mr. Randlett, of Council Bluffs, Ia., calls for special mention.

The programme is explained by the scores in the tables given below. The club added \$30 to every purse in the 20-target races. On the fourth day there were only four 20-target races on the programme; the balance was made up of special events referred to in connection with the scores. The Association added \$40 to the purse in the live-bird championship contest, and \$30 to each purse in the team race contests.

AVERAGE MONIES.

There were 12 cash prizes for average moneys: \$20, \$18, \$16, \$16, \$14, \$14, \$12, \$12, \$10, \$10, \$9, \$9. These were divided as in class shooting; thus Marshall and Trotter, who broke more targets than Elliott, split up \$10, while Elliott took a \$10 bill for his share. The destination of the other average moneys can be gleaned from a perusal of the table of general averages. The tables of scores tell the rest of the story:

SCORES OF THE FIRST DAY, APRIL 21.

There were just 71 shooters who took part in to-day's events, the entries varying from 54 to 34. In addition to the 63 whose names appear in the table given below, Edwards shot in No. 8 and broke 10. Brewer and Welch also shot in No. 9, the handicap event; the former scored 43 and had 4 added to his score, making his total 47. Welch scored 32 and had 7 added to his total. The number that appears in the column after Event No. 9 is the number added to the shooter's score. Trotter won first prize with 44 breaks and 4 added—total 48. Gilbert made the best score of the scratch men, scoring 47 out of 50. Scores:

SCORES OF THE SECOND DAY, APRIL 22.

To-day's events were participated in by 72 shooters. Entries ranged from 50 to 33. Besides the names of those given in the table below, Tucker, Shirley and Tremens took part in the 50-target handicap. Tucker got a place, scoring 38, which, with 8 added to his score, made his total 46. Leach, Linderman and Harkins tied for first prize—an \$80 Remington hammerless ejector—Leach winning on the shoot-off. Scores in to-day's events were as below, the figures in the column after the ninth event representing the number of misses as breaks allowed the shooters:

Events:	1	2	3	4	5	6	7	8	9	Shot at.	Broke.	Av.

On Staten Island.

COLUMBIA SHOOTING ASSOCIATION.

April 20.—The Columbia Shooting Association held its monthly live-bird shoot this afternoon on the New Dorp Grove grounds, Staten Island. John H. Schleuter, of Brooklyn, captured the club shoot, being the only shooter to score out of his 7 birds. The scores in this event, and in the sweepstakes also shot during the afternoon, were as below:

Club shoot, 7 live birds per man, A. S. A. rules to govern: J. H. Schleuter (28) 6, P. F. Ehrich (26) 5, J. B. Gordon (26) 4, J. G. Henry (26) 3, C. G. McWilliams (27) 3, J. W. Whortley (26) 2, R. J. Perry (26) 2, T. L. Foster (26) 2, R. J. Behrens (26) 2, T. L. Weedon (26) 1, C. W. Hester (26) 2.

No. 1, 3 live birds, handicap rise: Schleuter 3, Ehrich 2, Gordon 3, Henry 1, Williams 1, Whortley 1, Foster 1, Behrens 2, Weedon 2, Hester 3.

No. 2, same: Schleuter 2, Ehrich 1, Gordon 1, Henry 3, McWilliams 2, Whortley 1, Perry 2, Foster 2, Behrens 3, Weedon 2, Hester 2.

No. 3, miss-and-out: Schleuter 2, Ehrich 0, Gordon 2, Henry 0, McWilliams 2, Whortley 2, Perry 1, Foster 0, Behrens 2, Weedon 1, Hester 0.

GERMANIA ROD AND GUN CLUB.

April 21.—The monthly shoot of the Germania Rod and Gun Club at targets was held this afternoon at the New Dorp grounds. Richard V. Wagner made the top score in the club shoot at 15 targets. The members are handicapped by distance, their marks being shown by the figures in parentheses after their names. Scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

CLINTON GUN CLUB.

April 22.—The members of the Clinton Gun Club, of New York, held their monthly live-bird shoot on the New Dorp Grove grounds, S. I., this afternoon. Dr. Emil Schraeder (28) and David G. Schneider (26) tied for first place with 6 out of 7 in the club shoot, Schneider beating Schraeder in the shoot-off. The scores made this afternoon were as below:

Club shoot, 7 live birds per man, club handicap rise: Dr. Emil Schraeder (28) 6, D. G. Schneider (26) 6, H. K. Williamson (26) 5, T. P. Longreif (27) 5, E. W. Schraeder (26) 4, G. J. Kingsland (26) 5, L. G. H. Wilson (27) 5, S. G. Porter (26) 3, R. J. Williamson (26) 4, J. O. Henderson (26) 4, A. W. Barton (26) 3, T. P. Lee (26) 4, R. D. Morgan (26) 2, W. H. Smith (26) 3.

No. 2, 3 live birds per man: Dr. Schraeder 3, Schneider 2, Williamson 1, Longreif 2, E. W. Schraeder 1, Morgan 3, Smith 2, Henderson 1, Porter 1, Kingsland 1, Wilson 2.

No. 3, miss-and-out: Dr. Schraeder 1, Schneider 0, Lee 2, Williamson 0, Longreif 0, E. W. Schraeder 1, Kingsland 2, Wilson 2, Porter 1, Henderson 1, Barton 2, Morgan 1, Smith 0.

No. 4, same: Dr. Schraeder 1, Schneider 2, Lee 0, Williamson 1, Longreif 3, E. W. Schraeder 3, Kingsland 2, Wilson 1, Porter 2, Henderson 3, Barton 1, Morgan 1, Smith 1.

No. 5, same: Dr. Schraeder 3, Schneider 1, Porter 1, Williamson 1, Henderson 2, Barton 2, E. W. Schraeder 2, Wilson 0.

P. and O. Border Gun League.

MEADVILLE, Pa., April 16.—The first contest of the teams of the P. and O. Border Gun League was fought out on the grounds of the Youngstown, O., Gun Club this afternoon. Below are the scores, which give the trophy to the Youngstown Club to hold till the next League meeting at Warren, O., May 14, when it will be again contested for. This contest has started the shooting blood in the clubs of the League, and I expect the interest will increase as the season advances. We had a hot day for it to-day, but there was plenty of cold water and kindred Ohio beverages to cool the thirsty shooter, and solid refreshments *ad libitum*. Everything passed off in perfect harmony. The scores of Youngstown, Meadville and Warren show that it is nobody's game until it is played out. The other clubs, Greenville and New Castle, made scores that were considerably lower, but it is only fair to take into account that the Greenville Club is not a year old, and that the New Castle Club was organized last month. The clubs have some excellent material in them, and what is of more value have the shooting enthusiasm and what I might call the game blood in them, which will tell in the end. It is safe to say that the scores of the two young clubs will gain very rapidly on those of their older associates during the season.

Trap Around Pittsburg.

NORTH SIDE GUN CLUB.

PITTSBURG, Pa., April 16.—The second monthly contest for the E. C. cup took place to-day on the grounds of the North Side Gun Club. The cup will become the property of the shooter making the highest aggregate in five out of the seven shoots. The North Side Gun Club is one of the most progressive clubs in western Pennsylvania; consequently its shoots are always well attended. Old boss and McPherson managed to-day's shoot, while Bill McCrickart acted as referee and scorekeeper. Of course the necessity of shooting their scores interfered somewhat with Old Boss's and McPherson's pleasure, but that could not be helped. The scores in the event were:

P Kelsey.....	23	22	22	23—89
Oliver.....	23	23	21	23—89
Old Hoss.....	22	20	22	21—85
A H Klag.....	20	21	22	22—85
J H Shaffer.....	22	22	20	21—85
H Born.....	18	23	25	18—84

C. A. MAY'S GOOD SCORE.

April 18.—There was some great shooting done to-day at Brunot's Island by some of the members of the Herron Hill Gun Club. C. A. May, probably the best of the live-bird shots in this city, made the great score of 97, losing two of the three he failed to score dead out of bounds. After losing his 1st, 7th and 29th birds he finished with an unbroken string of 71. Farmer also shot well, scoring 90, while Fargo with 89, McPherson with 86, and Anson with 85, were all strictly in it. Fargo's and Rickey's scores count as a 100-bird race between those two men, Rickey losing by a large majority. The scores were:

C A May.....	0211120121111212111211—23
Farmer.....	11011212121222112212121—24

D. F. HARLAN, Sec'y.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., April 18.—There was a good attendance to-day at the regular weekly shoot of the Audubon Gun Club. The number of entries in the badge shoot—No. 2—was 23. Ranks did some great work this afternoon, scarcely being able to miss a target, breaking 98 out of 100. Scores:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

No. 2 was the badge shoot; No. 8 was at 6 pairs.

April 22.—To-day saw the third contest for the Erie county live-bird championship badge. Dr. Woodbury won the shoot to-day with a score of 23 out of 25, 2 dead out of bounds. Dr. Woodbury is a new acquisition to the ranks of the Buffalo shooters, but he has commenced to make his mark. C. S. Burkhardt won the first heat and B. F. Smith the second. This makes three men tied for the honors. The fourth contest takes place on Wednesday, April 29. C. S. Burkhardt and J. Edwards each scored 22 in to-day's contest. Several live-bird events were also shot off during the day. Full scores follow:

B. F. S.

Winning Powders at the London Gun Club.

The London Field, in its reports of pigeon shooting events at the London Gun Club and at Hurlingham, gives the guns and powders used by winners in the more important events on the programme. These points are always of interest to shooters, who, like other men with a hobby, run to statistics on such questions. The following figures, compiled from the above reports of events shot at the Gun Club during the winter season of 1895-96, will probably be of interest:

In the main events there have been 22 winners outright, and 103 dividers of stakes. Of the winners 11 used E. C.; 1 used E. C. and Schultze; 3 used Schultze, and one used Schultze and black; 2 used Amberite; 3 Walsrode and 1 Ballistite. Of the 103 dividers 55 used E. C.; 1 used E. C. and Schultze; 19 used Schultze; 3 Schultze and black; 8 Amberite; 13 Walsrode; 3 Cannonite and 1 Ballistite. The amounts won by those using the above powders were divided as follows: E. C., \$5,650; E. C. and Schultze, \$380; Schultze, \$1,685; Schultze and black, \$280; Amberite, \$1,070; Walsrode, \$1,615; Cannonite, \$150; Ballistite, \$515. The total amount won was \$11,195.

In considering the above figures, there are some facts that should be mentioned. In the number of wins and dividers credited to Amberite, there were 2 winners and 3 dividers in contests in which only Amberite was allowed to be used. Of the Walsrode winners and dividers, the same may be said of 1 winner and 2 dividers in events in which Walsrode alone was to be used. The solitary win of Ballistite was that of the Ballistite cup, for which only those using that powder might compete.

Trap Notes from Seattle.

SEATTLE, Wash., April 13.—The interest in trap-shooting in Seattle, Tacoma and Spokane, the three principal cities of the State, is worthy of special attention. While it is true that the terms "great and extraordinary interest" have become to a certain extent hackneyed, I am forced to fall back on them to express my sentiments.

In Seattle there is a shoot once a week. I was going to say through the summer, but that would not be exactly correct, for the boys were out once in two weeks through the winter. Tacoma has just as enthusiastic shooters and as many of them.

Spokane is too far away to take part in our contests, except the annual tournaments. She has some of the best men in the State, and every one of them is a thorough sportsman. Perhaps Caspar Whitney, of Harper's Weekly, would not admit the possibility of a man shooting for money purses and still being a sportsman and gentleman. Spokane is preparing for the annual tournament of the Sportsman's Association of the Northwest. There will be three days' shooting and \$600 cash added to purses. The Hunter Arms Co. has donated a \$300 trophy for the individual championship at inanimates. The programme is now in course of preparation by Tom Ware and Fred K. McBroome. Tom Ware came over to the annual tournament of the Protective Association and carried off the Post-Intelligencer trophy, representing the State championship at 50 targets.

We had a shoot to-day, the scores being as below:

Team race, Tacoma vs. Seattle;	Seattle.	Tacoma.

In New Jersey.

BOILING SPRINGS VERSUS ENDEAVOR.

April 16.—The Boiling Springs Gun Club, of Rutherford, N. J., and the Endeavor Gun Club, of Jersey City, N. J., have been engaged in a series of team races at targets. The Boiling Springs won the first heat on their own grounds; the Endeavors won the second by a narrow margin on their grounds at Marion. The third and final match was shot this afternoon on the grounds of the Boiling Springs Gun Club, Paul Jeanneret having won the toss for choice of grounds from George Piercy, the captain of the Endeavor team. On this occasion the home team won by a good majority, scoring 207 to 184.

The score of the winners was the result of some very even work, the high scores being two 24s, and the low scores two 18s. George McAlpin regained his lost form and pounded out 24; W. J. Simpson, one of the most consistently good target shots the club claims among its members, also scored 24; Paul Jeanneret, F. Hall and Frank Krebs were each responsible for 22 breaks. For the losers Carl von Lengerke shot very well, adding 24 to the team total, Edwards being next with 23, L. H. Schortemeier and Eddie Collins being close behind with 21 apiece. The team totals were as follows:

Boiling Springs.											Endeavor.										
George S. McAlpin.....	24										Carl von Lengerke.....	24									
W. J. Simpson.....	24										F. S. Edwards.....	23									
P. A. Jeanneret.....	23										L. H. Schortemeier.....	21

Team race—Whitehead's team: Whitehead 19, Folsom 21, Thomas 22, Dawson 16, Herrington 19. Total 97.
Hedden's team: Hedden 23, Welles 21, Orton 13, J. H. Terrill 16, Clark 23. Total 96. W. R. HOBART, Sec'y.

ENDEAVOR GUN CLUB.

April 18.—The regular monthly shoot of the Endeavor Gun Club, of Jersey City, was held to-day at its grounds, Marion, N. J. Ten members put in an appearance and shot in the prize shoot. No. 1 in the table below. This was the last shoot of the series for the shooting year. Eddie Collins shot well, breaking 86 out of 95. Scores:

Events: 1 2 3 4 5											Events: 1 2 3 4 5										
Targets: 25 25 25 10 10											Targets: 25 25 25 10 10

ORITANI FIELD CLUB, OF HACKENSACK.

April 18.—A few members of the Oritani Field Club, of Hackensack, N. J., had a little practice at targets this afternoon. The first event shot was a 10-target sweep. In this Warner scored 3, Bell 7, Banta 6, Johnson and Holberton 5. Nos. 2 and 3 were a 20-target event and a 25-target event respectively. The weather was exceedingly hot for the time of year. Scores in Nos. 2 and 3 were:

No. 2.											No. 3.										
Warner.....110111110101110111-16											0110100101111010010111-16										
Johnson.....100100101010101010-9											1000000010101010000000-6										
Banta.....010110101010101011-13											000011010000011101011-14										
Holberton.....00111111011101110111-19											00111111011101110111-19										
Bell.....110100010011011110010-15											110100010011011110010-15										

Prent and Bell also shot a match at 25 targets per man, Bell winning by 19 to 13.

BAYSIDE GUN CLUB, OF KEYPORT.

April 21.—Fourteen members of the Bayside Gun Club, of Keyport, participated in the bi-monthly shoot to-day. Conditions: 25 bluebirds per man, unknown angles. Following are the scores: H. E. Ackerson, Jr., 21, Josiah Crammer 21, Wm. Watts 19, D. W. Walling 19, D. A. Heyer 18, G. G. Hoagland 18, Thos. Compton 18, Jas. T. Walling 17, Wm. Maurer 13, Wm. Brower, Jr., 13, Mark Brower 12, Arthur Carhart 12, Jacob Aumack 9, Winfield Maurer 8.

In shooting off the tie for the badge H. E. Ackerson, Jr., won by one target.

NEW JERSEY TRAP-SHOOTERS' LEAGUE.

April 21.—The April shoot of the New Jersey Trap-Shooters' League was held to-day on the grounds of the South Side Gun Club, of Newark, N. J., in glorious spring-like weather. Notwithstanding the fact that the grounds of the South Side Club are centrally located and easy of access from almost every point in New Jersey, the attendance was nothing like what it should have been. Of the ten clubs that form the league only five were represented by full teams of six men. The teams that competed were: Climax Gun Club, of Plainfield; Boiling Springs Gun Club, of Rutherford; South Side Gun Club, of Newark; Endeavor Gun Club, of Jersey City; Union Gun Club, of Springfield. These five teams finished in order named. The Riverside Gun Club, of Red Bank, had four men present, but lacked two to complete the team.

The team race was productive of some high scoring. The Climax and the Boiling Springs teams scoring respectively 131 and 130 out of the 150 targets shot at; the South Side Club was third with 123. A special feature of the shoot was the great number of high individual scores. Out of the forty-two that shot along in the main event six scored 25 straight, four made 24, one scored 23 and five made 22. On this occasion the management departed from the system of shooting this event that had been in use at the previous league races this year, that of splitting up the teams, and shot the teams as squads. As it happened this did not matter much, as the conditions were equal for everybody, wind, sun and light being about the same during the entire race; although it did make quite a difference when, as happened while the Endeavor team was at the score, an engine burning the softest of soft coal stopped at the coal shutes and sent its black trail across the traps like a pall over the face of the sun.

During the afternoon, for shooting did not commence until about 12 o'clock, some capital shooting was done. Eddie Collins, shooting King's Smokeless, broke 96 out of 100 shot at, making the best average of the day. It was a treat to all to note that Colonel R. Heber Breintall, president of the South Side Gun Club, had regained his lost form and was shooting away up. George S. McAlpin was another who showed that he was able to "find 'em" once again. Empire traps and targets were used, of course, the South Side Gun Club having a set of these traps always in use, while empire targets have been adopted by the League for all its contests. Billy Hobart, secretary of the home club, and also secretary of the League, ran the shoot, with W. Parker, of Elizabeth, as cashier. W. N. Drake, manager of the League team races, looked after the main event, and strangely enough never took his gun out of its case; Billy is a good shot and loves to shoot, but to-day he never tried his hand at a target. Among those looking on was Elmer E. Shaner, manager of the Interstate Association, who is very busy just now arranging all the details for the E. C. tournament at Guttenburg the first week in May.

There was one very disagreeable feature about this shoot that we were very sorry to see. We refer to one or two palpable cases of dropping for place in the minor sweeps. The only redeeming feature about these cases was the refreshingly open way in which it was done, the delinquents making no bones about it at all. While there is, of

course, no law to prevent dropping for place, it is so very generally conceded that such actions are not in sympathy with the great mass of shooters that droppers as a rule do their best not to let their tactics become public property. One shooter who was present has recently become quite noted for loitering around until the event is almost ready to be closed, entering in the last squad with a well-defined intention of seeking the best hole. He is a first-rate shot and very often successful in his endeavors to "touch the spot." We would suggest to the managements of certain small shoots in this section that they take a leaf out of the books of the Memphis and Knoxville gun clubs, or follow Paul North's example in dealing with the party: Make him enter early or don't let him shoot. Their entry lists will not suffer.

The team scores were:

Climax: Dutchy 25, Apgar 24, L. H. Schortemeier 23, Aaron Woodruff 22, E. J. Clark 20, D. Darby 18-131.

Boiling Springs: P. A. Jeanneret 25, G. S. McAlpin 25, W. J. Simpson 24, W. H. Huck 21, Frank Krebs 19, B. James 16-130.

South Side: R. H. Breintall 25, E. A. Geoffroy 24, C. M. Hedden 22, Asa Whitehead 22, T. Dukes 19, L. Thomas 16-123.

Endeavor: F. S. Edwards 25, Eddie Collins 23, G. H. Piercy 20, P. Proctor 19, E. Ingram 18, Dr. Fletcher 13-118.

Union Gun Club: E. D. Miller 21, T. W. Morley 21, Capt. Money 20, M. Herrington 20, Dr. T. J. Jackson 19, N. E. Money 14-115.

The scores in the sweeps, also the scores of those who shot along in the team race as broken teams, are given below:

Western Traps.

THE COOK COUNTY LEAGUE.

CHICAGO, Ill., April 25.—Pleasant weather and a fine attendance marked the initial shoot of the summer series of the Cook County League, the central organization of the Chicago trap-shooting clubs. Should interest be sustained, as there seems no reason to doubt it will be, there will be high cause for congratulation upon the idea of this union of the target clubs into one friendly body for competitive and social purposes, and there should be much benefit derived from the combination by all concerned in the sport of trap-shooting in this city.

This first shoot was held at the grounds of the Garfield Gun Club, which proved ample to accommodate comfortably all present. By the middle of the afternoon the grounds presented a goodly and well-filled appearance to those passing by upon the electric railway, and indeed sweepstake shooting began there at shortly after 10 A. M. and was kept up all day. At the sweepstakes the records show that some 55 men shot at 25 targets each during the afternoon, this quite aside from the League event.

In the regular League contest there were six clubs represented—Eureka, Garfield, Cicero, Calumet Heights, Douglas and Garden City. Under the conditions each club may enter three teams if it wishes to do so, there being three classes, A, B and C, as earlier described in these columns. Of the clubs represented to-day only one, Eureka Club, had a team on hand for each class. Garfield Club had two teams, A and B; Calumet Heights had two, B and C; Cicero Club had also two teams, B and C; Garden City had one team, B class, and Douglas Gun Club one, C class. This made eleven teams to shoot in all, and it might have been well had the shooting begun at an earlier hour than 2.30 P. M., as the day was well spent by the time the final scores were in. Eddie Bingham referred the shooting very satisfactorily, and the scoring was done by Mr. E. B. Knott, the League secretary.

The conclusion of the first contest shows Eureka Club ahead in the race for the principal trophy, the Mussey A class medal. The same club leads in B class for the Montgomery Ward Co. medal, but in C class loses to Douglas Club, which had but the one class represented; this in spite of the fact that Dr. Miller, one of the Eureka C men, made the A class showing of 23 out of his 25 birds. It is, however, too early to begin any predicting, and the best wish of all is for a close finish at the end of the season. The shoot for the month of May falls for Eureka grounds.

The League has secured a great many special and merchandise prizes, the disposition of which has not yet been fully agreed upon, but which will be distributed equitably and lavishly later on, most of these depending on season averages. A special prize of a drum of Du Pont powder was offered by Mr. E. S. Rice, agent, to-day for the lowest men in the respective clubs, such low men to shoot off at 5 birds. Dr. Meek, Weed, W. A. Jones and S. Palmer shot off thus, and Weed, of Cicero, won with 3 out of his 5. The following are the scores of the League events: For the Cook County League Club classified championships, six-men teams, at 25 targets per man:

DOUGLAS GUN CLUB TROPHY CONTESTS.

The Douglas Gun Club will shoot for trophies A and B at the club's grounds, Jackson and West Fifty-second streets, according to the following schedule: May 2, 13, 30; June 6, 17; July 11, 22; August 1, 12, 22; Sept. 12, 23; Oct. 3.

Shoots for trophies at 25 birds a man. Each member must participate in at least eight of the fourteen shoots. Trophy A is valued at \$25 and Trophy B at \$20. Ladies' day will be on Aug. 1.

ILLINOIS ASSOCIATION MATTERS.

The executive committee of the Illinois State Association thinks they are certain to have a great shoot next June, and predict some record breaking entries. The special prize of a Cashmere gun valued at \$300 will be offered in a 20-bird \$20 contest, live birds, open only to members of the State Association, though open to the world so far as the sweep only is concerned. It is thought best to restrict the gun contest to the Association members in the hope of awakening greater Association interest among outside clubs, and the latter should be represented in force. In the same contest there will be a second prize of either an L. C. Smith \$100 gun or a bicycle of like value, besides other merchandise attractions of merit and value. No doubt we shall see a big attendance at the old Chicago annual.

1206 BOYCE BUILDING, Chicago.

Massachusetts State Shooting Association.

WORCESTER, Mass., April 15.—The seventh monthly shoot of the Massachusetts State Shooting Association was held to-day on the grounds of the Worcester Gun Club. The day was a perfect one and consequently scores ran high. Quite a number of the new members of the shooting fraternity were in attendance and shot in some of the events, making a good showing against such old war horses as Dickey, Leroy, Bennett, Davis, Mascroft, Kennerson and Climax. Among the new men who distinguished themselves were John Tougas, vice-president of the home club, who broke 19 out of 20 in the individual badge race, that being the best score in the event, and Earl Ide, who broke

49 straight. Altogether it was the best exhibition of trap-shooting that we have had in Worcester for some time.

The scores in the 3-men team races for team badges were as below, the No. 2 teams of the Worcester Sportsmen's Club and the Boston Shooting Association making scores of 27 out of 30:

Worcester Sportsmen's Club, team No. 2: A. W. Walls 10, R. C. Walls 8, V. D. Kenerson 9—27.
Boston Shooting Association, team No. 2: Bennett 10, Sanborn 9, Sawyer 8—27.
Boston Shooting Association, team No. 1: O. R. Dickey 9, B. Leroy 9, Puck 8—26.
Worcester Gun Club, team No. 1: Clason 10, Kinney 8, Hoyle 8—26.
Worcester Sportsmen's Club, team No. 1: W. L. Davis 9, C. E. Forehand 9, J. T. Mascroft 7—25.
Lynn Gun Club: Martin 9, Judkins 8, Alley 6—23.
Worcester Gun Club, team No. 2: T. Davis 7, Parker 7, Tougas 7—23.

The scores in the sweepstake events were as follows, No. 10 being the contest for the individual badge:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	10	10	10	10

Michigan Trap-Shooters' League.

ZEELAND, Mich., April 22.—The first meeting of Michigan Trap-Shooters' League for 1896 was held here yesterday and to-day on the grounds of the Zeeland Rod and Gun Club. The club had its grounds in good shape, while the traps, targets, electric pull and electric bells worked very well indeed. We had made preparations for a large attendance, but the two days of rain prior to the shoot undoubtedly kept many shooters away. The wind also blew a perfect gale, causing a great many low scores, particularly in the State medal contest. Ben. O. Bush, of Kalamazoo, won the expert medal; R. Widdicomb, of Grand Rapids, secured the semi-expert medal, while A. Smits, of the home club, took the amateur medal.

Four teams shot for the diamond trophies: Grand Rapids, Pontiac, Holland and Zeeland. The Grand Rapids team—Walton, Widdicomb and Holcomb—won the event.

The special cash prizes offered for the best averages on the two days' shoot were disposed of as follows: Ralph Trimble, of Covington, Ky., won first; Ben. O. Bush won second; Walton, of Grand Rapids, taking third. Ralph Trimble carried off the major part of the purses in the sweepstake events. On the second day he was handicapped, allowing the other contestants an extra target.

The meeting with one exception, the comparatively small number of outside shooters, was a thorough success. Mr. Young, of Grand Rapids, acted as referee, giving the best of satisfaction. In fact, the shoot ran smoothly from start to finish. The scores in the different events are given below:

FIRST DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	9	10	11

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, SATURDAY, MAY 9, 1896.

VOL. XLVI.—No. 19.
No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page viii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order.
Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE DECLINE OF ANTELOPE HUNTING.

It is not so many years since the antelope was the most abundant game animal of the plains and the Western mountains. This was immediately after the extinction of the buffalo, and it is perhaps true to-day. The reduction in numbers of the species has come more from the contraction of its range than from actual destruction of individuals. The time was—and men whose hair is not yet gray can remember it—when the antelope ranged in vast numbers over both the Dakotas, Nebraska, Kansas, Indian Territory, Texas, and to the west to and beyond the Rocky Mountains and to the Pacific coast, and their numbers were so great that it may even be questioned whether the buffalo greatly exceeded them for multitude. As the traveler rode along, the prairie as far as he could see was dotted with the white patches of the feeding animals, and only those immediately in his way moved off to some nearby rise of ground and stamped and whistled at him as he passed.

Over all the summer range the species was very abundant and very evenly distributed. If the buffalo covered the face of the plain, antelope were to be seen mingled with them, feeding among the great beasts; if there were no buffalo in the country, the antelope were still there in the same numbers. Hundreds and thousands of them might be seen in a day, not bunched up together, but sometimes singly or in loose herds of from three to fifty. If frightened and started to running, these herds would mingle for a while; but after the alarm was over they would separate again into smaller groups.

At the approach of winter the antelope changed their ground, migrating in loose, straggling columns from summer to winter range. They traveled by established routes, crossing rivers at certain well-known points and using the same passes between mountain ranges year after year. At such special points they were killed in great numbers by hunters. On the winter range, after the cold set in, the antelope congregated in herds of thousands, and these herds kept together until the approach of spring. Hunters used to kill many of them in winter by shooting into the close mass of fleeing beasts so long as they were within range. Of course they wounded as many as they killed. At that season the antelope often perished from cold. If a cold winter rain came on, gradually changing to sleet and then to snow with bitter cold, the animals sometimes became coated with ice and either perished from cold or were so chilled that they fell an easy prey to the hunter on two legs or four.

In the olden time the white-tail deer was the only animal that was harder to kill than the antelope. Perhaps now there are two, the mountain sheep—having received an education. The difficulty encountered in killing antelope arose in part from the animal's keenness of sense and its alertness and also largely from the character of the country which it inhabited. This, on the plains, was usually gently rolling and often absolutely flat, so that it was quite impossible to approach the game unseen, and, eyes, nose or ears having told them of the hunter's presence, they were off at once. In the rough foothills of the mountains and the much broken country of the central plateau the task of securing antelope meat becomes much simplified.

It is commonly stated in books that the antelope never

ventures into the timber and that it dreads the forest. This is far from true. They are frequently to be found in little mountain parks, and we have seen them feeding among the pines and underbrush of the lofty plateaus of the mountains and among the thick willows that clothed the stream bottoms of tributaries of the North Platte River in northern Colorado. You may find them in such places, but you will try in vain to drive them into the timber. If an enemy is seen they seek the open, where their eyes can be used, for on these they chiefly depend.

And yet they are simple, too, these fleet, wary beasts, and the tales told of their coming to a flag in the early days were true enough. We have seen their inquisitiveness bring them up almost to the tent door in the morning and to within thirty or forty steps of a fire, where a couple of men were cooking coffee at noon. If you were approaching an unsuspecting feeding group and they caught a glimpse of the top of your head, they were likely, if you ducked down quickly and kept still, to trot cheerfully up to the muzzle of your rifle. But those which did this were the young and the simple-minded. An old buck or doe, the leader of a small bunch, was seldom guilty of this conduct. Such a leader at the least warning of danger gave the alarm cry, and bolted seventy-five or one hundred yards to the top of the nearest rise. Here, perhaps, was made the brief pause for a look back which was the only interruption to the rapid flight to distance and safety; but if the first glimpse had really showed danger, there was no pause in the headlong rush. The family scuttled over the innocent hill like so many rabbits—literally *ventre a terre*. On the other hand, a young buck would stand about at seventy-five or a hundred yards, and let the tyro pierce the air all about him with harmless bullets, stamping and snorting unterrified, until some ball whistled too close to his ear, when he trotted off over the hill, a little uneasy. There is nothing so foolish as a yearling buck antelope; nothing so alert and wary as an old one.

The sport of antelope hunting seems to be passing out of existence; or if it is still practiced, we hear but little of it. Perhaps most men choose for the objects of their pursuit the larger animals, like elk, moose and caribou—animals which, though larger, are not so keen and wary as the little white and yellow beast whose twinkling feet and long, easy stride so swiftly carry him beyond the range of the modern rifle. Certainly the decay of antelope hunting is not due to the lack of game, for though exterminated over a vast territory which was once their range, they are still found in goodly numbers along the flanks of the mountains and in much of the country grazed over by cattle and horses. In this cattle country we are glad to believe public sentiment now protects these animals, and the females and young are killed only when meat is absolutely needed.

So there must still be antelope hunters, even though they no longer tell us of their exploits. The sport is one that calls for good judgment, hunting sense, patience and skill with the rifle. It should not die out.

BUFFALO FOR NEW YORK.

NEW YORK, it appears, is to have in one of its new parks in the immediate future a herd of buffalo. When we say a herd we do not mean two or three or half a dozen scrubby animals, confined in a tiny pen which barely affords them room to turn without touching each other, but the third largest collection of buffalo in this country, kept in a pasture 150 acres in extent—nearly a quarter section of land. There is here given a remarkable exhibition of public spirit by one of New York's most successful citizens, Mr. Austin Corbin, the president of the Long Island Railroad, who proposes to loan this herd to this city. The herd numbers, we believe, more than fifty.

On Monday last the Park Commissioners of New York city accepted Mr. Corbin's offer and approved a contract to that end. The park department will inclose 150 acres in one of the new parks for the accommodation of the buffalo, and will provide feed for them, reserving the right to introduce deer into the inclosure; the keepers will be provided by Mr. Corbin. Twenty-five per cent. of the increase is to become the property of the park.

The results of the work of the New York Legislature with respect to game and fish interests are given elsewhere. The chief points to be noted are the failure of the State Association bill and the neglect to repeal Section 249, which permits the sale of game the year around,

NEW YORK INDIANS AND THE GAME LAWS.

AN interesting game law case tried at Salamanca, in this State, the other day, turned upon the application of the fish and game laws to the Indian reservation. It appears that on one occasion last winter a Seneca Indian was spearing pickerel on the reservation, when he was threatened by a white man with shooting if he persisted in the spearing; another Indian thereupon drew his pistol and threatened to shoot the white if the white shot the spearer. The diplomatic incident was concluded without shooting, but bad blood was engendered, and a question was raised as to what the Indians had always considered their inalienable right of hunting and fishing on their own reservations without regard to the laws of the State.

To make a test of this question, James Pierce, an Indian of the tribe, offered his friendly services, and dynamited a stream flowing through the reservation. He was prosecuted for the act by Game Protector Salisbury, and the case was tried at Salamanca before County Judge O. S. Vreeland. Counsellor D. C. Reilly, in defense of Pierce, contended that while the State exercised jurisdiction over the Indian reservations in criminal matters, it had no authority with respect to misdemeanors, the class of offenses in which violations of the game laws belong. Judge Vreeland, however, in an elaborate opinion, overruled this contention, and asserted that the State game and fish laws must be held to apply to the reservations. Pierce was found guilty and was fined \$40, with thirty days' imprisonment.

The Senecas are dissatisfied with this finding. They contend that their treaties reserved to them the right of hunting and fishing on their own reservations so long as the sun should shine and the rivers run. It was pointed out by the court in the case at bar that to kill fish by dynamiting is not fishing. Chief John, of the Senecas, has gone to Washington to lay the case before the Indian Bureau.

SNAP SHOTS.

We had a pleasant bit of biography in one of our February numbers recording the angling life of Isaac McClellan, of Long Island, and his cousin, S. C. Clarke, of Georgia, both 90 years old and still fond of fishing. A fortnight ago we printed a portrait giving the intelligent and kindly countenance of Mr. C. L. Stratton, of Tennessee, our long-time contributor Antler, more than 84 years of age, and still a mountain climber. In this present number are printed notes from another correspondent of many years' standing, Mr. J. H. Dudley, of Poughkeepsie, who, if we do not err, is on the further side of 80. In another column is a story of his salmon fishing written for us by Mr. John Mowat, of New Brunswick, whose accounts of handling paddle and rod, canoe and salmon, alone and unassisted by canoemen, are all the more interesting when we remember that the work recounted is that of a veteran 75 years of age. These instances—and we might cull many others from the records of FOREST AND STREAM'S columns—illustrate the truth that a love for field and the stream and the pursuits of outdoor life is not a brief and transitory fad, but a deeply imbedded sentiment which does not diminish with the years.

British anglers are competing to-day, May 9, in their ninth international fly and bait casting competition, on Wimbledon Lake. There is an elaborate programme of twenty-five events for amateurs, tackle makers and professionals, the three classes being kept strictly separate. Amateur classes exclude any person "who has ever fished for his living, who has been a paid river keeper, guide, gillie, instructor of fishing, or any person connected with the fishing tackle trade." The event appears to have a secure place in the calendar of the United Kingdom; but on this side of the water interest in angling tournaments has practically died out with the passing away of most of the school of fishermen who promoted the Central Park meets of the '80s.

We referred recently to the demoralizing effects of vermin bounty laws upon the morals of the community, and a new instance has just come to light in an Illinois case, where, as is told in our game columns, certain sparrow killers were convicted of obtaining money from the county treasury on bogus warrants, and the county clerk under indictment for complicity fled to Mexico. The rule appears to be well established that an offer of reward for scalps or tails of vermin sets in operation ingenious schemes of amateur thieves for getting something for nothing, on a scale limited only by the gullibility or the guilty conspiracy of public officials.

The Sportsman Tourist.

ZEKIEL'S REMEDY.

Did you ever feel unsatisfied? A kind o' lurkin' fear
Like nothin' wa'n't a-goin' right upon this mundane sphere?
When everybody's craps and things seemed better than your own,
And every breath of air that blew seemed laden with a groan;
When your wife looked kinder humbly, and the children seemed to be
The ornierest set of young uns that ever you did see?
Then it's time to go a-fishin'; get out your rod and reel,
And rough it in the woods awhile, and then see how you'll feel.
You'll find that nothin' else will blow the cobwebs from your brain
Like kinder restin' up a spell, fergettin' loss and gain.
Or maybe you like huntin'; then gather up your gun,
Throw all thoughts of care away, and jest go out fer fun;
Fill up yure shells with No. 7, and don't furgit yure pipe;
Kiss the young uns all good-by, and make a sneak fur snipe.
It may be luck's ag'in' you, and you won't git nary one;
But blue devils won't pursue a man who has his rod and gun.
You'll see the trees a-wavin', and see the waters glint,
You'll tramp upon the daisies, and smell the peppermint.
And when the day is over, and you come to camp at night,
You'll wonder how you ever got such amazin' appetite.
The next day is the same again. You fish in lake or stream;
You hear the ducks a-quackin', or you hear the eagle scream,
You hear the squirrel barkin', as he jumps from tree to tree,
And you try to sneak up on him in a hunter's ecstasy.
Way over in another field you hear the cry "Bob White!"
The world seems full of glory; the sun shines out so bright
That you wonder why you had the blues, and what a fool you've been.
This change is wrought by inhalin' of nature's medicine.
And when you git back to your home your wife looks mighty fine,
You think, "I never seed any children that seems to ekel mine."
The craps has been a-growin', will turn out well, you guess,
And your soul goes out in gratitude and quiet thankfulness.

CINCINNATI, O., April 18.—*Editor Forest and Stream:* You ask for the address of the author of "Zekiel's Remedy." If it is a crime, let me off as lightly as possible, on the plea that I am not an old offender. I had just returned from a hunting trip in the wilds of North Carolina, and when I got home everything looked so attractive that I was disposed to contrast my lot with those less fortunate than myself, rather than with the many who have so much more. In a moment of weakness, like Silas Wegg, I "dropped into poetry." Now, however faulty the rhyme or the meter, I claim the sentiment is all right. There is no medicine like the woods for mind or body. I am a busy man, but always contrive for a week or two each year for fishing or hunting, and never fail to come home refreshed in health and spirits. Next to actual experience comes the reading in *FOREST AND STREAM* what others have done or are doing. There is no other publication so welcome to my home. As long as I can spare the subscription price, keep sending it to my address.

CHARLES R. HUBBARD.

UP THE ST. MAURICE RIVER TO WAYAGAMACK LAKE.

SITTING in the library of a house in Montreal (the house occupied by the late Jefferson Davis during his residence in Canada) smoking an after-dinner cigar, my host asked me how large I had known the common brook trout to grow. The dinner had been good, the cigars were good, the surroundings were most charming and soothing, and I was prepared to hear of a big trout when I had told my story and my host came to having his say, for his manner indicated that he was loaded, and I did not much care how big it was, I was prepared to accept it. I said that the largest brook trout, *Salvelinus fontinalis*, of which I had knowledge was a fish of 12lbs. which was netted in Maine by the Fish Commission men when netting blue-back trout at the junction of Rangeley and Kennebec streams. I saw a look of relief in my friend's face as I named the weight, and I thought to paralyze him by adding—but I believe there was a trout of this species caught by the Indians in the Nipigon River and certified to by the Hudson Bay Co.'s factor as weighing 16lbs. and a fraction. Anyway, this is as I recall what Charles Hallock has said of the fish.

"What would you say to a trout of 20lbs.?"

"I would say it was a good thing; and should be cultivated."

"But a brook trout of 20lbs. weight has been taken."

"Great Scott! Where? And where are the documents in the case?"

"It was caught in Wayagamack Lake, and I have the documents, as you call them, in my possession."

"Where is Wayagamack Lake, and how do you get to it? Is it public or private water, and do you happen to know if there are any of those 20-pounders left to be caught by a fisherman of the present day if he is seemingly willing to risk his eternal salvation by telling of it afterward?"

"Do not shoot all the charges in your magazine at one time, but take a fresh cigar and let me talk a few minutes and I will fill you reasonably full of information on the subject you ask about. In the first place Lake Wayagamack is one of the lakes of the St. Maurice Club, of which I am the president. To reach it take the Canadian Pacific R. R. from Montreal to Three Rivers, change to a branch of the same road and go to Grande Piles, and there take a steamer and go up the St. Maurice River about seventy miles, nearly to La Tuque, and make a portage of eight miles to Lake Wayagamack, on which the club house is situated. As to the big brook trout it was caught by Mr. Colin Campbell, of the New York & New England R. R., now living in Boston, but formerly living in Quebec. Mr. Campbell caught the trout through the ice long before the lake and adjoining territory came into the possession of the St. Maurice Club. He packed the fish in snow and took it to Quebec, where it was exhibited, and afterward his brother-in-law, Sir Alfred Jephson, put it in the ice box of an Atlantic steamer and took it to England, where it was also exhibited."

"But are you sure it was a speckled trout (*Salvelinus fontinalis*) and not a lake trout (*Namaycush*) or togue, as you call them up here?"

"I expected that would be your next question, and here is a letter from Mr. Campbell, dated Aug. 5, 1895, in which he says there can be no doubt about the species, as there are nothing but speckled or brook trout in the lake, and that he has caught many 10 and 12lb. fish of this species from the lake. The thing to do, however, is for you to go there and see the lake and fish it for your own satisfaction and edification, and I will make up a party and we will start in two weeks from this time."

The conversation I have narrated was the incentive for my trip to Lake Wayagamack, in the Province of Quebec, Canada. About Sept. 1, or to be precise Aug. 31, Mr. W. F. Rathbone, attorney for the D. & H. R. R., started from Albany on the Montreal sleeper, and I joined him at a point on the main line of the road, and the next morning we were in Montreal. Dr. Wm. H. Drummond, president of the St. Maurice Club, had arranged everything for the proposed trip, and we really had nothing to do in Montreal but visit and wait for the next day to come.

Dr. Drummond, Col. J. B. MacLean and Mr. F. W. G. Johnson composed the Montreal contingent, and on Monday morning, Sept. 2, we got a good start; but trouble began before we had gone fifty miles. I had some money in my pocket when I started, but a few miles out I discovered that I had neither money nor pocketbook when I wished to pay for a pool I had bought on the weight of the largest trout that would be caught. We had the smoking compartment of the parlor car to ourselves and I knew the money was in the compartment, and it did not much matter where. Dr. Drummond had retained a box of cigars out of the stores to smoke en route, and when he opened the box it was filled with Montreal newspapers; and later the cigars were found stuffed into the pockets of my overcoat hanging on a hook. The loss of cigars was a serious matter, more so than the loss of money, for money would not buy cigars where we were going, and a drum-head court martial was ordered at once. It was clearly proven that my overcoat belonged to Col. MacLean, that the cigars were of poor quality, made from habitan tobacco, and really belonged to Givadam Johnson, and that the Doctor had made a bluff with an empty box with an importer's stamp on it, and he was fined a bottle of Radnor water and recommended to the mercy of the court. Except that Rathbone was a lawyer I think the Doctor might have been hung for having had his cigars stolen. At Three Rivers we left the main line of the Canadian Pacific R. R. for a branch road which terminates at Grand Piles on the St. Maurice River. On the branch road at Radnor, the home of the Radnor Spring water, we were joined by Mr. John Drummond, who was to act as chaperon for the party until he had turned us loose in the woods. At Grand Piles I was chiefly impressed with the fact that my rubber overcoat weighed about 200lbs., as the pockets were loaded with coal, the sleeves with kindling wood, safely pinned in, and that the body of the coat surrounded an infant saw log. At this point I may say, in simple justice, that during our outing I never found Col. MacLean with a cavil that did not belong to him, and that I never found any other member of the party with anything whatever that did belong to him, except his features, until we got back to what is politely termed civilization. Upon crossing the river at Grand Piles the portage begins which leads to the Laurentian Club. Mr. Parker, president of the club, had sent guides and canoes to meet us, and they were awaiting our arrival to go up river with us. Two young gentlemen, Mr. Boyer, of Montreal, and Mr. Charles M. Taintor, Jr., of New York, with their guides, had also come over from the Laurentian Club to go with us to the St. Maurice Club house, to start on an exploring trip among the little known lakes and rivers of the latter club.

At Grand Piles we were to commence our journey of seventy miles up the St. Maurice River in a new steamer, the *Voyageur*. This steamer was built to take club members and their guests and baggage nearly to their destination. She was 68ft. long, with steel hull, sheathed with rock elm for protection against possible rocks, and fitted with state-rooms, cooking galley, etc., so that unless one was pressed for time it mattered little whether one reached the portage near La Tuque on one day or another. Secretly I wondered why the steamer was provided with such a powerful engine as I found in her hold, but I found out at the first rapids without asking any questions. This was to be her first trip up the river, and as we had a new guardian for the club property, a cook and belongings, furnishing for the club, and stores to load, it was nearly dark before we started. When we did start, however, the boat was arranged like a bridegroom for a wedding, and the town turned out to see us off. The British flag, the American flag, the French flag and the steamer's flag were flying from various parts of the boat, and the steam whistle answered salutes from the shore until I thought we were wasting precious motive power. The machinery being new, it was thought best to run slowly and tie up for the night when darkness had fallen. Our trip up the river was one continuous ovation from the settlers on the banks. When we came in sight of the first cabin, perched high up above the river on the mountain constituting the bank of the river, and a girl rushed madly out of the door with something in her hand—which afterward proved to be a French flag—and pulled it to the top of an exaggerated barber's pole near by, at the same time a man ran from the field at the side of the cabin and entered the door only to reappear with a gun, with which he fired a salute of welcome, which the steamer's whistle answered as the passengers swung their hats, I thought it was something the Doctor had arranged for his guests; but every blessed cabin along the river had a barber's pole in front of it, and every cabin contained a French or British flag, which was run up at our approach (the British flag was quite as apt to be upside down as right side up, and the French flag was sometimes the flag of the Netherlands and sometimes nothing but a flag), and a gun or two or three, which were fired again and again in welcome. I could not understand why each cabin should support a flagstaff, nor why each flagstaff should be striped like a barber's pole or "singed, streaked and speckled," until I was told that some years before, upon the death of a bishop of the dominant church on the south side of the St. Lawrence River, the people of the diocese were urged to show respect for the good man's memory by placing flags at half mast. Those who had no flags procured or made them, and the forests furnished the masts, and association with the Indians and their totem poles furnished the stripes of colors, and thus the idea spread until the habitans way up the River St. Maurice, north of the St. Lawrence, acquired the flag-pole habit, and a very agreeable habit it is. Tuesday morning, Sept. 3, the steamer started up stream again before the passengers were dressed. We had to ascend three rapids—Manigance, Cuisse and Croche—and each one had peculiarities of its own, although they seemed to be unanimous in their desire to keep the *Voyageur* from going up stream, and, in fact, the first one, Manigance, acted as though if it could have its own way it would send the boat to the bot-

tom rather than permit it to go on its journey up stream. Fifteen miles from Grand Piles the Mekinac River comes in on the right (*i. e.*, it is on the left bank); twelve miles further and the Mattawin River comes in on our left; twelve miles more and we reach Grand-Anse, a little settlement. From Grand-Anse to Rat River, on our left, it is twelve miles, and from Rat River to La Tuque it is twenty-one miles. The Wessonneau River is also on the right bank, and the Little Bostonais is on the left, being the outlet of Wayagamack Lake. The portage for the club house is two miles south of La Tuque, but I am getting up the river ahead of the steamer. All day Tuesday we charged the current and the rapids, when we were not fixing the machinery, and when night unrolled and spread itself over the Dominion we were still several miles shy of where we were to do the heel-and-toe act. No one seemed to mind the delay, as the steamer was well provisioned, the weather was fine, and the river and its banks constituted one grand panorama of magnificent scenery, with sufficient change to keep us wondering what the next bend in the stream would unfold. However, I believe I promised to say nothing about the scenery, as Givadam Johnson and Col. MacLean went up to the falls of La Tuque, which I did not, and they have charge of the scenery department, and will exhibit it in the columns of this journal after I have done my turn.

Wednesday forenoon the steamer dropped anchor opposite the mouth of the Little Bostonais River, about two miles south of the proper landing, and the guide put the canoes in the water to take us up to and around the falls on this stream, and then on up stream to the main portage. The falls are well worth seeing, but I advise any one who may go to the club to take my word for it and get a photograph of them, and disembark at the main portage. If one likes to climb up the side of a house about 150ft. high with no creepers or life insurance, by all means take in the falls, but take along a bag of crude oxygen and pump it into your lungs through a cake of ice, or your breath will set the forest afire before you get to the top. Johnson may not agree with me about this when he tackles the scenery, but the difference may be accounted for when I say he weighs 117lbs. and is agile enough to walk on a ceiling, while I weigh 220lbs. and can sit in a wagon behind a good strong horse all day without getting tired.

From the St. Maurice River to the club house on the lake it is seven or eight miles, depending upon who tells it and whether or not you have a pack to carry. Four miles and a half is by land over a good trail and the balance is by water in a canoe. A road has been cut so that all heavy luggage and stores are taken in by team, the guardian, Joe Mercier, living on the portage, so that he responds in person when invited by the steamer's whistle to do so. We reached the club house by the middle of the afternoon on Wednesday, but our rods and tackle had not arrived over the main portage, nor had the provisions. Rathbone found a sapling with hook and line belonging to the camp keeper, and going down to the landing, he pushed out in a canoe into the lake and hooked a trout in about four minutes' time.

The club house is a substantial and comfortable building of squared logs standing on a slight elevation overlooking Lake Wayagamack. The lake itself is about five miles wide and seven miles long, but so irregular in shape that it has a shore line of about fifty miles. The territory leased by the club contains over 100 lakes. From Little Wayagamack Lake, less than three miles from the big lake, it is only about ten miles to Lake Edward on the Quebec & Lake St. John R. R. The rods and tackle came in before dark, and as soon as I could mount one I went down to the outlet, where the club has two other buildings, and cast in the stream. The fishing was too good, the trout would rise at any fly offered. I do not know how many I did catch, but I killed six, the smallest weighing 1lb., the largest nearly 2lbs., that being my quota to supply the camp with food that night. The fishing in the quick water afforded some sport after the fish were hooked, for there were snags and things to be avoided, but every cast seemed to raise a trout and it was too rich for one accustomed to work to get a fish to rise. The next day I fished in the lake and caught several trout weighing between 2 and 3lbs. each, but had to put most of them back uninjured in the water. It seemed impossible to locate the big ones we were after. My guide, Aimé Beauheu, had fished the lake through the ice in winter and had caught brook trout of 10lbs. weight, but he knew nothing of the fall fishing.

In the afternoon there was rather too much wind for a canoe in the lake and I went down to the outlet stream, as we required fish in camp. Fifteen was my limit and they were caught in rough water in almost the same number of casts. I did try several different flies, but one was as good as another. I saw one big trout in the white foam and fished industriously for him. I have a very good idea in my own mind how much this fellow would have weighed had I been able to put him on the scales, but I could not tempt him. While fishing for him I hooked eighteen trout, which were released as soon as netted. The fish that I killed and the fish I returned would run from $\frac{1}{2}$ to 2½lbs. each, but they were not what I especially wanted. The next day was Friday, fish day, and Dr. Drummond had given Joe Mercier to me to paddle the canoe. Joe was an old *voyageur* of the Hudson Bay Company, and had lived most of his life among and with the Indians, for his wife was a squaw and had enjoyed foreign travel. During the war in Egypt the British Government had sent to Canada for 600 *voyageurs* to operate the boats in passing the cataracts of the Nile. Joe went over in charge of one of the detachments as captain of a company, and his experience was amusing to listen to; but he said the birches, a few of which were taken along, were of no earthly account except to give the officers in the army a ride through the cataracts. We fished around an island thought by some one to resemble a steamboat, and so called Steamboat Island. There were trout enough to be had, but not of the magnitude I was after. One of 4lbs. was the largest I caught, but my memoranda tells me, which is wholly unnecessary, that I hooked eight trout and lost them. They would stay on but little longer than it required to strike, and why I could not put a hook into those fish that would stay put I have not found out to this day. I hooked and landed trout that would weigh from 2½ to 3lbs., and then put them back in the water, for there was nothing else to do with them after I had killed all that could be eaten. Once I hooked a trout of perhaps 1½lbs. in weight, and played him toward the bow of

the canoe for Joe to put the net under him. He extended his hand to lift the fish by the leader, but I said, "No; use the net, Joe." With a look of disgust he said, "Too small." I explained that I did not propose to have leaders broken by monkey work when I was so far away from the base of supplies, and he must net all the fish. The trout was still fighting, and I was slowly reeling him toward Joe's end of the canoe, when Joe reached for the landing net, plunged it into the water, and lifted into the canoe a fish much larger than the one I had hooked, and in fact my fish was still on and I was using but a single fly. "Joe, where did you get that trout?" "He was following that little trout on your hook and I just lifted him into the canoe." It was a fact, the fish was not hooked and was uninjured, and weighed 3½ lbs. I talked with Joe about his life as a *voyageur*, as a moose and caribou hunter, and as a fisherman. I asked if he had caught ouananiche, and he said yes. "Where?" "In Lake St. John, in the Mistissini River, in the Saguenay." "How long have you known of the ouananiche?" "Oh, forty years; since I first went up the Mistissini River on my way to Mistissini Lake." "Do you mean to say you went to Mistissini Lake forty years ago?" "Yes, about forty years." He said it as he might have said that he went the week before to La Tuque to get some tobacco; there was to him nothing remarkable about it, he simply answering my question as he would have answered it had I asked about the Big Bostonais which flows a few miles from his cabin. Here was a man who forty years before had been to the "great inland sea, the greatest freshwater lake on the continent," and all that sort of thing, and did not know that it was only discovered within a decade. How Hallock would have smiled and Murray questioned had they both been in the canoe that day. It was a sad thing to do, for I had grown to like Joe, but I had to tell him that the lake was not discovered until thirty years after he had been there, and that quarts of ink had been shed to prove it to be an unknown lake. That at least two Government expeditions had been sent out to discover it long after he had visited it, and that only the year before I had met a man at Lake St. John who had just that season explored the lake to confirm its discovery. I asked Joe how he happened to wander to the lake so long ago and give historical annals a fatal twist by anticipating its discovery, and he said he went with a missionary priest and spent one summer on and around the lake, but the Indians were so ignorant they could not be saved and the missionaries gave them over to their own devices and returned to a more profitable field of labor. I think it was Hallock who said a few years ago, during the discussion as to whether the lake was known or unknown, that there was a well-known trail to it marked out by the missionaries, and indicated on a map, fifty years or such a matter before it was discovered in the newspapers, and in this Joe Mercier confirms his statement.

Saturday the wind was too strong for the canoes on the broad lake and I went down to the outlet and caught two trout and put them back in the water, as the camp was supplied with fish for dinner. The weather was perfect for an outing, and the only rain we had was a shower in the night. It was so warm that the black flies had a fall convention on the outlet stream and contiguous territory, and there was not a preventive in camp. At the club house there was not a single fly, nor was there any flies on the lake, but the outlet evened things, as my swelling ears testified. Saturday afternoon I again went down to the outlet stream, and standing at one place on the end of an old log I caught fourteen trout in water that I could command with my line from that one position. The fish ran in size from 1 to 2½ lbs. I made no memoranda of the fishing of other members of the party, but Rathbone's fishing was about as I have described my own, and the others did little fishing. In fact, on Saturday Johnson and MacLean started with a canoe and two guides and went over the portage to the river, and then up the river to La Tuque, where the Hudson Bay Co. has a post, from which point they proposed to seine the river to Grande Piles, in the canoe. Sunday noon we were on the portage—the Doctor, Rathbone and the writer—headed for the river and the steamer.

By 4 o'clock we were steaming down stream. Now, it is quite a different matter coming down the St. Maurice, shooting rapids, instead of climbing slowly up. Croche Rapids made our hair curl as we went through without a check, and when a few moments later the boat struck a rock it uncurled. We had three pilots on board, and the man who ran that part of the river went below for his supper after we had passed the rapids. When the boat struck she jumped like something animate and struck again, making everything jingle from stem to stern, and on we went like a race horse without a bell being sounded from the pilot house. One of the engineers, we had two, came back and examined the hold to see if we were making water, but the rock elm sheathing did its work so well that Rathbone said, "Hit her up again just to see how far she can jump." I do not think he did not mean what he said, for if I am even a fourth rate mind reader, he meant "hitch her to a post, tie her to a tree or several trees, throw out all the anchors you have got, rope her in her wild career, put hoppers on her so she can't buck-jump and let me get ashore, for I am a little cramped from sitting and I would like to walk from here to Montreal."

Since we returned I have known of his saying to about fifty men, in confidence, that when the *Voyageur* reared up on her hind legs I grabbed a canvas fender that looked like a life preserver and was ready to obey the command, "All ashore that's going."

It was dusk when we reached the second rapid and we headed up stream and anchored for the night. The next morning we had to wait for the fog to lift before we started, but we got the wood while we were at breakfast and by nine o'clock we were where the river broadens out into a great shallow and the Meckinac comes in. All the rapids and shallows and obstructions buoyed or marked with course signals, and while we were squarely in our course as indicated by the shore signals we went hard and fast into the sand. Of course while we were in this plight Johnson and MacLean came whooping past in their canoe and jeered us from A to izzard in several tongues.

At this point the Doctor rubbed his hands and smiled a satisfied smile as he assured us that everything was going as he arranged it for our entertainment. That no first trip of a steamer up an unknown river was complete without running aground, and except for the expense he

would arrange with the engineer to blow out a flue while we were waiting. Rathbone and I signed a round robin which informed him that much as we loved him, and much as we enjoyed the eating and drinking and sleeping on the palatial *Voyageur*, that we proposed to leave at 11 o'clock sharp, Eastern time, in our private conveyance for a point where we would chance being wrecked in a railroad disaster. Rathbone said his experience had taught him that anything that was dry or extra dry was preferable to water, and in this I agreed with him. We regretted to leave our host behind, and shipwrecked at that, but Grande Piles, Montreal and other places were beckoning to us, and our two guides put a canoe in the water over the side of the steamer at the appointed time, and when we were stowed in it with our belongings we bade the Doctor good luck and farewell and cast off. With two paddles and the current to aid, we went humming down stream and soon after 1 o'clock we reached the station, and that evening the four survivors dined together at the Windsor, in Montreal.

It is many a day since I have so thoroughly enjoyed a fishing trip in all its parts as this one I have only outlined. As I have intimated, the trout fishing was too good, there were too many of them ready to take anything offered in the shape of a lure. We did not catch any trout as large as were taken by a member who visited the club a week before we were there, but had no reason to feel disappointed on that account. An angler is always fishing for the big fish and if he does not get him it offers the best kind of an excuse for his return to seek again for him. The mother of the cook at the club was half Scotch and half Esquimaux, who first saw light at a Hudson Bay Co. post in the far north. It was as good as reading a story to talk with her of her experience in the frozen north, and when she told me how good smoked trout were I asked her if she would smoke some for me if I would catch them. She consented, and it gave me an excuse to catch more than I otherwise would have done. Turning the big fireplace in the club house into a temporary smoke house, she did turn out some fine smoked fish. Game seemed to be as abundant as fish. Returning to camp at dusk one evening, a caribou walked out of the water's edge and lumbered away into the brush. Joe told me both moose and caribou were abundant, and the former could be had any evening for the calling. I hope to try the fishing at Wayagamack again this year and perhaps I may get one of the big fellows. A. N. CHENEY.

UNCLE LISHA'S OUTING.—XXI.

Unexpected Visitors.

"WAL, here you be, boy," said Uncle Lisha, "an' I'm glad tu see ye, for it's a-gittin' consid'able ca'julluky aout yender for your milkweed pod. Good airth an' seas! What a snag o' ducks you got! Sixteen, seventeen, eighteen, nineteen! Yes, sir; nineteen! Jullook o' there, Ann Twine; he's skunked the hull caboodle on us! Le'me see, you got three, an' me an' Jozeff—wal, we hain't caounted aourn yit."

"Pooh, dat a'n't notings!" said Antoine, contemptuously poking the pile of ducks with his toe. "A'n't he'll gat honly nanteen dawkin dat crik all to hese'f? Dat a'n't much for do, an' what leetly feller dey was! One tam w'en Ah'll leeve in Canada Ah'll keel forty wid club; yes, seh, an' dey was gre't beeg feller. Yes, seh, dey was geeses."

"Sho, Ann Twine, I guess they was in the aig."

"No, seh, dey was in Canada, sem Ah'll tol' you, an' if you'll a'n't b'lieved me Ah'll goin' tol' you de trute. You see de way of it, he come on stubby graoun' for pick de hoat was jus' sow, an' he steek hees foot on de mud so he can' pull it, an' den he froze heem fas' 'cause it mos' winter; so den Ah'll a'n't not'ing for do honly knock hees head of it."

"What be you a-tellin'?" Uncle Lisha groaned. "Oats jes' sowed on stubble in the fall! Du, fer massy's sake, lie reason'ble if you must lie."

"O, Onc' Lasha!" Antoine said, in an injured tone. "If Ah prove mah storee you'll a'n't b'lieved it. Haow you s'pose mans was goin' for rembler everyt'ing was happen in hees laftam w'en he happen so meny, hein? It was two tam Ah'll keel forty wid stick, one tam in de spring an' one tam in de fall! Come, le's go on de camp. De patack was mos' all bile, prob'ly, an' de dawkin ready for cook. Sam, you wan' save dis leetly feller?" touching the ducks again with a scornful toe.

"Sam Hill," said Joseph, just finding words to express his admiration. "If that 'ere hain't a harnsome mess o' feathers. Samwil, if 'll let me pick them tu the halves, M'ri 'll be more'n willin' 'at I come, or leastways she'd ort tu be, seems 's 'ough."

"You c'n hev the hull on 'em tu feather your nest, for all me," Sam replied, cringing from a fresh contact with his wet trousers in a way that attracted Uncle Lisha's attention.

"Why, Samwil," he cried, as he laid a tentative hand on one of the legs. "You've be'n in the water. Hes that 'ere mis'able aigshell be'n a spillin' on ye? I allers said it 'ould. I wish 't the dumbest Injin contraption was smashed finer'n a barn fore it draounds ye."

"It never tipped over wi' me yit," Sam protested. "I went int' the water a purpose."

"A-wadin' arter ducks? You tarnal fool, this time o' year?"

"No, I didn't," Sam answered doggedly.

"Wal, then, what did ye for?"

"Wal, if you've got tu know, the' was a leetle shap tumbled int' the crik a fishin' all alone, an' I hed tu fish him aout tu keep him from draoundin', an' it nat'rally was sort of a wet job."

"I wan't callatin' tu scold ye for no sech a thing, Samwil," Uncle Lisha said in a low voice as he laid his hand on Sam's shoulder, "but you'd better go an' dry ye off by the fire." And so they all set forth toward the camp, these two leading the way.

As they drew near it they were astonished to hear the unmistakable sound of female voices, and singularly familiar ones. Sam coming first in sight of the place signaled silence and a halt to his companions, who gathered close at his back, and all stood and stared in wonder not unmingled with dismay upon the unexpected invasion of the camp.

Two women were mousing about, turning their sun-bonnets like telescopes this way and that in diligent inspection of every object, now focusing a common center of interest, now separately, in search of new diversions and discoveries. These movements were ac-

companied by remarks which were not very flattering. The faces were indistinct in the depths of the sun-bonnets, but there was no mistaking the forms, motions and voices of Aunt Jerusha and Huldah.

"I don't b'lieve they've swep' up sence they be'n here," said the first, making a slow inspection of the fireplace and its littered surroundings.

"Swep'?" the other returned, sarcastically. "Why, they hain't got so much as a hemlock broom, I warrant ye, which they might easy enough, for jullook at the cedar a-growin' all araound."

"I know it," Aunt Jerusha acquiesced, "jest as good if not full better, not scatterin' itself so bad."

"An' will you look at that 'ere fryin' pan?" cried Huldah, holding off the utensil with gingerly hands at a distance, yet bringing the muzzle of her bonnet to closer inspection. "I can caount the leavin's o' three cookin's in 't, plain."

"Sam Hill, hain't I glad M'ri hain't here tu see that 'ere," Joseph whispered, "an acre o' feathers wouldn't caount ag'in' leavin' on 't so; wal, mebbe that's settin' on 't high, say half an acre."

"An' see them petaters. I'll be baound they're all b'ilin' tu pieces," cried Aunt Jerusha, fluttering over to the pot and peering into it while she blew away the steam. "Yes they be, true's you live. Can't you take 'em off, Huldah?"

"Taint likely there's no sech a thing as a holder. I da' say they use a bunch o' leaves or a dirty stockin'," said Huldah, rushing to the rescue of the potatoes; "but thank goodness I've got my apron," and she whisked the kettle off, keeled it and set it by the fire in a trice.

"Or mebbly the' hats," Aunt Jerusha suggested, still dwelling on holders. "Jest think on't, Lisher might ha' fetched his luther apron." And Uncle Lisha gave Sam an appreciative dig in the side with his elbow.

Then the two women backed off a little to take a comprehensive view of the scene, making inquiries and responses of, "Did you ever?" and "No, I never," till they fell into a fit of laughter which they were obliged to sit down to finish, while the spectators made a silent exchange of imbecile grins. When the camp inspectors had exhausted their mirth, they discovered the tent and flew to it. Now their heads were thrust far inside in minute inspection, now withdrawn and the muzzles turned to each other with divers nods and shakes of assent and dissent, accompanied by spasmodic movements of their bodies, all of which gave evidence of invidious remarks and indulgence in unseemly mirth. All this was endured in silence by the spectators of the inquest till the older woman began poking at the contents of the tent with a long stick, when Uncle Lisha could restrain himself no longer, but rushed forward and shouted at the top of his voice,

"Hello, you women; what you duin' in there!"

Thereupon the intruders backed out of the tent, and facing about showed the rightful occupants a far bolder front than they could muster, caught as they were in all unseemly ways of housekeeping.

"Why, Lisher Paiggs, haow du ye du?" cried Aunt Jerusha, beaming upon her husband, and Huldah called out heartily:

"Haow be ye, Sam, an' all of ye?"

"Good airth an' seas, is that you?" Uncle Lisha shouted.

"Why, I thought you was couple o' schoolgals a-snoopin' 'raound. Wal, seein' you ast, I do' know 's I'm none the better for seein' you, considerin' haow you talk about aour haousekeepin'."

"Wal, naow, Lisher, you can't deny but it's a leetle mite thick under the nail," said his wife.

"By gosh, Aunt Jerrushy," cried Antoine, coming to the front, "you was come de wrong day. Dis a'n't aour day for wash de dish. We jes' daown to de lake for see if dere was waters 'nough for wash to-morry, an' we make off aour min' we got for wait till he rise."

"Haow come ye tu come, anyway?" Uncle Lisha demanded. "Sed daown an' make yourselves tu hum, an' tell us 'baout it," and he waved them hospitably to one of the fireside logs. "Aour gal 'll git tea ready tu rights. Come, Miss Ann Twine, you want tu be gittin' aout your sweetcake an' plum sass an' jell, for we got compny."

"Ah'll gat all of it in de pettetto keetly, an' de res' of it Ah'll gat pooty soon," Antoine answered promptly, and began bustling about the fire, heating the frying pan and scouring it with a stone—as he would never have thought of doing but for the presence of the guests. They eyed his movements, but politely refrained from audible comment. Then seeing the ducks, they fell into a poultry-wives' admiration of them.

"My, I never see sech harnsome ducks," cried Huldah, "an' you got all them sence you come here?"

"Why, I got these tu-day, jes' myself, an' I do' know what the rest on 'em has got," Sam answered, and then Huldah detected the condition of his nether garments, and she took him to task forthwith.

"Why, Sam Lovel, what in this livin' world you be'n a-duin' to your trowsses? You be'n wadin' int' the river with 'em? An' the water jest as cold as ice. An' you've be'n a-duin' on't every day sence you come here an' got the rheumatiz tucked ontu ye an' the phthisic an' nob'dy knows what all, jest tu shoot a duck. You'll ketch your death jest as sure as you live, for a few leetle mis'able ducks. You shan't never come here again, not if I c'n help it. Hain't it a caution. Naow you go intu that tent an' take right off them trowsses an' hand 'em aout tu me an' le' me dry 'em an' you cover up in the blankets till they be. I should think you'd know better an' should n't ha' s'posed Uncle Lisher 'd ha' let ye."

Before Sam could say a word in his own defense he was judged and sentenced, but when Huldah stopped to breathe Uncle Lisha put in a plea for him.

"Naow, Huldah, you quit a scoldin' on him, for he hain't be'n in the water afore sen' we be'n here, an' he went into 't tu save a leetle boy from draoundin'. I guess that 'ere leetle shaver's mother wouldn't wanten hev Samwil scolded."

Huldah's voice shook a little and the look she gave her husband was anything but reproachful as she said:

"Why, Sam, haow 'd I know? You set ri' daown here by the fire an' dry ye an' tell me all about it. Folks hain't half so apt tu ketch cold if they let the' clo's dry on 'em. Le'me fill your pipe for ye. Did you run a turrible resk? Did he come all right? Haow old was he?"

These and many more questions he was called upon to answer as he toasted his legs between whiles of keeping them out of Antoine's way, who as nearly as could he was on all sides of the fire at once,

At the same time Aunt Jerusha hovering about him, intent on motherly offices from which she could not be diverted until Uncle Lisha had shouted at her three times with increasing volume of voice.

"Haow come ye tu come? Good airth an' seas! that's what I want tu know," while Joseph could not find a chance to inquire after the welfare of his father or to ask what message M'r'i had sent.

"What was 't you was sayin', father?" Aunt Jerusha asked at last, yet still giving her attention to Sam. "Haow 'd we come? Why, we tackled right up the waggin an' come along. But we never tol' nob'dy 'at we was a-comin' here. The 'd ha' be'n objections, no eend on 'em, if we'd ha' tol'. Hedn't you better pull ye boots off, Samwil, an' stick ye feet up on that chunk? An' so you see, Huldah she hed some dried apple 'at she wanted tu trade off, an' we jest fixed it up betwixt us 'at we'd fetch it daown tu Vergennes an' stay over night tu Cousin Chase's an' then come here! An' so we did, an' here we be. Hain't you glad tu see us? You don't act as if you was, not turrible."

"Why, yes, we be tew," Uncle Lisha protested; "but you see, you took us kinder onawares."

"We didn't hev time tu put on aour tother clo's," said Sam.

"Wal, tu tell the truth an' not no jokin' ababout it," said Aunt Jerusha, "we fetched daown all on ye's t'other clo's as fur as Cousin Chase's, an' there they be."

"You didn't never, Jerushy Paiggs," said her husband, incredulously; but she nodded repeated affirmatives and smiled serenely.

"Wal, then, what did ye for? Be you goin' tu sell 'em or be you goin' tu take us to meetin' or a-visitin', or what is 't?"

"No, not nary one," said she, after a moment's enjoyment of her auditors' mystification; "but tu the caravan 'at's comin' nex' day arter day arter tu-morrer. We cal-lated you'd plan tu go to 't, an' we'd go tew, on Bub's 'caount. His gran'pa an' gran'ma's goin' tu fetch him, an' we wa'n't a-going tu hev you 'raound in your ol' ev'y-day clo's."

"Good airth an' seas, if I hadn't clean forgot it!" Uncle Lisha declared in genuine surprise at his forgetfulness of so important an event.

"Seems 's 'ough I did kinder think on 't when you was a-carummuxin wi' that ol' ram," said Joseph; "but I hain't thought on 't sence an' I do know when afore."

"Forgot it!" Aunt Jerusha exclaimed with mild scorn; "that's a likely story, an' it all pictered aout in red an' yaller ev'ywheres. Anyways, it is naow up tu Danvis even on tu folkses barns, an' ev'ybody's a-goin'."

"On Bub's 'caount, I s'pose," her husband remarked, bestowing a wink upon the company. "I do know what we'd all du if it wa'n't for that boy."

"I don't nuther," Aunt Jerusha assented heartily. "But it don't signify. 'We're all a-goin' an' a-goin' lookin' somehaow. O, you needn't think me an' Huldah didn't fetch aour t'other bunnits," as she detected a quizzical glance at the gingham sun-bonnets. "An' you needn't worry none; we made cal'lations on your not bein' prepared for comp'ny an' laid in wi' the folks where we left aour hoss and waggin tu keep us over night in case you didn't hev spare beds."

"We got feathers 'nough, seems 's 'ough," Joseph said, "but I don't know 'bout the tick, not sca'cely."

"An' we fetched along a loaf o' bread, an' some butter, an' some b'iled aigs an' some quick pickles," Aunt Jerusha continued, casting a doubtful eye upon Antoine's panful of fried duck, "'cause we didn't know but what you might be gittin' short; but I will say it smells better'n it looks. Be ye gittin' dried off, Samwil? They be rael socierable folks where we left the hoss. Larkins is the name—I b'le' so, an' they 'peared tu be consid'able 'quainted wi' some on ye." She cast a quizzical glance around, ending at Huldah, who shook her head. "Why, good land! what hurt 'll it du? Don't they all know what they done?"

"What in time be you a drivin' at?" Sam asked. Huldah still shook her head and gave at the same time a deprecatory "S-h-h," but Aunt Jerusha persisted in telling her tale.

"Why, nothin', only them folks was a tellin' haow 't an ol' man an' a fat man come there one day with a wil' goose 'at they'd shot, praouder'n tew rhusters, an' come tu it was a tame wil' goose 'at them folkses hed. O, my sakes!" She ended with a fit of laughter in which Sam and Antoine joined as they comprehended the gist of the story, while the heroes of it looked foolish, though Uncle Lisha tried to make light of it by saying,

"Sho, women folks 'll b'lieve anything you tell 'em. That 'ere Larkins 'll lie faster'n a hoss c'n trot. What was that 'ere yarn he tol' you, Samwil?" But he failed to divert inquiry and was obliged to admit the truth of the charge. Yet he was consoled for this humiliation by the admiration that his real wild geese drew forth when he exhibited them, and Joseph's store of feathers were given unqualified praise.

Then Antoine announced supper and the embarrassed hosts led their guests to the repast, which they attacked with no great zest, having seen the cook wipe on his trousers the fork with which he turned the contents of the pan, and use his hat for a holder. Yet they praised what was set before them, while making a meal mostly from the provisions they had brought with them. Then they helped to clear the table and made the dishes cleaner than they had been since their first use here.

After this all the company gathered around the fire, the men smoking, Aunt Jerusha regaling herself with snuff, Huldah unwontedly idle for lack of knitting, while all the latest Danvis news was told and with judicious omissions all the adventures of the camp, and so well did the visitors enjoy their first taste of this life that they decided to lodge in the tent, where a luxurious bed was prepared for them with a double allowance of cedar twigs.

At sundown the north wind died, but the pulse of waves still beat upon the beach in regular recurrence above the slumberous murmur of distant shores. A company of bitterns were performing a farewell rite on the eve of migration, uttering uncouth squawks as they wheeled high above the marshes in awkward gyrations, and frequent flights of ducks were whistling past and splashing into channel and marsh.

The busy air was filled with sounds that were strange to Huldah's ear; the shuddering cry of a screech owl and the sad monotony of the crickets were the only familiar ones among them all. These with the slow wash of

waves were the voices that her dreams shaped themselves to, when with a lingering sense of strange environment she fell asleep.

ROWLAND E. ROBINSON.

Natural History.

SERPENTS AND SENTIMENT.

Editor *Forest and Stream*:

The writer, having already categorized himself as a "back number," is well content to lay aside his much-worn "Faber No. 2," leaving the field of hunting adventure and fishing narrative to younger and fresher chroniclers, whose ready pens and facile art of story-telling are well attested in the bright and entertaining pages of *FOREST AND STREAM*.

I am moved, however, to arise to a point of order and let fall a few remarks in mild rebuke upon finding my own peculiar domain as *FOREST AND STREAM*'S "snake editor"—in the enjoyment of which distinction I have some while reposed in honorable retirement—invaded by two of your correspondents in a recent number. These heedless and superficial speculators in snake philosophy, unmindful that the eye of the snake editor is ever alert to pounce upon and demolish any unorthodox theories that may be advanced by novices in this his chosen field, have presumed to reopen controversies that have long since been put to rest by authority.

To come down to particulars, Mr. L. G. Sanford has again conjured up that well-worn spook, the "stinging snake," which was long since exorcised and consigned to the realms of myth. The snake as described is evidently that well-known variety which everywhere bears the unsavory reputation of carrying a most diabolical concealed weapon in its nether pocket—a weapon so well concealed that no one has ever been able to see it.

Mr. Sanford's evidence that this was a real, simon pure stinging snake seems to have been chiefly the snake's general reputation and incidentally the peculiar movement of its tail, which latter, from its suggestiveness, is probably the sole basis for the former.

Mr. Sanford does not allege that he saw the sting, although it would seem that he had every opportunity to verify its existence by ocular demonstration. He inclosed the tip of the tail to *FOREST AND STREAM*, but the editor does not record that the sting went along with it.

It was most unfortunate that Mr. Sanford should have destroyed such a rare curiosity as a veritable stinging snake; any museum would have regarded it as a very valuable acquisition.

The writer made a careful examination of one of the same species a few years ago, failing to find anything like a sting, or any place for one, as the minute vertebrae extended quite to the tip of the tail.

The proneness of the human mind to accept any marvelous statement as to snake attributes is everywhere manifest, and probably has its origin in the old biblical serpent myth in the garden of Eden story, a myth which was common to many primitive peoples besides the ancient Hebrews. In the experience of our earliest ancestors the serpent was a prominent feature, and from the dread which he inspired was held to be the embodiment of guile. Hence the place assigned to him in all the earliest cosmical myths.

And now comes brother Ransacker in the rôle of an implacable judge, condemning all snakes without discrimination; charging them with a long catalogue of crimes too heinous for condonement; forgetting that the self-same offenses are common in all their enormity to nature's multifarious chain of predatory animals, birds, reptiles and fishes.

Does Ransacker's own pet cat, which purs so innocently and cozily by his fireside, pursue the pretty warbler with less stealth, or devour the helpless nestling with more remorse, or prolong the agonies of the harmless mouse with less needless cruelty than the graceful and beautiful garter snake exhibits when it appropriates to its own private and personal use the repast which kind (or unkind) nature has appointed for it?

Is the hawk more tender than the chicken snake when he bears away in his talons the bird or barnyard fowl, screaming with agony, to be torn piecemeal while still struggling, for the delectation of himself and his family circle?

Is the pike more mindful than the blacksnake of life's amenities when he gobbles up the tender troutlings into his capacious maw, with exultation in his healthy appetite?

Or the lordly turkey gobbler, when he approaches the unsuspecting grasshopper from the rearward, has he any regard for the latter's comfort or convenience when he yanks him off the sweet potato vine?

Lastly, when Ransacker himself curtails his wholesome rest, forsakes his comfortable bed at an unlawful hour (in violation of nature's code), shivers through the dawning hours bedrenched with chilling dews, and lies in treacherous ambush for the same amorous gobbler, which he enticeth to his destruction by imitating the inviting call of his love mate—can Ransacker, with a blameless conscience, arraign any one of nature's children for a simple obedience to the law of its existence?

There is an old story, with which most readers are acquainted, that comes down from a time when men and beasts were on a more equal footing and held familiar intercourse, which recites that a certain artist painted a picture of a lion with a spear thrust through its body, and the man who wielded the spear standing triumphant over the lion's prostrate form. This picture he exhibited to a lion, who remarked, "Ah, but let me draw the picture!"

The moral of this story is obvious. If the snake could only sit in judgment what a true bill he would find against Ransacker for cruelty, rapine and murder unprovoked, and all the crimes on the calendar, with numberless counts and particulars!

Ransacker, with his mind full of unreasoning prejudice, even accuses the snakes of having "slimy folds!" Now, who ever saw a snake with "slimy folds?" I challenge anybody to produce such a snake. The slimy folds of Ransacker's snake are just as mythical as the sting in Mr. Sanford's specimen. It is a fact most patent to common observation that nature's whole scheme of animal existence presents one boundless field of cruelty and suffering. The whole fabric of mundane life is based upon an endless chain of life's destruction, accompanied with what appears to be needless suffering.

In the whole domain of nature, so far at least as our earth is concerned, man alone is distinguished from all other animals by the characteristic which we call mercy, or altruism, which is manifested in the lower animals in one direction only, and that because life's survival demands it, to wit, parental solicitude for the young.

This distinguishing attribute of humanity is the result of evolution, and exactly marks the development which we have attained above the lower orders of animals. Shall we now place ourselves back on the brute plane, and kill things that can do us no harm, and for which we have no use?

In the whole snake tribe, in this country at least, there are probably 1,000 that are quite harmless to man for every one that is a just occasion for man's resentment on the score of personal insecurity.

It is a matter of regret to me that in this part of the country the snakes of every kind are nearly exterminated, and you may travel a week's journey without seeing one. Most white men, like friend Ransacker, kill all the snakes that come in their way, but the negroes especially pursue them with superstitious and relentless zeal. I have elevated brother Ransacker to a high place in my catalogue of most worthy and entertaining contributors to *FOREST AND STREAM*, but he should stick to burros and bears and such like cattle, and leave the uncongenial snakes to more sympathetic hands. COAHOMA.

MISSISSIPPI.

OUR FEATHERED FOUNDLING.

AN ambitious fledgeling had flown from the nest before its wings were strong enough to be relied upon; it had fallen by the sidewalk and a sleek cat was there, swinging its soft tail and preparing to spring, while many agitated sparrows of mature age hopped to and fro twittering their friendly warnings. But the little adventurer, instead of finding itself in the cat's maw, was carried to a safe place, to be brought up "by hand."

The foundling is now nearly 2 years old, a veritable urchin with a natural objection to anything suggestive of order, liking his cage best when it is most untidy. At 3 o'clock every afternoon he has been allowed the freedom of our sitting room, and promptly at that hour he pecks at the fastening of the cage door.

When about 4 months old Dick observed some one playing a guitar. Forthwith he perched on the hand that was toying with the strings, staying there regardless of its instability. On the following morning we heard a faint noise suggestive of a canary with a sore throat, trying to exercise its profession. This was the first attempt of our sparrow, who afterward practiced every day, particularly if incited by the guitar, developing a sweet voice. At an early age Dick manifested energy and persistence, never abandoning what he had made up his mind to accomplish.

During summer Dick's cage stood by an open window and soon we learned eleven expressions of sparrow talk with the following meanings: Inviting other sparrows to approach; welcoming them; urging them to remain; a great desire; coaxing; surprise; alarm; scolding; anger; satisfaction; delight. The eleventh expression Dick always uttered when a fly was presented to him.

It was great fun to bring the bird perched on one of our fingers before the looking-glass. He at once became irritated at the mocking image, darted his head forward and pecked at it. Nor did he become convinced that he was deluded when his beak came in contact with the glass, its hardness serving only to exasperate him.

His actions were and are always expressive. One day he went through the movement of bathing in a lot of dry crumbs, and immediately called for food. His action evidently indicated that the crumbs were dry enough for a bath, but no longer fit to eat. His caution has always been excessive, everything being closely scrutinized by him before being tasted. He has always enjoyed refreshing himself in a sand bath, but if the sand was placed in an unfamiliar receptacle he hopped round it many times, making a careful examination. Before plunging in, Dick removed from the sand any piece of rubbish that might have fallen in, carrying it to some remote part of the room. His favorite resting place after bathing was a big yellow plush chair. He likes yellow and pink, but has a horror of goods that are variously colored, particularly if spotted. We put newspapers over the plush chair, but the bird worked its way under, seeking the yellow color. Inquisitiveness always overcame Dick's timidity, and any object falling to the floor was at once examined by him. The moment a closet door was opened the bird would stand on the sill, peering into the dark corners, reminding us of a sage trying to penetrate the mystery of the great unknown.

Dick had a fancy for waltzing, spinning round in an amazing style on any small round spot that he could find, and altogether indulging in as many antics as a kitten.

When our foundling was a year old something happened. The males and females of his tribe flocked about his cage within the window to partake of seed, bread, cake, lettuce, etc. Some entered the room, where they flew about in a state of wild terror and perplexity. We caught several females and put one at a time in the cage to see if the companionship would be agreeable. Dick fought some and others fought Dick, but at last we caught a beautiful birdling that did not screech nor bite, and as she had persistently tried to force her way into the cage, we persuaded her to remain with Dick. He was more than pleased, and has now courted her steadily for nearly a year. We thought there would be a prospect of his winning his suit this spring, and at this very moment we are interested in watching a one-sided love affair.

Loulou is the prettiest and sauciest little sparrow that ever broke through an egg shell, and is very clever too, besides being a sweet singer. At the beginning of winter both birds were determined to build a nest. Nothing in the room was safe from their busy beaks. Dick had a wooden box containing a warm nest which had served him in his infancy. To make him remember this we put him in the box; he came out after a few seconds, his beak full of straw, which he carried to the Loulou. This action he repeated several times, at last bringing two big pieces, that suggested to our mind the ludicrous spectacle of a fashionable beau going to visit his lady love carrying a couple of rafters between his teeth as proof of his power to provide a home.

His protracted and rather dubious suit has somewhat saddened Dick, and he is not always playful enough to please Loulou. Sometimes she says to him: "You are

too slow! Fly! I'm after you!" and away they go, round and round the room. The female bird is so swift in her movements that she seems to be in three places at once. Her excessive independence is painful to Dick's chivalrous character. He tries to condescendingly provide for her, and she, belonging to the order of advanced females, resents this.

Formerly the foundling objected to bathing in water, but this being Loulou's greatest luxury, she has trained her admirer into it.

Miss Loulou is quite a fire worshiper. During the cool weather she acquired the habit of warming herself before the grate, standing on the fender—particularly after bathing in cold water. With her feathers standing out and her wings spread, she first dries herself on one side, then turns to dry the other, bending her small body to and fro in the most graceful manner, so that the heat may reach every part of her skin. This very day—April 27—she is on the fender warming herself for the third time within one hour.

Every evening at dusk there is a contest for a particular spot on one perch. Unless Dick yields to Loulou she sulks and makes him miserable, so that in the end she always has her own way.

Although our bachelor bird is grown up he still insists, when free, upon his friend who rescued him from the cat giving him bread from between his own lips. This he persistently demands, alighting on the broad shoulder, hopping round on the long beard, and taking some moustache in his beak, repeating a cry that distinctly sounds like "pretty Dick!"

The sparrows are not aristocrats, but they are so bright and clever that any one who loves nature must take a delight in studying them.

Since fair spring commenced to smile upon us we have provided our feathered friends with a large family mansion, two stories high and containing a nesting chamber. But present appearances indicate that Loulou is in love with another fellow on the outer side of the netting which is fastened before the open window. She warbles her sweetest lay to him. We shall watch the progress of a tangled love affair.

ALICE D. LE PLONGEON.

NOTES ON THE EVENING GROSBEEKS.

BY DR. R. W. SHUFELDT.

AMONG the finest representatives of the big-billed finches we have in this country are the evening grosbeaks. My first experience with these birds was in north-western New Mexico some ten or eleven years ago. There I collected, with my sons, a good many fine specimens of them, together with skeletons, and made notes of habits, which were subsequently published in the *Auk*, as was also my account of a male and a female of this genus that were captured alive by me and for upward of two years kept in a cage. These were all specimens of the Western evening grosbeak (*Coccothraustes vespertinus montanus*), a now recognized subspecies, although I reported them as evening grosbeaks simply, which was then the only species described for this country (*C. vespertinus*). The Western evening grosbeak, however, had been recognized by Ridgway in 1874 (*Hist. N. Am. Birds, Land Birds, I., 449*), and it was finally revived by Mearns in 1890 (*Auk, VII., 246*). So all that I then said about the evening grosbeak must now be taken as referring to the above-mentioned Western subspecies.

My two cage birds died eventually, and the taxidermist at the U. S. National Museum mounted them, and they are now in the exhibition cases in the ornithological department of that institution. I have two other fine mounted Western evening grosbeaks in my own private collection that I shot and brought with me from New Mexico; they are especially dark ones selected from a large series. Of these I once made a life-size colored drawing, representing the birds on the partly dead limbs of the red cedar, of the berries of which tree they are very fond. Subsequently this colored drawing had quite a history, for after it was framed it fell into the hands of the Goths and Vandals—children who knew just enough of the value of ornithological plates to be dangerous, but who knew not an evening grosbeak when they saw it, or for the matter of that not five and twenty other American birds—and mutilation was the natural consequence. It escaped final destruction, however, and what unthinking hands can easily accomplish in the way of vandalism an artist can often restore, and this is what I had to do. My picture is now not only restored, but has an account of the aforesaid vandalism appended to it in addition and as a matter of historical interest. A few days ago I photographed this colored drawing of mine, considerably reducing it in size, and the half-tone that illustrates the present contribution was made from this photograph.

There are a number of birds in our avifauna of whose nesting habits we know little or nothing, and in this category stand the evening grosbeaks. I have written to a few of my friends about this matter to gain some idea of our present knowledge in the premises, for personally I have never seen either the nest or the eggs of this species. Mr. L. M. Loomis, who is now doing so much for us with the Pacific Coast seafoal, wrote me back that he had not even seen the species alive, and so knew personally nothing of its nidology. In the meantime comes a letter from Major Bendire, than whom there is no better authority in the country on this subject, and he writes me: "As far as I know there are no fully identified eggs of the evening grosbeak in collections, and in fact there appears to be little if anything known about the breeding range of this species. Somewhat more is known about the Western evening grosbeak's nesting habits, and both Mr. John Swinburn, formerly of Holbrook, Apache county, Ariz., as well as Mr. E. H. Fiske, of Yolo county, Cal., published by Walter Bryant, claim to have taken their nest and eggs. The last record you can find in *Bull. California Academy of Sciences*, II., 3, published in 1887; the former in one of the early numbers of the *Nuttall Bulletin* or the *Auk*. You can hunt this up yourself. As far as my observations go, I question both of these records and take little or no stock in them. I have shot young birds of *C. v. montanus*, but a few days out of the nest, near Fort Klamath in the late summer of 1883, which is as near as I ever came to finding the nest. The Eastern species probably breeds entirely north of the United States, in the mountainous regions, where little or no collecting has as yet been done."

A few days after receiving this valuable letter there came another to me from Mr. A. W. Anthony, an authority who has contributed much to your knowledge of

Western ornithology. In his very interesting letter Mr. Anthony says: "I am afraid that the information that I can't give regarding *C. vespertina* would prove far more interesting. However, you are welcome to what little I can furnish. As for eggs, I cannot tell of a single set that I would like to indorse—but they may have a few for all that. Several years ago Mr. Bryant, of Oakland, published an account of a set of the Western race, and afterward told me more of the details; the eggs were shaken from the nest and broken so that none of the fragments were saved. The boy who found them afterward described them to B. from memory, and they were from that data put on record. Bryant, I think, had no doubt as to their being true evening grosbeak, and as I do not at this time recall who it was that found the set, I would not like to discredit the discovery. In Oregon I found the species very abundant about the streets of Portland, making a very agreeable substitute for the English sparrow of most cities; they were remarkably tame, and especially about the streets where maples were used for shade trees were to be found all winter. They were less common outside of the city, but often seen throughout the country until March or April; they then left the city and were rare everywhere, though small flocks and pairs were seen until June or later. The last season spent at Beaverton, eight miles west of Portland, I saw a few until July; they were, as they always are, in the fir growth, very high up in the tops of the largest trees, and would have been overlooked had it not been for their clear, ringing call notes. I did not see a single bird near enough to the ground to shoot. If they bred there, and I think they did, they must have built fully 200 ft. or more from the ground in thick firs. This may account for the lack of eggs in collections. If the species was found

EVENING GROSBEEKS.

after July they must have been silent, for I do not recall any after that month.

"There may be even a number of authentic sets among the small collections on this coast, for the species breeds from central California north, and is so common that it would be strange if some one has not found them; but I have not seen much of the species, and know but little regarding it, and nothing regarding any sets that may possibly be in collections.

"Mr. A. M. Ingersoll is much better posted on what is to be found in the collections of this coast and I will question him regarding them. I am sorry that I am unable to furnish so little data personally.

"P. S.—Mr. Ingersoll says he does not know of a set of grosbeak's eggs on the coast. He is personally acquainted with the person who found the set mentioned by Bryant and thinks it is all right."

Now here is an opportunity for work on the part of some young enterprising nidologist, and there is no question but that good, reliable accounts of the nesting habits of our species of *Coccothraustes* stand among other needed desiderata to fill in the gaps existing in the life histories of our North American birds.

A Texas Deer Head.

LANSING, Mich., April 18.—A few weeks ago I wrote you about the antlers of a buck which had thirty-six points. This was called out by a note in *FOREST AND STREAM*, calling attention to a pair of antlers with twenty-six points. Mr. C. J. Davis, of Lansing, has just returned from a somewhat extended trip through Texas and the Southwest, and to-day he has left at my office a photograph taken by Barr, Main Plaza, San Antonio, of the head and antlers of a common Virginia buck, which is way ahead of anything that I have ever heard of. The head seems to be of about an average size, it is mounted on a long neck, on a shield, representing a huge star, I suppose an emblem of the Lone Star State. The antlers are quite large, and on the shield the number of points is stated to be seventy-eight. I can count seventy on the photograph. It is really a remarkable head. Such a head and such antlers deserve a place among the record breakers of America.

[We have already illustrated this head.]

Soaring Birds.

Editor *Forest and Stream*:

If Mr. O. H. Hampton will procure a copy of "Smithsonian Contributions to Knowledge," No. 884—"The Internal Work of the Mind," by Prof. S. P. Langley—he will find therein a scientific discussion of the soaring of birds,

PARTRIDGE DIVING AND BUDDING.

Editor *Forest and Stream*:

Why is it that none of the numerous writers in the *FOREST AND STREAM*, who are generally able and interesting, whether sportsmen or men who have made birds and their habits a study, has ever mentioned the habit of the partridge (*Bonasa umbellus*) as to diving and budding?

Perhaps the birds are so nearly exterminated that these have become "lost arts;" but hardly.

The diving is done after a fall of light or dry snow, not less than 10 or 12 in. in depth. They fly in on a slant, leaving a mark about the size of a man's boot. Their object seems to be protection from the cold, also from the sight of the owl or hunter. But this protection sometimes becomes their tomb, as when the snowstorm is followed by rain and severe cold a crust is formed that all the captive's efforts to escape will be unavailing, unless, as sometimes happens, they burrow or tunnel to a more protected spot, where the crust is thinner, as under the branches of a conifer or mass of clustering vines. But should reynard happen near, the poor bird's fate is soon sealed.

They usually dive in a small clear space near a thicket, and should the hunter approach, the bird, hearing his footsteps, bursts out with a whir, scattering the snow in all directions, and is out of sight before the surprised hunter thinks of his gun, and if he does what will it avail? For we boys of sixty years ago had only Queen Anne's arm with flint locks, and never heard nor thought of wing shooting; in fact, generally shot from a rest alongside of a tree, if nothing better offered. But don't think we got less game than at present, with our double-barreled hammerless, pistol grip, top action, patent fore end and Damascus steel breechloaders; for the game was there and we shot to kill—not for sport.

Another thing that is seldom or never spoken of is partridge budding. This occurs in late winter or early springtime. But objection is made that it is in the close season. Very true; and if that is the reason budding time is not known to sportsmen of the present day, so much the better; for it should be strictly observed for all kinds of game and fish, and more than that, all spring shooting should be abolished by law and in practice.

Having recently returned from Atlantic City, where every morning (except Sundays) the bang! bang! of ducking guns were heard, it became very annoying; but when an examination of the birds killed showed that there were nothing but coots in the lot—a bird unfit to eat—indignation somewhat abated. But still spring shooting is wrong in principle.

When we were boys, some fifty or sixty years ago—more or less, rather more than less—in the days of company and general training, when every one subject to military duty had to meet at a named rendezvous twice each year armed and equipped according to law, which meant musket with iron or steel ramrod and two flints, and knapsack, or be fined, it was not difficult for the boys to obtain a gun from some one to hunt partridges with in the budding time.

The usual time for the birds to appear in the apple trees was about an hour before sunset, and if they were not disturbed they would fill their crops with the swelling apple blossom buds, and be back at their roosting places before dark.

When we had learned of their visiting an orchard, and usually some particular tree or trees in the orchard—for they seemed to like the buds on some of the trees better than others—and the old flintlock having been previously loaded with 4 in. of powder, wads and shot, or bits of lead, and secretly taken from the wooden hooks where it was usually kept, we would begin the silent tramp, hoping that no other boy had our knowledge of the situation and had stolen a march on us. If too early and no birds were there, and there was no other party in sight, a hiding place was sought and the coming of the birds was waited for with bated breath and watchful eyes. Sometimes the birds came singly, thus giving time to reload after the first fire. But generally two, three or more came at once, and only one was killed; but it has been said that when several come together, shoot the one on the lowest branch and the others would not fly.

Certainly this manner of killing game was very unsportsmanlike and quite contrary to our present game laws and close season, which have been so tinkered as to be almost unintelligible; but at the time referred to game laws and close seasons were not known nor thought of.

It is encouraging to think our best and truest sportsmen are quite generally opposed to spring shooting and have abandoned it. Would that the head man in our Government was of like opinion, or rather practice, for certainly every man's honest opinion must be, no spring shooting.

POUGHBKEEPSIE, May.

J. H. D.

A Few Animal Notes.

READING in *FOREST AND STREAM* of April 18 Mr. N. D. Elting's account of a cat opening the door made me think of one that I saw in New Jersey in an old colonial house, where most of the doors had the old-fashioned thumb-latch. The cat was a tailless Angora and she used to open the doors whenever they pushed the right way.

To-day I saw a peculiar looking squirrel; it was gray except for a streak of red down the back. He had lost 2 in. of his tail and what was left was gray. In all respects but color he was an ordinary red squirrel or hemlock squirrel, as some call them.

I believe the red squirrels often lose a part or the whole of their tails in fighting. Probably in being chased by an antagonist, they often get away with their life, but not their tail. I have seen them absolutely tailless, and do not know how else to account for it.

I have repeatedly found chipmunks with a large grub-worm living in their navel, and conspicuous from the outside.

Speaking of intelligence and instinct, I would like to mention the remarkable instinct of our old horse, who always knows when Sunday comes, and on that day turns up the street to the church. All other days he trots along by to the post office. He either hears the church bell ring or else notices we have on our best Sunday-go-to-meeting clothes.

Living as I do on Lake Champlain, there is no doubt in my mind that the smelt lives in those waters the year through, and in that I bear out my friend Mr. B. Bishop.

WOODLAND BIRD NOTES.—II.

NEW ROCHELLE, N. Y., April 19.—Nature, who is a fickle creature at any time, has certainly shown herself in queer moods this spring. The warm wave which swept over the country has wrought sudden changes in bird and plant life. In spite of the heat on April 18, I took gun in hand and went on a collecting expedition. The winter birds that were so abundant on my last trip have quite disappeared, and their places have been filled by the increasing of our summer residents and regular migrants. The cousins of the chippy, the field sparrows, were very numerous, flying in large flocks on the border of the woods and fields. Among these flocks were many song, chipping and vesper sparrows, and here and there a straggling junco, who, being separated from his fellows, was making his way to his northern home, leisurely.

Immense flocks of bronzed and purple grackles, red-winged and rusty blackbirds, cowbirds and meadowlarks occupied the fields and swamps. Numerous varieties of warblers swarmed in the bushes and trees, but they are so lively and shy that they are very difficult to collect or identify. One of them, however, which was more abundant than the others, and perhaps less shy, was a well-known one, the black and white creeping warbler, whose name describes him very well. He spends most of his time in trees looking for food, but nests upon the ground about the last of May or the first of June, and is a rather rare summer resident on the Sound—only one nest being found (containing young birds) by myself last year. Ascending a small brook I came upon a pair of Louisiana water-thrushes, a bird very interesting to me and very abundant in this neighborhood. This is the most northern part of his range and does not occur further north than Connecticut, as he belongs to the Carolinian fauna.

This thrush-like warbler is one of the strange combinations we sometimes find in nature, being in customs and habits the representative of three distinct families, the warbler, the thrush and the snipe. He is a lover of forest streams and is very seldom found anywhere else, except in their neighborhood. He runs over the miniature beaches and shoals like a true snipe, uttering a peep, peep, bobbing his tail and head with the peculiar teetering motion of the snipe. At times he will fly up into the trees and sing in rich, flute-like notes as a thrush does. His throat is white, breast saffron spotted with brown, back of head, back and wings olive-brown. He builds his nest under the banks of streams or in hollow logs lodged in them, about May 15-30. He arrives in the neighborhood of New Rochelle about the middle of April and returns South the end of September. The Louisiana water-thrush is very rare on Long Island (Chapman), but on August 29, 1895, I saw five birds among a flock of snipe on Bayshore Creek, Bayshore, L. I.; I secured two out of the five. Closely related to this warbler is the water-thrush, like him in every respect, except that his breast and throat are lemon color, and he is only a migrant here, nesting from Massachusetts northward. They pass through here about May 15-20, and return again in the fall.

EDWIN IRVINE HAINES.

Hairy Woodpecker as Flycatcher.

DURING the past week while standing in front of my house I saw a bird fly from the trunk of a tree a few feet and return. At first I thought it was one of the flycatchers, but on walking up within 20ft. of the tree I saw that the bird was a hairy woodpecker (*Dryobates villosus*), and to my surprise it went through the same motion as at first attracted my attention, again returning to the same tree. I saw that it had caught an insect of some kind and after eating it again repeated the performance, only that it flew much further than a rod to secure its prey and alight on the next tree beside the walk. In trying to get near enough to see what it had caught, I frightened him (it was a male bird) and he took his captive to other fields to devour. I have often seen the English sparrow imitate the flycatchers by taking the small moths on the wing, I had never before seen one of the *Picidae* family in the flycatcher rôle.

In the case of the English sparrow I have often wondered if they caught the moths to eat or for persecution, as they do not seem to know what to do with them after they get them. I once watched a male sparrow for half an hour after he had caught one and the moth was very lively when I took my last look at them.

J. L. DAVISON.

LOCKPORT, N. Y., April 20.

New York Bird Notes.

NEW ROCHELLE, N. Y., April 24.—*Editor Forest and Stream*: It seems strange to read in *FOREST AND STREAM* accounts from Maine telling how the snow is 3ft. deep on the ground when in this vicinity spring has at last got her "grip." Dog-wood and apple blossoms, violets, marsh-marigolds, adder-tongues and many other flowers fill the fields, woods and swamps. Birds are very numerous, as can be seen from the following list, seen during the last two weeks: Purple grackle, robin, song, field, swamp, chipping and vesper sparrows, red-winged blackbird, rusty blackbird, bronzed grackle, flicker, Louisiana water-thrush, black and white warbler, cowbird, barn-swallow (just arrived), bobolink (just arrived); meadow-lark, kingfisher, hermit thrush, yellow-palm warbler, nighthawk warbler, towhee (just arrived).

On April 23, I found a bluebird's nest with five eggs and a crow's with six. On walking through Pelham Bay Park to-day (April 24) I was surprised to hear the bob-white of the quail, and upon investigation I found a nice little covey of from eight to ten quail; perhaps they will nest there.

Game Bag and Gun.

IN THE ROCKIES.

CLARK'S FORK CAÑON, Montana, Sept. 18, 1895.—*My Dear Sammy*: This is the first opportunity I have had to send you a few notes since leaving Philadelphia on the 11th inst. As you are familiar with the route taken I won't pause too long in describing the many beautiful places along the line. Still when I consider the many courtesies shown our party I can't refrain from telling you, because I know it will touch a tender spot in your heart, as it will in the hearts of others. First allow me to introduce to you my companions, H. W. H., alias Pop, and N. M. W., alias Judge, both of York, Pa., and genial and companionable Dr. D. P. M., alias Doc, of Chester, Pa. (Doc, you remember, was with me last year in the wilds of Minnesota); and lastly, yours truly, alias Capt. These aliases I will explain to you later on.

Our route lay over the picturesque Baltimore & Ohio Railroad to Chicago, and what a charming ride it is. Almost every spot along it is familiar to me, especially in the bass and trout fishing districts. These things alone are enough to make me use this road, as I have taken many a large and gamy bass from nearby waters in days gone by. The same thing may also be said of the Wisconsin Central road. For the sportsman it is the most accommodating line out of Chicago to St. Paul. They, like the B. & O., will carry, and did carry for us, free of charge, all our camp outfit, dogs and baggage, etc. The trainmen are kind and considerate to dogs and take the best care of them, often dividing their lunch with them. You would be in your element in this State, Sammy, as the bass fishing all along the line of the Wisconsin Central is great.

When we reached Waukesha Doc got mixed up with a bridal party and received a handful of rice down his back and had his off ear nearly taken away with an old shoe; "they mistook him for the groom." I can't understand why this should have occurred, as the groom was a fairly good-looking man.

We left Chicago at 6:05 P. M. and arrived in St. Paul on time, had an excellent breakfast on the train. At 10 o'clock we marched in a body to call on Mr. Charles S. Fee, of the Northern Pacific Road, who was to send us over his road to Red Lodge, Montana. As that worthy gentleman was out of town, we were introduced to Mr. B. N. Austin, the Assistant General Passenger Agent, and a man whom every sportsman traveling in that country should know. He knows more duck and geese resorts than any man in Minnesota. And I desire to extend to him my deepest gratitude and thanks for the many kindnesses shown us. And also to thank him and the gentlemanly trainmen for kindnesses and courtesies extended to us all along the line. They did everything possible for us in the way of putting us on to good shooting grounds for ducks and chickens. Offered decoys, ammunition, etc., etc., and I really believe would have enjoyed killing them for us too. It does make a fellow feel good to have a man open his heart to you as Mr. Austin did to us, strangers and far from home.

We left St. Paul at 4:50 P. M. The ride through Minnesota and the Dakotas was an interesting one; we saw quite a number of chickens along the line, yet I scarcely think so many as last year. The crops through this section were phenomenally large this season and prices next to nothing. One farmer told me he had 1,000 bushels of potatoes and he couldn't get 5 cents a bushel for them, in fact he guessed he wouldn't dig them at all. We stopped over at Dawson for a day's shooting, and Doc and I had one of the most delightful days with chickens and ducks I ever remember having. Pop and Ben were handicapped by having two dogs that were worthless, one being blind and the other lame and deaf. However, they brought to bag about all they saw, fifteen chickens. Doc and I had a very good dog, though a little lame in one foot. However, we had the good luck to come across a slough with two small lakes and it was literally alive with ducks, which probably had never been shot at. No, they were not tame ducks. Well, we had sport fast and furious, having eight and ten ducks down at one time. They would fly from one lake to another, giving us all sorts of shooting. Result of day's work, forty-five ducks and thirteen chickens. Recollections of this day's shooting will ever linger in my memory, not even the landlord's bill can erase it. We left Dawson next morning bright and early, and were glad when we crossed the line into what is destined to become one of the greatest States in the Union—Montana, meaning "of or belonging to the mountains," or in Indian, To Yabe-Shock Up, which translated means about the same thing. "The country of the mountains" is well named. There are many interesting places along the line, among them the different military posts. At Billings we left the main line of the Northern Pacific. Billings is the county seat of Yellowstone county, with a population of 2,600 people, and is situated at the first crossing of the beautiful Yellowstone River. It is a growing town and is the largest wool shipping point in the State. Situated at the mouth of the famous Yellowstone Valley, with an irrigating ditch thirty-nine miles in length, besides Cañon Creek and other streams, and only a few hours' drive from the once famous Crow Indian Reservation, now thrown open to settlement, it offers many inducements to settlers. There are many ardent sportsmen living there too, and foremost among them stands Mr. John D. Losekamp, of whom I shall tell you later. Next morning we left Billings about 8 o'clock over the Rocky Fork and Cooke City branch. It was an uphill pull all the way and a tedious ride, so different from the ride through the Yellowstone Valley, which is one of the most beautiful I have ever had. The Northern Pacific enters this valley near Glendive and runs to Livingstone, a distance of 341 miles. You can't imagine a more fascinating ride, and there is game all along the line.

After leaving Laurel on the branch road Doc was taking in the country from the rear of the car, and in his vain endeavor to attract the attention of a young squaw on a pony he lost his hat. Ben, who was an eye-witness to the proceeding, says he threw it at her. Result, had to buy another at Red Lodge, which town we reached after many delays. Our first break was for the hotel, where we met for the first time our guide, Ed. E. Van Dyke. After dinner we proceeded to view the town. Red Lodge has a population of 1,200, and is built all over the country, without any regularly laid out streets, but

houses just dumped down promiscuously. It is principally a coal mining camp, employing about 300 miners, and is an outlet to a rich surrounding country. There has been much irrigating done here, in which Buffalo Bill is largely interested. We pulled out of Red Lodge Tuesday, Sept. 17, at noon, headed by Van Dyke, with the Kid as cook and Lee as helper, saddle and pack horses numbering eighteen. It was a jolly crowd, and an experience new to both Pop and Ben. In single file we took the trail southwest out of the town and began the ascent of the mountains; the sun was warm, the air clear and pure. Oh, what a treat after having traveled nearly 2,000 miles in stuffy cars. Being in the saddle reminded Pop of the time he spent in the saddle with Kilpatrick in the South fighting, though I assure you the animal he rides now is not a cross-eyed mule such as he rode then. Some day I will tell you about that mule as he told it to me, also to what purpose he rode him.

First camp was made on Cold Creek, in the Bear Tooth Mountains, a most charming spot. After unpacking the horses we had our first meal out from civilization, and were ready to turn in by 8 o'clock. Right here is where our lamb-skin sleeping bags came in. Crawling down into them, we lay on the ground and slept with no discomfort whatever.

And shall I ever forget the glorious sunrise next morning. We were at an elevation of about 7,000ft., and looking across the Bad Lands, we had an unobstructed view of mountain ranges 200 miles distant. The whole heavens toward the east seemed on fire.

After breakfast breaking camp and packing horses began, while I proceeded to photograph our first camp.

The trail over the plain toward the west was a fairly good one. On this ride we had extreme thirst and not very copious perspiration. Every stream we came to, and they were numerous, we had to drink. About 1 o'clock we sighted a small bunch of antelope. Doc and Pop tried them at long range and threw dirt all around them; Ben, who was bringing up the rear, also emptied his magazine at a long distance of probably 300yds., and after doing so they immediately turned and ran up an old creek bed to within 50ft. of him. Imagine his disgust. He had no more shells, thus escaping the first meat. Nothing of interest occurred until we reached the entrance to Clark's Fork Cañon, about 5 P. M. The trail here is the worst we have yet encountered, and I assure you we all, that is all the dudes, dismounted and preferred to take our chances on foot, not having had the opportunity to know fully to what extent our horses could go without a tumble.

I give this letter to a prospector who is going into Red Lodge for grub. I shall more than likely send or take the next one to Cooke City to post. Yours as ever,

WABASH.

HIGH CAMP, Rocky Mountain Divide, Sept. 25, 1895.—*My Dear Sammy*: When I last wrote you we were camped in Clark's Fork Cañon. And I believe I promised to describe it to you, if such a thing be possible. It is simply an elysium for the fisherman, and I don't know that I can better describe it than to repeat what Doc has said to me on several occasions. Positively he is Clark's Fork Cañon crazy. Get him started and he talks as follows: "Clark's Fork Cañon! How shall I attempt to describe it? Never did I so acutely realize the poverty of my vocabulary and of language itself as when I attempt to put in words some adequate conception of its majestic beauty. Nor am I entirely a novice in the mountains. I have three times crossed the Rockies. I have seen the Grand Cañon of the Colorado, the Weber, the Yellowstone, the Black and the Eagle cañons, as well as many other mountain gems of the Sierras and Rockies, but here is one comparatively unknown that surpasses them all; and as it suddenly burst upon our astonished and enraptured gaze, such was the vision of grandeur and beauty, we were awed into silent reverence. I imagine—no, I hardly dare impose the task upon those who have not seen it; but if there be a keener and more exalted faculty than imagination, try and exercise it to get some slight conception of this jewel of the mountains. I have seen longer cañons. The Grand Cañon of the Colorado has higher walls, but none combine, all in one, its beauties of form, color and contour."

"The entrance to this cañon from the northeast is through a steep rocky gorge, through which flows the rapid, noisy, crystal river, Clark's Fork." [I can't resist the temptation to interrupt the lecturer and tell you about the glorious fishing we had here, every time we made a cast in any of the pools in this stream we were rewarded with a mad rush, a swirl, a strike, and then the fun began; result, one of those beautiful salmon trout weighing from 1 to 6lbs. Ah, Sammy! you would have been in your element here. To hook one of those spotted darlings weighing 4 or 5lbs. was to live.]

"As we approached the gap in the mountains where the cañon proper began, our attention was attracted by the almost perpendicular wall to our left; soon this became straighter and smoother, until it stood as erect as a house wall, a palisade of solid rock, at the base of which flowed the river. Further on the palisades grew higher, ranging (according to our guide) from 1,000 to 3,000ft. above the base of the cañon. Here we noticed some of the same coloring effect that appears on the famous terraces of the Yellowstone Park, but instead of being localized it ran in broad bands across the face of this gigantic wall of rock; in some places a great variety of color and tints, pink, red, blue, orange, yellow, salmon, brown and white, each tint preserving its originality, but all so curiously and capriciously blended, and on such a beautiful and gigantic scale, as if the parting kiss of some glorious sunset had left the imprint of its rays. Capping this palisade were what on study proved to be conglomerate formations, but which appeared as castles, forts and palaces. If they had actually existed as such, they could not have looked more real and certainly not so beautiful. Terrace gardens, with statuary; bow windows and protecting wings; ramparts, turrets, towers, even moats and drawbridges, all seemed so perfectly outlined through the transparent air that it required a mental effort to convince one that they were not veritable creations of man instead of the decorative work of the Great Spirit."

"Above these weird formations which capped a large part of the palisade was a scattering growth of evergreen trees, forming a fitting frame to the sublime picture, and above these trees, in many places, shining against the azure sky, the eternal snow, a fitting crown for this picture let down from the gallery of heaven. At the foot of the

palisades, so close that they seemed to grow out of it, was the river, here looking green from the shadow, but the water as clear as crystal and as cold as ice. There were at every few hundred feet huge boulders and masses of detached rock formed pools which proved ideal loafing places for the trout, which we knew from experience were there.

"The right wall of the cañon was neither so high nor so perpendicular, but down its sides every few hundred yards came tumbling and falling tiny mountain brooks, some of them piercing the solid rock in their descent and then re-appearing. One I recall that had dug for itself a well, and then disappeared. The cañon ends as a box cañon, as if nature had marked this private park of hers 'No thoroughfare.'"

On the right there is a mountain called "Van Dyke's Causeway," nearer the perpendicular than anything I ever attempted to ascend—except an elevator. This mountain, we were told, we had to go up in order to get out of the cañon, and Van said: "Boys, when you get half-way up stop and look back, and it'll make your hair curl." I remained behind, in order to photograph the outfit when half-way up. They started in all right, but before they were one-third the way I could see them, one and all, getting a firm hold on the tails of their horses. Thought I, if those fellows are compelled to do that in order to ascend, with nothing to carry but themselves, what will it be for me, with camera, rifle, etc.? I watched them until they reached the top and disappeared. Then, packing up my kit, I started on the ascent. Before I had gotten half the distance I realized what was before me. How I wished a horse's tail to hang on to, or anything that would lift or pull. I would have to stop on an average of every 25ft. to get my wind. When two-thirds the way had been climbed I heard a stream of water pouring down the mountain side, and on making a sharp turn came in sight of it. How refreshing and cool and inviting it looked! I made an extra effort to reach it, and when I did it was to drink my fill. I don't think water ever tasted so good before. I rested here for fully fifteen minutes, and took my last look at Clark's Fork Cañon.

On reaching the top I found Ben waiting for me. Bookie, my broncho, was getting impatient, as the outfit had gone on to find a suitable place to camp before darkness set in. Then began a ride such as I never had before. Carrying camera and plates was no easy task astride of Bookie that afternoon. He was in a terrific hurry to "catch up." When he finally got quieted down a little I began to take observations, and all along this trail one could have picked up a carload of elk horns and some sheep horns. Here we sighted our first elk. Pop and Van tried to stalk him, but Pop had to fall out, as he couldn't keep Van's pace. Van soon came within shooting distance, but as the head was not a fine one he would not kill the game; the meat, of course, at that time was not good, and it was a written law among us to kill nothing we could not use.

As it was getting late and the pack train restless and tired, we made camp. The weather looked threatening, so we pitched our tent. Snow fell during the night and until about 10 o'clock Saturday morning. Hunted a little, but signs of game were few. Remained in camp until Sunday A. M., when we broke and started on. A most singular thing about the snows in this country—the mountains north, east and south are covered with snow, while those lying in a belt west by south are perfectly bare, no snow having fallen on them.

The wind was blowing a gale. At 1 o'clock we began the descent of another mountain, not quite so steep as the one we had gone up a few days before.

When we reached the creek at the foot of this mountain, we followed the worst piece of trail we have yet encountered. The heavy rains and wind some weeks before had made windfalls and washouts that seemed almost insurmountable. In crossing one bad place I looked back, and Doc was doing a horizontal bar act on an overhanging limb, having been caught under the chin, and to save himself "caught on."

A little further on a huge pine had fallen across the trail and we had to jump it. All cleared it nicely but Ben, and when his horse jumped Ben began to climb the pommel of his saddle. He declares that had it not have had three stories to it he would have had to move out. About 2:30 we came out into one of the most beautiful valleys I have ever seen. Fenced in by nature with mountains almost perpendicular, east and west, with a stream of pure mountain water clear as crystal flowing through it, the spot was most picturesque and lovely. Here could be made one of the finest natural game preserves in the world, and with but little labor and expense. The creek could be stopped easily. It is positively a dream of a place. Already some one has realized the same thing, as it has been settled upon, but the tenant had perhaps become tired of solitude and gone into civilization for the winter. The cabin stands empty and the potato crop remains undug. Wishing to see what the soil would produce, we dismounted and dug a few potatoes. They were as large and beautiful as I had ever seen in any market. It is so quiet here, with not a sound save the rushing waters of the creek, that I have called it Peaceful Valley. Looking back from here the mountains are white with snow, yet not a flake is to be seen here.

At this point we cross the creek, following the trail west by southwest, and pass many cattle grazing. Here and there we find a pond or, as they call them here, lakes. From the grass in one of them jumped two mallards, making noise enough for a bunch of twenty. How I did wish for my 12 guage! I feel quite sure we would have had roast duck for dinner, and I assure you we wanted fresh meat badly. The country passed through after leaving the creek was not much broken. Van tells me these lakes in the spring are full of water and that ducks and geese by the million congregate here for a short sojourn on their way north. Of course it goes without saying that here they are never disturbed. The pot-hunter has not yet arrived, but he will come all in good time.

Should the railroads enter this country, as they undoubtedly will, then good-by to all the quiet undisturbed haunts as they exist now. Speaking of railroads entering this country reminds me that, from observations taken thus far, it seems to me that the most feasible route the Northern Pacific road can take from Red Lodge into Cooke City is up the Clark's Fork Cañon. It is much the better and cheaper route, according to excellent authority. There is also another route much easier than attempting the Park Route; of this I shall write you later on,

About 4 o'clock we again crossed the creek and begin the ascent. On our right is what appears to be a walled inclosure to some great park. The rocks, so perfectly formed in stratified layers or blocks, appear like some master work of huge masonry.

Traveling on now due west, scene after scene of beauty, like some ever-changing panorama, greet the eye. No matter how tired and hungry we are, there is ever something new and beautiful to attract our attention, and for the time both hunger and fatigue are forgotten.

"I live not in myself, I become
Portion of that around me; and to me
High mountains are a feeling, but the hum
Of human cities torture."

At 5 o'clock we camp in the foothills in sight of old Bear Tooth Mountain, whose summit capped with snow glistens like polished silver. We are fast approaching the very heart of this delightful country—delightful alike to the sportsman, the invalid, the pleasure-seeker, the geologist, the botanist and the naturalist. There are many rare finds here for the geologist and mineralogist. Pop is not feeling well to-night, has a touch of the "rheumatiz," so Doc has brought forth several bottles of sugar pills and a canteen of witch hazel; and while he feeds the patient on pills I rub his knee with the liquid, and he likes it so well that we have trouble to break away. After bandaging the joint with red flannel we put him in his sleeping bag, buckle him in, and in ten minutes you would think a tugboat was laboring to get up stream.

Monday dawned bright and beautiful; broke camp about 9 o'clock; jumped half a dozen blacktail deer just after starting from camp. Moving on, we follow the creek for several miles; saw plenty of elk, deer, sheep and bear sign. I was much amused on this trail. There was a mountain I will call the Sphinx, which seemed to travel as rapidly as we did. I would exclaim to Doc, "Now we have passed by it," when a slight turn in the trail would so place us that the blamed thing was ahead of us again. Honestly, Sammy, I thought we would never get away from that pile of rock; however, a sharp turn in the trail took us away from it for a time.

Camped at 5:30 on the creek. Here Pop had more pills and another bath, with massage treatment. Got an early start Tuesday, as we have a long, hard climb. We are now fast approaching the Rocky Mountain Divide, and which we will cross about 2 o'clock, 13,000ft. high! Sammy, think of it, and wind up here on the divide is blowing a howling gale.

What a mighty scene this is! What a creation! and how infinitely small and insignificant is man. The day is perfect, and from here one can see Pilot Peak, Index Peak, Tower Mountain, Republic Divide, Sheep Mountains, Grand Mountains, Mount Jones, Fremont's Peak, highest in Wyoming, situated on the divide between Wind and Green rivers, whose waters empty into the Missouri and Colorado rivers; Bear Tooth, highest in Montana, in the Saw Tooth Range; Dead Injun, Haystack, and away down in Idaho looms up the Saw Tooth Range. We stood here and felt as though our bodies were entirely too small to allow the lungs to take in all the air we wanted. We simply breathed on in silent admiration. Words could not be formed that would express all we desired to say. As we were getting chilled through we moved on and camped in the cañon or basin over the divide.

We are now in the game country. Will tell you all about it in my next. WABASH.

BIG RIFLES FOR BIG GAME.

Editor Forest and Stream:

There is only one side to this question of cannon vs. pop-gun. Give me the cannon every time. I want a weapon that will get there with approximate adjacency. I want a weapon that will persuade the animal to pause and reflect. A man who would select a .44-40 rifle as a proper prescription for an adult moose or caribou ought not to be allowed to run at large in the woods. He is irresponsible and should be impounded.

It is perfectly feasible for a good marksman to bag his game at 800yds. and even 400, if the conditions of weather, time and place are right, and he has the right kind of gun. I am only a plain farmer of a shooting turn of mind, and I wear rock maple pants that have a tendency to cling to my neck, and I live in a land where the flint-lock blooms and blossoms in perennial youth; but I should, in my humble way, feel a large degree of ante-mortem grief for the unrepentant moose who showed up in front of my .45-85 Martini within that range. But in the case of Cecil Clay and his .44-40 I should not squander any sorrow on the moose. Any tears I had to shed would be shed for Capt. Clay.

Mr. Irland, of Washington, is a rattling good rifle shot, who can disseminate more sudden death in leaden form per minute than any one I know of. He is not driven to the use of artillery for any personal reasons. He is also a man of humane feelings, who has escaped the great American national malady of swelled head of which some of us are victims, and he knows precisely what he is talking about with regard to the effect of various doses of powder and lead upon the structure of moose and caribou. Mr. Irland had a race with a bull moose down here a spell ago for the unpaced flying-start mile record. Mr. Irland was geared to .45-85, but he concluded that the moose was geared up to .45-120, so he has changed his gear to that figure. He also had an argument with a buck caribou which, after receiving four applications of .45-85-325 at a range of 50yds., still stood up and disputed the right of way. Mr. Irland, as usual, had the best of the argument, but the caribou gave the audience a wonderful object lesson in animal vitality.

I wonder if any of our callow friends who shout for the .44-40 ever take into consideration the element of wind to which Mr. Irland refers. There is almost always, even when not apparent to the shooter, some motion to the air, and the bullet drifts to leeward during its flight just as fast as the wind does. The longer the bullet takes to reach the mark the more it will stray from the straight and narrow road that leads to the bullseye. In the mildest of summer zephyrs the .44-40 bullet, besides dropping several feet in going 200yds., will be "wafted" out of its course about 1ft., and in a stiff September breeze 3ft. would not be an excessive estimate. Perhaps Cecil Clay shot his running moose in a gale of wind and thus the bullet drifted to leeward at the same rate as the moose.

It is a mistake to suppose that these knitting needle

guns with smokeless powder will not shoot straight. It is true the weapon with the unpronounceable name adopted by the American military authorities has proved to be a failure when tested on the range, but that is not the case with the Lebel rifle, nor the Lee-Metford, used by the French and English armies. In England last year a battalion team of eight men shooting at Queen's ranges (200, 500 and 600yds.) averaged 96 points, which is ahead of any previous record made with an open-sighted military arm. No one would recommend a .30-cal. rifle, no matter what its accuracy and penetration, for killing big game. A dog was shot in this town the other day with two of these bullets, and the next night after that he was able to resume business at the same old stand and howl at the moon in the same old saddening way.

That a great many game animals are missed and maimed every year owing to bad marksmanship cannot be denied. The average city sport is a very indifferent shot, and his so-called guide would miss the Rocky Mountains if he didn't have a tree to lean his gun against. The man who has learned by careful and conscientious practice on the range how to handle a rifle will discount the Indian or the bushman every time. He will assume the easiest available position; he will judge the distance with reasonable certainty; he will allow for windage if the wind is blowing across the bullet's path; he will vary the elevation according to the light; he will hold his rifle plumb and cold; brain and eye and hand will work in unison; he will not flinch at the anticipated recoil; he will aim straight and keep aiming until the hammer falls. He may be a trifle slow, but he is going to place that bullet very close to the right spot. Some years of observation on the range and in the woods have convinced me that genuine skill with the rifle is a certificate of intelligence. No man with hayseed in his whiskers ever won the Queen's prize, or ever will. It is usually a certificate of manhood as well, for the mastery of the rifle calls for patience, pluck and purpose.

Isn't it queer how few of the world's great literary lights, of past and present times, know anything of marksmanship. Scott thinks it perfectly feasible that an archer should be able to "notch the shaft" of his rival at 100 paces in a shooting contest. Cooper sees no difficulty in a man with a flint-lock musket puncturing two potatoes thrown in the air with a single bullet, or shooting eagles on the wing. Even our own Conan Doyle describes the bowmen of the White Company as dropping storks and hawks on the wing at near 100 paces, and as shooting a string of arrows in quick succession in the air, which pierce a stump, one after the other, upon their return to earth. No margin is ever allowed by these worthy analysts for luck or chance or condition of weather. The mighty marksmen of the olden days never missed the mark; never needed a sighting shot as we poor moderns do with our new-fangled weapons; never required more than a single shot to display their utmost prowess; never had to contend against any "bull luck" on the part of their rivals; never had any bad ammunition. The shooting they did, whether with arquebuse or arbalest, long-bow or cross-bow, blunderbuss or brickbat, was infinitely superior to any that is ever done in these degenerate days of nitros and knitting needles. Now, if these bright and shining lights of the literary world (the live ones I mean) would only subscribe for FOREST AND STREAM, they might learn something about shooting. They would certainly learn something about literature. FRANK H. RISTEEN.

FREDERICTON, N. B., April 27.

New York Constables as Game Protectors.

PRESIDENT FRANK J. AMSDEN, of the New York State Association, has sent out the following letter to the peace officers of his county, and he advises us that copies will be mailed to all sheriffs and constables whose addresses may be given him by fish and game clubs and others:

My Dear Sir:

As president of the State Association for the Protection of Fish and Game, I take the liberty of calling your attention to Section 31 of the Game Laws, which is as follows:

"Section 31. Powers of sheriffs, constables and deputy sheriffs. Peace officers shall have the same powers as are conferred upon game protectors and foresters for the enforcement of the provisions of this chapter."

You will observe that you have the same power in the enforcement of the game laws as game protectors, and your expense and time in destroying illegal devices is a county charge, and your fees as an officer in making an arrest and serving subpoenas, etc., are a town charge, whether a conviction is had or not. I should be glad to explain any matter which you may not understand, and furnish you with a copy of the Game Law and give you any information that you may desire, if you will kindly call at the office or write to me.

Trusting that you as a public officer, charged with the enforcement of the law, will interest yourself in the enforcement of the Game Law, I am very respectfully yours, FRANK J. AMSDEN, President.

Adirondack Deer.

Editor Forest and Stream:

In your issue of May 2 your correspondent under title of "Adirondack Deer" attempts to be funny. I say attempts, for he does not seem to succeed.

When you have no argument against t'other fellow try ridicule—but don't be ridiculous yourself. Mr. S. quotes from my article, "Meaning by comparatively few that no greater percentage of the living supply than that supply will allow without permanent decrease," and comments: "In other words, he admits that jacking alone would keep the supply down without the aid of other kinds of deer killers." He "admits" nothing of the kind, and the imagination must be badly distorted to see any such meaning. Then Mr. S. proceeds to quote from and comment upon events that occurred between thirty-five and forty years ago, when deer were plenty and hunters few. No, in those days you couldn't kill a deer with a brass band. If Mr. S. gets one on this trip he will feel satisfied that it can be done now. "Will somebody please explain?" Explain what?

Why the lawmakers should expect to save the deer by making more stringent laws instead of trying to enforce even to a small degree the ones they have had. Well, I can't. That's even harder than killing deer with a brass band. JACK HUNTER.

CHICAGO AND THE WEST.

Fraudulent Bounties for Sparrows.

CHICAGO, May 2.—The State of Illinois has a sparrow law, by which a bounty of 2 cents a head is offered on English sparrows during the months of December, January and February. Some comment before now has been made upon the large amounts this bounty extracts from the treasury without a very appreciable diminution of the sparrow pest, but not until recently has the most interesting development in the sparrow law appeared. Reports from Jersey county, in the lower part of the State, indicate that extensive frauds have been carried on under cover of this act. For the first three years Jersey county bounties ran about even with those of other counties, but during the past two years more than doubled. This year Madison county paid \$190 bounty, Macoupin \$300, Sangamon \$166, Greene \$114. Against these amounts Jersey county had \$1,050 to her credit, or discredit. It appears that the county clerk paid to one man, Thad. White, \$171.16; to Thos. Coates, \$158; to John W. Hayes, \$125.32; to John B. Carroll, \$113.68; to James Rhoades, \$104.34; to James Arte, \$79.42; to D. Oberlin, \$76.06. These seven men claimed thus to have killed 46,388 sparrows. A local paper at Jerseyville, the *Republican*, instituted an inquiry, and an ill state of affairs was found at the clerk's office. At the March term of court indictments were found against White, Coates, Carroll and Clerk Nevins. White and Carroll were convicted of obtaining money on bogus warrants, and given one ten and the other thirty days in jail. Coates was acquitted and Nevins had skipped for Mexico. J. W. Hayes turned State's evidence and gave away the whole scheme, showing that Nevins got 40 per cent. of the orders that they cashed. This delectable state of things is good commentary on what the law can do when it is worked aright. And still we have a few sparrows left.

Shooting Season Over.

The golden plover are up in this country now, but their stay will be brief, and only a languid interest attends the flight. In fact, the natural shooting season is over, and sportsmen who love the gun more than the rod now have their eyes turned on the artificial shooting of the trap. The jacksnipe have gone, and only a few sandsnipe remain. The next legitimate line of field shooting will be at woodcock along about July 1, in this region for the most part. Angling promises to be in great vogue this summer, and the fishing tackle houses here report good sales the past two weeks.

Horicon Club.

The regular annual meeting of the Horicon Shooting Club will be held at the Commercial Club rooms, Fond du Lac, Wis., May 12, at 8 P. M.

"Forest and Stream" as an Educator.

Ahmeek, the gentleman who some time ago criticised the moose head on the cover page of *FOREST AND STREAM* as not being a thing of beauty, writes again in plaint of another ill he has discovered, claiming the right of an American citizen and old-time contributor to explain how the paper ought to be run—though I notice he doesn't have nerve enough to write to the editor of *FOREST AND STREAM* about it for fear he should become a marked man. He says he contributes to the paper when the editor is away on his vacation. Ahmeek does not like the uncut pages of *FOREST AND STREAM*, which he says display an artistic tendency which is to be viewed with alarm.

"If this vicious tendency is not checked," he says, "how long will it be before it prints an *edition de luxe* with gilt top? When may we look for a morocco back and illuminated title page? Are the illustrations to be printed hereafter on Japan paper? Are the horns of the alleged *Cervus alces* to be painted red? Well, I guess not. Not if the plain, common, low-down, or'nerly critters that not only buy the paper but believe in it have any rights left. Have you personally had any experience in cutting those cussed edges with a large, ugly knife just tainted with a fat, juicy ham? Have you ever grabbed the thing on its arrival in camp and smeared it all up with a gory dagger fresh from the blood of your s'teenth deer? Have you ever tried to get it in a readable condition so the pages will number consecutively by the aid of a long steel ramrod, model of 1804? Or have you ever tried the picturesque effect of impromptu trimming of the top with an old axe, well nicked along the edge? Well, I reckon not, not often, that is. I suppose no up-to-date periodical will be perfectly happy until it is printed on the inside of a closed bag, but when that era reaches us it will be necessary for the average citizen either to give up reading or to buy a trimming machine listed at about \$350. This last would be inconvenient to take into camp. I will not say more on this subject now, but let the fruitful suggestions I have made soak in."

I feel sure the management of *FOREST AND STREAM* will have Ahmeek's copy of the paper cut for him each week now, for it is the chief function of any leading journal to strive to please. He has already been promised a change in the head of the paper, and if there is anything else required it will, I am sure, be looked into. There are many ways in which *FOREST AND STREAM* can be opened without putting one's foot into it. It can be opened with a foot rule, or a penknife, or a young puppy, or a pair of scissors, or perhaps, under the rules of the game, with a pair of jacks. There is an infinite variety in all this, which has, I am sure, been well considered by the management in seeking for something new and interesting for each week's issue. Ahmeek admits that he sometimes uses a ham bone to cut the pages with. That is good too, and it shows a versatility of thought which promises much for later years. Does not Ahmeek begin now to see the real, if slightly disguised, purpose of *FOREST AND STREAM* in coming out with uncut pages? Can he not see the intent to educate the young, interest the middle-aged and amuse the old? Is not this better than advertising a \$10,000 prize mystery story exclusively published (by a syndicate), as is the fashion of our daily papers? Cannot Ahmeek now begin to discover a high moral purpose in this which he has sought to criticize? Let him think well ere the edict go forth that henceforward his paper shall go to him in the old plebeian fashion of snug trimmed edges and unsuggestive top. Doth not one rejoice to open a package of sweets, with care unscrewing the top thereof? In his early days, did not Ahmeek's mother lay his plate at table face downward, that he might know the joy of turning it over

Have a care, gentle sir, lest thou run foul of the great law of longing, which hath been subtly considered by those who print this the greatest paper on the earth.

Information Wanted.

At table sat certain ones with Omar Khayam, author of the "Rubaiyat of the Dog," and these sought to make sport with him.

"How," said one of these, "shall I break my favorite dog of sucking eggs?"

"In truth," said Omar, "in the language of the cult, that is dead easy."

"How then?" said yet another.

"Break the eggs," said Omar.

Thereupon those others rapped loudly upon the table and declared that he had spoken well.

E. HOUGH.

1208 BOYCE BUILDING, Chicago.

MY SIXTEEN-POINT BUCK.

PORTLAND, Me.—In response to your "Relate your Experiences," I send the following incident of my 1895 trip:

Leaving Jack and Charles in charge of camp, located in the Moosehead region in Maine, I started out one Saturday morning to visit my family, then stopping at a farm house ten miles away. I was obliged to turn back on account of the rain, but as it cleared up one hour later I again started out, intending to remain over Sunday and return Monday. I had scarcely proceeded one mile on my journey when glancing up on the ridge I saw a fair-sized doe feeding. Taking hasty aim I fired. The deer made a jump, and followed by a larger one, which I had not seen, bounded up the wood road. I started after her and soon came across a trail of blood, following it until I reached a point in the road where a large tree had fallen across. I glanced over and saw the large doe on the side of the next ridge, and, thinking that the wounded one must be with her, I started across. Seeing nothing of the

MY SIXTEEN-POINT BUCK.

wounded deer, I sent a shot after the large doe, but missed. I then went back and picked up the trail at the fallen tree, and had not gone two rods before I found the doe stone dead. I dragged her down into the trail, dressed her off and hung her up, and then started on my interrupted journey.

After proceeding about three-quarters of a mile I took a sharp turn to the right in order that I might visit an old deserted lumber camp where I had seen many signs of deer. Coming cautiously into the yard, I stepped out in front of the hovel, and glancing down a wood road I saw, about 75 yds. away, the antlered head of a large buck. Raising my rifle, I took careful aim and fired. The buck took a step forward just at that moment, and the bullet passed through him a little too far back to drop him. He immediately wheeled away from me and dashed down the road, making a stand in the next turn with head and tail in the air, but was off again before I could get another shot. By examining the trail I saw that he was bleeding freely, so followed him across the ridge down into the swamp, but without getting sight of him. I found it easy work to keep the trail on the ridge, but when I reached the swamp I found it much more difficult and lost the trail again and again. After three hours' work it began to rain quite hard, and having eight miles to go and not much daylight for the undertaking, I had about decided that I would give it up, but noticing that the trail was headed toward the pond, I made a break in that direction, and upon arriving at the shore looked across. I saw the buck standing in the water on the opposite side. I was to the windward of him; he lifted his head as I appeared in sight, but as I was some half a mile away he kept his position. Feeling assured that if I did not disturb him he would not leave the water, and having but two hours of daylight left, I struck out for my destination, arriving there just after dark.

On returning to the pond Monday forenoon I was met by Jack, to whom I pointed out the position on the opposite shore where the buck was supposed to be, and upon approaching the spot we found him there. Having lain so long in the water, his carcass proved to be worthless, but the head was a beauty. While dressing him off we

happened to glance behind us on the bank and there stood a moose which seemed as much surprised as we were. We grasped our rifles, but alas, it was a cow, so we let her escape.

Having my limit on deer, I devoted the remainder of my stay in camp to the partridges until Jack and Charles had secured their limit also. The accompanying halftone is a fair likeness of the buck.

F. L. S.

New York Legislature.

[Special correspondence to *Forest and Stream*.]

ALBANY, May 4.—In the closing hours of the Legislature Senator White's bill amending the game laws generally was killed because it contained a provision that shad nets could not be drawn in the Hudson River between Friday night and Monday morning. This led to the opposition of all the senators and members living on the Hudson River, and so the bill did not pass.

The following Senate bills have become laws: 1298, Assemblyman Cole, allowing fishing through the ice in Silver Lake; 875, Guy, protecting oyster beds; 871, Brown, protecting Mongolian pheasants till the year 1900; 466, Tibbits, accepting as a part of the forest preserve the farm of old John Brown, in Essex county.

These Assembly bills have become laws: 2208, McNaughton, protecting the owners of private fishing ponds; 1728, Messiter, allowing an incorporated game club to act as game protector; 1679, Rogers, providing for stocking private lakes; 1674, Brownell, allowing special counsel to the Fish Commission for prosecutions; 1100, Hanna, extending to Ten Mile River the Hudson River shad law; 1010, Allds, exempting Wayne, Onondaga and Oswego counties from the anti-ferret rabbit provision; 930, Sears, making more strict provisions as to the prosecution of offenders against the game law; 760, Kelsey, appropriating \$5,000 for a better water supply for the Caledonia hatchery; 719, Burr, allowing the shooting of deer in Kings, Queens and Suffolk counties every Wednesday in November; 482, Horton, making the close season for fur-bearing animals in Wayne county from May 1 to Oct. 31, but one month shorter for foxes; 193, Ives, appropriating \$2,000 to improve Raquette River.

The Malby-Sanger bills, allowing fifteen days each for jacking and hounding, have gone to the Governor.

Maps of the Yellowstone Park Region.

THERE have recently been published by the U. S. Geological Survey maps showing portions of Montana adjacent to the Yellowstone Park, which are of great interest and beauty. The folio of the Livingston sheet shows the northern strip of the Yellowstone Park, north of the Wyoming line, and gives also the geology and topography of the country immediately north of the Park, with some interesting text. The four geological maps of the region are of peculiar interest. The geological work of this sheet was done by Mr. J. P. Iddings and Mr. Walter Harvey Weed, under the superintendence of Mr. Arnold Hague, geologist in charge. The excellent work of all these gentlemen in the National Park is well known to persons interested in the reservation, and Mr. Hague's writings on and deep interest in the Park have done much toward preserving it from spoliation by its many enemies.

Sheets of the U. S. Geological Survey map, showing a portion of the Yellowstone Forest Reservation, which lies to the east of the Park, show part of the Clark's Fork drainage and that of the Stinking Water River. They are called the Crandall Creek and Ishawooa sheets. The topography is carefully worked out and the altitudes shown by contour lines for every 100ft.

The Michigan Goose Flight.

MONROE, Mich., April 24.—Not in many years have there been seen in this vicinity so many wild geese as during the month of April. The wheat fields north and south of Monroe have been regularly visited by large numbers of "honkers" in the early hours of the morning, and the numbers of them which have been slain are reported to have been large—some seven or eight to each gun. B.

New York Game Protectors.

THE Fisheries, Game and Forest Commission has reappointed State Fishery, Game and Forest Protectors S. M. Prouty, of Whitehall; A. B. Klock, of Herkimer; George B. Smith, of Horseheads, and Jos. H. Lamphere, of Weedsport. Carlos Hutchins, of Indian Lake, is a new appointment.

Sea and River Fishing.

DAYS ON THE NIPIGON.

[Continued from page 357.]

WE slept well under the ample supply of blankets provided by Mr. McKirdy, and when morning came we felt most excellent. The cold night did not disturb us in the least, and we only arose when we learned that Joe had breakfast ready. We had some more trout, because we were not yet satisfied—well, we had other good things also that belong to camp life, and we certainly enjoyed them.

The morning was foggy and we did not care to go beyond the heat of the good log fire, so we watched the fog rise up from the waters in front of us. When the sun got up over the mountains in the east we could soon see where to go, and so started out. We had the two canoes manned with the Indians, and they took us all along the shores, then across and back, until we, old fishermen as we were, gave it up, and ordered to proceed up the river. The narrows are perhaps about 600ft. wide, and the water rushes down in a mighty volume to the falls below and on to the lake. Naturally one would suppose that our fish caught would spoil, as they were not salted or preserved in any way. The Indians simply sank them in the ice-cold water of the Nipigon River, and when they were taken out they would be as cold as if taken from an ice box.

The shore to the west was level along the river front for some fifty rods, and the shore was lined with pebbles. Further back it rose into high or lofty hills, covered with immense rock and timber, and the eastern shore was still more hilly from the water's edge. At places along the

river the banks rose 200ft. high, in one solid rock, and at other places still higher.

As near as I could ascertain, there is no way by which a wagon road could be made from the station to the lake without a vast expenditure of money; nor could a steam or sailing vessel go up without a like expenditure. As our camp equipage had again been stored in the canoes, we went up through Lake Maria, and at times cast the fly into tempting places; but Fred, as usual, had good luck, and made himself the butt of our good-natured ridicule by catching a wall-eyed pike of about 4lbs. weight. We certainly guyed him until he gave it back to us for doing the same trick. At the head of the lake we again entered the river until we reached Split Rock, over which we had to walk, while the Indians looked after the canoes and dunnage. The next portage was made at Island Portage, and while the Indians were making it we investigated the waters, and although we saw trout not one of us got a strike, so that when the boats were ready for us we got in and paddled away.

It is not all of fishing to catch fish on one of these trips, and this portion of ours was mostly spent in beholding the wonders of God as exhibited here, and which opened up before us as we passed along. The Judge is skilled in botany and geology, and he instructed us in the different formations of the rocks and their kinds, showing sometimes iron, copper and gneiss, while the fauna was pointed out in its different characteristics, and the mast of the country in its peculiarities of pine, cedar, spruce, etc.

I have found fault with myself all winter and last fall because I did not take a kodac along and take photographs of these different points along the trip, and I promise myself that from this time on I shall provide myself with one even if I fail to take something else. It is a happy article to take with you, and in the event of any extraordinary occurrence you can get indisputable evidence of it and produce as many copies as you wish.

The day was all we could wish, and neither accident nor any unpleasantness occurred to mar the pleasure of the trip. We are now nearing a fall, as is indicated by the roar heard in the distance, but as our Indians do not understand our language, nor do we understand theirs, all we can get out of them is "Cow-win," meaning, as near as I can understand, "Don't know." As it is repeated so often in our hearing we soon commit it to memory and then apply to Joe to interpret.

As we near the rapids on the west side again we learn that we are at Pine Portage and that we have one and one-half miles to carry the stuff overland, and this will cause delay. As we land we find some other people coming down the river, and soon a half dozen white men come in sight with about a dozen Indians, and while we introduce ourselves to the whites the Indians fraternize. I do not recall the names of these gentlemen except one, a Mr. Patrick, a very eminent, prosperous and wealthy merchant of Duluth, and to him my party as well as myself are greatly indebted for the loan of a pair of scales, so from this time on there will be no guesswork in the weight of our catch.

After eating our noonday meal, prepared by the Indians on a part of the level ground on the high land overlooking the Nipigon, we toasted each other, hail fellows well met, and parted, they going down and we up. They had the skins of trout dried and fastened upon birch bark, with branches tied at the corners for frames—specimen catches of the members, taking them home to convince the skeptical. They had said that when we got to Virgin Falls we would get big trout and as big trout as we wanted, so we were in a big hurry to get to the promised land, and to make sure of getting there we turned in and assisted in making the portage.

This seemed to be the hardest portage of all. It took longer, with everyone working, than it did at the longest portage with the Indians alone. Joe seemed to get lazy, indifferent or sick, and it needed all our nerve to drive him ahead. It looked like a "soldier" on our hands, and it required an exhibition of authority to get things moving smoothly again; but afterward, to the end of our trip, no trouble or annoyance occurred. Perhaps it was not intentional on their part, but some of us have seen fishermen placed in such a predicament when out in the woods that the so-called guides would leave and go home, and the fishermen could get home the best way they could. Our Indians told us tales of men hiring them and when on the home trip slipping away down the river to catch a train and disappear and never pay them a cent, and so they have grounds sometimes to fear such a trick may be played upon them.

However, our men got into good shape and all things were taken across without loss or damage, and as our canoes had again been patched and pitched, we started again in dry boats.

At the landing on the north we indulged in fishing above the falls, but not a single trout did we catch; but around the rock upon which we stood while casting plenty of good-sized trout could be seen in all directions. I was well pleased to see at this place plenty of small white silver minnows, which kept close to the rocks and near the top of the water. They looked like small white-fish, and I have no doubt that if we had been able to have gotten hold of one they would have proven to have been the *C. clupeiformis*, of which we afterward found in abundance. Of this we will relate more hereafter in connection with the location and incidents.

Going north at the same time from this point was a reverend gentleman whose name I do not now recall, and who was the president of a college in Iowa. I think his name was Hubbard, and his home Cedar Rapids, Ia. He had one canoe and one Indian to do the heavy work, and he took the bow of the canoe and paddled when on the move, and fished at desirable points where he knew there were good trout. As we stood at his camp he pointed out to us across Hamilton's Pool spots where he said some very large trout had been taken, and that during his stay there that season there had been no one back of the little islands to take any of the monsters who lay there undisturbed by fishermen. I wanted to go over, but the rest said to wait until we should return and then we would all go and get them, but on our way home it was neglected. I hope it will be my pleasure to meet him there again.

At White Chute we got out on land again, and the Indians crossed to the east side of the river and poled the canoes up. We tried casting at this point, but got no fish. When we got above the chute we were in Lake Emma, and we took the east side of the river going north and cast our lines out on both sides of the boat, and then trolled for a distance to see if a trout could be induced to

strike; but getting none, we slowly reeled up the lines and began a geological quiz by Judge Fitzsimmons, to the evident edification of the Indians, who stared at him as he explained each peculiarity that we passed. The Indians named him Big Chief Big Medicine Man, and afterward stood in fear of him. I noticed that the head chief always saw that he got everything of the best and everything that was going, so that we too stood under his wings for favors.

About two-thirds up Lake Emma there is a portage of about one-half mile and a camp ground called Camp Victoria. As it was near night and we felt the need of food, we decided to remain here and go into camp, and afterward try the rapids in front of camp. We were getting out of fish, the supply taken at the creek below was now about exhausted, and it was necessary for us to show our skill or fall back on bacon; so to work we went, and after a long time a few fish were caught, but as usual the large one got away.

Fred and the Judge had both gotten bites from monsters, and flies and leaders were both lost in the shuffle; but they saved the rods and parts of their lines, so that repairs can be made. For myself, I was tired and I sought the downy underbrush mattress on the rocky floor and wrapped myself in slumber, sleeping the sleep of the righteous fisherman after a hard day's work, leaving my two companions busily engaged in fishing on the bank in front of the camp.

I had slept for some time, possibly for half an hour, and the woods were resounding with my snores, when I was rudely awakened by screams and blood-curdling yells from the bank. Rushing out undressed, I beheld the cause of the alarm. Our genial Fred came slowly moving up the bank, tugging at his line, and with much effort succeeded in landing a large body on the rocky banks. By this time the Indians had assembled, bearing in their hands large lighted pine sticks, which gave a lurid glare over the spot, and by its aid we found Fred's catch to be a monstrous wall-eyed pike. Going back after the scales, we hung the whale upon it and Fred scored his catch 8lbs. weight. Exhausted by his efforts in providing fish for the camp next day, he sought the fireside with the assembled camp, and then gently slipped away and was soon in the land of nod, and silence came over the camp again.

After breakfast we tried for some of the monsters said to inhabit this particular portion of the river, but for some reason the morning's work was not rewarded by any returns, and as we had to march overland to get above these rapids, we landed at another camp of fishermen and saw hanging upon a tree a monster trout caught the night before. Drawing my scales from my pocket, I took it down and had the satisfaction of seeing it draw down the scales to 6lbs. strong. The owner came out of his camp and greeted us with a hearty, cheerful "Good morning, gentlemen," and we were introduced to Mr. Denby Carr, a most accomplished gentleman of world-wide reputation as an accomplished and taking fisherman, of St. Louis, Mo., who has camped on this point for some years. Then the weight of the fish was the subject of discussion and we tried his two pair of scales, one an American and the other an English make, with the pair I had borrowed.

After carefully weighing the fish we found the weight to be 6½lbs. after having been out of the water about twelve hours. When first taken he must have weighed at least 7lbs. Whether this was the monster that had played havoc with the lines of Fred and the Judge I don't know, but I am satisfied and convinced that these waters contain some monstrous trout and that they don't all get away. Mr. Carr showed us his gut leader, which had been broken the night before by what he claimed the largest trout he ever struck, but it got away. I afterward heard that he got one that weighed about 9lbs.

The sight of this whale nerved us to desperation and that portage was quickly made. We left our camp and equipage in charge of the young chief, and taking sufficient food for dinner we started for Virgin Falls. It was a delightful ride up the river in the bracing atmosphere of the morning, and with the thoughts of catching all the big trout we wanted we were eager to reach there.

Every person we had the pleasure of meeting on the trip north gave us such hopes of big trout that nothing could have stopped us in our desire to get there.

We became aware of the close proximity of the falls by the dull sullen roar, as it fell upon our ears, but we could see nothing beyond the mighty rush of waters that frothed and dashed and sprayed until it looked like a snow bank, but when we reached it the falls showed up in great shape. You do not see them all at once, as it requires a walk up the trail through the woods to see the entire length of them. The portion above the falls proper slants northward for a quarter of a mile and carries the huge volume of water from Lake Nipigon above.

I have heard frequently of fish being so plenty that their fins would stick out of the water, but I never expected to see such a sight, as I deemed it impossible; but I did see and saw often during my stay at the Virgin Falls schools of fish all over the pool below, so thick that you could count the dorsal fins by the dozen. So well pleased were we with the prospects presented here that we quickly shipped both canoes back to bring up the entire camp, and by night we made our home here in paradise—alongside of the falls, with the pool in front as our fishing grounds.

I had secured a small minnow from the stomach of one of the fish taken the night before, and I made up my mind that I would experiment with it, and at the falls I baited with it and made a cast from a boulder that lies at the southern side of the falls, where there is an eddy, and where you can look down into its liquid depths some 10 or 15ft. As the current caught the bait I saw a half dozen trout dash after it, and by jerking it a few inches at a time I had the pleasure of actually seeing one of them swallow my bait. I struck him and the hook caught, and I had pleasure with the entire school until I got anxious to see the size and weight of my catch; so I landed him by the aid of the dip net, and carrying him back a safe distance from the water, hung him on my scales, and saw he weighed 3lbs.—the largest and heaviest trout I ever caught. If my hat got too big for my head I think I was excusable.

I having been so successful, live minnows were in demand, but neither love nor money could get them, so we fell back upon the fly, grasshopper, bugs, etc. In the meantime Fred had taken a stroll all to himself, and had gone up stream some 100ft. away. When he had been

there about ten minutes we heard his yell far above the roar of the falls, and thinking he had fallen in or a bear had grabbed him, the Judge and I dropped our rods and ran up to assist him out of his trouble, and when we heard the second yell, louder and fiercer than before, we redoubled our speed and reached him out of breath and puffing like porpoises, to behold him the picture of contentment, with a large trout at the end of his line leaping and dashing in the rapid waters of the falls. The sight was such a glorious one and Fred's face glowed so like the sun with pride and happiness that we forgot to get mad and throw him in. So we left him, retraced our steps and went back to fishing.

The fish we caught were placed in a pool formed by taking a lot of rocks out of the water and making a wall with them out into the river. It was about 6ft. in diameter and 2ft. deep, through which the water flowed constantly. During the day when the sun came out a board or two was placed over the center to make a shade and in this our trout lived. We could stand there and admire the beauties as much and as long as we wished because they could not get away.

As I do not smoke, the Judge would invariably inflict upon me a second-hand smoke by getting to windward of me, and enjoy himself by watching the fumes come my way and seeing me dodge and change position to avoid them; but there came a time when peace and contentment came over me like a dream, and the air became pure and undefiled, and he was gone. As I regained consciousness, I heard a noise down the eastern shore below the camp, and looking up perceived the Judge in one of the canoes coming ashore, and making great ado with his arms motioning me to come to him. I laid down my rod and went down to him, when he asked me for the scales, and in the bottom of the boat lay two monsters—two 5lb. trout as I weighed them upon the scales—and when he danced a war dance upon the rocky shore I forgave him for the second-handed smoke. Nor do I think the Indians felt less reverence for him when he stuck his thumbs in the armholes of his vest and threw his head in the air and walked off, the hero of the hour of that day, and finally of the trip, because none of us came anyway near equaling his catch on the entire trip, either in weight or size. I have the skins of these two fish, and to-day I measured them and found the trout was 26in. long, and half the skin measured at the dorsal fin 5½in. and the tail 5in. wide.

When night came on the clouds began to gather in the east and west and moved toward each other, silence overspread us, everything hushed, and when the clouds came together, apparently right over the falls, the crash of thunder came, and peal after peal until everything shook; then the rain descended in sheets and the wind drove it into every chink and in every direction. It struck our tent and we flew to the corners and held it down until the rain was over, and then went outside and anchored it down with the largest rock we could find loose. Inside the tent all was nice and dry, but the wet air caused it to feel damp, so a fire was built in front of the tent, and under its soothing influence we soon wrapped ourselves in warm woolen blankets and went to sleep.

J. W. HAGUE.

[TO BE CONCLUDED.]

NEW ENGLAND ICE AND FISHING.

BOSTON, May 2.—The ice went out of Lake Auburn, Me., earlier than anticipated, but the fishermen were not long in getting ready. There were several electric car-loads of fishermen going up to the lake by 6 o'clock in the morning on the first day of the ice being out. The lake was covered with boats and all sorts of rigs. Over thirty trout of good size were taken on the opening day and several landlocked salmon, some of pretty good size. Since that time the lake has been thoroughly fished, and more trout and salmon have been taken than would seem possible, considering that the lake is within a short electric car ride of two cities. It is a fact that the male inhabitants of State of Maine cities and towns are nearly all fishermen and hunters. But restocking and re-restocking is doing much to keep up the supply in Lake Auburn at least.

The ice is out of Swan Lake, near Belfast, Me., and some of the trout for which that lake is celebrated are being taken.

The ice went out of Grand Lake, in Maine, or the Schoodics, on Tuesday last. Mr. D. W. Field, of Boston, received a telegram on Wednesday, saying that the ice is out. With a couple of friends he is off for landlocked salmon, though earlier than he had anticipated. They expect to take their share of fish. It is understood that these fish rise to the fly earlier in the Schoodics than in any other Maine waters. The ice is out of Sunapee Lake, in New Hampshire, and Newfound Lake is clear. But the weather has been most too cold for the fishermen to start off. Still a landlocked salmon weighing 17½lbs. was taken at Sunapee, Monday, according to a letter received by Mr. George D. Appleton, of Appleton & Bassett. Mr. Appleton, with Mr. Arthur Soden, the noted baseballist, put off their trip to Sunapee till Tuesday of this week, wholly on account of the cold weather. Parties for Newfound Lake have done the same. The fishing party for Dan Hole Pond, New Hampshire, mentioned in the FOREST AND STREAM last week, came back without a fish. The weather was too cold and the smelts were not running at all; conditions against the taking of landlocked salmon. Messrs. A. J. Selfredge and W. B. Hastings went to Dan Hole Friday, determined to further try the salmon there. Their success is not yet reported. There has been only fair fishing at Sebago thus far. Mr. John G. Wright came back without a salmon; it being against the law for a non-resident of the State to fish that lake till after May 1. A Portland lawyer took a salmon of good size the second day of fishing and other Portland parties have been successful. Indeed Sebago is fished by people of Maine a great deal.

Mr. D. H. Blanchard is planning for his summer salmon fishing trip. He says that he shall make that trip as long as he is able to go anywhere, and his present hale and hearty appearance would indicate a good many salmon taken from his branch of the Mirimachi. He is planning for a trip to Winnipisaukee with his daughter, undoubtedly the guests of Mr. E. R. Jones, with his family, who has a cottage there. A steamer is used, and the ladies troll for lakers, and the gentlemen—all salmon fishermen—only deign to bait the hooks.

At this writing the ice still hangs in Moosehead and the

Rangleys, in Maine, and I have met several fishermen within a day or two who have set the 10th as the time when the Rangleys will first be clear of ice. Moosehead is likely to clear a couple of days sooner; such is almost always the record at least. It is with sadness that it must be mentioned that many of the long-time parties to Moosehead, from Boston, are broken up. I have seen several gentlemen within a few days, once among the foremost to be off for Moosehead when the telegrams came that the ice had gone. They are not going this year. "Our old party is all broken up," they say. Of course there are one or two parties left, but the old days of interest and excitement are gone. I hear that the Produce Party, always heretofore early to be off, will wait a week or ten days after the ice is out. Possibly Mr. W. S. Robinson, president of the Chamber of Commerce, will be in that party this year. I learn that Mr. C. P. Stevens, always first and foremost to the Rangleys on former seasons, will not open his camp in the narrows of Richardson Lake this season. He has been sick to the extent that he desires to rest fully, and starts for Rangeley Lake this week, where he proposes to spend some time at the Rangeley Lake House.

SPECIAL.

BOSTON, May 2.—A letter received from H. O. Stanley, the Maine Commissioner, on April 29, stated that the ice is out of Lake Auburn, Swan Lake and the Belgrade ponds. Mr. Stanley has been fishing in Swan Lake and took eight or ten trout and salmon, weighing altogether about 30lbs. He thinks the fishing opened up better than it has for some years, and says they have been taking many large salmon from Sebago. With just a little more of the same kind of weather that we have been having he prophesies open water in the Rangleys very soon.

A splendid specimen of a brook trout 8½lbs. weight, caught by S. B. Gates, of Presque Isle, Me., and beautifully mounted by Crosby, of Bangor, is shown in the window of the Boston & Maine Railroad office on Washington street, this week. It is a product of the Aroostook region, and as such has created some surprise, it being the impression in many quarters that fish of that size were almost wholly confined to the western waters of Maine. The coming season will cause a great change of heart in this direction, as there promises to be a great pilgrimage to Aroostook waters this year.

One of the men who will visit the Aroostook fishing country this spring for the first time is Henry W. Clarke, of Boston. He has gone each spring to the Rangleys since 1873, but thinks the time is now ripe for a change. His old guide, David Haines, who has been with him for twenty years, will be with him in the new country this time, and together they will go to Atkin's camps at Milnocket Lake. It is Mr. Clarke's intention to explore the region over there pretty thoroughly, and from what he has heard he feels confident of getting some good fishing.

Moses R. Emerson, of Boston, and his friend, Mr. Heald, of New York, leave next week on a fishing trip to Errol, N. H. They have a nice camp on one of the ponds near Errol, and have always been fortunate in getting good trout fishing during each of their annual spring trips. For fifteen years they have fished together, thus affording an example of congeniality not often seen.

The new Portland fishing club, who have a fine club house about three miles from Crockett's, on Sebago Lake, have just returned from a three days' trip which in results was quite satisfactory to the participants. They brought back an 8lb. salmon and several others of less weight, and considering that there were thirty or forty other boats on the lake whose occupants did no better, they felt well satisfied. The party included six men, Chas. Robinson, David Drummond, Samuel Boothby, a Mr. Stevens and two guests from Boston.

Rangeley fishermen will be interested to hear that the new Rangeley Lakes division of the Portland & Rumford Falls Railway will begin running regular trains to Bemis on Monday, May 18. The road is finished now, but it is not yet sufficiently ballasted. It is the intention, I hear, to run a parlor car out of Boston on the 9 A. M. train, which will reach Bemis about 5 P. M. of the same day.

Good shooting grounds near Boston that are open to the public are hard to find in these modern days. Most of the best stretches along the coast line are controlled by clubs or individuals who jealously guard their property against encroachments from outsiders. It is rare that one of these preserves is offered for sale, and when such an event occurs it does not go begging, but is snapped up at once by eager purchasers. Such an opportunity recently came to the notice of T. H. Rollinson and George M. Woodman, of the Oliver Ditson Co., Boston, and it did not take them long to make up their minds to buy. The property consists of a shooting cottage and tract of marsh land in Marshfield Hills. The cottage is on Trowant's Island, and the shooting grounds border on Macomber Creek, the whole tract lying back of what is known as Fourth Cliff. It is said to be the best shooting grounds on the south shore, and both gentlemen feel fortunate in securing it. They are much attached to shore bird shooting, and will have quarters so comfortable at the new place that they can take their families down and spend some weeks there during the shooting season.

The Megantic Club have inaugurated a new method of keeping members in touch with the welfare of the organization. A supper and talk was held at the Copley Square Hotel a few evenings ago, the object being that the directors might inform members what steps had been taken for the benefit and comfort of all who will visit the preserve during the coming season. There were about thirty gentlemen present, all of whom were deeply interested in the subjects under discussion. It is proposed to hold these informal talks occasionally, and it is believed they will do much toward keeping interest alive in club affairs.

Good cod fishing is a pleasure which is anticipated, and better still, quite often found by many of Boston's residents. The fishing usually begins about the middle of May in the waters comparatively close to the city, that is, just outside the harbor; but this year it has started in early and down around Boston Light the boats have been having great sport for two weeks back. No one seems able to explain its premature beginning this spring, but they have all found out about it, and while willing to concede the sport not as scientific as fresh-water fishing, still contend that pulling in the useful cod has charms which cannot be slighted.

Mr. Jas. Bird has returned to Boston from the Cape, where he has been fishing a private stream, and also

YANKEE DOODLE'S PATENT STEAM FISHING ROD.

THE above is a plan of the recent application of steam for the assistance of amateur fishermen, to enable them to take without difficulty the large bass and others of the finny tribe with which the streams around us are so plentifully filled. The application is quite simple, but not the less worthy on that account. We forbear further comment, and proceed to the explanation of the diagram:

(A) The reel with the line (J) which is supposed to be carried to the end of the rod (I). (B) the crank. (C) the connecting rod. (D) cylinder. (E) the boiler. (F) supply pipe. (G) a dial to indicate when you have either a bite or a nibble. (H) pendulum. (I) the rod.

The rod may be held in the hand, or be placed in any

permanent position, and the instant some unfortunate tom cod takes a nibble the engine makes half a turn, and when the nibble has grown into a bite the engine puts itself immediately in motion, and the poor victim is landed in the most scientific manner. It may be proper to state that experiments have been made in the presence of Mr. Webster and other gentlemen skilled in piscatory science, and that entire satisfaction was given. K, above, shows an old-fashioned rod, such as were used when we were boys.

Worthington's patent feeding pump may be attached to this invaluable invention by those who fear an explosion. Price with the pump \$75, without the pump \$55.—From Yankee Doodle, 1850.

Forge Pond on the estate of Eben Jordan. From the latter he got thirteen nice trout. The bass fishing at Belgrade will occupy Mr. Bird's attention next. He will leave for the ponds near June 1, and expects to make quite a stay. It is a favorite place with him, as with many others.

HACKLE.

CHICAGO AND THE WEST.

Bass Fishing in Greater Chicago.

CHICAGO, Ill., May 2.—During the past week the bass have been biting very well in the lakes and streams of this vicinity, and a number of large catches have been reported. Pawpaw Lake, in Michigan South Peninsula, has sent in some heavy catches, one pickerel of 16lbs. among others, besides many bass. At Fox Lake, in northern Illinois, the catch of bass has continued, and in fact in all the lakes of that series the best fishing of the spring has been going on. The first run on the spawning beds is always the time for the big strings, and then the fishing falls off till warmer weather, to revive for a time previous to the sultry days, when the bass haunt the deep water and only feed in shallow water during the evening and morning. This early bass fishing is frowned upon by other States, but is legal in Illinois, and anglers take advantage of the statute. At this date the spring run of bass is far up the streams and much of the spawning is over with, and fishing this week is not the crime against angling ethics it was ten days ago.

The spring run came very early this year and the stage of water has been such that we have every reason to expect good fishing this season. The Kankakee has been yielding large takes of bass at the old favorite spots, such as Momence and up river from that point. The bass have not been so abundant in that stream for a couple of years as they were the few seasons previous, but it seems that this summer there will be more of them. The Fox River has been marked also by an early and abundant run. At Aurora, St. Charles, Clintonville and McHenry the bass have been up for some time, and indeed the heaviest part of the run is up and gone. George Morrell, who lives at St. Charles, says that he has had some good fishing there. Ed. Rock, a local angler of experience at St. Charles, says that he has made some very heavy catches. He adds that one day last week he caught 263 rock bass at one spot, his boat being anchored near the west pier of the railroad bridge above the dam. I had not thought the rock bass schools had gotten up so high so soon, but everyone of experience with that easy-mannered little fish knows what it means to meet a school in the early spring run. It is simply a question of how many one is willing to take of them. At St. Charles last week also one fisherman caught thirteen big bass, several over 3lbs., in the river above town about three miles. The banks of the river in the town are lined with anglers of the country type, and have been for three weeks, and nearly all of these have caught more or less fish, bass, rock bass and pickerel, with a few, a very few, wall-eyed pike. One man caught three pickerel in the rough water below the dam in one afternoon, all over 5lbs., and one over 9lbs. All the bass mentioned in the above catches on the Fox are the small-mouthed bass.

An Open Letter to Mr. Cheney.

Hon. A. Nelson Cheney, who writes the able and entertaining "Angling Notes" in FOREST AND STREAM, is an authority commanding respect in his field of labor. Yet no man can surpass him in telling a good fish story, and he is noted for his long-suffering patience with people who ask questions. I make bold to hand him, through the columns of FOREST AND STREAM, a letter recently received at this office addressed to him, hoping he will meet the cheerful spirit of inquiry with his customary blandness.

Hon. A. N. Cheney, State Fishcultivist, Albany, N. Y.—Dear Sir: When I was in New York recently, I became very much interested in clams, and since my return to Chicago I have imparted some of my enthusiasm on this subject to a few of my wealthy friends, and as a conse-

quence we have resolved to form a club for the purpose of starting a clam preserve. As I know you to be thoroughly well posted on the habits of all our native American game animals, I have resolved to write and ask your opinion on certain matters intimately connected with the success of our experiment, and beg to ask the following questions:

Do you think clams will be good preserved?

Do you think the clam (*Lusox luciosus*) can be acclimated at this altitude (25ft. above sea level)?

What are the nocturnal habits of clams? (We do not want them if their habits are bad.)

Would we need wire netting around our preserve, and if so, of what size mesh?

In your experience, have you known the clam to climb trees?

What would you advise feeding the clams for the first sixty days after birth? Would it be necessary to feed them clam chowder after that period?

What is the greatest size the clam attains on this parallel of latitude—i. e., what is the largest one that has ever come under your personal observation?

At what season of year does the clam afford the best sport?

Do you advise placing the eggs under a native hen? If so, what color of hen is best?

How many acres of land would you advise for our first experimental inclosure? We would like to stock the preserve with at least a dozen clams to start with.

In your experience, is it dangerous to the health of clams to go around with only a half shell on? This we ask as applying more especially to the young clams in the cold and rainy weather common in the neighborhood of Chicago in the early spring.

In your experience, how many men would be necessary to night-herd a dozen clams, if proper fencing were afforded about the preserve?

Is there any probability that the clams would increase beyond our ability to control them, and so necessitate governmental action?

Have you found it true that clams gnaw the bark of young apple trees in the spring? We are disposed to consider this assertion as inaccurate. Please answer, to decide a bet.

Do clams hibernate in winter time, or do they prefer the summer?

In case of a stampede of clams, what would you advise to stop the herd?

In regard to the annual migrations of clams, what, in your personal observation, is the greatest range of territory north and south covered, and during what time? (We don't want any guess work here.)

What is the largest clam you ever ate?

What is the State law of New York on clams? Would special acts of protection be a necessity in this region? In your opinion would Gov. Altgeld, of Illinois, veto such a law if passed?

Are clams ever indigenous? If you believe they are, what is the reason for your belief, and do you think it can be cured?

Would you blame a clam for being indigenous if it could not help it?

Any further information or advice you can give us in the furtherance of our enterprise in acclimatizing and preserving these interesting creatures will be very much appreciated, and if we meet with success we should be pleased to have you come out and enjoy the sport with us. I am a constant reader of FOREST AND STREAM, and an occasional contributor, and always turn to your column after reading my own stuff.

CONSTANT READER.

E. HOUGH.

The Texas Tarpon Season.

ROPEVILLE, Texas, April 24.—The tarpon season has opened here. Mr. W. D. Jenkins landed a fish to-day 4½ft. long, and had six strikes besides. Mr. H. T. Drake and son, of Milwaukee, had several strikes this morning, but have not yet landed a fish.

F. H.

ON THE METAPEDIA.

Second Day.

UP at 5 o'clock of a lovely warm morning. The pool here looks well. There is a long heavy rapid well broken by rocks at its head and another rapid divides it from a pool called Jim's Pool at the lower end. The water where the rapid enters is about 10ft., very gradually shoaling for 50 or 60yds. At low water fish lie at the upper end of nearly all pools. If the water is high to fair fish fancy the lower end. If the water is very high it is of no use to look in the pools so called for fish. They then take their rest when they do rest in some slack water spot behind a point or eddy. As breakfast was named for 8 A. M. I thought I would try the pool for an hour. I did so very faithfully, with no result except a rascal of a 2lb. trout. I had poled to the landing where I started from. At the far side a huge rock stood above the water, having a current betwixt it and shore. I turned to go ashore when I heard a break over at the rock. Having plenty of time I laid out for another trout, and slipping on a good-sized Nicholson fly (to save my others) anchored a few yards above the rock. I tried casting from both sides, drawing the fly into the eddy, always a good place for a trout, but could get no rise. Becoming careless I threw into the eddy to clear it; I switched the fly into the outside current. It had scarcely struck the water when a grilse sprang clear out after it, a nice one, plump 5½lbs., the heaviest I ever took or even saw in the Restigouche. I soon had him ashore and took him to the house in time to try his edible qualities for breakfast. I then started down stream for the Jimmy pool. This pool is some 200yds. long, a heavy rapid coming into it, with a quarter mile of rapid below it. At its upper end stands a heavy high ledge running half way across the stream. Around this ledge the river runs moderately easy and forms the fish lay at low water; at higher water the fish lie altogether at its lower end. To know just where the fish lie at different stages of water can only be gained by practical experience. If you know it, it saves the angler many hours' weary casting.

I dropped anchor well to one side, 60ft. above the rock. I had just got some 40ft. of line out when a smolt took the hook. I tried to shake the fish off, but did not succeed. I took the line in my hand, putting my rod in its socket, drawing the little fellow rapidly toward me. When within 5ft. a trout struck him viciously, coming at the little fellow on top of the water. At once I quit drawing line, let the big fellow gobble him and turn down with his prize. Not for long though; my turn came, and when I snubbed him I found he was fast. Now this trout was more trouble than enough. I did not want to play him in the salmon lay; I did not want to go to shore; I had no landing net, and did not want to lose him. As the water was only some 4ft. deep at my anchorage, and a bath would not injure me, I stepped out, drew him as close as possible to the shore, taking him off down stream out of the salmon lay, gave him a few minutes' butt, and drew him out. He was a fine fellow, plump 3½lbs., and had the little salmon smolt nearly out of sight. He was a male well advanced, large, black head, vermilion red fins, well developed milt, three-quarters grown. I again got into my canoe and tried hard for a rise, but did not succeed.

The next pool, a quarter mile below me, was called Three Islands. This famous pool, at the lower end of the small islands from which it derives its name, is formed by a very short turn of the river, a heavy rapid running into it at right angles, striking the opposite rocky bank and causing a strong series of eddies to run back on the other side, along which is a fine gravel beach. The pool is short, probably not over 100yds., 25ft. deep at its upper end, gradually shoaling to 8 and 10ft. at its lower end, falling into a fine smooth rapid and which continues more or less rapid and shoal for a mile. An angler not acquainted with the fish lay would suppose the upper end of this pool should help his score; but not much, unless it is trout he is after. Something is wrong. You must take the lower end at any stage of water, and just where the lower rapid begins to draw off the dead water of the pool, often well down in the quick water.

It was now getting late in the day, but the weather had changed and a nice cold northwest wind was blowing, with passing clouds. I took one side of the pool, easily casting to its center. After one drop down a fish came well, but did not touch. As the fly was gradually swimming around in the current I had hopes of him following, and just as the line straightened he again came at the small dose and made no mistake; after a few seconds' hesitation he started for down stream, and before I had my rod in place and anchor up he must have had 100yds. of line and was still going, and it gave me all I could do to paddle the canoe fast enough to keep up with him.

He kept this gait up for a full half mile. I was sure he was foul hooked, but he was solid in the tongue. At last he called a halt in the eddy of a rock, and here got some slack line on me in spite of all I could do with so much line out. The barrel of the reel took it in slowly. I shall have one with a much larger diameter another year. I was now below the fish, and as the current was very strong dare not give him the weight of the canoe, therefore had to drop anchor, with its cable in one hand and the other on the reel handle, giving him all the butt possible. He soon found the pressure was too much for him, took partly across the river and down again. I up anchor, letting the canoe go with the current, and soon found he was getting spasmodic, with a little turn up and a little run down, having the weight of the canoe to hold nearly all the time. Finally I found he would lead, and on a dry beach a few hundred yards below me I landed him high and dry, totally played out. He was a nice male of 23lbs., a little off color, in good condition.

I was now a mile below the pool and where I had left my tent and that indispensable kettle. However, I soon got there and had the tent up while the kettle was boiling, and I had cold lunch and hot tea, promising myself head and shoulders of something for dinner. I went down to the pool on the opposite side without much hopes, and anchoring I was overlooking line, leader and fly, when a fish rose within 30ft. of me, at a point of rock directly below. I said, "Ha, that looks well, we must try to get more closely acquainted." I was considering as to the utility of a fresh fly when another fish showed himself directly opposite, nearly in the center of the river. I postponed the new fly and went for the first fish that rose. After a cast or two I reached his lay, but could not get a move out of him. After a few casts I concluded to change

the fly. I just thought, well, I'll offer it for once to the outside chap, lengthening out a few yards so I was sure to reach. I almost think the fish had it before it fairly touched the water. It is not often the angler has this satisfaction. When he does, I think the fish must be near the surface. I was once casting a long line for a re-rise on a fish which had showed; on the back cast my fly touched the water; I could feel it do so just as I made the forward motion, when behold the tip broke, and the line came about my ears without leader or fly. Three or four seconds after a salmon came out of the water with a big plunge, and my man declared he saw the leader hanging from his mouth. No doubt my hook went home that time.

The fish which struck laid quiet for a little. This takes place often if the line is not held too hard; I do not think the fish realizes there is anything wrong until the pressure takes place, although it may be quite close to shore. Not knowing how the fish would act, I dare not leave the canoe. Finally I had to put on the screws, and off he went away up the pool. I was glad of this, for if I could once get him into the eddies he would soon give up. When halfway up, the length of line beginning to tell, he came out of water handsomely. I was now paddling after him, he taking the line as he wanted, until he got up to the strong water at the head. I now went ashore on the smooth beach, he hung in that strong water for a few minutes, took a turn down, and before he ran 50yds. struck one of the eddies, and running up that decided his fate. In five minutes more he was ashore. This was also a 14lb. male fish, a little dark, probably a month in the river.

I was now in a quandary whether I should again try for the fish that had risen or go to the pool above, where I had killed the trout. I was sure there were salmon there. Finally up I went. This is an easy pool to kill in, with nice, easy current. When fish lie at the top they are sure to run down, and up when they lie at the lower end. It is about 60yds. wide and 200 long, and fish lie in one spot 30 or 40ft. in length. I left my canoe below the fish lay, casting upward, so if I could hook a fish from shore I could lead him down without danger of ruffing the pool. Before I got halfway up the fish lay a fish quietly took the hook under water. I at once put on strong pressure; he followed me down quite a bit, and I almost thought it could not be a salmon; but he soon rebelled, going off across the river. Halfway over he came out to see what was wrong; took another few yards of line, and again came out, coming right back to where I stood, the deepest water being on my side, and again was out of water not 15ft. away. Those runs and leaps having started his wind, I saw he was not large, so dealt with him accordingly, giving him butt for all the leader was worth; and it was good for 15lbs., while a 3lb. pull would double up my 14ft. rod. In less than ten minutes of a mean give-and-take fight I drew the fish into a little bay on the shore having some 3in. of water. This was only a 12lb. female, but a bright, clean-run fish.

I now crossed to the opposite side, going up to the rock at its upper end, around which a good current ran, forming quite an eddy. Touching my canoe on the rock to be handy if needed, I stepped out and commenced casting, putting on a new dose. I threw well above me, short at first and lengthening out. I had got some 45ft. of line out without a sign when a fish rose just as the fly touched the edge of the eddy; but it did not touch the fly. I imagined the fish had followed the fly around until it straightened out. I tried for him several times, but it was no go. I then put on a small fairy. No better. I next tried a Jock-Scott with the same result. It was now sun-down and I wanted that fish; I lit my pipe and considered. I made two choices, the dose he had risen to or the doctor, so I reserved the dose for the last, putting on the physician. On reaching the same spot he rose before the fly came quite to the edge of the eddy, and went to bottom at once. Not knowing his intentions, I stood prepared to follow if possible, unless he ran through the heavy rapid just above; even then I would have done my best to follow. At once up he came, the line hissing through the rapid water running around the rock on which I stood, and going some 30yds. up to where the white water was tumbling over the rocks, when out he came his whole length and turned completely over. I breathed more freely when I found I still had the fish. He then tried for bottom, a pretty dangerous trick in the rocky bottom, where he now was. About a minute sufficed for him; he could not stand the pressure nor face the music. Down he came, passing me with a rush and with slack line. I sprang for my canoe and dropped my rod in its place with the reel, singing "Haste to the Wedding." I did haste with the paddle, easing the reel some. Nearly halfway down the pool up he came again with a plash, and then went to bottom. I recovered line as fast as the canoe came down on him and passed him, instantly giving him the butt. Instead of going upstream, which I fully expected, he passed me like a flash within 6ft. down and away. There was no remedy; I could not check him without risk, so I had again to paddle. He now made a long run to quite the lower end of the pool, sulking again behind a very large boulder, a favorite spot at a good stage of water, the location of which no doubt he knew. I was soon there, pursuing the same tactics and trying my best to force him upstream, but he wouldn't. He was bound for the sea or the lower pool, nearly a quarter of a mile, and all the way heavy rapid, but not very shoal. I now fully expected to lose that fish. I confess I would have given a V for a good canoe man for fifteen minutes. I knew the fish could not run the distance without stopping, and he did stop three times, keeping in the center of the river while I was closer to the bank. When he went, so did I, holding the canoe by the pole; when he turned up for a moment to get his wind I waited until he took another run. At last we reached the pool, and whether he was tired of the rapids or from what cause I don't know, but I tightened up on him in the eddy, out of which I would not let him go. We must have been fighting and running for at least fifteen minutes and it took ten more before I got the gaff in him. I dreaded his size to draw him out and would take no risk, particularly as it was now very dusky. This fish was a female with ova half ripe and weighed 29½lbs. I can assure you I did not feel like trying the white fly to-night. The edge had gone off the rod and settled in my stomach. I got the head and shoulders from my 12lb. fish and into the frying pan as soon as possible. Didn't I enjoy that meal? and when I lit my pipe I felt equal to forgiving my worst enemy.

Next morning I was up ahead of old Sol, just a little stiff, but it wore off after a drop out of the kettle. This was my last day on the river. The morning was fine, with wind still westerly. As I had some three more pools on my way down, I concluded to try for the fish I knew lay here, and did not much care to pole up the heavy water to the upper pool. About 8 in the morning I rolled up my blanket, dropping down to my former station. Having on the dose, I tried my best, but in vain; could not get a sign. Moving a couple of canoe lengths further down, my luck was no better; again moving down, the current being now very strong, it was no better. I decided to go on down. Looking over my goods, I found I had missed putting the gaff aboard where I had used it the night previous. Going back and obtaining it, on turning round I saw the back of a fish just where I had anchored my canoe when I began fishing. I at once saw I had been too low down for that fish. I now anchored opposite, about 50ft. from where I saw the break, and ran out the line, casting down stream when I had length to reach him. It went gently over his lair; it seemed hardly to touch the water when he had it solid, showing half his body with the rise. Away he went down stream through the rapid, getting into the shoaler bouldery rapid, following the deepest water he could find, heading up to get his wind, thus getting some slack at times, at other times more butt than was prudent, when all at once the strain went of and the hook came home with the point gone. I judged the hook may have struck the jawbone, or it may have been faulty.

Well, I did not cry over it; I never made a practice of doing that; but paddled down to McKeil's Pool, put on another, and went at it. This pool is very wide and of fair length. The water was too low for it. I did not raise a salmon, but got a nice 4lbs. grilse. Trout and smolt were both very troublesome in it. Fished an hour, then ran down three miles to the Prentice Pool. In quite a short time, with only one drop, I struck a nice fish. The river here is at least 70yds. wide, and of good depth and bottom. I got him so close I had to get up anchor for fear of fouling. I had this fish so close before I got to shore that I might have gaffed him, but if I lost him he would not count. I never did gaff one when alone in a canoe. To hold and gaff both and no one to steady the canoe is quite a feat.

It being now 11 A. M., with that kettle to boil and seventeen miles to reach home, I had to bid farewell to *Salmo* seler until about May 24, 1896. As the wind was from the west and my course was east, I stood up a sapling for a mast, my pole for a yard, and I was just four hours running that seventeen miles, having current for eleven and a falling tide for six miles. My total for the two and a half days was seven salmon, average 20½lbs.; two grilse, and two large trout along with some smaller ones. I enjoyed this trip above any fishing I ever did—far ahead of the Patapedia Pool, where, in 1876, Mr. Curtis, of Boston, and myself killed and landed fifteen fish in four hours and a quarter; gaffed every fish from the canoe, and never lost or missed one or broke a leader. If I never cast another fly, the memory of that august trip will forever remain with

I. MOWAT.

Sebago Landlocked Salmon.

Editor Forest and Stream:

Kindly allow me to correct one of Special's items, in your issue of May 2, in regard to high line at Sebago Lake, etc. C. F. Jordan, of Portland, caught on Tuesday and Wednesday, April 21 and 22, seven fish weighing 34lbs. Fortunately his last fish was the biggest, weighing 9½lbs., so that he did not violate the 25lb. limit law in making this fine catch. Billy Field also got four, one weighing 9lbs., another 7½lbs.; the writer took one weighing 9½lbs. twenty-four hours after he was caught, and E. W. Rounds, of East Baldwin, Me., caught several fish, one weighing 6½lbs. and another 5½lbs., which he hooked in the side while trolling and had a circus with. I think these records will show that Mr. Woodbury being "high line" must have been confined to his own boat. Mr. Eastman and Dr. Brock, both of Portland, beat the record quoted, fishing the 21st and 22d.

The largest fish I have known of being caught so far was one weighing 11½lbs., taken by George Fitch, of East Sebago; but probably the well-known Linc Daniels has caught the largest number up to date. He has a camp on the shore of the lake, where he spends the summer. It would take up too much valuable space to mention all the good catches, so I will close.

THE DRUMMER.

The Castalia Brown Trout Record.

Editor Forest and Stream:

The other day at the upper Castalia Club waters John Zollinger, of Sandusky, took, on a No. 4 Parmachene Belle, a brown trout which showed a recorded weight of 10lbs. and 4oz. This is the heaviest fish ever taken from these waters, and after being exhibited in this city the monster was turned over to Mr. John W. Oswald, who has preserved its proportions in a plaster cast. Dating from the introduction of the brown trout into Castalia waters this fish cannot be more than 7 years of age, and its size would indicate that it is fully capable of destroying twice its weight of brook trout every year. It is an open secret that the Castalia people are very anxious to rid the stream of these brutes and that they regard them as utterly unfit for brook trout waters. If the experience at Castalia is worth anything whatever as a guide, no man who has any regard for *Salmo fontinalis* will hazard his welfare by introducing this overgrown cannibal into brook trout streams. It is infinitely easier to get them in than to get them out again.

JAY BEEBE.

TOLEDO, O., May 2.

Maine Ice.

INDIAN ROCK, Rangeley, April 30.—I heard a yellowleg for the first time this season to-day. Ice quite strong on the lakes. Plenty of snow in the woods. Deer begin to show themselves in the fields. C. T. RICHARDSON.

Adirondacks.

CANTON, N. Y., April 27.—Some of the Stillwater Club were up to camp last Saturday, but found snow and no fishing.

R.

AND LIVED HAPPY EVER AFTER.

INTENT upon fishing, one fine summer's day,
With rod and with line a young man took his way;
When going that way there was, too, a fair maid,
Whom the young man saw, loved, and attentions soon paid.

When the streamlet was reached, where the fishes are found,
The maid found her heart in love's meshes fast bound;
The line being thrown (minus bait, minus hook),
The fond pair talked love in a nice cozy nook.

The fishes that day had the rarest of fun,
As they came to the line and they tugg'd one by one;
Till tugging at last made the rod leave the ground,
And swimming along with the fishes be found.

The owner of rod and of line heeded not,
For these things he now cared not one single jot;
Being caught, fairly landed, in love's silken net,
The charms of fair maid made him all else forget.

E'er after that day their true love grew more warm,
And the man who went fishing (when fish took no harm),
And the maiden together might often be seen,
And looking as happy as king and as queen.

They married, and crowds came to see the knot tied,
And say pleasant things of both bridegroom and bride;
The church bells were rung in their merriest style,
And sounded their joyousness many a mile.

'Mid shower of old slippers and handfuls of rice,
And such exclamations as "lovely" and "nice,"
They left for the "lakes," there that sweet time to spend,
Called honeymoon, which too soon came to an end.

They next settled down in a "neat little cot,"
On the banks of a stream near a beautiful spot;
("A nice cozy nook") and as husband and wife
Lived happily ever the rest of their life.

—Fishing Gazette.

MASSACHUSETTS LOBSTER BILL.

BOSTON, April 27.—*Editor Forest and Stream:* Here is what our Governor says and does about the proposed law to reduce the legal length of lobsters.

C. H. MORSE.

Gov. Wolcott sent in a veto of the Short Lobster bill this afternoon, says the *Journal* of April 27. There was no surprise when the messenger came in. It had been gossiped about the Legislative halls for days that he would veto the measure. It had been said by some of the experts of the State that the passage of the bill would destroy the lobster fisheries and exterminate the lobster in the end. On the other hand, experts on the other side had said that the bill would do no harm whatever. Under this condition of conflicting evidence, it was urged by opponents of the measure that the only safe course, with a due regard to the interests of the Commonwealth, was to veto the measure, and this the Governor did. The veto was placed in the orders of the day for Tuesday. It was as follows:

To the Honorable the Senate and the House of Representatives:

I herewith return to the branch of the Legislature in which it originated a bill entitled "An Act Relative to the Protection of Lobsters," together with my objections thereto in writing. This act lessens the protection which our statutory laws for 22 years have afforded, by reducing the size at which lobsters may be taken and sold from 10½ to 9 in. It does not require proof by statistics, but is a fact of common observation that during this period the average size of lobsters placed on the market for sale has diminished, while the price has advanced. This shows that under the conditions that have existed the supply of this important food has not kept pace with the increasing demand.

If it could be shown that the proposed legislation would prove of more than temporary benefit to those immediately occupied with this fishery, and that this benefit would not be offset by injury to the great body of our people, it would deserve and receive executive approval. But from the most careful examination which I have been able to give to this matter I am satisfied that this is not the case.

There is no unanimity in favor of this legislation even among those actually engaged in the industry. Not only from dealers in lobsters, but from numerous lobster fishermen as well, have come earnest protests against the change. Improvident and illegal methods employed by those beyond the jurisdiction of this Commonwealth have doubtless helped to make more difficult the livelihood of our citizens engaged in this fishery; in certain localities the condition of those who yield a ready obedience to the law, which in any Massachusetts community must always constitute the great majority, is without doubt one of diminishing profit and increasing hardship.

But the Executive must look to the effect of proposed legislation upon the people of the whole Commonwealth, and believing that the effect of this bill, if enacted, even if temporarily beneficial to a part of the State, must be finally a detriment to all, I am unable in the performance of the duty imposed upon me by the Constitution to approve it. (Signed) ROGER WOLCOTT.

BOSTON, May 2.—*Editor Forest and Stream:* I wrote you a couple of weeks since of the passage of the new lobster law, allowing the taking of 9 in. crustaceans instead of 10½ in., as for many years. The Fish and Game Association made a strong fight against the bill, and it was only by a margin of one vote that it passed the Senate. When it reached Gov. Wolcott there was a hearing at which both friends and opponents were present. President Clark continued his active work against the bill, and brought out a large array of testimony against the bill, both from lobster fishermen and dealers, so that the acting Governor, in sending in his veto two days after, was entirely justified in saying that there was no unanimity for the proposed legislation. His action was rather unexpected to the few advocates of the bill, and the fight was entirely knocked out of them. They tried hard to rally their forces, but on Friday last, when the vote was taken in the House, the veto was sustained by a vote of nearly three to one. It is another victory for those who are fighting for the proper protection of fish and game.

WILLIAM B. SMART.

EARLY FISHING IN CANADA.

A Remarkable Change in the Outlook.

Editor Forest and Stream:

It is the unexpected, they say, that happens. On the 14th of April, when I wrote you last, sleighs were running here and I had worn a fur cap down town the previous day. My growl was apparently heard, for a remarkable spell of fine weather set in the next day, and so rapid was the thaw that in little more than ten days there was scarcely any snow to be seen. I wrote on the 14th ult., "The warm weather may come with quite a rush when it comes at all, and unless it does there will be very little May fishing this year in northern Canada, and none at all in the middle of the month." We have had the warm weather, rush and all, and now we may have the May fishing just as well as in any ordinary season, and perhaps even earlier than in some recent years. The snow water is even reported to be almost entirely out of the woods. So much of it came down at once upon the ice of the lakes that it grew rotten, and in many cases has disappeared already. That on Lake Beauport broke up yesterday. Lake Kiskisink is clear, and Lake Bouchette nearly so. On Lake Edward it was breaking up yesterday. If it has not already gone there, it will be in a couple of days. Bait fishing for trout, unless the weather keeps cold, usually commences some fifteen days after the disappearance of the ice from the lakes. It ought to be good in any case this year from the 20th to the 24th inst. in all the lakes along the line of the Quebec & Lake St. John R. R. It may be good somewhat earlier, but it would be questionable wisdom to come much earlier from a distance and to run the risk. I certainly do not expect to hear of much fly fishing in northern Canada before the 24th, and it may not be at its best until a few days later. The conclusions that I have arrived at as to these dates are the result of careful inquiries, calculations and comparisons with the records of former years. The signs all point to a successful season, both in the lakes and also in Canadian salmon streams. In all of them exceptionally high water has been the rule this spring. This always means an abundance of fish. A new time table goes into force on the Quebec & Lake St. John Railway on Monday, May 4, and without wishing to write a railway advertisement, I may say that FOREST AND STREAM will confer a favor upon anglers by stating that during the month of May three trains a week will leave Quebec for Lake St. John, namely, on Monday and Wednesday mornings at 7:30 and on Saturday night at 6:40. For want of this knowledge last year a party of anglers was locked up in Quebec nearly three days.

Ouananiche fishing with bait in Lake St. John ought to be good about May 20. The fly fishing in the Discharge will probably open about June 8 or 10; certainly not much, if any, earlier.

By the bye, I was pleased to notice in your issue of April 25 that your charming correspondent, G. de Montauban, urges the Provincial Government to establish a hatchery for trout and ouananiche. When in a few days now the new book entitled "The Ouananiche and its Canadian Environment" makes its appearance from a New York press, it will be seen that at page 107 and again at 149 I have already not only urged the same thing upon the authorities, but have announced the probability of some early action of the kind being taken here, of the development of which I will endeavor to keep you posted.

E. T. D. CHAMBERS.

QUEBEC, May 1.

The Whitefish Supply.

DETROIT, Mich., April 24.—Detroit people are great lovers of the peerless whitefish, and it seems passing strange that, whereas the deep, cold, blue waters of the Detroit River formerly afforded the best whitefish, and the greatest abundance of them, sufficient to supply not only all local demands, but large numbers for shipment, now their supply largely comes from Winnipeg. Of 1,800 tons shipped from that point last winter 800 tons were taken for consumption by Detroit.

The supply of the lake whitefish is 5 per cent. of the demand from August to the close of the season. A Detroit firm has already sent to Winnipeg a boat and twenty-five men to commence fishing as soon as the ice is out of the lake. It is said that the fish there are exceedingly plentiful, and the catch as soon as made will be placed in loose ice, taken to West Selkirk, Manitoba, and hauled by the Canadian Pacific to Detroit in four days from the time they are taken out of the water. About thirty carloads a week will be brought to Detroit in this way.

Fishing for the festive perch is now at its height along the Detroit River, and every available spot along the entire river front as far as Delray is fully occupied by men and boys with fishing tackle of every conceivable description, while at the Sainte Claire Flats those who have taken advantage of the fine season thus far are enjoying great sport with perch, bullheads, pike and rock bass.

New Jersey Coast Fishing.

ASBURY PARK, N. J., May 2.—The first striped bass of the season was taken at Manasquan the present week, weight 3½ lbs. This beats last year's record by nearly two weeks, and is a matter of delight to anglers who are prepared to give battle to his elusive majesty. Next in interest to the bass, during the early season, is the kingfish. I saw this week some magnificent specimens, which were taken in the vicinity of Cape May. This is unusually early and portends good sport in the near future. If the weather is favorable Decoration Day should find them with us, and hard to please must be the angler who cannot be content with the sport these game fellows afford.

The pickerel season opened with us yesterday and several have tried their hand on our lakes, but with indifferent success, the prevailing easterly winds not being favorable to that pastime. Sages may argue as they will, still it is an unquestionable fact that east winds take away the pickerel's appetite.

LEONARD HULIT.

The Michigan Lake Season.

MONROE, Mich., April 24.—The season for Lake Erie fishing is now open, and the catch of pickerel, herring, saugers and perch is better than for some seasons. We do not look for nor expect whitefish any longer. That magnificent food fish, through the ignorance, idiocy, lawlessness and devilment—or all combined—is now almost

a thing of the past, "a memory and a reminiscence." More's the pity and more's the shame. The Ohio Legislature passed a law at its late session providing for a close season from Dec. 15 to March 15, and prohibits the setting of gill nets in water less than 50 ft. deep. This will have the effect, if enforced, of preventing the taking of undersized fish, and, it is to be hoped, of giving the whitefish and all other varieties "a chance for their lives" to be prolonged until they are a proper size for use. The season on Lake Huron, the home of the trout and whitefish, on the east side of the State, is opening, but of course at this early date it is too soon to venture a prediction as to the probable catch.

KEUKA.

Spawn-Eating Habits of Fish.

SYRACUSE, N. Y.—*Editor Forest and Stream:* The members of the Anglers' Association of Syracuse are trying to investigate and to get all information they can pertaining to fish that eat the spawn of other fish. We would like to hear from Mr. Cheney and others their observations in this matter.

Thirty years ago four anglers caught a democrat wagon-box full of pike, bass and perch in one day's fishing at Oneida Lake. Were there not as many spawn eaters then as now? My claim is that the diminution is owing to the increased number of fishermen, and the better price of fish has increased the number, and of nets, and to the improvement of the nets now used. The decrease of bass is due to the fact that the bass season opens too soon; the fish are caught before they spawn. In Oneida Lake they do not spawn until the middle of June in localities where I have fished.

HENRY LEFLER.

Forest and Stream Fishing Postals.

Drop us a line about the fishing.

NEVERSINK (Fallsburgh), Sullivan county, N. Y., April 26.—A very large catch of trout was made in the Neversink, near Dean's Hotel, on April 22. The string showed eighty-eight fish, all of good size, the largest going 3½ lbs. The prospects for the season are good.

HENRY W. DEAN.

CANADENSIS, Pa., May 2.—Brodhead Brook is vigorously maintaining the high reputation it won in the days of Thad. Norris, and many creels of fine trout have been taken from its waters since the season opened. At Spruce Cabin House about twenty guests have been in constant attendance, and good luck has been very evenly divided. W. H. Schroder, of Elmira; E. C. Smith, of Hoboken; Geo. W. Shaw, of Philadelphia; Col. H. A. Babitt, of Pomfret, Conn., former U. S. Consul to Alexandria; W. P. Ketcham, of New York; Benj. Kent, of Paterson, and Kit Clarke, of New York, have each brought in fine creels of trout.

Kit Clarke caught a trout 18 in. long and weighing 2½ lbs. This is one of the largest taken here in years, but a number weighing fully 1 lb. have been taken this spring. P.

Rare Chance for Salmon Fisherman.

We have just learned of a fishing privilege for sale for one rod on the Grand Cascapedia. The most easily accessible and renowned salmon river in all Canada. Price moderate. Address CASCAPEDIA, this office.—*Adv.*

Salmon Fishing for Sale.

FREEHOLD, on the best fishing waters of the southwest Mirimichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York city.—*Adv.*

National Beagle Club.

An executive meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, 55 Liberty street, Monday, April 13. Considerable business was transacted in connection with the club's coming field trials and the following committees were appointed by the president, to take charge of trials for 1896: Field trial committee: J. W. Appleton, Chairman; H. F. Shellhass, George B. Post, Jr., J. B. Lozier, George M. Rogers, George Laick, A. Wright Post, John Bateman, N. A. Baldwin, the above constituting the executive committee; and B. S. Turpin, George F. Reed, A. D. Lewis, W. S. Clark, D. F. Summers, Guy D. Welton and F. B. Zunner. Field trial sub committee—on judges: J. W. Appleton and G. B. Post, Jr.; on finance: G. Laick and G. W. Rogers; on arrangements during trial: G. W. Rogers, G. F. Reed, W. S. Clark, H. F. Shellhass; selecting grounds and hotel: A. D. Lewis, A. Wright Post and H. F. Shellhass; premium list and classes: J. W. Appleton, G. W. Rogers and G. Laick.

A quarterly meeting of the club will be held at the rooms of the American Kennel Club, 55 Liberty street, Thursday, April 30, at 3:30 P. M.

GEO. W. ROGERS, Sec'y.

250 WEST TWENTY-SECOND STREET, New York.

THE HANDLERS' CLUB.

THE handlers have quietly organized into a club on most commendable lines. The mission of the club, as set forth in Article II. of the club's constitution, embodies purposes worthy of all praise. It reads as follows: "The purposes of the club shall be to elevate, perpetuate and improve field trials; to enforce the conscientious performance and full completion of contracts between owners and members, if connected with dogs, and to promote good fellowship among the members of the club."

All these purposes contribute directly to the benefit of the handlers as individuals, as an organized body, and also to the interests of field trials, field sports and dog owners.

But the purposes of the handlers do not end in vague generalities, for in the by-laws is the following: "No member of the Handlers' Club shall become a member of any field trial club, and all members of this organization pledge themselves not to enter or handle any dog at any trial held by a field trial club of which a competing handler is a member."

That the handlers themselves should organize and so specifically legislate against an evil which was pointed out and condemned in no uncertain tones by FOREST AND STREAM years ago, bears testimony to-day to the soundness of FOREST AND STREAM's position from the first. In passing it may now be mentioned that the strenuous efforts to pervert FOREST AND STREAM's position from its true relation to the best interests of the sport—that is, the observance of the most scrupulous equity for all—were plainly unfair and insincere. The claim made by one handler that objecting to a handler being a member of a club was a social discrimination is too absurd to now seriously consider. Time has demonstrated that the issue has not even a remote relation to one's social standing; that it is entirely a question of equity, and that a professional handler who is also a club member and a competitor in the club trials has an advantage in the selection of judges, the selection of grounds, in determining the amount of stakes and entry fees, etc., which his non-member brother has not, and therefore the equity of the competition is marred. It is all plain now after so much experience and practical demonstration.

But, while as an abstract proposition, as a matter of theory, the purposes of the handlers in their new departure are most praiseworthy, there is other matter which is essential to the success of all reforms, and that is moral courage and energy, vulgarly called backbone. When the old handlers' organization found itself in a position where evasion of a reformatory issue was impossible, it dissolved like snow before a July sun. They were too timorous to take any genuine action. Groundless fears that this or that person might be offended and antagonized brought individual self-interest forward as the standard of value instead of the true standard, namely, the constitution and by-laws of the club and the right or wrong of the case.

Of course, times have greatly changed since the time the old handlers' club was tried and found wanting in 1886; the personnel of the new club is quite different and the conditions in general are greatly changed.

The new club contains nearly all the well-known handlers in its membership. The officers are: C. Tucker, president; Frank Richards, vice-president; W. W. Titus, secretary and treasurer. If the club has not the timorous nature of the old club, which was utterly devoid of moral courage as a club, and if it have force of character enough to carry out its true mission, it can do much for the good of all; if it have only a theory, and is courageous only in theory, or if each member approves action, but always desires that the other members shall do all the unpleasant work, it will only add one more wreck to the wrecks of history. In other words, a club must act as well as talk.

Open Letter to the Members of the Bull Terrier Club of America.

The attention of the members of the Bull Terrier Club of America is called to the following resolutions adopted by the advisory committee of the American Kennel Club at a meeting held April 11, 1896, in which it will be noticed that the Bull Terrier Club is requested to withdraw certain resolutions passed by their executive committee. The secretary requests members to express their views in the matter, that the executive committee may be guided by their voice.

W. D. BRERETON, Sec'y.

[COPY.]

NEW YORK, April 15, 1896.—Re resolutions referring to the action of Messrs. Foote and Schellhass on the cropping question.

Whereas, Every member of the American Kennel Club has the right to be represented by a delegate, to voice its opinions upon all matters presented for discussion at American Kennel Club meetings, and

Whereas, It is not within the province of any member to pass resolutions reflecting upon the opinions of delegates of any other club, therefore be it

Resolved, That the resolutions of the Bull Terrier Club of America, in which reference is made to two delegates to the American Kennel Club, are of such a nature as to savor of intimidation, and if members are permitted to adopt this course many delegates will undoubtedly decline to express their views in open meeting, fearing that some member may subject them to attack similar to that of the Bull Terrier Club of America. And be it further

Resolved, That we recognize the right of the Bull Terrier Club to express its views through its delegate at any American Kennel Club meeting, by virtue of its membership therein, but hold it exceeded its rights when it passed and published the resolution under notice. It is therefore

Ordered, That the Bull Terrier Club of America be requested to withdraw said resolution, giving equal publicity to its withdrawal as was done in the case of the original resolutions, and to express to the delegates named therein, the regret of the Bull Terrier Club that the error was made of carrying a discussion of American Kennel Club matters beyond the limits which should govern members of the Club.

The above resolutions and order were unanimously adopted at a meeting of the advisory committee of the American Kennel Club, held on Saturday, April 11, the case having been referred for action to said committee by the American Kennel Club at its late meeting of Feb. 20.

AMERICAN KENNEL CLUB, A. P. Vredenburg, Sec'y. To W. D. Brereton, Sec'y, Bull Terrier Club of America, Pittsburg, Pa.

FOREST AND STREAM.

The Cohoes Show.

THE Mohawk Kennel Club held its first annual bench show in the Opera House, Cohoes, N. Y., April 25, 27 and 28. Mr. Charles H. Mason judged all classes. Mr. E. M. Oldham superintended; Spratts Patent benched and fed the dogs.

Following is the list of awards:

MASTIFFS.—OPEN—Dogs: 1st, J. L. Winchell's Black Prince Brampton.

ST. BERNARDS.—CHALLENGE—(ROUGH OR SMOOTH): 1st, Belle Isle Kennels' Eboracum.—ROUGH-COATED—OPEN—Dogs: 1st, E. Ravenscroft's Troy. Bitches: 1st, Belle Isle Kennels' Artilla.—SMOOTH-COATED—OPEN—Dogs: 1st and 2d, Watervliet Kennels' Survivor and Ben Bolt. Bitches: 1st, Mrs. J. M. Nicholson's Scottish Beauty; 2d and 3d, Watervliet Kennels' Belline II. and Peggy.

NEWFOUNDLANDS.—OPEN—Dogs: 3d, J. W. Dickey's Rover. CHESAPEAKE BAY DOGS.—CHALLENGE—1st, Oak Grove Kennels' Deacon.—OPEN—Bitches: 1st, Oak Grove Kennels' Daisy.

BLOODHOUNDS.—OPEN—Dogs: 1st, J. L. Winchell's Jason. Bitches: 1st, J. L. Winchell's Sue.

RUSSIAN WOLFHOUNDS.—CHALLENGE—1st, Weeks & Turner's Svodka.—OPEN—Dogs: 1st and 2d, Weeks & Turner's Zem II. and Prince Gallatin; 2d, G. S. Keasbey's Optimist. Bitches: 1st and 2d, Weeks & Turner's Lady Deltz and Queen Catherine.

GREYHOUNDS.—Dogs: 1st, M. Barrymore's Davy Garrick; 2d and 3d, Weeks & Turner's Springhill Electric and Toronto. Bitches: 1st, Weeks & Turner's Springhill Laurel.

POINTERS.—CHALLENGE—1st, Glenrock Kennels' Molton Banner.—OPEN—Dogs: 1st, G. W. Lovell's Shotaway; 2d, A. Robertson's Ross. Bitches: 1st, Mrs. R. K. Armstrong's Brighton Flossie; 2d, E. M. Beale's Alice Leslie.

ENGLISH SETTERS.—CHALLENGE—1st, Warwick Kennels' Sheldon. OPEN—Dogs: 1st, Warwick Kennels' Albert's Ranger. Bitches: 1st, W. F. Hastings's Albert's Moll; 2d and 3d, J. Fenleur's Mary F. Bondhu and Fanny C.

IRISH SETTERS.—Dogs: 1st, Mrs. W. Sutton's Kildare Malt; 2d, A. W. Fraser's Barney. Bitches: 1st, A. Van Gotzhausen's Lady Finglas.

GORDON SETTERS.—CHALLENGE—1st, C. C. Hendee's Highland Yola.—OPEN—Dogs: 1st, C. C. Hendee's Highland Boy; 3d, G. T. Owen's Laird. Bitches: 1st, C. C. Hendee's Highland Leola.

FIELD SPANIELS.—Dogs: 1st, R. P. Keasbey's Coleshill Rufus. Bitches: 1st, 2d and 3d, R. P. Keasbey's Moonlight Belle, The Shrew and Black Knight.

COCKER SPANIELS.—CHALLENGE—Dogs: 1st, Swiss Mountain Kennels' Middy. Bitches: 1st, Belle Isle Kennels' Gaiety Girl.—BLACK—OPEN—Dogs: 1st, Swiss Mountain Kennels' Brother S; 2d, Belle Isle Kennels' King Raven, Jr.; 3d, R. Baker's Don K.; R., J. Stanway's Nigger. Bitches: 1st, Swiss Mountain Kennels' Gabrielle; 2d, Belle Isle Kennels' Mrs. Disdain; 3d, W. T. Payne's June.—RED OR LIVER—Dogs: 1st, Belle Isle Kennels' Cherry Boy III.—Bitches: 1st, W. T. Payne's Trilby; 2d, Swiss Mountain Kennels' Zuleika; 3d, Belle Isle Kennels' Rachel.—ANY OTHER COLOR—Dogs: 1st, W. T. Payne's Lorraine.—Bitches: 1st, W. T. Payne's Tansy.

FOXHOUNDS.—1st, B. F. Lewis, Jr.'s, Friendly.

COLLIES.—CHALLENGE—1st, Wilford Kennels' Woodmanstern Trefoil.—OPEN—Dogs: 1st, S. L. Stewart's Doctor David; 2d, V. Grenelle's Ford; 3d and 4th, Wilford Kennels' Hempstead Chief and Woodlawn Laddie; R., M. B. Smith, Jr.'s, Wilford Duffy. Bitches: 1st, 2d and 3d, Wilford Kennels' Scottish Gem, Flora May and Duchess of Fife; R., A. W. Lansing's Vannie. Puppies: 1st and 2d, Wilford Kennels' Wilford Trefoil and Woodlawn Laddie; 3d, Mrs. W. T. Ford's Woodlawn Princess; R., Albert Akin's Wilford Laddie.

BULL DOGS.—Dogs: 1st, B. Christy's Captain Kidd; 2d, T. Morse's Rustic Crib. Bitches: 1st, T. Morse's Rustic Dowager.

BULL TERRIERS.—Dogs: 1st, F. F. Dole's Masterpiece. Bitches: 1st, F. F. Dole's champion Starlight; 2d, Toon & Thomas's Havelock Daisy. Puppies: 1st, T. S. Bellin's Tommy Tickle.

DACHSHUNDE.—1st, H. Tiemann's Roy K.; 2d, A. Froembling's Blitz.

BEAGLES.—CHALLENGE—1st, J. Lewis's champion Ringleader.—OPEN—Dogs: 1st, J. Lewis's Rafter. Bitches: 1st, Ruth Robinson's Miss Wonder; 2d, J. Lewis's Mollie L. R. M. S. Tyson's Actress.

BASSET HOUNDS.—1st and 2d, M. S. Tyson's Turk and Drayman.

FOX TERRIERS.—ROUGH OR SMOOTH-COATED—CHALLENGE—1st, G. W. H. Ritchie's Burslesque.—SMOOTH-COATED—OPEN—Dogs: 1st, R. S. Horne's Prisoner; 2d and 3d, C. Rathbone's Beverwyck Cavalier and Beverwyck Royalist; 4th, Toon & Thomas's Blenton Firebrand. R., J. Bennett's Larry. Bitches: 1st and 4th, W. Le Monier's Dudley Saunter and Richmond Victory; 2d, C. Rathbone's Beverwyck Dare; 3d, Weeks & Turner's Mystery.—PUPPIES—WIRE OR SMOOTH-COATED—1st, 3d and 4th, Weeks & Turner's Springhill Proof, Springfield Trixy and Springhill Daisy; 2d, Toon & Thomas's Lady.—WIRE-HAIRED—Dogs: 1st, H. T. Foote's White Topper; 2d, G. W. H. Ritchie's Mister Great Snap. Bitches: 1st, H. T. Foote's Bridle Bee.

BOSTON TERRIERS.—OPEN—Dogs: 1st, withheld; 2d, 2d, Tyler Morse's Rustic Jack.

IRISH TERRIERS.—CHALLENGE—1st, Toon & Thomas's Gessler III.—OPEN—Dogs: 1st, Toon & Thomas's Red Hot; 2d, Dr. Cushman's Boomellin. Bitches: 1st and 2d, Toon & Thomas's Brickdust and Endcliffe Fuso.

SKYE TERRIERS.—OPEN—1st, A. W. Powers's Noble.

PUGS.—OPEN—Dogs: 1st, Rookery Kennels' Finsbury Duke; 2d, C. Y. Ford's Otterburn Treasure. Bitches: 1st, Rookery Kennels' Princess Madge.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, S. D. Ripley's Glenwood.—OPEN—1st, S. D. Ripley's Surrey Gem; 2d, H. T. Foote's Rochelle Ratrap.

YORKSHIRE TERRIERS.—OPEN—1st, withheld; 2d, M. S. Tyson's Little Swell.

MISCELLANEOUS.—OPEN—Equal 1sts, Toon & Thomas's Blazer (schipperke), Mr. James's Hard Tack (Bedlington terrier), and G. T. Van Zandt's Blink Bonny (White English terrier).

New England Beagle Club.

THE quarterly meeting of the New England Beagle Club was held at Mechanics Hall, Boston, April 20, and called to order at 2:45 P. M., President Joslin in the chair. The following members were present: H. S. Joslin, A. D. Fisk, Thomas Shallcross, Henry Hanson, A. Parry, B. S. Turpin, George F. Read, F. W. Cliefeld, Howard Almy, Harry Tallman, C. J. Prouty and W. S. Clark. The minutes of the last meeting read and approved. Secretary-Treasurer's report was read and approved. The following gentlemen were elected to membership: W. E. Deane, Somerset, Mass.; A. H. Willard, Chicago; W. W. Brown, Springfield, Vt.; G. A. Clark, Lowell, Mass.; P. Kennedy, Peabody, Mass.; Robert Hindle, Jr., Providence; C. O. Smith and Leon A. Bailey, Woonsocket, R. I.

It was moved that a vote of thanks be given to the gentleman owning the estate where the last field trials were held, at Oxford. Messrs. Turpin, Reed and Fisk were appointed a committee to draw up resolutions of regret on the death of Dr. N. Rowe. In regard to the fall field trials it was voted they be held at Oxford, Mass., beginning Monday, Nov. 2, and the field trial committee make all arrangements for the same. The field trial committee were elected as follows: H. S. Joslin, A. D. Fisk, Henry Hanson, Thomas Shallcross and W. S. Clark. It was voted that the entry blanks for the 1897 Futurity Stake be sent out as soon as possible and all arrangements left with field trial committee.

The secretary was given a vote of thanks for his work in behalf of the club. Adjourned at 3:55 P. M.

A meeting of the field trial committee of the N. E. B. C. was called at 4 P. M., President Joslin in the chair. The following members were present: Messrs. Joslin, Fisk, Hanson, Shallcross and Clark. It was voted that all puppies born on or after Jan. 1, 1896, be eligible in the 1897 Futurity Stake. Voted that a meeting be held early in

June, at the residence of Mr. A. D. Fisk, Worcester, Mass., to select judges and make arrangements for fall field trials.

W. S. CLARK, Sec'y.

POINTS AND FLUSHES.

Following are the winners of the National Field Trials, run at Shrewsbury, England: Pointer Puppy Stakes, six starters, £40 to first, £15 to second, £5 to third; 1st, F. C. Lowe's Dora of Kippen (Don of Bolcord—Dora of Bolcord); 2d, Elias Bishop's Tom Pedro (Señor Don Pedro—Jeanette); 3d, Col. C. J. Cotes's Pope (Prior of Bromfield—Polly Jones). Setter Puppy Stakes: 1st, J. Bishop's Duchess of Salop (Benbow—Maud S.); 2d, T. Lauder's Barton Charmer (Sybarite Sam—Charming Spot); 3d, S. Humphrey's Bonny Pat of Coldhill (Harlech—Bertha). Acton Regnald Stakes, for single-aged pointers and setters, each £20 to first; absolute winner £10 extra; second, best of either breed, £7 7s.: 1st, H. F. de Trafford's Irish setter Punctestown (Compton Ponto—Kerry Kate). Champion Stakes: 1st, B. J. Warwick's pointer Dolly of Budhill (Brag of Merelbeke—Devon Betty).

The Kennel Club trials resulted as follows: Field Trial Derby—1st, A. Morren's pointer Bendigo of Brussels; 2d, S. Humphrey's Irish setter Merry Jill of Coldhill; 3d, W. Arkwright's Star One; 4th, F. C. Lowe's Dora of Kippen; 5th, S. Humphrey's Irish setter Bonny Pat of Coldhill; 6th, Sir H. de Trafford's setter Barton Charmer. All-Age Stakes—1st, B. J. Warwick's pointer Dolly of Budhill; 2d, F. C. Lowe's setter Mabel of Kippen; 3d, R. Le P. Llewellyn's setter Daphne; 4th, A. Morren's pointer Bendigo of Brussels.

The Continental Field Trials Club announces its second annual chicken trial, to be run this year at Kennedy, Minn. The sterling expert, Mr. W. S. Bell, has been engaged to judge. The particulars of the stake are given in full in the club's advertisement.

We deeply regret the painful accident which happened to Mr. P. T. Madison on April 20. Our sympathy is extended to him and our earnest wishes go forth for his speedy recovery. He relates the circumstances of the accident as follows: "Last Monday I was sitting talking with some friends, and on rising I stepped off with my right foot, then raised the left, which naturally threw my weight on the right leg. At that instant the ligaments of the right knee were fractured, and I was made a cripple. My physician says I am doing nicely and he expects to have me on crutches next week, yet he will not say that I will entirely recover. However, I will be able to attend to the business of the Continental Field Trials Club."

An eminent field trial handler writes us concerning the Manitoba field trial clubs, that "I think it would be much better, if they want patronage from the United States, to hustle and make some arrangement with the customs authorities so the boys can get their dogs in and out without so much expense."

The April number of the *American Kennel Gazette* gives in full the action of the advisory committee at its meeting in April. In addition to the disqualification of George Bell till May 1, 1897, for making entries at the Detroit show while not in good standing, the committee recommended that the case of the A. K. C. against the City of the Straits Kennel Club, Detroit, for accepting Mr. Bell's entries be referred to the quarterly meeting, May 21 next, and that the club be dealt with under Art. IX., sec. 1, of the Constitution, which provides that "the executive committee shall have power by a two-thirds vote to suspend for a stated period or to expel any club or delegate or individual whose membership it may deem prejudicial to the welfare of the association." The Omaha Kennel Club was given thirty days within which to pay the claims of Thomas Blake and T. A. Howard, in default of which the club shall stand suspended and the officers disqualified. Lewis H. Miller, Westchester, Pa., was disqualified. In respect to the suspension of Dr. W. S. Bigelow and B. Alton Smith, the former has written to the A. K. C. that he is willing to abide by the decision of the committee and would remit the price of the dog to Mr. H. Rieman. R. B. Morgan's protest against the pointers Furlough Mike and Prince's Lad for being under weight at the St. Louis show was sustained, and the decision of the club was reversed, and the dogs next in merit as placed by the judge moved up under the rules. It was ordered that the committee did not feel justified in entering into any agreement with the Canadian Kennel Club in the matter of reciprocity. The Mohawk Kennel Club was admitted to membership. The application of the R. S. S. F. Association was granted and the association reinstated. The secretary was directed to make a payment on legal account.

From the *Breeder and Sportsman* we learn that Dr. R. J. Withers, of Los Angeles, Cal., lost recently by poison a litter of choice Irish setters, the bull terrier Crisp and three fine greyhounds. The poison fiend seems to be universal. Dr. Withers is a famous veterinarian who moved to Los Angeles from Chicago a few years ago.

The programme of the Eastern Field Trials Club's Derby is given in our advertising columns. The forthcoming trial is in number the eighteenth, and bespeaks much praise for the club which has gone steadily on its mission while strong clubs have sprung up, had their existence and faded away. Entry blanks, rules, etc., may be obtained of the secretary, Mr. S. O. Bradley, Greenfield Hill, Conn., who writes: "The purposes of this club are the same to-day as when organized. Many of its charter members have passed away. New members have taken their places with the same purposes as those of the originators of the club eighteen years ago, namely: to improve the breed of sporting dogs, to test their field qualities and to increase the legitimate sport. To-day the name, Eastern Field Trials Club, is familiar to every sportsman in America and abroad. In sports like these are all our cares beguiled."

Concerning their new purchase, the Wanoosnac Gordon Kennels write us as follows: "We have purchased the Gordon setter Wanoosnac Prince, winner of first in the

open class at the Boston show, both in 1895 and 1896, and have added him to the string of good ones that we have at the Wanoosnac Kennels."

Dr. and Mrs. R. J. Withers recently celebrated the twenty-fifth anniversary of their wedded life at Los Angeles, Cal. A silver sociable was given therewith; the gift contributed by each guest was donated to the church fund of the Plymouth Church. Flowers decorated their home profusely and there were pretty costumes in bewildering variety.

It is rumored that Messrs. J. H. Dew, A. M. Young and W. S. Bell have been invited to judge the U. S. F. T. C.'s trials at Newton this fall.

It is indisputable that in England, as in Belgium, some litters of schipperkes have had their tails carved out from their bodies. We know how this is done with surgeons' scissors. The operation is cruel and barbarous. Those who like their dogs so dare not practice it. From the first the *Chasse et Pêche* has frankly declared that the schipperkes were born with tails, and that one born without was the exception. But the judges have never troubled themselves to try and discover whether a schipperke on exhibition was born without a tail or had had it cropped. Such are details quite neglected. It is quite useless to seek to cut the tail of the schipperke either a little more or a little less short when, as has just been said, the judges take no notice.

This is how the operation is performed. Ordinarily when the dog is two or three days old, one of the operators takes it by the tail and holds the dog suspended, while the assistant is ready to catch the puppy the moment it falls. He first takes the scissors and cuts the tail as close as possible. Occasionally the little thing howls, and occasionally it makes no noise. The mother licks the place and that is all.—*British Fancier*.

Hog-herding Dogs.

It is claimed that the wild hog of Catahoula is second only in the matter of pugnacity and ferocity to the roaring tiger of the Bengal jungle. In order to get a drove of these hogs into a pen, the hog-dog of Catahoula, as Mr. Wiggins informs us, operates as follows:

Keeping always in mind the direction of the pen or corral, the dog goes into the woods and flushes a drove of hogs. Then keeping himself invariably in front of the hogs barks forth a challenge; the hogs accept the gage of battle and make a dash for the enemy, and the dog, tucking his tail, if fortunate enough to have one, which is seldom the case, skedaddles toward the pen, regulating his speed so as to save at all times a distance of about 30yds.

Should the hogs halt in their pursuit, the dog returns and renews his dare, and again he is charged, and again he slopes. In this way he lures the hogs on until in their mad chase they follow him through the open gate into the pen, when he immediately proceeds to jump the fence on the opposite side, while his master, who has been seated on the fence during the pursuit, hurriedly climbs down and closes the gate on the entrapped porcines. The faithful and intelligent dog, which is found nowhere else but in the languorous shades of the Catahoulans wilds, is rewarded with a pone of cornbread, and the next day there is a great hog-killing time, followed by feasting and revelry.—*New Orleans States*.

Information Wanted.

COLUMBIA, Pa.—Some five or six years ago I purchased through an advertisement in *FOREST AND STREAM* a black English setter dog. I have lost his pedigree. The seller was a man named Robinson, whose kennels were located in some Massachusetts town, but where I have forgotten. Can you supply the deficiency? W. H. FENDRICH.

(Perhaps some of our readers can furnish the desired information.)

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. G. G. Williamson's Belle of Piedmont, Jr., English setter bitch, March 19, to champion Antonio.

Mr. S. Penfield's

Bayonne Nellie, Boston terrier bitch, April 17, to Monté.

Jennie, Boston terrier bitch, March 13, to Buster.

WHELPS.

Mr. E. W. Tynan's Ruby Glenmore II., Irish setter bitch, whelped, April 6, tea (four dogs), by champion Finglas.

Mr. R. L. Soper's Duchess, Gordon setter bitch, whelped, Oct. 20, six (four dogs), by Grouse.

Mr. Fred. C. Marsh's Duchess, Gordon setter bitch, whelped, Oct. 20, six (four dogs), by Grouse.

SALES.

Mr. Joseph McMurphy has sold Norah, Boston terrier bitch, to Mr. Smith Penfield.

Bayonne Kennels have sold Bayonne Nellie, Boston terrier bitch, to Mr. Smith Penfield.

ONE day recently Henderson Mathews, a well-to-do negro farmer near Minden, La., went over in Black Lake Swamp to look for a little bunch of cattle that had not been up to pen for some weeks. After considerable search he found some of the cattle stranded on a little island in the swamp, formed by the sudden uprising of the lake since the recent rains. Henderson, with the assistance of some friends, constructed a rough bridge of brush, puncheons, etc., filling up a passageway whereby the cattle might cross over to dry land. This they lost no time in doing, bringing with them, to Henderson's intense amazement, a young fawn. Deer are getting to be quite scarce in this region, and this little one coming in so strange a manner created no small sensation. No trace of dam or buck was to be found, the fawn having evidently strayed from its parents weeks ago. The little fellow seemed perfectly at home with the cattle, tugging away at the bag of one of the cows in the most cheerful and trustful manner when found. In return, the old cow seemed quite as fond of her adopted child, and still takes the best possible care of the little deer, which may be seen comfortably penned in Mathews's cow lot.—*Correspondence Philadelphia Times*.

THE CUCKOOS.

In the early autumn day,
When the hoar frost holds its sway.
And the emerald of the sod
Is gilded by the golden-rod,
Then I wander through the glade
'Neath the overhanging shade,
Listening, lingering, listening long,
For the cuckoo's plaintive song:
Cuckoo! cuckoo!

Though I linger, 'tis in vain,
Once to hear that song again.
Why should I this loss repine,
Wandering through the groves of pine?
I remember, I have heard,
Years long dead, that forest bird:
Cuckoo! cuckoo!

PROBABLY there are few birds in the Northern States so common and yet so little known as the cuckoo. Of the six species comprising the family *Cuculidae* found in North America, two occur in western New York, the yellow-billed cuckoo (*Coccyzus americanus*) and the black-billed cuckoo (*Coccyzus erythrophthalmus*), which seem to be about equally divided in Niagara county, while the yellow-billed is reported as rare in the central part of the State, where the black-billed is common. They generally arrive here from the South about May 1 and remain until October. I have seen them as late as Oct. 7.

There is but little difference in the size and color of the two species. The upper parts are of a metallic greenish olive, tinged with ashy toward the bill; underparts white, with the exception of a brownish tinge on the throat of the black-billed. Tail feathers of the yellow-billed (except the two middle, which are like the back) black, tipped with white for about 1in. on the outer feathers, the external one with the outside edge almost entirely white. The tail feathers of the black-billed on the upper part are all of the same color of the back, on the under surface, of an ashy gray, all tipped with white (except the two central) for about ½in. The black-billed has a naked red skin around the eye, which is lacking on the yellow-billed. The two species measure from 11.50 to 12in., black-billed longest; wings 5.50 to 6in., yellow-billed longest; tail 5.75 to 6.50in., black-billed longest.

Both species commence breeding between the middle of May and June 1. The nest is a very loose affair composed of twigs and rootlets nearly flat, indeed so flat that I have often wondered how the eggs remained on. It is generally placed in the forks of a horizontal limb well out from the trunk of the tree; I have found them in small bushes, and one I found in a burdock within 6in. of the ground. The eggs of the yellow-billed measure from 1.15 to 1.25in. in length, and from .90 to 1in. in breadth, their color a light bluish green; from two to four are found in a set. The eggs of the black-billed are more spherical and of a darker green than those of the other species. They measure 1.5 to 1.15in. in length by .80 to .90in. in breadth.

Although the black-billed sometimes deposits its eggs in the nest of other birds, I do not think it deserts them (as does the European species, to be incubated and the young reared by the foster parents). I have found nests containing the eggs of both species with the black-billed on the nest, and in one instance I am quite certain that I saw both species feeding four young in one nest. This I reported to *FOREST AND STREAM* at the time, and after the following observation I am more than ever convinced that it was so.

On June 17, 1882, I saw a black-billed cuckoo and a mourning dove sitting on a robin's nest together. I secured the nest and found that it contained two eggs of the mourning dove, two of the cuckoo, and one robin's egg. The robin had not finished the nest when the cuckoo took possession and filled it nearly full of rootlets, but the robin got in and laid one egg. Incubation was well advanced in the robin's and cuckoo's eggs, but the mourning dove's eggs were fresh, showing that it was the last to take possession, and also that it lays its eggs in other birds' nests. I have never found them in other than old nests of the robin except in this instance. I have this nest and the eggs of this trio of birds in my collection still in good order. Another peculiarity of the black-billed cuckoo is the long continuance of the laying season. Young of different ages will sometimes be found in the same nest with partly incubated and fresh eggs.

Audubon mentions an instance where he saw a nest containing two young cuckoos nearly able to fly that scrambled off their tenement among the branches of the tree and were caught. The nest still contained three young cuckoos, all of different sizes; the smallest apparently just hatched, the next in size probably several days old, while the largest, covered with pin feathers, would have been able to have left the nest in about a week. There was also in the nest two eggs, one containing a chick, the other fresh or lately laid. And another instance where eleven young cuckoos had been successively hatched and reared in the one nest by the same pair of birds in one season, and that young birds and eggs were to be seen in it at the same time for many weeks in succession.

I have observed the cuckoo more than any other species we have. During incubation the birds are loath to leave the nest; I have stood for minutes with my face within 3ft. of a nest of the black-billed when the bird was on it, and there was not a perceptible movement, but as soon as I raised my hand the bird was gone in an instant. On Sept. 10, 1883, I found the nest of a black-billed cuckoo containing two young birds not more than one day out of the shell; the two previous nights we had had severe frosts that destroyed vegetables. This is the latest date that I have ever found young birds of any kind, and Oct. 7 mentioned above is the latest date that I have observed the cuckoo. I was hunting grouse when I saw a bird fly into a small oak tree; I walked up within 10ft. of the tree, where I stood and watched it through my field glass for some moments. I then walked entirely around the tree and stopped directly under the bird and again looked at it through the glass, and although my eyes were within 7ft. of the cuckoo for some minutes I could not detect the least motion. I then backed away without removing the glass from my eyes, and not until I was at least 50ft. away was there the least motion, and then the bird was gone like a flash; it seemed as if it thought that its only safety was in remaining quiet.

I can say very little about the song of the cuckoo, not

having heard it for at least twenty-five years, when I did not know that there was more than one species here, and had never heard but one call or song; but I remember it well, and always when I see a cuckoo I seem to hear it as distinctly as ever. I suppose that both species have a song or call and have often wondered if they were the same.
J. L. DAVISON.

Yachting.

The *Marine Journal*, quoting some of our remarks on the Payne bill, comments as follows:

Rather a severe arraignment, this, of American yacht designers and builders, but they are not facts. There are many as capable steam yacht designers in the United States as there are in any part of the world, and the *Marine Journal* believes them more capable. Any one of these can be employed to design just such a yacht as an owner desires, and can furnish him with ideas for comfort and elegance wherein he may be lacking, and any one of our prominent yacht builders will gladly contract to build from these designs in as short a time as can be done abroad.

Our main contention in this matter is that there are, practically, no American designers of steam yachts, for the reason that, as was the case in sailing yachts prior to 1880, both owners and builders have failed to recognize the necessity for a trained and educated specialist—the yacht designer—but are content to delegate the work that he alone can do to some one who, whatever his special qualifications may be, is not familiar with this class of vessel. It is from this lack of encouragement that there are no American designers of steam yachts, and that American steam yachts float far below their designed lines, fail in appearance, accommodation and performance, and require expensive rebuilding immediately after launching. If we are so far astray in our contention, then the *Marine Journal* will find it an easy task to prove this to be the case by publishing a list of American designers and the steam yachts which they have designed, and also of American steam yachts and the names and nationalities of their designers. It must be remembered that the discussion relates to the class of yachts affected by the Payne bill, sea-going craft, and especially of the larger size. We do not deny that there are several firms that turn out a ver serviceable type of river steam yacht of moderate size. By designer we mean the individual who has actual control of the drawing of the lines and the making of the calculations, if any a made, and not the firm which takes the contract and builds the yacht.

The practical result of the Payne bill, if passed, will be to create a monopoly for builders who have not shown a creditable amount of enterprise in encouraging the designer and improving the steam yacht, but have contented themselves with turning out anything that the owner or his captain will accept. The field for the improvement of the steam yacht in the direction of the development of a national type specially fitted for American conditions is quite as wide as that formerly existing in sailing yachts, and which has been filled, not by the builder, but by the American designer, in the construction of Volunteer, Lasca, Gloriana, Emerald, Ariel, Niagara and Defender. That the average British steam yacht of to-day is far ahead of the American is due solely to the fact that British owners have had a better appreciation of what was both desirable and possible, and have gone to the yacht designer, rather than to the builder of steamers and warships, to get it. As is the case in sailing yachts, the British craft is by no means as well suited for this side of the ocean and for American yachtsmen as for the other side and the different uses of British yachtsmen. When American owners have learned just what a steam yacht should and may be in appearance, accommodation, speed and economy of running, and when they and the builder are willing to pay to the professional designer a reasonable fee for the skill which enables him to give them what they want, we shall see a fleet of American steam yachts that will surpass anything that the other side can produce. That this day will be hastened by the passage of the Payne bill we very much doubt.

Assuming the right and justice of protection to American industry, the Payne bill deals solely with the builder and leaves the designer entirely out of the count. The efforts of the *FOREST AND STREAM* for many years have been for the full and complete recognition of the designer in all classes of marine work, and though this has come about in the case of the sailing yacht, but little has been done in steam yachts or in commercial work. Apart from the good work done by the United States Government within a dozen years in the encouragement of thorough technical education and systematic designing, for its own special benefit, this great country is still woefully astern, and the very ones who should do the most, the builders, are doing nothing at all. No encouragement or opportunity is offered to the ambitious young workman or draftsman in the yards, or to the scientist who devotes his time to investigation and the advancement of naval architecture, and the work of designing is intrusted largely to men whose first attention is necessarily given to the mechanical details of shop and yard management.

So much is this the case that the construction of two large passenger steamers from the designs of a professional designer entirely unconnected with building stands alone in the history of American shipbuilding. The remarkable success of these two boats has already produced a good effect, which is bound to increase with their further competition with other craft produced in the yards.

If the Payne bill is to become a law, at least a certain amount of good might be derived from it by a provision that all moneys collected under its operation shall be devoted to the establishment and maintenance of a national college of naval architecture.

APROPOS of the protection of the American workman, naturalized or otherwise, there is something instructive in the present condition of the boat-building industry. We hear from many quarters an urgent demand for skillful, intelligent and sober boat-builders to work on the smaller classes of sailing boats, such as the 15-footers, good workmen of this sort being difficult to obtain. The demand for this class of craft, which is something unprecedented this year, is due to the fact that these boats are now the fashion, which, like canoeing twenty years ago, was introduced from England, where the type originated. A year ago the half-rater and the one-rater were almost unheard of in America, and now they are all the rage, possibly only for a time; but we believe that the general type, handsome in appearance, shipshape in model and construction, moderately rigged, easily handled and withal fast, will largely displace the old types of catboats and sloops with short ends, big rigs and large crews. That they are known and appreciated here now is due to the importation of one English boat. As the type has been developed to a high degree of perfection on the other side, and as many fast boats are this year for sale there at a low price through the extinction of the class by the recent change of rule, it might be expected that many would be imported in spite of the duty; but thus far we have been able to learn of but

one order for an American placed in England. So far as the interests of American builders and mechanics are concerned in these small classes, it would be an excellent thing if the duty were abolished and more English boats imported, to stimulate the competition.

In spite of a cold and backward spring, the building yards and basins are giving indications of a fairly early opening of the yachting season, and a very large number of yachts, both new and old, are being finished off to go into commission shortly. It spite of many rumors, it is hardly likely that either Defender or Valkyrie will be raced—either together in this country or each with her home fleet on opposite sides of the Atlantic; but it does not follow from this that the sport of yacht racing will suffer to any material degree. It is hard to conceive any other way in which such a vast sum of money could be expended to so little useful purpose in yachting as was accomplished by these two great craft last year. Defender sailed in all about a dozen races, all but two against her older sister, Vigilant; and while it was demonstrated that she is in all ways faster than the centerboard boat, the racing of the two was notable mainly for the ill feeling engendered and the very serious charges made. The races with Valkyrie III. were but two in number, and while they also demonstrated Defender's superiority, they fell far short of a thorough and conclusive test of the two costly machines. The final disputes attending these races also can only be considered as a misfortune to be regretted by yachtsmen of all nationalities. Much might yet be learned by the systematic racing together of all the big cutters—Defendant, Vigilant, Ailsa, Satanita, Britannia and the new Meteor; but this is manifestly impossible. In default of it, however, a great deal of uncertainty must always exist as to the exact relative merits of each yacht.

On this side of the ocean the prospects of racing in the larger classes are very poor indeed. There is little probability that the yachts now nominally in the largest single-stick class, Defender, Vigilant, Navaboe, Jubilee and Volunteer, will be raced at all. In the schooner division the principal interest centers in Emerald and the re-rigged Colonia, with possibly Ariel, though we understand she will not be raced. In the classes from 70 to 40ft. there are no new yachts, and it is still a question as to how many of the old ones may be tempted into racing.

From such an outlook as this, which is all that the circumstances justify, it might be anticipated that the season of 1896 would prove a remarkably dull one, but such is hardly likely to be the case. While there is nothing startling or sensational in view, there is a good prospect for the sport in all parts of the country, and of a sort that will do much to build up American yachting.

While the building of large craft has been almost entirely confined to the steam yacht division of the national fleet, there has been through the past winter a great activity in the building of small craft, most of them for local use only and many for cruising or all-round service, but none the less important on these accounts. With this building there has been a remarkable activity in several localities, such as New York, Boston and the ports of Lake Michigan, in the direction of union and inter-club organization, and in the former two localities in particular the results far exceed anything thus far known.

The new Yacht Racing Union of Long Island Sound has taken hold most energetically of the local racing between New London and New York, and under its rules and management as to dates, etc., the Sound racing promises to bring out a much larger fleet than has yet been seen, with more races and larger fields of starters in each. The work of the Union has made it far easier for the racing owner to lay out the season's programme in advance and to adhere to it through all the races, and with the increased competition the interest and excitement of racing will be trebled. The systematization of the racing and the non-clashing of dates will of itself tend to increase entries, as it offers a fair guarantee to a man that if he takes his yacht to a race he will find several competitors—something that he was never sure of when each club was a law to itself in the selection of dates and adoption of rules.

The same process of organization has been carried out this past winter about Massachusetts Bay, and equally good results may be looked for from the Massachusetts Yacht Racing Association. It is not to be expected that, where similar attempts have failed year after year, these two associations, neither much over a year old, will get along with no difficulties whatever; but each has started under more favorable circumstances and on a broader basis than in the past, and the results thus far are such as to encourage every hope of permanent success.

On the Lakes a similar work is under discussion, but has not advanced so far; there can be no doubt, however, that in spite of the notable apathy of some of the larger clubs, whose action might long ago have produced a union of all American clubs, a national association will be formed before many years. It would take comparatively little even now to bring together the Long Island Sound Union, the Massachusetts Association, and all the Lake clubs in the adoption of uniform rules and regulations, forming a body with which other clubs throughout the country would be glad to ally themselves.

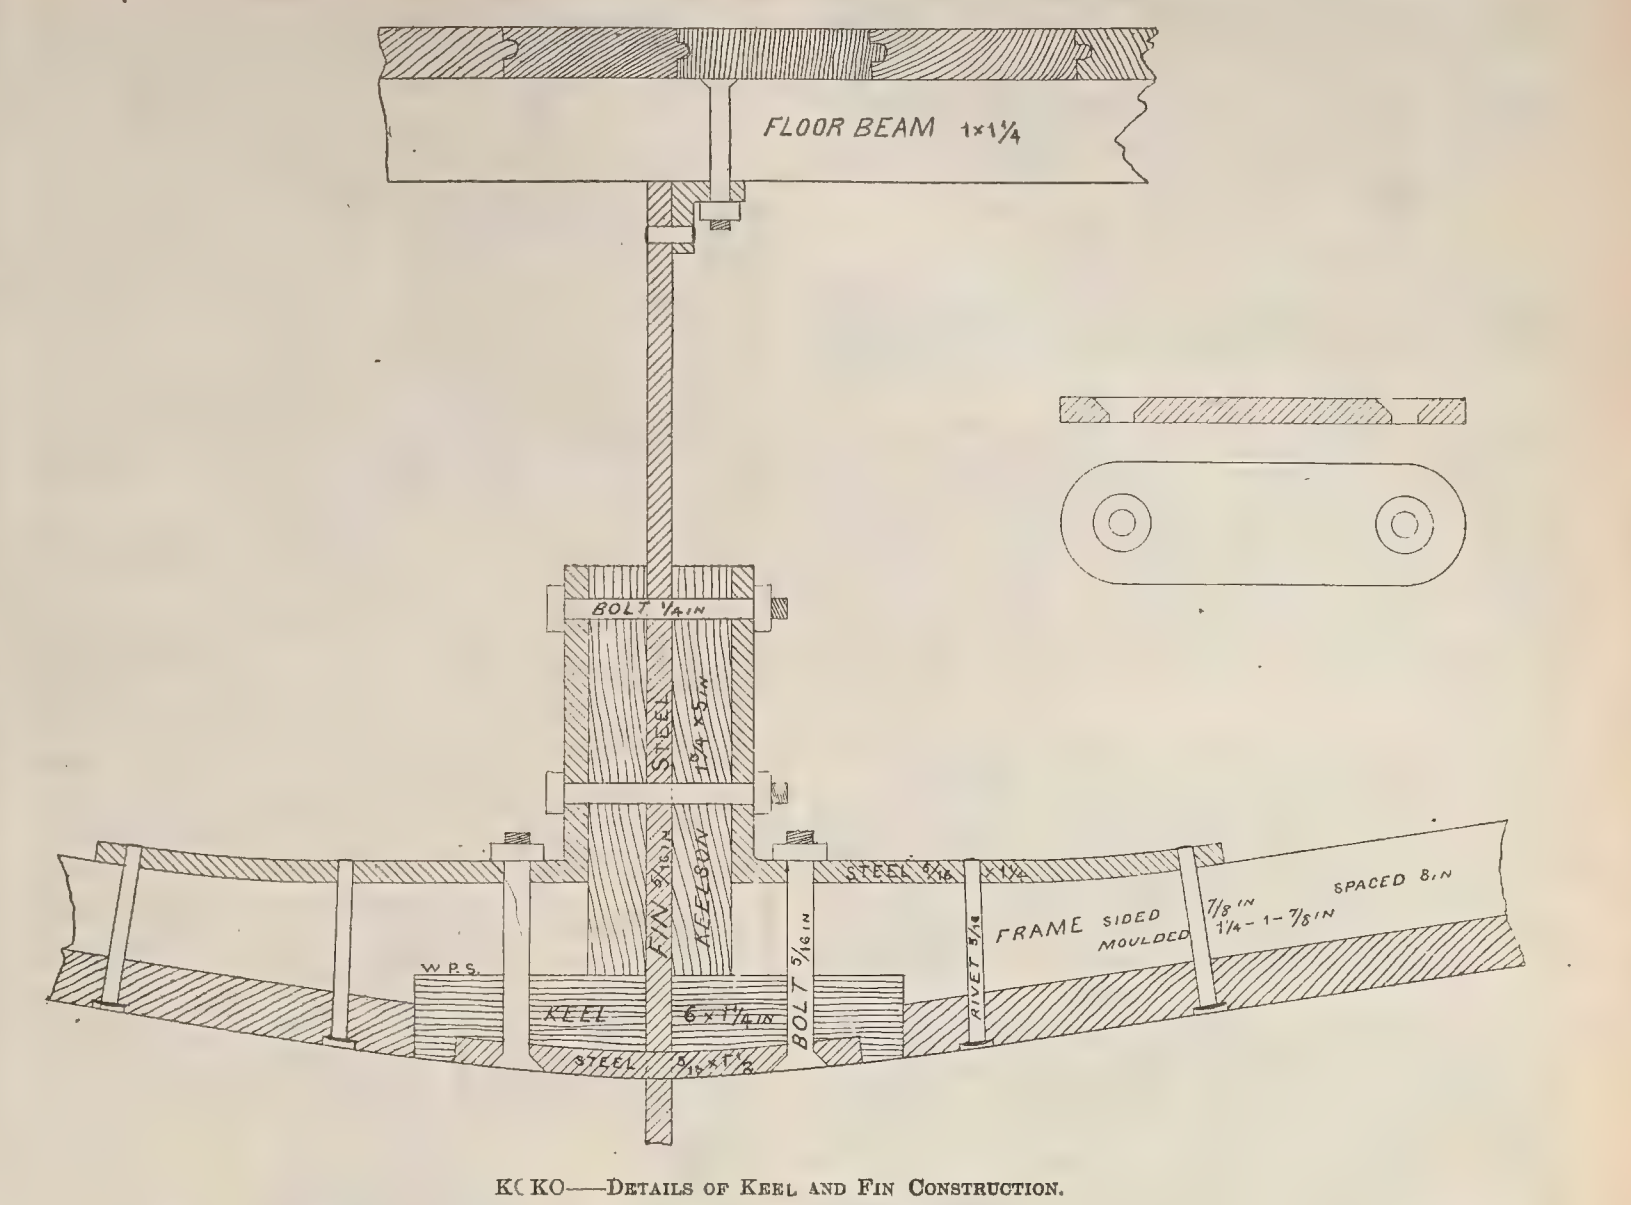

The immediate result of such work as has already been done must be to stimulate yacht racing as a popular sport in which all who have access to navigable waters may participate. The numerous classes, from the very smallest upward, recognized and encouraged by these bodies, offer opportunities for men of limited means and of all possible tastes, as the 15-footer or the small cabin cat is accorded quite as much attention as the largest schooner—a very different state of affairs from that existing in the larger clubs that have hitherto dominated yachting.

In any complete system of national yachting the first place must always be accorded to the strictly racing class, with new boats added each year, that makes the racing of the larger clubs and in the principal ports, such as the 90ft. schooner class, the 70ft. cutter class, the 40-footer and 30-footers in this country, and the old 40, 20 and 10 tonners and later the 40, 20, 10 and smaller rating classes in England. It is through such yachts that improvements originate and international matches are made; while the fame of their racing serves to stimulate yachting among men in distant places and who never see them.

At the same time, what is really more important is the successful maintenance of a large local fleet, through which the sport shall be represented on every river and lake and harbor in the land. Such a fleet as this is rapidly taking form and strength throughout the country, on all of the Great Lakes, on the smaller and isolated inland waters on the Pacific coast, as in Puget Sound. In this national fleet the number and quality of the yachts are increasing rapidly and the racing is of greater interest and more systematically conducted each year.

Of strictly international racing there will be none this year, as the yachting and canoeing interests of the United States and Canada are so closely associated as to obliterate all boundary lines; but at the same time there will be two series of matches which will attract special attention from the fact that the two competitors in each will sail under different national ensigns.

The greater contest, as size goes, will be between two new yachts, one built at Racine, Wis., and representing the Lincoln Park Y. C., of Chicago, the challenger, and the other built in Toronto and representing the Royal Canadian Y. C., of that city, the race being sailed in neutral waters, presumably on Lake Erie. As both boats are really

SAIL PLAN OF KOKO—DESIGNED BY W. P. STEPHENS.

Hiawatha.

THE first of the yachts to go overboard at the yard of C. L. Seabury & Co., at Nyack, was the one designed and built by the firm for Charles Fleischmann, of Cincinnati, named Hiawatha. The launch, after the custom of the yard, took place at night, just before 12 o'clock on April 29, the yard and vessels being decorated with electric lights and Chinese lanterns. A number of friends of the owner were present to represent him in his absence. The Hiawatha is 135ft. over all, 110ft. l.w.l., 16ft. 2in. beam and 7ft. draft, with a Seabury triple compound and watertube boiler. The hull is single planked below the bilge and double planked above, with steel frames. The internal arrangement is very good and the saloon and staterooms are handsomely finished. The yacht is flush decked and schooner rigged. Capt. B. F. Smith will be in command. The steam yachts Kanawha and Mayita are nearly ready for launching at the same yard.

Ingomar.

EVER since the smart schooner Quickstep, of 65ft. l.w.l. was built in 1889 yachtsmen have praised the class as a most useful and convenient one, and every fall several new boats have been confidently predicted for it. After a great deal of idle talk it has taken seven years to build a second boat for the class, the steel schooner Ingomar, launched at Lawley's yard on April 25. The new yacht, which is for Mr. John D. Barrett, of New York, former owner of the sloops Madcap and Swananoa, was designed by H. C. Wintringham, and is intended for general yachting about the Sound and coast. She is 85ft. over all, 63ft. l.w.l., 18ft. beam and 8ft. 2in. draft. As in Quickstep, the steel construction gives a strong and roomy craft, with trunk cabin and centerboard well out of the way. The yacht is not intended for racing, but will doubtless turn out quite fast. She is plated in lapstrake fashion.

Model Yachting.

THE model yacht Star, owned by G. W. Townley and G. F. Pigott, has been chosen to defend the American Model Y. C. perpetual challenge trophy against Ripple, owned by Wm. Wallen, Wave Crest M. Y. C., the race to take place on July 4 off the American Model Y. C. station, foot Thirty-fourth street, South Brooklyn, N. Y.

Mr. G. D. Casey, owner of Henrietta, A. M. Y. C., has withdrawn his challenge for the *Outing* cup in favor of Messrs. Cogswell and Thompson, owners of the Wave, Wave Crest M. Y. C., l.w.l. 43in.; beam 14in., the race to be sailed on May 17 over the course of the W. C. M. Y. C., foot Fifty-sixth street, South Brooklyn, N. Y. The present holder of the cup is John Smith's Dolphin.

The Payne Bill.

ON May 4 the Payne yacht bill was passed unanimously by the House of Representatives under a suspension of the rules. In deference to pressure from yachtsmen, and contrary to the wishes of its introducer, the bill was previously amended to read as follows:

"SECTION 4,216.—Yachts belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States shall have the privilege of entering or leaving any port of the United States without entering or clearing at

the Custom House thereof or paying tonnage tax, provided that the privileges of this section shall not extend to any yacht built outside of the United States, and owned, chartered or used by a citizen of the United States, unless such ownership or charter was acquired prior to the passage of this act.

"SECTION 2.—That section 11 of an act entitled 'An Act to Abolish Certain Fees for Official Services to American Vessels, and to Amend the Laws Relating to Shipping Commissioners, Seamen and Owners of Vessels and Other Purposes,' approved June 19, 1886, so far as the same exempts any yacht built outside of the United States, and owned, chartered or used by a citizen of the United States, from the payment of tonnage taxes, is hereby repealed."

As amended, the new law will not apply to foreign built yachts now in this country or at present building for American citizens.

Free Yachts.

Editor Forest and Stream:

Your article on "American and Foreign Steam Yachts," in the *FOREST AND STREAM* of April 25, commends itself entirely to my approval. I have for many years advocated free ships for the merchant service, and have adduced the same argument you employ; among many others that do not apply to yachts, that the free importation of vessels of all kinds from abroad, whether for the purposes of business or of pleasure, would be an incentive to our domestic shipbuilders to equal them, not only in speed and other desirable qualities, but in cost of construction. Some progress has already been made in this direction by the introduction of foreign built yachts, and its effect would by this time have been so complete, had our restrictive navigation laws been absolutely repealed, that we would have no occasion to go abroad for vessels of any description, whether propelled by sail or by steam. We observe that "The introduction of one little English boat, through the payment of a good round sum to the treasury of the United States by way of penalty, has brought work to the value of thousands of dollars to American builders this year, and will be the means of setting afloat probably 200 boats of home design and construction." So true it is that competition is the life of business. The monopoly possessed by our shipbuilders is a sedative, whereas competition would be a tonic. They stand in their own light and are entirely responsible for the almost total annihilation of our foreign carrying trade as well as for the impediments of which you so justly complain. Their influence over Congress in preventing any discussion of measures of relief from their dictation has been for many years unbounded, and until the true inwardness of it has been ascertained yachtsmen as well as merchant ship owners will continue to be powerless against them.

JOHN CODMAN.

ST. DENIS HOTEL, NEW YORK, May 3.

YACHTING NEWS NOTES.

Mr. and Mrs. C. Oliver Iselin returned to New York from Europe on April 29.

The mess dinner of the Seawanhaka Corinthian Y. C. at the Arena on April 30 passed off very pleasantly, about forty members being present. The next dinner will be on May 21.

May, steam yacht, E. D. Morgan, arrived at Port Jefferson on May 4, after a voyage of 10½ days from Southampton.

The Payne bill will probably come before Congress early this week in a somewhat different form from that originally proposed; yachts now owned by Americans, and new yachts actually under construction, being exempted from its provisions.

The Royal St. Lawrence Y. C. has issued a very neat programme for the racing season.

Com. Brown has appointed Chester C. Griswold, for some years a member of the regatta committee, as Fleet Captain of the New York Y. C.

H. Maitland Kersey has tendered his resignation as a member of the New York Y. C.

Lewis Nixon, of the Crescent Shipyard, formerly naval constructor in the U. S. Navy, will deliver a lecture before the Corinthian fleet on Saturday, May 9, at 8 P. M., at the Murray Hill Hotel, New York. The subject, one with which Mr. Nixon is perfectly conversant, will be the building of the new navy.

Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

The Nautilus Rig.

The accompanying cut shows the sail plan of the canoe yawl Nautilus, from the Field. The rig is an unusual one for a canoe or canoe yawl.

CANOEING NEWS NOTES.

A meeting of the executive committee of the Atlantic Division was held on April 25, at which it was decided to hold a meet of the Atlantic Division on Lake Hopatcong during the week including July 4. The exact site will be selected shortly and full advice as to transportation, etc., will be sent to all members. The chairman of the camp site committee is W. C. Lawrence, Trenton, N. J., and of the regatta committee is H. H. Smythe, 121 Pearl street, New York.

W. H. Martin, purser of the Central Division, A. C. A., died very suddenly on April 4 at his home in Rochester. Mr. Martin was very popular among the Rochester canoeists, and made many friends by his genial manners at Croton Point and Bluff Point.

Steam Yachts and Marine Machinery.
Complete machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Rifle Range and Gallery.

Texas Rifle Shoot.

SAN ANTONIO, TEX., April 27.—The sixth annual meeting of the Texas Rifle Association took place six miles from the little city of New Braunfels in a beautiful park, romantically punctuated with moss-laden live oak trees, under the auspices of the Green Valley Rifle Club, to-day and yesterday. There were team and individual contests and prizes given for the greatest number of flags. For two days the neighboring woods resounded with the crack of rifles. Scores:

A Tournament at Walnut Hill in June.

WALNUT HILL, Mass., April 25.—The Massachusetts Rifle Association will hold a two days' shoot on its range here on June 17-18. The association will add \$500 as cash prizes for rifle and pistol competitions.

Rifle Club Constitutions.

We would be obliged if secretaries of rifle clubs would favor us with copies of constitutions and shooting rules, that we may send them to other clubs seeking such information.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; \$2,000 added money.

May 7.—SPRINGFIELD, O.—Tournament of the Home City Gun Club. Targets.

May 15-16.—HACKENSACK, N. J.—Tournament of the Oritani Field Club. Targets.

May 12-15.—MEMPHIS, Tenn. — Tournament of the Memphis Gun Club \$2,000 added money.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 23-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 26-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 26-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 28-30.—MILWAUKEE, Wis.—Twelfth annual tournament of the South Side Gun Club, on the club grounds, Lake Station, Adolph Gropper, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAYTON, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 20-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 23-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. H. B. Shoop, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

October (second week).—BALTIMORE, Md.—Baltimore claims this week for her tournament. Dr. Samuel J. Fort, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

We have received a copy of "Pigeon-Shooting," the work being from the pen of Blue Rock, the *nom de plume* of Captain A. W. Money. After giving the above information in regard to the author of this work, it is hard to add anything in commendation of the thorough and able manner in which Captain Money has covered the subject. The book is the first of its kind that we have come across, and it undoubtedly fills a vacancy in the library of the trap-shooter that has long needed such a work to occupy it. It is questionable whether the subject could have been handled satisfactorily by anybody of less experience than Captain Money, while it is certain that the many thousands of shots fired by the author on all the best-known pigeon grounds in the world have enabled him to give to shooters conclusions based on solid fact that are bound to be of help even to those who are not mere novices.

In our report of the Atchison tournament we stated that the empire traps and targets worked satisfactorily, or words to that effect. Our correspondent, Paul Litzke, was in no wise to blame for the error, having written merely that the traps and targets worked well. As we remembered it, the programme called for empire traps and targets, and under that impression we inserted the little word "empire" and let 'er go. We now learn that the targets thrown, over 50,000 by the way, were half blue rock and half empire, while the traps were twenty blue rocks, not empires. This was the result of an agreement of which we were not aware; hence the mistake above alluded to. Jack Parker looked after the blue rocks at this shoot, while Airy Lou Hardt saw to it that the empires were thrown satisfactorily from two of the four sets of traps.

Mr. W. F. de Wolf writes us under date of May 1 as follows: "The second meeting of Cook County Trap-Shooters' League will be held May 16, on the grounds of the Eureka Gun Club, Seventy-ninth street and Vincennes' avenue; reached by electric cars on Clark street line direct to grounds without charge, fare 5 cents. The grounds will be open for sweepstake shooting from 10 A. M.; all moneys divided on the jack-rabbit system, so as to encourage the young shooters, amateurs, etc., to go in. The Cleveland Target Co. has said, that if it was a possible thing to have a magautrap in Chicago on that date, it would do so and operate it as one set of traps; if so, this will give us three sets in use on that date. A large meeting and lively time may be looked for."

The annual meeting of the Baldwinville Gun Club was held in the Narragansett parlors on the evening of May 1. The following officers were elected for the ensuing year: President, Geo. S. Stoddard; Vice-President, H. A. Perkins; Treasurer, W. P. Lund; Secretary, F. L. Hager; Captain, H. A. Perkins; Directors: Albert E. Hager, W. P. Lund, A. W. Ladeau. The treasurer's report was very gratifying, showing a handsome little nest egg as a starter for the season's sport. A number of new members were initiated and the outlook for the coming season is very promising. Practice shoots every Wednesday afternoon on club grounds. Visiting shooters are always welcome.

The dinner tendered O. R. Dickey by his fellow members of the Boston, Mass., Shooting Association, on the evening of April 24, was a great success, and the winner of the Grand American Handicap of 1896 was toasted in great shape. In addition to being made the recipient of several nice verbal remarks, Dickey was made a present of a roll top desk and chair as a proof of how much his friends in the East think of him. We understand that the first use Dickey made of his desk was to figure out how much it would take to win the championship at the E. C. shoot this week.

In a personal letter just received from Tom Divine (no need to enter into further particulars as to who and what he is) the following occurs: "We are just going to simply turn ourselves loose from May 11-16, and have a week of fun. There will be at least twelve or fifteen of our club shooting through this tournament. Every effort will be made to entertain everybody that comes here, especially those people who come from a long distance." We will be there, and we are of the kind that "come from a long distance," and that are always willing to be enter tained.

There will be an open all-day shoot at the grounds of the Baltimore Shooting Association, Pimlico Road, Thursday, May 14, 1896, starting promptly at 9 o'clock. Nobody barred. Everything pertaining to a tournament will be at hand. Will adjourn at 1 o'clock sharp for dinner, at which time the annual meeting of the Maryland and District of Columbia Trap-Shooters' League will be held. All clubs of the State and District are invited to attend, as re-election of officers will take place and outlining of business of the League for 1896.

STANLEY BAKER, Secretary.

Tom Callender, of Nashville, Tenn., is just now busily engaged at Gutenberg smashing targets with a load of W-A powder. This may sound strange to some who only know Tom as "Troisdorf Callender." It will be news to them to learn that Laffin & Rand will handle the output of the plant of the American Smokeless Powder Co., and that W-A will now be placed on the market by the manufacturers of the famous Orange Extra, and will be known as Laffin & Rand's W-A powder.

The tournament squad pads issued by FOREST AND STREAM seem to have made their mark. That they are just the thing is proved by the number that have done their duty at tournaments this season. All managers of tournaments, and the secretaries of clubs that are contemplating holding shoots, should write to FOREST AND STREAM for sample and prices.

The first tournament of the Annapolis (Md.) Gun Club will be held on their grounds May 20 and 21. The first day the principal event will be a handicap race open to all, target allowance, price of targets. The second day the principal event will be a team race of six men, \$75 guaranteed.

J. M. HAWKIN, Manager.

Correspondents must not forget that all matter intended for the trap department should be addressed to FOREST AND STREAM Publishing Company. If addressed personally to the editor of this department it is liable to serious delay, owing to his enforced absence from the city during the tournament season.

Paul Litzke has been doing good work for FOREST AND STREAM at the April circuit tournaments. Paul is a hustler and gets the news that's going, and puts it in a shape that takes the fancy of the shooters. When it comes to getting the scores to New York, there are few that can beat our Little Rock correspondent.

The Springfield, Mass., Gun Club, a recently organized club for promoting trap-shooting, has elected the following officers: President, Dr. J. T. Herrick; Vice-President, Colonel A. H. Goetting; Secretary-Treasurer, Harry L. Hawes.

Although we don't hear very much from Cincinnati, we understand that R. S. Waddell is not wasting his time, but is making preparations that are bound to make a success of the Hazard tournament the third week in May.

Irby Bennett wires under date of May 5: Charlie Hebbard will have charge of traps and Elmer Shaner the shooters at coming tournament Memphis Gun Club. The attendance promises to be enormous.

The Warren, O., Gun Club will hold its fourth tournament on May 14. One of the events on the programme is the team race between clubs composing the Pennsylvania and Ohio Border Gun League.

The Limited Gun Club, of Indianapolis, Ind., are going to handicap experts pretty severely, and give the under dog a show. See their programme, noted elsewhere.

The Newburgh, N. Y., shooters gave their guests a good time at the shoot last week, but we missed the genial face and hypnotic influence of secretary W. C. Gibb.

We shall hear more about the Binghamton, N. Y., tournament this week. Hobbie, Kendall and Brown can scarcely keep away from the E. C. tournament.

The twelfth annual tournament of the South Side Gun Club, of Milwaukee, will take place May 23-30.

MAY 4.

EDWARD BANKS.

The Opening of the E. C. Tournament.

No. 7, 15 targets, \$5 added, entry \$2; No. 8, 20 targets, entry \$2; No. 9, 25 targets, \$10 added, entry \$8; No. 10, 25 targets, \$10 added, entry \$8.

JOHN R. BANTA, Sec'y

THIRD DAY, APRIL 30.

Uxbridge, Mass., April 25.—The first target shoot of the Uxbridge Gun Club took place to-day on the fair grounds. Those present shot from the 14yds. mark. Almost everybody was strange to the business of smashing targets, hence the low percentages made. The numbers in brackets after each man's name show the number of targets he shot at. The percentages were as follows:

Jerry Provo (20)	85 per cent;	E. A. Ford (30)	75;	Dr. A. E. Jones		
(30)	51.6;	Wm Fleming (20)	42.5;	W. S. Hobbs (30)	41.6;	G. T. Hobbs
(30)	38.3;	Geo. F. Day (20)	22.5;	J. W. Day (10)	20;	Bernie Loughlin (30)
6.5;	W. E. Rawson (20)	10,				Geo. F. Day, Sec'y.

Boston Shooting Association.

Boston, Mass., April 24.—The spring tournament of the Boston Shooting Association was attended with every success generally incident to such meetings of this organization. Of course the shooting was under the direction of Orrin R. Dickey, the club's manager, who kept things running every day with the smoothness of clockwork. The creature comforts of the shooters were looked after by Caterer Dill, who provided the usual Boston Shooting Association dinner—that means a great deal.

During the three days of this shoot there was some excellent work done by the shooters. Miskay, of the Boston Gun Club, who is probably as good a shot at targets as any lady in the world, and who can beat pretty nearly every male member of her club, was present on the second day and did some very good work, although it was not perhaps up to her usual standard. The scores of each day are given in order below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Boston Gun Club.

Boston, Mass., April 29.—The Boston Gun Club opened its new prize series on Wednesday last under favorable auspices as regards weather and attendance. The new prize list, together with handicap alterations, are posted in club house, and everything looks well for a pleasant series of 10 shoots. Five scores, selected at attendance decides, count for prizes and the prize score of 25 single targets, 15 known and 10 unknown from known traps, should enable good totals to appear each week. Mr. Sawyer certainly this week set a good example, with a splendid 23. Tabulated shooting as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	5	10	10	10	10	10	10	10	10	10	10	10	10	10

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, SATURDAY, MAY 16, 1896.

VOL. XLVI.—No. 20.
No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page viii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream one year and the set of four pictures, \$5.
Forest and Stream 6 months and any two of the pictures, \$3.
Price of the pictures alone, \$1.50 each; \$5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

BUFFALO IN PARKS.

It appears to be settled that the greater part of Mr. Corbin's herd of buffalo is to come to New York, and to be turned over to the Park Commissioners here for exhibition to the public. While the exact spot at which the herd is to be located has not yet been publicly announced, it is understood that Van Courtlandt Park has been chosen for its home, and that the number to be brought here is thirty-five.

It seems fitting that this herd of buffalo should have its feeding ground in the largest of the New York parks, which is also one of the most beautiful. Van Courtlandt Park comprises within its boundaries an area of 1,069 acres. It lies partly on hills and partly in the valley, near the center of which is the beautiful Van Courtlandt Lake. A large portion of the level ground in the valley has been set apart by law as a parade ground and rifle range for the militiamen of New York State, but besides this there are hundreds of acres of beautifully sloping hillsides which are as yet practically undisturbed.

No doubt when these animals are shipped from New Hampshire they will be stalled separately in the cars, and not packed in together as range cattle and horses are shipped. The disastrous experience of shippers in the past has shown that if buffalo are packed in like cattle many of them will be killed or injured during the journey. At the present day risks of this sort should not be taken.

The history of Mr. Corbin's herd of buffalo is pretty well known from the accounts published about it in our annual reports on the private game preserves of this country. It began with a few head purchased from C. J. Jones, of Kansas, and has been added to from time to time by purchase from Charles Allard and others, and by the natural yearly increase. Last season, we believe, this increase was fifteen calves, and this year twenty or twenty-five are expected. The herd at present numbers fifty-five or sixty, old and young. Unless some unexpected misfortune should happen to it, the autumn of 1897 should see it numbering 100 head, including calves. There are but two herds of buffalo in America which exceed Mr. Corbin's in number. One of these, belonging to Charles Allard and Michel Pablo, of the Flat Head Reservation in Montana, numbered last autumn, as we were told by Mr. Allard, over 200 head. The other is the property of Mr. Goodnight, of Texas, and by this time should contain more than 100 buffalo, if it is still cared for as it used to be.

Mr. Corbin's buffalo have always been kept on his Blue Mountain Forest Preserve in New Hampshire, where they have done remarkably well. There is no reason to doubt that they may do quite as well in New York City, and should they increase here as rapidly as they seem to have done in their mountain home, the prospect for the herd is a grand one.

Too much cannot be said in commendation of the liberal spirit which Mr. Corbin shows in consenting to permit this splendid possession to be brought to New York for the instruction and entertainment of his fellow citizens. The founding of the great game preserve in New Hampshire is something that might have been done by any wealthy man from selfish motives, but Mr. Corbin, while he no doubt established this preserve primarily for his own pleasure, rises superior to considerations of self

when the opportunity offers to make his collection useful in a broader field, and thinks of the good of the community of which he is a member. Such an exhibition of public spirit is very unusual.

Just as New York has secured for exhibition a splendid herd of buffalo, Chicago has parted with a number of those which she owned, and which have long been on exhibition in Lincoln Park. There were twelve of these, five of which, a bull and four cows, have passed into the hands of the Page Woven Wire Fence Co., and reached that company's game park at Adrian, Mich., in good condition the last of April. The same company have since purchased two more buffalo from the herd of Mr. John Bass, of Fort Wayne, Ind. The other seven Chicago buffalo were sold to Mr. E. C. Waters, the manager of the steamboat line on the Yellowstone Lake. He announced his purpose of shipping the animals to the National Park, where they were to be put on an island in the lake, to be kept there as an attraction for tourists. This purchase was never completed. The buffalo were resold to some German animal dealers, who have taken five of them abroad. They go to the Leipsic Zoölogical Gardens and to the Royal Menagerie at Schoenbrunn.

There was something fairly pathetic in the purchasing of the menagerie buffalo to be sent out to the Yellowstone Park, where still linger the pitiful remnants of the only wild herd in the United States; but it would have been far better to have them go there than to see them shipped out of the country.

The Cincinnati Zoölogical Gardens have sold two of their yearling buffalo—a bull and a heifer—to Dr. W. A. Conklin, and they reached New York last Monday and were shipped to Germany by the steamer Lahn on Tuesday. They are destined for the Berlin Zoölogical Gardens.

To one who twenty-five years ago traveled for weeks without ever being out of sight of buffalo, who saw the plains blackened by the innumerable multitudes which swept by in terror, and heard the dumb earth throb beneath the beating of their countless hoofs, it cannot but seem strange that we should now be keeping a record of the few survivors of this mighty race. The record should be kept, and sad to say, it grows easier to keep year by year, as the numbers of the buffalo grow less and less.

SALMON, DUCKS AND TERRAPIN.

AN old story widely current relates that once upon a time salmon were so plentiful that masters were restrained by articles of indenture from feeding apprentices on the fish more than so many days a week. The tale is told of the Connecticut River in this country, of the Merrimac, and of other streams where salmon are now a rarity. More anciently it had been related of rivers in Scotland. Whenever any one ventures to question the truth of the story he is referred to the old records, which somewhat vaguely are said still to exist.

Not long ago a correspondent, who wrote of duck shooting on the Chesapeake Bay as he had found it when the game was much more abundant than it is now, referred to an earlier time when the wildfowl were in such store that the slaves were fed upon them as a steady diet. When we flouted this story of the plenitude of wildfowl and ventured a suggestion that it was a variation of the salmon story, our correspondent promptly retorted that the condition of affairs as related by him was a historical fact and could be proved by documents in existence. He has sent us an excerpt from a diary of an aunt, which relates to the early years of the century between 1820 and 1825, in which it is recorded that on "Carroll Island and all along Chesapeake canvasback ducks were so plentiful that the negroes were fed on them, and contracts were made in hiring slaves not to feed them over twice a week on them." The diary further chronicles, "Gen'l Cadwallader and my grandfather, as well as many other large farmers and owners, had long-barreled guns on carriages and often killed eight to ten dozen at one firing."

Another article of food rare and costly and esteemed as a luxury by the gourmets of our generation, but which in former times was so common as to pall on the appetite, was the diamond-back terrapin found in this same fertile Chesapeake Bay; and the diamond-back has been given rank with the salmon and the canvasback duck as having been a subject of specification as to the dietary treatment of servants. Mr. A. T. La Vallette, of Crisfield, Md., who has for years controlled the supply of terrapin of the

Chesapeake, relates that "in times gone by terrapin were so plentiful that they were fed to the negro slaves, being about the cheapest kind of food at that period. Some of the masters would overfeed their slaves to such an extent that they were compelled to sign articles of agreement that terrapin should be fed but once or twice a week. If anybody doubts this," he adds, "there are old documents still on file at some of the county seats of the Eastern Shore of Maryland that will confirm the truth of what I say."

Here then we have three variations of the story, one of the waters fishy, one of the air flighty, and last of the mud amphibious, long-lived and likely to outlast the others.

MORE JUGGLING AT ALBANY.

THERE is good ground for believing that the game selling provision of the New York game law, Section 249, permitting the sale of game the year around, was juggled into the statute by a hocus-pocus in the confusion and rush of the last hours of the session of 1895. The measure was not incorporated into the law as a product of deliberation and consideration, but as an interjected piece of trickery, which astonished even some of the men who were watching the bill most carefully. It was added as an amendment at the last moment, and probably was not passed by both branches of the Legislature.

Something of like nature has been perpetrated again this year. Senator White's bill was the one in which were embodied the recommendations coming from the State Sportsmen's Association, as the fruit of its Syracuse convention in January. The measure had the approval of the Fish and Game Commission, and more than this, so far as possible all other amendments favored by the Commission had been incorporated in the White bill. The bill had passed the Senate and was brought up in the House on the last day of the session. There was every certainty that it would pass, when Mr. Husted offered an amendment to read that shad nets in the Hudson should be taken up for one day only instead of for two days, as the text read. The effect of adopting any amendment at this juncture would be to prevent the passage of the entire bill, for under the rules three days would be required for the bill to pass after amendment. The Assembly therefore voted down the amendment by an overwhelming majority. In the face of this, however, Speaker Fish declared the amendment carried, and so defeated the entire bill.

These facts speak for themselves, and show some of the obstacles annually encountered at Albany by those who seek to perfect the protective system.

One provision of the White bill repealed Section 249, relating to the sale of game. It was quite fitting that a measure which originally found its way into the statute by questionable methods should be retained there by legislative ways not less devious.

NEW YORK INDIANS AND THE GAME LAWS.

By the courtesy of Judge Vreeland we publish in full to-day the opinion rendered by him in the case of James Pierce, a Seneca Indian convicted of a misdemeanor in having dynamited fish in a stream on the reservation. It is a very clear and what may be accepted as conclusive exposition of the principles governing the case. The sole contention of the Indians was that their treaty provisions retained to them the right of hunting and fishing on their reservations unrestricted by the game and fish laws. Judge Vreeland reports that he has been unable to discover any such treaty provision, and in its absence the Senecas cannot maintain their claim. The most notable feature of the affair is that the question at issue should not have been determined years ago.

THE THOUSAND ISLAND PARK.

ONE of the acts of New York for 1896 sets apart the waters of the St. Lawrence River from Tibbet's Point Lighthouse to the city of Ogdensburg as a water park subject to special provisions with respect to fishing. The open season for St. Lawrence River black bass, pickerel, pike and maskinonge is fixed from June 10 to Dec. 31, both inclusive; the lawful limit of black bass is 10 in.; no person may take more than twelve bass in one day, nor any boat party more than twenty-four; and it is required of fishermen that on request by any fish and game protector they shall permit inspection of their catch, with penalty for refusal to do so. The Fish Commission is directed to name a special protector for the district.

The Sportsman Tourist.

WOODCOCK, GROUSE AND PICTURES.

THE year 1895 was the one in which I was to take my long vacation, and during the entire summer we had planned where we would go, what we would do, etc., and about every week some article which would be needed for the "big hunt" was added to our already well-stocked outfits. These preparatory purchases, with a frequent run-together to talk things over, served to pass the summer quickly, but they nearly drove the rest of the office force insane. Before I could go I had to have a dog, and right here is where fate stepped in and made several abrupt changes in the programme I had decided upon.

It has come to be almost a proverb that most of a man's troubles have a female at the bottom of them, and the series of complications into which I was now forced was no exception to the general rule, though the female who caused an abandonment of all my late vacation plans was only a female English setter.

The boys were all ready to start on Oct. 8, and had arranged to put in a month at our old '94 camp at Gravel Dam, on Mopang Lake. I was to go along with them as far as, possibly, Wiscasset or some other shore town, where I would put in a couple of weeks with the "long bills" and "old Pats," then follow them into camp and try for big game. The supplies were all purchased and sent into camp, and Joe was located there and waiting for us, when I learned that I would not be able to go for a week or two unless I went without my new dog. That I could not do. I have been without a dog for nearly three years, during which time I have been continually on the lookout for one. As the hunting season approached I became desperate, but not a good dog could I find that it did not take hundreds to own. It might as well have been thousands. Finally I heard of a little bitch, half sister to my last dog (as good a recommendation as she could possibly have), and every one who knew her said that she was just a little bit the best bitch they had ever seen. I saw her owner. I tried her, and although I had to dig pretty deep, I bought her. I thought a bang-up bitch would come nearer pleasing me than a fair dog. That's where I hit it.

I gave her to a friend to hunt her till I started for Maine; then, when it came to start for Maine I went up and hunted with my friend, while the boys went down to camp without me.

I was completely disheartened at the outcome of all my long-cherished vacation plans, but I took my gun and camera and Oliver's old Ned (to try and work off a summer's accumulation of fat for him), and went up to make the best of it with Bob and Gypsy Belle II.—that's what we call her in company, but in the field I found that Zip seemed to fit her better. It's more of an explosive and travels quite a distance more quickly and without losing so much of its force as a longer name. Bill Perry always said that a good name for a dog was one that you could "yell." His dog is always Ben. I found that Zip was a good name to yell, but after we had become pretty well acquainted I frequently found it not inconvenient to call her Gypsy, and she was such a cheerful, tireless worker, and withal so clever, that I easily forgave her early attempts to impose on me and run the hunt herself. Hunting them alternate days we had quite a good supply of dog.

Well, Bob and I had a royal good time for two weeks, hunting as handsome a piece of country as the sun ever cast shadows over. From Wachusett Mountain on the

his "dad" brought home, though, and I think he is going to be one of us all right.

The next morning Oliver and myself, with another friend, started for the Granite State and woodcock, and after dinner that day we went out and killed eight. So Oliver had his woodcock shoot.

We finished out the week there and had a thoroughly good time, and took home something over thirty birds. The weather was delightful and the covers easy, but the birds were scarce. Still we always managed to find a few, and saw some beautiful work by the dogs. I think our friend Frank had a pointer, Mack, who showed more style on a point or draw than any dog I ever saw, and together they made quite a pair. The horse would hardly come to a full stop beside a cover before Frank was out, his overcoat off, Mack bounding into the air as high as his head, while "Come! come! get a wiggle on, boys!" urged Oliver and me to greater exertions to extricate ourselves and traps from the rear seat, while Rufus was hitching the horse. Rufus was one of the characters of the town, as a hanger-on about a livery stable so frequently is.

I think I must have followed that pointer a hundred miles with my camera on my back trying to get a snap

SOMETHING TO SHOW FOR IT.
Photo by C. H. Morse.

at one of his hair-raising points. But I could never catch him. Those dogs had no more idea how a well bred dog who "wanted his picture took" should behave than I have of preaching. They simply would not come to a stand except it was in the midst of or behind a clump of brush, and if we "whoa'd" them they always limbered up, let their tongues loll out, wagged their tails, or did something to spoil what we were after—an honest and at the same time, spirited "game" point.

I did succeed in getting a fair snap at Ned, but in an unfavorable position. We wasted hours, lost dozens of birds, and I probably crawled several miles on hands and knees in a vain attempt to "get into position." However, I succeeded in getting a few pictures, which are very pleasant remembrances of a very pleasant vacation, even if the little bitch did upset my plans for a trip to Maine.

C. HARRY MORSE.

BOSTON, MASS.

A CHEAP OUTERY.

Editor Forest and Stream:

About two years since I built a rough cabin for outing purposes—as I generally manage to get a vacation during early summer before the big rush and jam of the season commences—at my home in Asbury Park, and during each of the past two summers I have put in my vacations in and around that cabin, the Little Bresh, as it is called. It is situated among the big hills in northeastern Connecticut, on a high and dry knoll, with large oak and other trees in front (they cannot be seen in the photo which I send), and with not another house in sight, but woods all around. A small stream runs by a short distance in rear of cabin, and there is a never-failing well of the coldest, clearest and purest water some 40 yds. in front. I had the well dug and stoned up especially for the use of those who might be at the cabin. A trout stream and several lakes stocked with black bass are within easy reach.

For the benefit of the readers of FOREST AND STREAM who, like myself, are not overburdened with riches and who nevertheless would like to have an inexpensive, permanent and, I might say, most delightful place to spend a vacation once in a while, either alone or with one's family or friends, I will give a few points of instruction in regard to the cost of some such a building.

The specifications of this one are thus: frame 16 x 20 ft., 9 ft. posts and roof one-third rise; veranda, 5 ft. in width. All the frame of young chestnut timber and plenty of it, and hewn just as little as possible. Siding of full inch unplanned pine boards, the outside battened with cedar poles averaging 4 in. in diameter, halved lengthwise with band saw. Roof closely covered with 1 in. boards and then covered again with cedar shingles, best quality. The siding required nearly 1,000 ft. of pine boards, and the floor with roof of both cabin and veranda took about 1,300 ft. of chestnut 1 in. boards. Floor of house, two thicknesses of unplanned boards; floor of veranda, one. Veranda roof of chestnut boards, and battened with chestnut slabs, and its posts unhewn chestnut sticks. Windows cut from siding, the boards battened on the inside and made to slide on girts inside and fastened with hooks. No glass to get broken. Door rough pine boards, battened and hung in the usual way.

Of cash paid out, the battens cost \$10; shingles, some \$20; and hardware, some \$8 or \$10 more. The rest of the material was furnished from the woods on the tract. Sawmill bill, say \$20 more, and labor not far from \$60. Had I bought all of the material, the whole cost, including labor, would have been not far from \$150. A fireplace and chimney of stone, or if preferred of brick, could be put up for, say, \$25 more, making the whole cost not to exceed \$175.

As I have been there only in warm weather, there has been no need of a chimney as yet; but earlier or later in the season one would be necessary and could easily be built, as suitable stones are plenty around there. I shall have a large fireplace and chimney built in the near

future. I have now a rough stone affair a few yards from the cabin, where I do the cooking, and every evening have a rousing camp-fire in front of and but a few steps from the door. Although the immediate neighborhood is thinly populated, there is almost always quite a crowd of persons of both sexes to enjoy those camp-fires. Evening callers seem to come from all directions.

Hammocks and a swing are hung to the branches of a gigantic oak standing but a few steps from the cabin. As to furniture, the bedstead, table, benches and stools are made of rough material; and even the broom that one may see hanging by the door in the photo, near where I am shown, was made out of a small hickory tree. The bedstead is made of four chestnut posts and some 1 in. pine boards put together like a box. It is filled with either straw or new-mown, well-dried hay, and covered with a large blanket, with other blankets for coverlets if needful; the bolster is filled with the same material as is in the bed. What delightful sleeps one can get on that rough bed!

Although the whole establishment may look rather uncouth so far as utility is concerned, for me it fills the bill exactly, and by what I can learn nearly all of those who have seen it seem to be favorably impressed with its design.

Now, often a tract of land near a lake, a stream, or in a healthy locality with pleasant scenery can be bought for a nominal sum, and then some such a cabin as the one here described could be built upon it, giving one who would enjoy such surroundings a most delightful and inexpensive place, as I said before, to spend a vacation in, either by himself, with his family or with his friends.

A. L. L.

A FOREST FIRE IN CAPE BRETON.

THE primeval forest of Cape Breton is peculiarly inflammable. There is a thick, low, resinous growth of fir and spruce, with a deposit of dry moss, needles and dead wood often several feet thick below, so that a fire once started the whole country flames like a furnace. I saw one of the fiercest of these fires ever known last summer on the southern coast, near the historic town of Louisbourg.

The great Whitney Coal Syndicate was extending its railroad from Cow Bay to Louisbourg, when one evening the fireman of one of its locomotives raked the ashes from his furnace and went to his lodging in one of the board shanties of the contractor. Toward morning a brisk wind from the west sprung up, whisked merrily around the ash heap, fanned the embers to life and sifted them through the neighboring forest, and in a few hours a tremendous body of flame was rushing through the woods, licking up every green thing in its path and leaving only ragged, blackened stumps behind.

My point of view was a high cliff above the little fishing village of Big Lorraine, and the flames, driven eastward by a fierce gale, swept along the crest of a ridge a mile north of me, a solid body of fire from six to eight miles wide, that sent a sheet of flame 70 ft. in advance of it and a skirmishing body of sparks and live embers to five times that distance, while the columns of dense black smoke that rose eddying and swaying covered sea and land like a pall.

The Clark street district lay in a valley in the track of the flames—a little community of thirty, hard-working farmers who lived in comfortable houses, each set in a clearing of thirty or forty acres in the deep wilderness. Beyond, on the coast, five miles distant, lay the fishing village of Little Lorraine, also in the path of the fire. From our cliff we looked down on the scene as on a panorama, and could see the farmers gathering from field and forest to the defense of their homes; they brought pails and even barrels of water, raised ladders to the roof and deluged the whole building; but in a moment the

APPEASANT DUTY WELL DONE.
Photo by C. H. Morse.

long line of flame would be upon them, leap halfway across the clearing, as it seemed, and wrap the building sometimes in flame—if not, in showers of sparks and live embers and billowy smoke that cleared usually only to show a mass of blackened ruins where the dwelling had stood.

The Clark street schoolhouse, a new structure standing in the forest, was the first to go. Fortunately there was a clearing of several hundred acres across the road, and by hurrying his pupils into the center of this the master was able to save them from serious injury, although they were burned and half-stified by the showers of sparks rained upon them. Bursts of flame here and there told where houses and barns were being consumed. The fire advanced with frightful speed, overtaking cattle and hogs in the forest and burning them to death. At times it swept up mountain spurs and leaped from the top, writhing and twisting like a huge serpent. In the valleys it rose almost as high because of the greater luxuriance of the vegetation and accumulated combustible matter. Not only the buildings of the farmers, but their fences and growing crops—the oats, grass and potatoes in the fields—were destroyed.

As the flames neared the coast the grizzled fisherman beside us pointed out a lofty promontory on the northeast and remarked that at its base lay Little Lorraine.

"And its bound to go," he added, "fer it's right in the track of the fire."

The village did not go, however, for the people rallied

A SNAP SHOT.

south to Monadnock on the north, all extremely high land with birch side hills and alder runs enough to hold all the woodcock that passed over the State; yet we started not over a dozen all told. Partridges were fairly plenty, but we hunted them like farmers, and could not seem to work the bunches to any advantage. We killed all we cared to eat, however, gave a good many to Bob's friends, and at the end of a week I took a bunch home.

Toward the end of the second week we sent for Oliver to come up and show us how to do the trick. He came, but could only show us how to let them get away, at which we were already past masters. Even Oliver could find no woodcock, and he declared that the first of the week we must go up into New Hampshire after them.

He had hunted them for twenty-three years and had never failed to find them, and he must have a woodcock shoot if he went to Canada and came down with the flight. After he left us Bob and I got down to business and had some good shots, one day running the score up to ten partridges to one gun. That day's bag made quite a showing. It was good enough for anyone and made up for several of the poor days' shooting we did.

But the "woodies" we could not strike, and Monday morning I took Ned and Zip and a nice bunch of a dozen partridges and dropped down to Worcester, from where I sent home a basket of birds, for Mrs. M. thinks a broiled partridge about the daintiest morsel she knows of, and there is a little fellow of 8 down there who is good for half a bird any time. I believe he would relish anything

with pails and buckets of water and kept the fire at bay; but for some time it was surrounded on two sides by a solid sheet of flame.

The next day we walked over into the Clark street section. At the first house on the road the owner and his son stood grim and silent between two barrels of water, their eyes bent on the still smoking forests.

A short distance more and we were in the burned district itself.

A more striking picture of ruin and desolation I had never seen, not even amid the cinder heap and lava of the upper cone of Vesuvius. The trunks of the trees, black and bare, alone remained. Every vestige of foliage and twig had been burned away. A few blackened timbers marked the site of the Clark street schoolhouse. A few yards beyond we came upon a man sitting disconsolate amid the ashes of his barn.

"Yes," said he, in answer to our question, "I am where I began. Every rod of fence is gone. My farm is out to commons. I haven't an acre of anything green left on my whole 200 acres. My barn and house are burned with everything in 'em. Last spring I planted sixteen bushels of oats and the same amount of potatoes. The tops were

A CHEAP OUTERY.

burned clean to the ground. So with the grass. I cut enough last year to keep a horse, six cows and twelve sheep. This year a cow would starve on what's left."

His nearest neighbor, Sandy Johnson, was drawing rails to replace the burned fence around his oat field. He fully believed that his house was saved by the interposition of the saints. He himself was fishing at Scateria that day, but the neighbors rallied and covered his house with water. Scarcely had they done this when a solid sheet of flame came up on three sides and enveloped it, burning a large woodpile scarce a yard from the door. His wife fled with two babies in her arms and two more clinging to her skirts. The neighbors fled too, but when they returned after the fire expecting to find everything in ashes the house was unscorched even; but the furniture, which had been piled in the clearing out of reach of the flames, as was supposed, was wholly consumed. A NIGHT ON THE OCKLAWAHA.

It was one hazy summer afternoon in Florida that a friend announced himself as desirous of doing but one thing in this world, and that was to go a-fishing. In myself he found a kindred spirit, so we hastily put into our wagon such necessities as we might need—such as pans, meal, cooked food, blankets, tackle, etc.—and bade our friends adieu for a day or two on the Ocklawaha, ten miles away. The road led past Indian Lake, where the country changes from light sand to that dark, sticky soil known as flatwoods.

On the way we noticed several white herons, whose ranks have been so thinned by the plumage hunter. Then came the thick woods, cabbage and saw palmettoes, and other luxurious swamp growths, and finally we arrived at a little creek which flows through the swamp at a distance of about half a mile from the river, into which it finally flows. Here stands an old packing house, and we found that since our last coming the little wharf had fallen down, and things looked generally dilapidated. There was an old hull of a dugout which had once seen service on this same creek.

Here we found, to our dismay, that the boat which usually lay at this place was unfit for use; and while I remained to unload and straighten things Fred went through the woods a quarter of a mile to the house of a man named Jones to inquire for a boat. Mr. Jones is a pioneer on this creek, having settled almost in the swamp, clearing a little piece of land, and by trapping, fishing and hard work has managed to make a good living for himself and a growing family.

As I finished making up the camp, Fred returned with the news that the nearest boat to be had was at a farm two miles down the creek.

We were not long in making a decision, and it being toward night we each ate a potato, to prevent our being hungry before we should return, it being our intention to bring the bateau by water to our camp to get an early start in the morning to the river.

The road being rough, we stabled the horse in the empty packing house and started afoot. I led the way with a lantern and Fred followed, bringing a few articles of tackle—as we intended to troll on our way back—and a .56cal. Spencer carbine. What we ever carried an arm like that for I have often wondered, but I suppose we felt safer. After dark had fully set in, and we had flushed a covey or two of partridges, which we were unable to shoot with our large-bore rifle, a light led us to the farmer's house.

He cheerfully agreed to let us have the boat, and took us to where it was, expressing his regrets that he could not go with us himself. Had we known as much of the creek as did he, perhaps we would have turned back to a night's repose, but ignorance was bliss, and we pushed off. Fred carried the lantern at the bow, and there being no locks, I paddled at the rear.

A half mile brought us to a broader creek, and as we slipped along under the tall palmettoes and great cypresses, hanging with moss, with occasionally an owl's hoot or the splash of an alligator, we were impressed with the somberness of the swamp and its wildness before man had penetrated it.

"There it is!" shouted Fred, as he remembered the opening the farmer had told us about, and we entered a narrow creek leading in the right direction for camp. A fallen palmetto lay across the stream, and we finally slid and lifted the boat over.

In this way, see-sawing and sliding, we crossed some five or six logs, and were at last brought to a standstill by several large logs which it was impossible to cross. After a conference we decided to go back to the main creek and try another opening. Oh! how hard it was to get back over those logs, and how we longed for the soft bed at home.

We had long since removed all the clothing we could spare as we bent to the work. Once in the main creek again, we entered three or four of these openings, with the same result. However, we were soon rewarded by coming to a tanglework of logs, which ended the creek itself. We had come far enough, and by this time we had no doubt that we were within shouting distance of camp; still we could see no earthly way to get through that network of logs. We determined to return to the farmer's, leave the boat, walk to camp as we came, and fish from stumps and logs early the next morning. But alas for human hope! We had already worked till our hands were almost blistered, and our bodies were sore and we were worn out. However, we had no intention of staying there all night, so we began the return. An hour or more, and we were brought up by the end of the creek that way also, and we had not found the way out. This brought us to the fact that we neither knew where was camp nor where the farmer. Fred stumbled about this time and dipped the lantern in the water, thus leaving us where Moses was when the light went out.

We didn't know north nor south, nor where we were, but we did know that we were very tired and hungry, and in the midst of a deep swamp. The dew had fallen, and we made up our minds to rest at any cost. First we stretched a set line across the narrow channel to catch any channel cat coming that way, and then crawled out on a little island about 20ft. square. We found a tree whose top had blown off, while the heart had rotted away, this furnishing us a fireplace, chimney and all, and this lighted up the woods for yards around. Once a noise in a palmetto caused Fred to fire at it, which was only the wind; but the noise of the big bore woke all the night birds which happened to be napping, and we heard the departing flaps of a wild turkey.

The warm fire caused us to be drowsy, and we sat on the soft leaves and leaned against palmettoes to rest. I was awakened some time after by the sun shining in my face, and my first sensation was of pains in my back. My companion awoke a few minutes after, and his first exclamation was, "My back's about broke."

The bright morning put new life into us, and after taking up the set line with a fine mess of channel cat on it, we paddled down the creek, and after several vain efforts found the farmer's, tied the boat, and wended our way to camp. Never did food taste better than it did to two tired fishermen that day.

The rest of the day we passed resting and fishing from the bank, returning home before night, none the worse for our trials; but for months we never breathed a word to anyone about our night on the Ocklawaha. W. W. S.

Michigan Bird Notes.

CENTRAL LAKE, Mich., May 8.—The small birds seem to be more numerous here than for two or three years past. The robins appeared March 28, and, although their arrival was succeeded by a very cold storm, they very soon became common among us.

The house wren was first heard April 8, and the crow blackbirds April 11. The peep of the frogs was noticed April 13. On April 18 about fifty wild geese passed over, going north.

The brown thrush and the Baltimore oriole were heard April 27. The oriole is an infrequent visitant—we had just a glimpse of one last year, though we heard it several times. KELPIE.

BEAVER STOPPING THE WATER WITH ITS TAIL AS IT DIVES.

Natural History.

BEAVER CATCHING FOR THE ZOO.

YELLOWSTONE NATIONAL PARK, February, 1896.—*Editor Forest and Stream:* In October of 1892 I was called upon to furnish some animals for the National Zoölogical Park. Among others wanted were beaver. I had had some experience trapping them for their pelts, and when doing this I had always tried to set my traps so as to drown them. Now that I wanted them alive I had to set my traps and stake them so that the beaver would not drown or injure itself.

I used Nos. 2 and 3 Newhouse traps, winding the jaws with rags. I watched the traps and relieved the beaver as soon as possible after it had sprung the trap. I found it impossible to catch them without hurting them more or less. Usually a foot was lost. In 1893 an old trapper was engaged for the work, but he had no better success than I, and got only crippled animals.

In October, 1894, Prof. Langley wrote that he would like, if possible, to obtain six uninjured beaver. I wished to fill the order, but did not know exactly how to go to work. The conditions were new. A new way to obtain them would have to be devised. After thinking about it for a few days I came to the conclusion that if I could once get wire netting around their houses and draw the water from the dams I could capture the beaver before they could escape the nets, and that to handle them at first I would require some sort of dip net.

That I was successful many readers of the FOREST AND STREAM know, and as I have received several letters from live animal dealers requesting information, for which they were willing to pay, and requests from friends that I would tell them how the work was done, I have concluded to give my experience in capturing beaver to all through the FOREST AND STREAM.

I had a frame made of $\frac{1}{2}$ in. round iron, 3ft. long and 2ft. wide, with a handle 28in. long. To the iron frame I attached wire netting, so that I had a dip net about 4ft. deep. With this and 200ft. of netting, shovels, picks, axes, other tools, lumber, wire cages, hip boots of rubber, and other articles not necessary to mention, I went out to Mr. John Yancey's. There I secured the help of two good men—Hague and Jump, the latter an old hunter and trapper.

After holding a council of war we determined to attack a house, newly built, on a little creek close to Yancey's. The dam put in by the beaver had backed the water so that part of Uncle John's hay meadow was very wet and swampy. Two beaver had often been seen while at work on their houses and dam. The creek having very little fall for quite a way, they had put in but one short dam. The house was built in a clump of willows. Willows were very thick all along the creek for about 200yds. Above there were none, the creek coming down through the hay meadow.

As the water was from 4 to 6ft. deep near the house, we concluded not to attempt to get our nets out until we had lowered the water by cutting the dam, which was about 50yds. below the house, and raised the water, making a pond quite large and shallow, except within the bed of the creek.

Uncle John Yancey, who had cut the dam several times to save his hay meadow, thought that if we made a long bag of netting and placed it in the creek after making the dam, we could get the beaver when they came to repair it—he had noticed them several times in daylight swimming along the channel. We made the wire bag and cut the dam, clearing it out to the old channel. While placing the bag in position we heard a noise in a hole under the bank, and thinking some animals, if not a beaver, were in there, we probed it with willow sticks and then dug it out, but without finding anything except mice. How they got there I don't know. The hole had been under water.

We now turned our attention to the house. One man went above it with a piece of netting, sinking the ends in the bank and one edge in the bottom of the creek, and holding it upright with sticks. This we imagined would prevent any beaver from going up the stream. As we were going to the house along the creek, where the water was about 2ft. deep, we saw a beaver swimming about.

When he saw us he dived, slapping the water with his tail, and disappeared. We placed a net across the channel below the house and then set about clearing away the cache of willows that filled the creek channel close to the house was the beavers' winter supply of food. Getting the ground clear and cutting away a part of the willows and mud from about the entrance to the house, we placed our dip net so that anything coming out would have to go into it. There had been an overhanging mass of stuff making a sort of long entry at right angles with the hole that led to the living room. While cutting this away I heard a beaver, but did not see it, so we were quite sure that one was in the house.

When everything was ready, Hague stood by the net, while Jump and I commenced to wade into the house. This is very slow work; willow, mud, moss, grass, some stones and clay are mixed and bound together, compelling one to use axe, pick, shovel and hands to remove the stuff. When we broke into the room nothing was seen of the beaver, but Hague soon yelled, "I've got him," and sure enough the beaver was there in the net, while Hague was holding it up as high as he could, the bottom of the net resting in the water. I soon had hold of one side of the frame. There sat the beaver with its front paws folded, looking very much astonished. Soon it dived, attempting to go out that way, only to return to its sitting position. We carried it to the shore, opened the door of a cage, placed the mouth of the net in front and awaited the slow movements of the beaver. After looking around a bit, it slowly crawled into the cage. We shut the door, and then congratulated ourselves on having captured a beaver without so much as pulling one hair out or hurting it in the least. It had not shown any fight, so we concluded it was a female. I had been laughed at by some people when I told them how I expected to capture beaver with a dip net; now I could laugh, as I had proved beaver could be captured without traps.

The beaver was of good size, about 30lbs. in weight. We packed it to the house, Yancey's, putting it in a cage with a small tank provided by the Government. I say we put it in a cage; we opened the doors of the cages, placed them together and poured water in the tank. The beaver slowly walked in and to the tank. At no time did we touch it or try to force its movements.

Before we had left the beaver house we had looked for the mate, but it was not to be seen. After dinner we went to searching for the other beaver. We found several holes in the banks from 5 to 10 ft. long, also runways starting from the bank. They would keep below the surface for 10, 15 and sometimes 20 ft., then come out to the open air, usually into an open runway or canal. All these had been under water before we cut the dam. Often the banks of the creek were undermined, the sod and willows hanging over, leaving quite a roomy runway. We spent the day looking for the other beaver, but it had escaped. The holes that we found we poked with long willows, and where we could not reach the end would cut in from the surface. The ends of some had been used as nests or rooms before the water had flooded them by the raising of the dam. The short holes appeared to have furnished material for cementing the dams and mud for the house. It was all very wet, muddy and nasty work. The surface after the water was drawn off was covered with all kinds of water insects and many water plants, and often the mud was so deep we could not wade through it. We found bits of sticks from which the bark had been cleaned by the beaver scattered about, but no large ones. These had been used either at the house or dam.

Next day we moved our cages, tools and netting down the creek to a large pond, in which there were two houses. Above and below were many dams. The ponds were full of willows and in the early morning were frozen over, the ice being 2 in. thick in some places. The dams were large, strong and old. We had to cut four dams before we could reach the one belonging to the two house pond. While doing so we found a house just started used by one beaver, but we could not find the owner, the ground being one network of runways. It was so undermined that the water of the creek left the channel and ran through some of the runways for more than 20 ft. Even the dam had tunnels along its lower side. We did not attempt to cut the main dam that day, but cleaned the channel so as to have the water go off rapidly when we were ready for it.

When we went to work in the morning we found all the dams that we had cut replaced; the water was at its old level in all the ponds. The beaver had done all this work in one night, and strangely had used little if any of the material we had thrown to the sides the day before. It was not as difficult to remove the new dams as it was the old ones. After they were cut the main dam was reached. Then we stationed a man above, near the next dam above, with netting across the creek, with instructions to watch it and see that no beaver passed. As soon as the dam was cut and the water low enough we run the netting around both houses, stopped all runways, canals and channels as well as possible, and then started in on one of the houses, first getting a good location for the dip-net at what I thought was the most likely place for the beaver to come out. To this house there were four entrances that we could see, and later we found another under water leading through an underground channel to a point 6 ft. from the house, but fortunately inside our netting.

We blocked all the entrances but one with stakes, and then began to tear the house to pieces. It was very large and strong, had been over 5 ft. out of the water and was now about 10 ft. out. There was water around the house in deep holes dug by the beaver in obtaining material for the house. When the room or nest was reached it proved to be very large, with several alcoves or nests, each a few inches higher than the main floor. This was nearly level, 6 ft. long by about 4 in the widest place, an irregular oval—a half an egg shaped room, with one entrance at the small end and another at the larger one and a little inside, giving room for a beaver to have its nest between the entrance and the outer wall.

The walls and alcoves were made by cutting away the material of the house from the inside, the teeth marks of the beaver showing plainly on the ends of sticks. The room was quite dry and had been about 3 in. above the water's level at the lower end. Soon after we broke into the room a 2 year-old beaver went into our net and was soon caged. When the hole in the roof was large enough I got down into the room, finding space enough to crawl about, and could look into the entrances. Jump worked

here, and on the floor soon broke through into another room with four openings, and later found another and smaller room under this. The two lower rooms had been under water, but were now dry. We could hear water running through the lower passages, and now and then get a glimpse of a beaver, a large one.

Making the hole in the second room large enough to crawl in, and with two at work with willow sticks, we at last drove this large beaver into the net. As soon as he found himself a prisoner he showed some fight, tried to cut the wire once and made a dive at the feet of any one near the net. When in the cage it became quiet. We could find no more beaver in this house, but there were a great many passages, in fact, the whole house was honey-combed with them, and the ground under it as well. We did not think there could possibly be any more beaver in places we had poked and punched so much with willows, but I now think they were hiding in there. Not having sufficient experience, we missed them.

We now moved to the other house and broke into that, finding one room with one passageway to an inner circular runway that had three outlets: one led to the cache. The cache was small and contained no more material than the one in the dam above, where we got our first beaver. There was no cache at all by the first house we opened. We did not find any beaver in the house, neither could we get trace of any in the runways or tunnels. We were somewhat disappointed, because we supposed there would be six or eight beaver at least, judging from the amount of work done in one night putting in the four dams we had cut. However, the cache was so small that, after more experience with them, I believe there were not more than two more at the most.

We carried our beaver home and I sent word to the Springs that I would send the beaver in.

I made a large box for future use, lined it with tin so that it would be impossible for the beaver to cut through. We prospected the country below, but concluded it would be very difficult work to catch any beaver there. One evening I watched a beaver house and dam above the meadow with my glasses and could see large and small beaver swimming around. I saw the little ones on the dam making their toilet. They did a great deal of scratching and rubbing, going over all parts of their bodies until they must have been quite clean. Then after a plunge in the water they went to work cutting willows, small ones, and taking the branches to their cache. I saw the large beaver come out, go up the stream 200 yds., cut a bunch of long willows and swim to the house with them. Other beaver were out in the pond, where the willows were so thick I could not see them well. I was on a hill about 100 ft. above the water. Jump and I made up our minds that there were at least five in this family.

Next day we moved all our outfit to the dam. There was a grove of quaking asp on a side hill, 50 yds. from the water where the beavers were cutting winter food. There were two trails over which they dragged the sticks and brush, each trail leading to a canal dug for the purpose of transporting their wood. The canals were about 14 in. wide and from 1 to 2 ft. deep. Jump and I thought possibly we could catch a beaver away from the water with our dip-net, if we watched; so that evening we posted ourselves in a favorable place to intercept them on their way from the grove to the pond; it was our intention to let them go to the grove before making our presence known. When we first stationed ourselves—an hour before sundown—we saw a band of Yancey's horses coming down a hill to the lower end of the main pond, and at the other side from us. As soon as the leader waded out into the water to drink, we heard a beaver strike the water with its tail close to the horses. These all threw up their heads to look. Again the beaver struck the water quite close to the leader, who was in the water up to its knees. The horses left this part of the pond, walked along the side hill back from the water about 25 yds. until they came to a sort of bay, where they again attempted to drink. The beaver slapped the water with its tail, keeping it up until the horses trotted off over the hill. This was the first time I had ever seen anything of the kind. I had often heard the animal make the noise and supposed they did it to alarm other beaver, but this time it was used to drive other animals away from their dam and pond. The beaver had followed along the shore until the horses attempted to drink the second time, and did drive them away. Where he did his last splashing was in long grass, the water standing from 1 ft. to 2 ft. deep. Jump and I could see him plainly.

We watched the beaver for an hour or so longer; could hear and see them at work, but not once did we see them come to the canal, so we concluded we did not want to catch beaver that way. I am quite sure the beaver did come through the canal and were watching for enemies before showing themselves. They very probably scented us or had strong suspicions we were near by. I have seen them go so slowly and quietly through their canals, keeping under water, that if it had not been very clean I would not have known they were there at all. When they wished to come to the surface they did so very slowly and carefully, making no disturbance or wave on the surface; but when they knew they were discovered they were not a bit careful, but went through the canal like a shot, taking a wave with them that overflowed the banks of the canal on both sides. When swimming under the surface rapidly they can be traced by a wave, but if they wish they can go so quietly through the water that they make no sign at all. They will often come to the surface close to a person and watch him, nothing showing but the top of their heads; then possibly diving, slapping the water with their tails. I have been startled by them while fishing along the Yellowstone, where they live in banks. I have seen them in the clear water, swimming along close to the bottom, seen them stop, slowly float to the surface and look at me. Sometimes they will sink again without making any noise, and swim off a long way before giving an alarm.

[TO BE CONCLUDED NEXT WEEK.]

A Death Struggle.

TWO LARGE bucks of a herd of thirteen Virginia deer, kept in the park of Hon. J. F. Dancombe, of Fort Dodge, Ia., fought last December until both were dead. The battle was not seen by any one, but on the morning of Dec. 5 the two were found with locked horns. While they were covered with bruises and more or less gored, an examination of the animals indicated that death was due to exhaustion.

AMERICAN ANIMALS FOR EUROPE.

A CONSIGNMENT of American animals was shipped from Hoboken to Germany on the North German Lloyd steamer Meier, on Saturday, May 9, the animals being intended for different zoological gardens. There were in the lot five buffalo, two moose and a dozen raccoons, and they were in charge of Messrs. Eising & Hoffman, who are animal dealers. The buffalo were packed in separate crates, which afforded them but little room, while the moose, which are more or less tame, were in a stall together. There were five of the buffalo—four cows and a bull—and they came from the Lincoln Park Zoological Gardens, and are exchanged for various foreign animals. Two of the buffalo are destined for the Royal Menagerie at Schoenbrunn, near Vienna, and the other three are to go to the Zoological Gardens of Leipzig, in Germany.

While the buffalo were extremely wild and hard to handle, and therefore were closely confined as stated, the moose had been more or less handled by Mr. Eising, and it is said could be driven. While on the cars during the trip to New York, a quick movement of the head of one of the buffalo cows, is said to have crushed a keeper's hand so badly that it had to be amputated. It is reported that Messrs. Eising & Hoffman will return to this country in June in search of more animals for Europe. There is said to be a steady and constantly increasing demand for our American wild animals among the Zoological Gardens of Europe.

The steamship Lahn, which sailed on Tuesday, the 12th, carried one of the first, if not the very first, Rocky Mountain sheep that has ever gone to Europe. This is a full-grown ram weighing 400 lbs. and supporting a pair of massive horns. He reached New York by rail last week en route for Germany, where he is designed for one of the zoological gardens. He was shipped from Leadville, Col., to Dr. William A. Conklin, the dealer in wild animals, and when he arrived showed the effects of a long and hard journey.

He had been confined in a Wilcox & White organ box measuring about 5 ft. in length and about 3 ft. wide by 4 ft. high. This box was padded with burlap and excelsior, and was closed up tight when the animal reached New York. He had had no water and very little air, and as a consequence was a pretty sick sheep at the end of his journey. He signalized his arrival, however, by butting out one end of his pen and incidentally snapping in the middle a piece of 2 by 4 in. batten that formed a part of its construction. Without doubt he would have secured this much needed ventilation earlier in his journey if he had been in less cramped quarters; but as it was, when he stood up his tail touched the rear end of the box and he had no chance to back off for a genuine butt.

It is said that this sheep is the largest ever taken alive. The following measurements, made by FOREST AND STREAM, show that he is a good one: Spread of horns, 22 in.; length of left horn, 33 in.; circumference at base, 16 in.

WANTED—RUFFED GROUSE EGGS.

Editor Forest and Stream:

Anon comes the spring, and the bland and childlike inquiry of Hough for ruffed grouse eggs to wring my heart afresh. If the man whose letter Mr. Hough printed had spent half a day ransacking his brain for a typical non-commercial article, he could never have hit upon a better. A great many things have a market value and can be bought with money, but ruffed grouse eggs do not come in the category. Now and then they are reduced to possession by accident; but by design—never. When one wants grouse eggs and really expects to get them in the vernal season, he must make his arrangements in the fall. Not the fall before, but a year back of that. Then if his plans are properly made, he ought to have no serious trouble in securing a moderate supply of a home-grown article.

The writer only a few years since succeeded in obtaining ruffed grouse eggs from birds in confinement for four different seasons. In two of these years the eggs were fertile and in two they were sterile. In one of these cases a living chick was brought out by the mother grouse, while the remaining chicks perished in the shell after having fully matured. This is the only case of the kind on record in the United States so far as I have been able to discover.

It is an utter waste of time to attempt to hatch and rear ruffed grouse under the common domestic fowl of whatever species. The two are altogether antagonistic under this kind of combination. FOREST AND STREAM readers will remember that one of my grouse hens hatched and reared several (four) game bantam chicks, but that was a different matter. The young grouse can no more understand the language of the barnyard fowl than a Yankee child can understand Chinese, and they will not try to learn. My first introduction to the ruffed grouse, while still a lad, was when I captured two chicks but a few days old and placed them in a coop with a common hen. The little fellows stood up like Comanches, savage and utterly irreconcilable, and had they not managed to escape the same day would have starved to death with the greatest cheerfulness and determination. JAY BEEBE.

TOLEDO, O., May 2.

Bluebirds in the Northwest.

OROVILLE, Wash., April 25.—Editor Forest and Stream: Last Sunday, while a companion and I were traveling down Kettle River, British Columbia, seven black-tail deer ran across the road just a little ahead of us, and within a few hundred yards a flock of at least 100 bluebirds flew up into some small trees.

They have been very numerous here for the last three years.

[Were these bluebirds *S. mexicana* or *S. arctica*? We should be disposed to think the latter. Can our correspondent tell us? *S. arctica* is wholly blue, of varying intensity; *S. mexicana* has a patch of chestnut brown on middle of back and breast, and sides are brown.]

Birds, Snakes and Cherries.

SOME writer whom I recently read says that in his boyhood there was great plenty of good cherries throughout New England, but that the trees and fruit are attacked by all manner of worms and insects, so that no good cherries are to be had. I wonder how much the destruction of birds and snakes has had to do with the matter.

COAHOMA.

Game Bag and Gun.

GAME BIRD IMPORTATIONS.

MACOMB, III.—*Editor Forest and Stream:* By your request I will give you my experience with imported birds. In 1878 I imported four dozen of the California valley quail from Knight's Landing, on the Sacramento River, to this city. I put them all out on a farm near here and they laid and hatched out large broods, and could be seen almost any day in the fields and roads all through the summer and fall up to the last of October, when every one disappeared, and never has one been seen in this county since. Evidently instinct taught them that they could not stand the cold weather in this climate, and they emigrated to a more congenial climate. The next year after this a naturalist at the Smithsonian Institution at Washington was sent to Kansas to procure birds for the institution, and he came across the California valley quail. He made his report that he never knew of any of the California quail being this side of the Rocky Mountains. I have always believed that these quail were mine, and they were hunting a warmer climate.

In 1890 I imported some Mongolian pheasants from Linn county, Oregon, and turned them loose on Camp Creek, some ten miles from here. They were seen several times after they were liberated, but at last they disappeared, and the next time I heard of them they were near Nauvoo, in Hancock county, some fifty miles from here. One of them fell a prey to the pot-hunter in that section. I think these were the first ones imported on this side of the Rocky Mountains. I gave a history of them in the *FOREST AND STREAM* at the time, and in less than four weeks I received about 150 letters, from Maine to California, and as far south as Georgia, asking: "Where can I get the Mongolian pheasant?" These letters were from bankers, lawyers, real estate men, railroad men and the clergy. So you see the shotgun has quite a respectable following.

Mr. Simpson, in Warren county, this State, sent to Oregon and got two pairs. He raised twenty-five from them the first year and turned seven pairs loose. Now large flocks can be seen most any day in the section where they were turned out. The game warden of Ohio raised 500 of these beautiful game birds, and it will only be a few years before the country from Maine to Colorado will be stocked with the Mongolian pheasant. They can stand any climate, and are doing well at Milton, Vt., and living on birch buds with the weather at 33° below zero. Such a game bird as this will carry joy to the hearts of all true sportsmen.

In 1892 I imported five pairs of the black partridge (*Francolinus vulgaris*) from Calcutta, India. The American consul, S. Merrill, got these birds for me. They were put into a small box about the size of a shoe box, with a small cup not as large as a teacup to hold water for them. Only three of them lived to reach here. The rest died before leaving London, probably for want of care and proper shipment. They were on the land and water fifty-seven days. I put the two males and female in a wire cage and the larger male soon killed the other. I kept the pair in a cage for two years and they stood the coldest weather all right and seemed to be perfectly contented till a large hawk flying near them frightened them so that the female broke her wing flying so hard against the cage. She died in a few days. The male only lived a few weeks after this. They are a fine game bird and will weigh 12oz. They fly very much like a quail and are said to be a very fine table bird. They would live and thrive anywhere where our common quail would. They are good breeders, although mine never laid while I had her. These birds were the first ones ever passed through Europe, so Mr. Albert E. Jamrack, the great bird dealer in London, wrote me. He has since imported some for Lord Russell. They inhabit all parts of India from Karachi to Calcutta.

In 1893 I imported five pairs of the *Caccabis chukor* (chukor partridge) from Karachi, India. I got them through James Currie, United States Consular Agent of that city. They were on the land and water forty-seven days. They arrived here in perfect condition and healthy. They were divided up here among our people a pair in a place. They were confined in small coops and fed on dry feed. Through the long, hot, dry summer all died but one pair. They seemed to waste away like a consumptive person. One pair fell into better hands, where they had a larger coop and were fed on fish, worms and vegetables. This hen laid eighty fine eggs during the summer, and they were put under bantams and most all hatched. The little chicks were shut up in coops and fed on common domestic chicken food. They would all die by the time they were ten days old. At last I became convinced that these chicks must have their liberty and roam about where they could get insect food. So I took a bantam with a half a dozen chicks two days old and took them to the field and turned them loose. In course of two months the bantam came to a farmhouse with her little family all right. They roosted in the stable all winter with the domestic chickens. The coldest weather in the winter, when the mercury stood 23° below zero, they could be seen on top of the stable. They remained on the farm till warm weather came in the spring, and then left. One was killed during the summer some eight miles from where they wintered. One was seen a few months ago, and probably they are somewhere now if they have not been killed. They are a beautiful game bird, and will weigh about 2½ lbs. There is no question but that these birds can be raised in any part of the United States. They are strong and hardy. Col. Rumsdale, of the English army, writes to me that they will stand any climate on the face of the globe. He says he has shot them on the highest snow peaks of India and in the valleys on the burning sand. He recommends them to the sportsmen of America.

My object in importing so small a number of these birds was to see if they could stand the cold climate of America. This question has been settled without doubt, and I hope the sportsmen of this country will take an interest in introducing these birds. The game warden of Maine is looking into this matter. These birds can be bought in Karachi for \$1 a pair. The net cost of them here, the five pairs, was \$52. The express charges from New York to this city were greater than the freight from Karachi to New York. I expect to import some more this coming winter so as to have them arrive here about the last of April, 1897.

W. O. BLAISDELL.

A GOOSE HUNT IN ASSINIBOIA.

LAST spring I had a letter from my friend Arthur Hitchcock, of Moosejaw, N. W. T. He wanted me to use my influence in securing a position in the civil service for a friend, and by way of an incentive he added: "If you succeed I will promise you the best stand, and to dig you the deepest and roundest of holes in the stubble when we go out in the fall for our annual goose hunt." Well, I succeeded, and I also promised to go on the hunt.

Moosejaw is a thriving town on the main line of the Canadian Pacific Railway, about thirty miles west of Regina, the capital of the Northwest Territories. Some twenty miles north of Moosejaw lies Buffalo Lake, about twenty-five miles long and from one to two miles wide. When the annual autumn migration commences from the immense northern breeding grounds on the shores of Hudson's Bay, the Yukon and the Arctic Circle, the geese drop into Buffalo Lake in large numbers, many remaining till driven out by the freezing over of the lake in the beginning of November. They find a very attractive feeding ground in the extensive wheat stubbles which surround the lake and are very regular in their habits. At day-break they fly out from the lake and feed on the stubbles till 10 or 11 o'clock, when they return to the water, flying out again a couple of hours before sundown and returning to roost at dusk, so that those who are well acquainted with their habits can get three or four flights during the day. The most numerous kind when I was there seemed to be the huge Canada goose, but there were many other varieties. The Hutchins goose, which appears to be a smaller edition of the Canada, was very plentiful, while the bean goose, laughing and white-fronted and brant all helped to swell the bag.

But I am anticipating. Hitchcock had named the 7th of October as the date upon which we were to start. We were to have as companions Gen. Supt. Whyte, of the Western Division of the C. P. R., and Mr. James Ross, a multi-millionaire contractor from Montreal. The former is an old friend of mine. He is an ardent sportsman, an excellent shot and most genial of companions, and many a day have we spent in pursuit of the prairie grouse, making our excursions from his comfortable private car. All our preparations had been made when, as ill luck would have it, the president of the road chose that very week to come West on a tour of inspection, and our friend, the superintendent, had to wait upon him. Day after day passed, while Hitchcock kept wiring me to come on, as we were missing the best of the shooting. Finally it was Sunday, the 18th of October, before the great man passed West to the coast, and even then the superintendent had to accompany him to the end of his division, and he could not get back before Monday. However, I waited no longer, and on Tuesday morning I reached Moosejaw, and my friend having everything in readiness we started at once for the lake, he regaling me the while with tales of the excellent sport he had enjoyed on the days we had originally planned to be out.

But in sport of all kinds I find that it generally turns out much as Alice describes in "Through the Looking-glass." "It's always jam yesterday and jam to-morrow, never jam to-day," and I am therefore rarely disappointed when things do not eventuate entirely as we have anticipated.

When we had gone about half way we missed a piece of baggage which had dropped from the buckboard. Turning to drive back for it I noticed a flock of geese on the horizon winging its way back to the lake for the noonday siesta. My friend accordingly drove back alone while I cast about to see how I should conceal myself from the approaching flight. Alas, the prairie was as level as a floor, and the short, closely cropped grass afforded no cover. I had no resource but to lay me down flat upon my back and remain motionless. But I weigh seventeen stone, and sarcastic friends aver that I am as tall lying down as when standing, and my too solid flesh would not be concealed. The leading flocks sheered off when they saw the unwonted object, but at last one string swung in behind me after passing. Hastily rising I fired into the fast receding flock and one bird came slowly down till he struck the ground a couple of hundred yards off, stone dead. As I turned from watching him I saw another flock coming straight at me, and though they climbed into the air I had the satisfaction of seeing two huge Canada geese come whirling down in response to my salute. I fired several other long shots before the flight ceased, but without success. Still it was with considerable satisfaction that I swaggered back to the trail with three big geese over my shoulder. We reached our destination about 1 o'clock, and after dinner took possession of the holes in the stubble field which had been prepared for us. They were some 25yds. apart and 4ft. deep, large enough to move round in comfortably, and with the earth left at one end to form a seat. The soil which had been thrown out was carefully scattered, for your goose is a wily and sharp-sighted bird, and at once distinguishes any alteration in the ground upon which he has been accustomed to feed. Midway between us, and a few yards in front of the holes, a dozen tin decoys were set up, and we had a call which, although it emitted a sound unlike anything I ever heard made by a goose, still seemed to be very effective in turning birds in our direction when once they came in sight. Hitchcock was using a 12-bore Greener and No. 6 shot, while I used my 10-bore loaded with B. B. My experience, here recorded, is that with these large birds the small bores and charges are not in it. True, there are times when, as birds come unsuspectingly into the decoys, they can be used most effectively, and I dare say earlier in the season, before the birds had been much shot at, they would have answered just as well; but while I was out I saw but few chances of that kind, the majority of the shots being at a considerable distance, and there the 10-bore did some wonderful execution. But we were not to get a chance of testing our weapons that afternoon. While we sat and waited I noticed an ominous cloud of smoke to our left, which shortly bore down before the wind in the shape of a well-developed prairie fire. We were in no danger, as the fire would not run on the short stubble; but the result was as might be anticipated. As soon as the geese left the lake, and saw the green prairie over which they had been accustomed to fly turned into a blackened plain and the air filled with smoke, they rose high in the air and winged their way to some far distant fields. Evidently there was no "jam" for us that day, so as soon as the flight had passed over we pulled up stakes and drove off in the direction the birds had taken. After traveling about ten miles we came to some stubble upon which geese were feeding

in large numbers. As they were unapproachable we did not disturb them, and night impending, we turned into the farmhouse and made arrangements to stay there. The male members of the family were all away fighting the fire, i. e., plowing fire guards round their wheat stacks and hay ricks; but on their return, and after a substantial tea had been disposed of, we got two of the sons of the house to go out with a lantern and dig for us two holes in as near as they could define it the line of flight. Then we turned in, and like St. Paul in his shipwreck, we "wished for the day."

The first glimmer of dawn saw us comfortably ensconced in our hides. Soon a scout, a single goose, as usual flew high over the fields, calling loudly. Then in the far distance we could make out what seemed a dim blue cloud, which gradually became more defined till all could distinguish the even, serried lines of a large string of geese heading in our direction. Even while we gazed another hove in sight, and still another, till as far as the eye could reach the air was filled with them. Unfortunately we were not quite in the best line of flight and the first few flocks passed considerably to our left, but at length one batch seemed taken with our decoys and call, and came straight over the counterfeits in front of us. In response to our four shots two birds fell. I was disgusted. We should have got a brace each, but as I watched a third pitched heavily out of the flock and a fourth looking very ill lagged far behind his mates till they disappeared over the slope behind us. But there is no time to spend looking after flocks that have passed. Here come some more heading straight for our decoys and within a few yards of the ground. "Keep down and keep quiet," hisses my companion. I could hear my heart thump as they came closer and closer, till their legs dropped preparatory to lighting. "Now," said Hitchcock, and simultaneously we straightened up in our hides. Up towered the astonished birds, but it was too late, they were within deadly range even for the small bore, and four huge "honkers" came tumbling on to the stubble. I was for rushing out, but "Down, down; more behind." The cry was still their come. A flock of "laughing geese" came over pretty high, four shots rang out, but not a bird fell. "Confound it," I cried, "how could that have happened?" but as more were approaching I had to keep down. Happening, however, to turn my head after the departing flock, I just caught sight of two birds tumbling out of the sky. So being, like the pig, "more aisy in my mind," I knocked a brace out of a flock of brant 80yds. to my right. My companion was not idle; for, although he could not kill the extraordinary long shots that my 10-bore would make now and again, yet any flock that came within reasonable range had to leave toll behind. And here I learned a lesson, viz., that it is possible to miss a goose! It seemed incredible sometimes how birds would escape that, had they been snipe, I am satisfied could not have got away from me. My explanation is that these birds are so large and fly with such an apparently slow, lazy flap of the wing that one can scarcely believe they are moving at the rate of eighty or ninety miles an hour. You can hardly bring yourself at first to make the allowance in front that you would to, say, a teal bustling by at the same pace, and therefore many a bird, hard hit, maybe, but too far back, will stick to the flock till it gets out of sight. Again, the size of the bird makes them often appear much closer than they are in reality, and there is much deception in the early morning light.

This flight lasted about three-quarters of an hour and was fast and furious. Then we got out of our hides and proceeded to count and gather the slain. We picked up thirty-one that we could see on the stubble round our hides. Then getting the retriever we hunted a radius of half a mile and picked up four others. We now enlarged our circuit to about a mile and found yet another four; and in the afternoon on our way to a different field we picked up one more, making a total of forty birds; and any one who has not seen that number of different kinds of geese laid out in rows can hardly imagine what a show they made. One other point impressed itself on me, viz., that with one exception every bird we picked up was stone dead, showing that as long as a spark of life is left these birds will struggle away.

The farmer's boys now brought over the wagon from where they were stacking wheat and carted our birds back to the house, where we packed them in sacks and forwarded them into town on a passing wagon, to be distributed among our friends.

After breakfast we made preparations to catch the flight on its way back to the lake. But whether our shooting had scared them or from some other cause, no birds came back that way. We went out in the afternoon—having got fresh holes dug in what seemed more particularly the line of flight—and only got two birds out of a flock that came out very late, and the following morning we never got a shot at all. We accordingly packed up our traps and returned to town. Mr. Whyte's car came in attached to the East-bound express and we all went down to Regina, where we were switched off onto the Long Lake branch. At 8 o'clock that night our car was laid off at Lumsden, a small station near Long Lake. It was dark as Erebus, and a gale was blowing from the northwest. Here we met with a disappointment. Knowing the difficulty we should have in getting vehicles in these country places, Col. Herchimer, the commandant of the N. W. Mounted Police at Regina, had kindly promised to send up one of the police teams with a wagonette. But there was no sign of it. It turned out that, having a fractious team, the driver had got off the trail in the darkness and had to camp out on the prairie, and he did not put in an appearance till next morning. At length the station master hunted up for us a farmer with a rig which would hold four, and a young man who could carry one in his buckboard, and they knew of a stubble some five miles out where there were some holes that a party had been shooting out of last week. So at 4:30 we were called, and after a light meal we started. I went in the buckboard, my friend being a nice young fellow, son of a Presbyterian clergyman in the Orkneys. We lost the other vehicle shortly after we started, in the darkness, but we kept on till at last, just as day was breaking, we blundered on to the stubble we were seeking. Getting into a hole, I dispatched my companion to hunt up the wagon and guide them to the other end of the field, about half a mile away, where three holes had been dug. In a short time he found them, and in the dim dawn I could see them putting out the decoys and getting into their holes. But the geese came out with a strong gale behind them, and to our great dis-

appointment passed high overhead and away to stubbles miles beyond. After waiting for half an hour without getting a shot, we got careless and were stamping about to get our feet warm, when some flocks appeared in the distance working up against the wind, and instantly every one vanished from view. Presently a flock of five Canada geese flew past. Hitchcock called them and they turned and flew straight for their decoys. From my distant hide I could see the geese lazily flapping up against the wind not 6 ft. above the stubble. Nearer they came and nearer. Surely now they must be right over the decoys! Why didn't some one shoot? Suddenly, as it seemed to me, four of them sat down simultaneously, while the other flew away. It turned out that our friend, the contractor, who had never done very much shooting, and had certainly never fired at a goose before in his life, had killed all four with one shot and was so astonished that he never thought to let off his other barrel at the remaining bird. (I may say here, however, that his subsequent performance scarcely equaled this early promise, as these were the only birds I saw him kill during the trip.) But this flock was followed by others. The superintendent, who was using a 10-bore Greener, did some admirable shooting; and as I got a few down at my end of the field we had after all a bag of twenty geese when we returned to the car for breakfast.

Subsequently we drove down to the lake to catch the flight coming back to water, and the wind being very high we had excellent sport, as many of the flocks came fairly low.

The following morning I killed eighteen from my hide and the others had also good sport, so that on the whole our bag totaled over 100 geese. But Hitchcock still maintains that we would have killed twice as many had we come up the date we had first laid out and we have faithfully promised that neither presidents nor principalities shall be allowed to interfere with our trip next fall.

THE SENATOR.

A GREENHORN HUNTING PARTY.

FRED MATHER'S account of the greenhorns' outing in "An Adirondack Night" so reminds me of my first camping trip that I jot it down for the amusement of the readers of FOREST AND STREAM.

Having from early boyhood waged slaughter on woodchucks, coons, squirrels, etc., on the west bank of Cayuga Lake in western New York, my boyhood's home, I longed for larger game.

While visiting a cousin in northern Pennsylvania I became acquainted with two timber owls (tie cutters and bark peelers) by the name of Tim C. and Alvin B., who claimed such prowess as hunters that they made my cousin and me believe they could have given pointers to Nimrod, Daniel Boone or Davy Crockett. They were willing to furnish a team and conduct a hunting party to the big timber on the headwaters of Pine Creek if we would pay the expenses of the trip. A letter to my younger brother at Ithaca called him to Pennsylvania with his rifle and my 8-gauge muzzle-loading shotgun, and we started on our hunt in the early part of November. As Tim and Alvin stopped their team at every hotel and at our expense took two or three drinks apiece to the success of our trip on our two or three days' drive, their valor increased as we neared the woods, and they impressed the cousin, my brother and myself, who was the eldest of the three, just 17, with the idea that when we got to the woods Tim and Alvin would kill all the deer and bears in the woods, while we would be lucky if we even caught sight of any live game, and that their slaughter would be so great, day by day, that we would be kept busy with the team hauling their victims to camp. So we planned a rebellion, determined that we would hunt one day in the woods if some of the deer they killed had to hang out all night.

As we neared the big woods surrounding the headwaters of the creek we were met by a team hauling out two dead bears and four deer. Tim and Alvin had a jug in the wagon under their front seat, from which they had frequently imbibed for our success, and now the sight of the game going out so increased their prowess, as they told how they too would kill the deer and bears, that cousin C. asked how we would get home if they loaded the wagon down with bear and deer meat. To this the cheering reply was made, "You boys can walk home."

On our arrival at the last house on the creek we left our team in the stable, made up our packs, and early next morning tramped into the woods for ten miles, carrying cooking provisions and the camp paraphernalia of bedding, cooking utensils and our guns and ammunition, where we soon had a lean-to of hemlock boughs facing a large log, against which our fire was kindled, and our camp was completed. Then, tired out, we enjoyed the fragrant beds of hemlock boughs, to be awakened toward morning by water dripping in our faces, and to find that a storm had come on during the night. Our hemlock-bough roof would not shed water, but as there was one rubber blanket in the party, it was spread upon the slanting roof; the other bedding was rolled under it, the fire was piled with fresh wood, and there we huddled until morning.

How it did rain the next day; and as the men said there was no use in trying to hunt deer in the rain we huddled under our roof all day, while they told of prior hunts in which the deer had been so thick that they had almost been driven from their camps by the numbers charging them. Finally they were tired of lying—as I now know—and then they played euchre at 5 cents a game "on tick," and thus they passed the day, while we boys wished it would clear off or that we were at home, and for fear of bears and panthers hardly dared leave the camp.

About 4 o'clock a change of weather came and it rapidly grew freezing cold, and when we awoke next morning we found the ground covered with about 4 in. of snow. Jim and Alvin said it was just right for deer; but on moving out from camp we found that the thick covering of leaves had become saturated with water and then frozen before the snow fell, and the breaking of this ice under a person's feet could be heard for half a mile.

From what I have since learned about hunting, I am now of the opinion that neither Jim nor Alvin knew any more about deer hunting or had had any more experience than the boys of the party, and that they had simply imposed on our credulity to get us to pay the expenses of a trip for them, which expenses included drinks for them whenever they could get them upon the road.

After breakfast we were started out in a row about half a mile apart and marched out for the slaughter of deer.

This line was maintained over hill and valley until about 2 o'clock, when we came together, not one of us having seen a deer, and disconsolately marched back to camp to find the valley surrounding the camp covered with fresh deer tracks. Having been forbidden to shoot at anything but deer or bears, we had let many chances to shoot grouse or partridges, squirrels and rabbits, go by, and when we came to overhaul our supply of provisions it was found that we were out of meat. While the stream was well stocked with trout, no hooks and lines had been brought along, and so we could not add to our supply from the stream. We made our supper upon cold potatoes, cooked at the house where we had left our team, and dry bread and butter.

Our breakfast next morning consisted of half a slice of bread for each one, and Alvin ordered that the party should separate and hunt meat for the day, anything that we could eat, and no one must come into camp till he brought in some kind of game. After a long day's tramp I got into camp just at dark with one small red squirrel, where I found the rest of the party had preceded me, and that our total bag for the day was five red squirrels and a porcupine. Each one broiled a squirrel and ate it, and then Alvin skinned the porcupine and broiled a piece of it, but as he could not eat it none of the rest of us tried it.

The next morning we packed up and marched out of the woods, to find on our arrival at the house where our team was that its owner had brought in and hung up four deer while we had been in the woods. Two of these my brother and I bought, and then we started home, disgusted with hunting and worse with our two mighty hunters, who had to stop at every tavern to drink and brag about the way they had shot the deer which my brother and I had bought. As funds were running low we tried to shut off on the drinking, but at the hotel where we stopped the second night they secretly sold the largest deer and used the money for the expense of irrigation. When we reached a stage line leading down to Elmira my brother and I took the remaining deer and boarded the stage for Elmira, where we were forced to sell it to get funds enough to get home to Ithaca. Thus ended our greenhorn hunting party and my first deer hunt and camping-out trip.

WINCHESTER.

IN THE ROCKIES.

(Continued from page 375.)

CANOE CREEK CAMP, Wyo., Oct. 1, 1895.—*My Dear Sammy:* This is certainly "God's country." The longer I remain here the more I am in love with it; the more I feel that I have just begun to live. Who could grow old and decrepit in this glorious climate, breathing the purest of air and drinking water that tastes like nectar? Sammy, make a resolve in the near future to break the links that "chain you to business" and come to this country of everlasting hills and health.

"Better to hunt in hills for health unbought
Than fee the doctor for a nauseous draught."

We have had the most charming weather I ever remember having seen. Every day alike, yet different. Pleasant enough to lie out under the evergreen trees and dream, and wish for friends to dream and live this life with us. Every day, every hour brings something new to admire and wonder at.

Wednesday Van and I tramped over the surrounding mountains and saw plenty of elk signs, but most of them two or three days old. I forgot to tell you that Pop brought in the first meat, having killed his first deer yesterday coming down the divide, and I assure you he was a very proud man. It was most welcome too, as bacon had begun to pall on me. After dinner Pop and Van took up the hunt and followed down the cañon; sighted several elk, but didn't get within shooting distance.

Thursday dawned bright and clear. It felt more like last of May than September. Doc and Van went after elk, but with the same result. This camp is a noted bear camp, and we are anxious to get one or two fine elk heads here, so that we can use the carcass for bear bait. The bears come and go here, and once you get bait out you are pretty sure of your bear coming to it. In the afternoon Van and I started on a twelve-mile ride to Cooke City for provisions and the mail. It was a charming ride, with enough excitement and a spice of danger to make it enjoyable. We had scarcely gotten 300 yds. from camp when Van, having spied three black-tail deer ahead, quickly dismounted and drawing his carbine prepared to kill; but, alas! "the best laid plans of mice and men." The "uncultivated son of a gun" Schuyler saw them at the same time, and made a crack for them, causing Van not only to lose a shot, but his temper as well. All his yelling to the dog wouldn't bring him back until he had run them into the next county. This was the only failing poor Schuyler had. But then the reception he got on his return was something painful to witness. His master broke off a small tree and wore it down to splinters on him. Truly the way of the transgressor is hard, and I fear he found it so, as he ran on two, sometimes three feet, for some time after. After this little circus we proceeded on our way, all apparently happy but the poor dog. I often felt sorry for him, as he was a good-natured cuss. He attended faithfully to the sores on the horses' feet and legs, often licking them for many minutes, in fact, when we stopped to rest. He seemed to take a special delight in teasing one sorrel colt, for he would sneak quietly behind him and nip him on the ankle or leg, and as quickly spring aside or lie flat as the horse's heels flew like a streak of greased lightning over his head. Had they ever struck him Schuyler would in all probability be traveling yet. Many a good laugh have I had while watching them.

Our ride and climb up the Republic Divide was work, but the summit once gained the view amply repaid for all the energy spent in getting there. While I stood taking in the surrounding scenery, oblivious to all that was passing around me, Van quietly made his way on down the divide, knowing that when I mounted old Roany (I was riding the old pack horse) he would make a rush to catch up, and he did. If ever my hair had any inclination to rise, it certainly must have been then, as Roany started on a run down this mountain. He was the most determined as well as the roughest horse I ever sat on. I made up my mind that there was no use in trying to stop him, so I simply gave him his head and held on. How we ever got down without breaking our necks is a mystery to me. To the right of the trail we went down there is a glacier that has perhaps been there for cen-

turies. Van says, "I had a horse slip in crossing it one day, and he went down a mile, gathering speed as he went, finally landing in a snowdrift, and buried himself. When he started to slide he was packed with fresh meat, but the saddles of elk got such a gait on them they never stopped until they struck in front of Jack Allen's hotel, in Cooke, and when I got in town Jack had the meat served for supper."

It was a breakneck pace until we reached Cooke, a it was getting late and the trail a rough one after dark. We arrived about 6:30.

Like all mining camps in that region, in the fall and winter Cooke was almost deserted. It is the largest mining camp in the Clark's Fork district, about sixty-five miles southeast from Cinnabar, and about five miles from Yellowstone Park. It is destined to become a rich mining camp should they ever get railroad facilities there. One old miner told me he had been waiting now for twenty-five years for the railroad to come in, and he thought within the next two years it would be a realization. The Daisy Gold Mine sold the day I left for \$83,000. There is a cyanide mill there now in operation, and I believe it is paying well. The surrounding country is rich in minerals.

Friday, the 27th, still clear and warm. Recrossed the divide, this time over the glacier. Van says, "Keep your feet out of the stirrups, and if your horse falls, slide off and let him go." I think Van did these little things to see how much sand the "dudes" possessed. These horses climb like goats. We kept going up and up until I thought we would never reach the top. It was dark when we reached camp, and much to my surprise we found discontent there. Ben had become frightened and swore he had to go into Cooke the next morning, as he had to get home in time to attend court, was disgusted with the game outlook, and in a bad temper generally. Pop says, "I found him a-settin' on a log a-cryin' to be taken home to Pennsylvania, and me and Doc had the devil's own time with him." This upset all our plans for killing bear—in fact spoilt it—and I assure you none of us felt jolly over it. To have Van go into Cooke the next day meant the loss of two more days really without any reason, as Ben had said previously that he didn't care to get home before the 19th of October. Now, as captain of the outfit I didn't wish him to go home without a head, so asked Van to move us the next morning to the elk country, let him kill his game and then take him to Cooke the following day, all of which he promised to do.

Next morning we broke camp and moved south. In crossing the mountain out we saw fresh signs of elk that had just come into the valley we were leaving, but it was too late—we were on the move. Went into camp on Canoe Creek at 5 o'clock. Poor Doc gets blown every time he does much climbing, and I attribute much of it to his excessive use of tobacco.

The 29th was another beautiful day. After breakfast Van and Ben took to the hills in search of elk, which we were anxious he should get. They had scarcely gone a half hour when we heard firing, and this is the way Ben tells it to his friends: "We had not gone more than a mile and a half from camp when we suddenly came across our first game in the thick timber. Van, who was in the lead, suddenly stopped and pointed ahead to where stood three deer, scarcely distinguishable to an untrained eye in the dark shadows of the evergreens. In an instant I had covered and pulled on the little buck standing about 80 yds. away on my side. He went down with a broken shoulder from a high shot, and after a moment's hesitation the other buck and doe bounded away, not, however, before I had covered the second buck, but on Van's suggestion that we had meat enough with one, I dropped my rifle and let it go. As the dead buck was small we changed our minds, and separating, followed into the timber, where the guide shot the second buck within a few minutes' walk. We left the carcass thrown across a log and went back to where the first buck lay."

"For several hours later we followed the almost innumerable elk tracks that made the soft earth in some of the open places look more like a well-trodden barnyard than anything else, but without overtaking anything. After the middle of the day, while pursuing our vain search, I suddenly heard the distant whistle of a bull elk, coming apparently from down the mountain side in the cañon. After locating it as well as we could, we began a long and trying climb to get to windward of him. At last we crept cautiously out to the edge of the cañon, only to find that the elk had in the meantime been passing upward on the opposite side, and were above us and already out of range. We could occasionally get a glimpse of their bodies between the trees, and felt they were fast getting away from us. Just then my bottled indignation at the dog boiled over, as he got between my legs again with the cord that I was leading him by. He had been breaking sticks, getting on the wrong side of trees, mangling the string and making life miserable for me for hours, and I said to Van, 'I would like to break his neck,' to which he promptly replied, 'Knock the head off the uncultivated son of a gun.'

"Without a thought of the consequences I whacked him over the head with my fist, when to my surprise and utter consternation a howl went up that waked the echoes of the mountain side, and which I felt must send every elk out of the country. Almost instantly there came back to us the whistle of the bull elk on the opposite side of the cañon. He had evidently mistaken the dog's yell for a challenge. We looked at each other and laughed, and a moment later, as we looked in the direction of the sound, the noble animal himself at the head of his band trotted out of the timber into an open space opposite and a little above us. With his head and spreading antlers lifted high in the air, he advanced directly toward us, looking for his adversary. Seeing nothing, he turned broadside and stood fast within 100 yds. of our hiding place. At the crack of my .45-90 Winchester he went down with a broken back at the first shot. Van then called my attention to a spike bull that had gotten perhaps 20 yds. above the big bull, and I put a shot into his ribs too far back to bring him down, a second shot to break his back was too high, and a shot from Van found the proper point, back of the shoulder, after which he rolled down the mountain side toward the place where the other lay."

"We crossed the cañon, taking with us the heretofore unappreciated dog, whom we now voted a hero as well as a much cultivated pup indeed, for who had ever before heard of a dog successfully calling an elk?"

"When we approached the big bull, though paralyzed from his broken back, he raised on his front feet, and

stretching his head and neck to their full length, gazed unflinchingly into our faces. It was a moment that I shall never forget. 'What would you give for his picture,' said Van. For the moment I felt a touch of remorse at my cruel work, and I answered: 'If I could mend his back I would gladly let him go.' A shot through the heart ended his troubles and we took up the line of march to camp."

Sept. 30.—The weather has been so delightfully clear and warm that it seems like Indian summer. We are located here right in one of the finest game countries in the world. Pop and Van have gone in search of elk. In the morning Doc and I took the back trail in search of blue grouse. Our guns consisted of a .22cal. Stevens rifle and a pocket full of rocks. Found five grouse scattered in trees and got three of them; one was the toughest thing to kill I ever saw. He was shot three times, each bullet hitting him fairly, before he even flinched, the third killing him. We did not know the other balls struck him at all until he was deprived of his feathers, when we found one had cut his craw open, one through his wing and shoulder, and the other back of his shoulders. Doc had guyed me unmercifully about my shooting at this particular bird, and said something about getting me a scatter gun. After the amount of shooting it required we concluded they would perhaps be better eating should we stew them, which the Kid did, and then they were tough.

Pop and Van came in about 5 o'clock, after a lively chase after elk. They had got into a bunch of perhaps seventy, but in order to reach them had to cross a frightful windfall. Van could go through this like a squirrel, running along from tree to tree, but Pop had to jump, climb and fall over them to such an extent that when he got within shooting distance he couldn't shoot. He says, "I couldn't do anything. Had no wind, no strength, no nothing. Just stood like a blamed old fool, shaking all over, and it took me ten minutes to get my tongue back in the right place, and all the time Van Dyke was yelling 'Shoot, Pop! What have you got that gun for?' 'Shoot yourself!' says I, 'all I want is breath.' Finally I did get the gun up, but it took me so long to get a bead on them that they were in the next county before I could pull the trigger." Van says next time he'll take a bellows along with him and supply him with wind.

Oct. 1.—A change has come, and I believe we are in for stormy weather. A few clouds are scudding across the sky, and now and then an occasional drop of rain falls. Pop and Van went off again for elk. The hunters returned about 4 o'clock, Pop as bright and fresh as a daisy. Reason, he had killed a fine bull about three miles from camp, and his experience is best told by himself: "Say, captain, I've had the greatest time ever you saw. Van and I just went around the Canaan and struck fresh trail. We followed them up, and soon Van saw them in a piece of woods (Van says timber), and then he showed them to me. We got around to windward, and sneaked on to them until we got within 75yds. There were about 100 in the herd. Soon one big old bull trotted out into a little open field (Van says park) and bellowed and scratched the ground so that he almost buried Van and me as we were lying flat on our bellies watching the whole show.

"Then he bellowed again (Van says whistled) and a young bull, a fresh-looking fellow, runs out to him with his hair all standing on end. He walks round and round, then they back off and come together. Wow! how they squealed and fought! The little fellow was no match for that old monarch, so he ran away. Then the old one he squealed again and pawed the ground some more, and another youngster trotted out to see what sort of an impression he could make. Say, Cap, I jest lay there and snickered and laughed, and the water ran from my nose; I couldn't blow it for fear of scaring them, so I had to just let her run. How I wished you were there with your camera to photograph that circus; I'd 'a' give \$50 for a picture of that fight. Well, it took him just ten minutes to polish off that fellow and send him to his corner. He kept this up until he had walloped the stuffing out of five bulls, only requiring about two hours to do it. Then he stood there and squealed for more, but they were all afraid of him by this time. It was so funny that the 'uncultivated cuss' began to get uneasy, and laughed too, so I had to sit on him. By this time the band began to get restless, and the cows and calves were almost walking over us. Then the old bull began to paw the dirt again, and I had either to shoot him or get buried, so I up and shot him three times, twice through the shoulders, and as he turned to run I shot him in the neck. Cap, that fight was worth coming 3,000 miles to see, and I'll never forget it. My, how I wish Georgie could have seen that."

In your letter, which I received in Cooke, you ask me why I haven't said much about the guide. Well, to tell you the truth, Sammy, you know how Doc and I were taken in by a fellow in Minnesota last year? I had concluded to wait until I should go out with him myself before saying much, though the boys all say "he is a marvel and no mistake."

Oct. 2.—Still cloudy. Went out with Judge, Pop and the Kid to help get in the head and hide from Pop's elk. Van and Doc left us and went up the draw to the right after game. Finished our work and got into camp about noon, and just in the nick of time too, as it began to snow about 1 o'clock. It seemed to me the flakes were as large as a silver dollar. Doc and Van came in about 4 o'clock, wet to the skin, and Doc exhausted. They had had a very hard tramp that day, but Doc had the satisfaction of killing his first elk, a nice five-point bull.

You will perceive, Sammy, that all have now secured heads but myself, though I am not pleased with the one Doc got, as I want him to get a larger one, and I feel sure he will. I have waited until the last. I haven't even looked for elk, but my turn comes now. WABASH.

[TO BE CONTINUED.]

CHICAGO AND THE WEST.

Live Western Wardens.

FOREST AND STREAM prints this week the portrait of Mr. Chase S. Osborn, the hustling game and fish warden of the State of Michigan, who is eminently qualified to rank high among the live Western wardens who are carrying on the fight against illegal shooting and fishing. Mr. Osborn is a newspaper man and owns two newspapers, chief of which is the evening daily, the Sault Ste. Marie News. He is thus a man of affairs, but one who brings to mind the business maxim that it is the busiest man who always has the most time to do something. His present ambition is the stamping out of illegal and over-destructive fishing and shooting in the great State of Michigan, and his success is something which, prior to this time, has not been generally known to the public, but which is worthy of careful study in other localities.

Mr. Osborn took the office of game and fish warden Feb. 1, 1895. During the eleven months of 1895 the department prosecuted 501 cases. These cases grew out of the investigation of reported violations to the number of 966. The total of fines and costs collected amounted to \$6,420 67 for the time mentioned. The office sent out about 10,000 personally dictated letters. Of the 501 cases mentioned, 397 convictions were obtained. Acquittals to the number of fifty-five resulted. In three cases there were disagreements and in thirty-four cases discontinuances were entered. This leaves twelve cases pending. All of the previous records of this office show a total of 604 cases prosecuted up to the time that Mr. Osborn took the office. This would indicate that during the eleven months of 1895 he was enabled to accomplish in the direction of actual apprehension and punishment apparently nearly as much as had been accomplished during the previous existence of the office of eight years and one month.

The laws were so emphatically prosecuted and enforced that the State does not have at present one quarter the violations reported at this time last year.

The sentiment for game and fish protection in Michigan is certainly growing, though, as in other States, the

WARDEN CHASE S. OSBORN.

warden is hampered for lack of funds. The salary of the State warden is but \$1,200 a year and he is allowed but \$2,000 additional for the payment of deputies.

The new deer law, making the season the same in both peninsulas, restricting the number of deer killed to five and requiring a license, was enforced to the letter and resulted in greatly reducing the number of deer killed. The law prohibiting the shipment of game and fish out of the State was rigorously enforced. Much attention was given to the enforcement of the new law prohibiting the sale of woodcock, partridge and quail, and hotels and restaurants were prevented from serving them at banquets whenever possible.

Mr. Osborn has taken the ground that all game and fish laws are constitutional and in force until declared otherwise by the supreme court.

The State game and fish warden of Michigan is not only expected to enforce the laws relative to the protection of game fish and game animals, but has under his jurisdiction the protection of the food fish supply. He is made the inspector of fish shutes, and his duties are multiplied by each session of the Legislature. The one thing glaringly needful in Michigan seems to be a law regulating the length and weight of fish caught in pound nets, gill nets, seines, fyke nets, etc. The warden has made special efforts to have the commercial fishing laws respected.

Non-resident deer hunting licenses to the number of twenty-three were issued during the season of 1895, and resident licenses to the number of 15,877. Mr. Osborn will advocate a change in the license law at the next session of the Legislature, requiring every person who has a gun in his possession during the open season to have a license.

Moose in Minnesota.

There is a popular impression that the moose law is off in Minnesota this fall, though I do not find it so recorded in the game laws. The close season law, or some other cause, has been followed by an increase in the moose supply not far short of phenomenal, though the killing has been very extensive in the Rainy Lake region, and indeed pretty much all through upper Minnesota the prospectors have penetrated beyond the reach of the wardens. The dispatches from Duluth, of May 6, state that a herd of moose on that morning appeared in the main street of that city, they having swum across the bay from the Wisconsin side. They were driven over into the woods on a point of land near by, and at last accounts had not left that locality, being very tired with their swim.

Along Deer River and in the Itasca region moose are very abundant, and have been for two years. Last year, according to a newspaper cutting which is handed me by

a Minnesota resident, a band of five moose ate up the cabbage patch of a Deer Lake settler, and so irritated him that he went after them with a shotgun and did all he could to exterminate the lot. They are there again this year, however, and he says he can't afford to raise cabbage for all the wild moose in Minnesota, for he intends to lay in that cabbage for next winter in the form of kraut for himself and family.

Poisoned Deer.

In northern Minnesota several deer are reported to have been poisoned last season by eating the tops of potato and other plants which had been treated with Paris green for the purpose of destroying bugs. The wild deer when not pursued become very bold, coming into the gardens of the farmers and helping themselves to what they like, and being of a very inquisitive turn of mind, though their investigations have not yet taught them that the good part of a potato is not the part which grows above the ground.

Deer in Chicago.

Mr. William Deering, of Evanston suburb, has a pet deer which has this week been having a lot of fun with the people of that village. It has broken away from confinement twice, once going out into Lake Michigan for a swim and nearly drowning itself, and then at a later day making its escape and running for some time loose in the cemetery, where it was with difficulty secured by the attendants and taken back home in a wagon under an escort of four policemen, who thus had their initial hunt for big game.

Wild Pigeons.

There is ground for the belief that the wild pigeon is by no means to be considered an extinct bird. This spring a report from Minnesota states that a few have been seen there, and now I have more definite word to prove that at least a few more of these beautiful birds remain in the land of the living. Mr. H. L. Stanton, who resides at Beverly Hills suburb, eleven miles to the south of the city, on the Rock Island road, tells me that one morning two weeks ago he saw a flock of birds flying toward his home which had a peculiar look and which he almost at once identified as wild pigeons; for though he had seen none for years he was raised in the pigeon country of Wisconsin and is familiar with the bird. These pigeons crossed the ridge of high land at Beverly Hills and disappeared in the direction of a wood back of that point, where Mr. Stanton thinks they may have alighted for a time. Mr. Stanton's neighbor, Mr. Fuss, when spoken to about this event, mentioned that he had on the same morning seen another flock of about the same number, thirty or forty, which crossed at nearly the same place. Mr. Fuss was brought up at or near this same spot, and he remarks that in the past, when there was a regular flight of pigeons, this used to be their regular crossing place, they seeming to come in from the direction of south Chicago, as though in their flight they had come around the head of Lake Michigan or crossed it near the head (or perhaps I should more nautically call this the "foot" of the lake, meaning at least the southern end of it). It would be pleasant indeed if we might once more see even occasionally a flock of these birds, once so extraordinarily abundant.

News from the Yellowstone Park.

A band of twenty-six mountain sheep was seen in the "strip" north of the Yellowstone River in the National Park two weeks ago. Deer are more abundant in the Park this spring than ever before. One bunch of forty-seven blacktails came down within a mile of the officers' quarters one day last week, and there are a number of whitetails hanging around the post pastures. Every range in the Park has dozens and hundreds of elk, and these animals surely more than hold their own. Two arrests have been made of poachers for killing elk in the Park, E. Sheffield and A. G. Vance, of Livingston. These men are charged with killing the elk in the Montana strip of the Park. They are to be tried before Commissioner Meldrum at Fort Yellowstone to-day, May 9.

After Big Game.

A French count with eleven dachshunde of the bluest sort of blood is in Chicago this week, bound for the National Park and other Western points. He is after big game. He takes his serpentine pack with him when he travels, because he loves them so. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

The Lonely Anti-Decoy Partners.

I BELIEVE that it was E. E., of Seattle, who a few weeks since moved to stash the decoy interest. I think that I was the only one who supported his motion, and I did this for the same reason that he made it, namely, that neither of us is in the habit of using decoys.

I felt that at any rate my flint-lock, muzzleloading amendment would be too much for him. Even Mr. Mitchell, who is the only one in the FOREST AND STREAM crowd having, according to the Seattle gentleman, a spark of humanity or unselfishness in his soul, seems to have "gone back on him." "Twas ever thus."

If decoys are really to be abolished by law I should like to have a loophole in the statute, so that when I chance to find myself among upland plover, I may feel a liberty to hold up my foot, or wave a handkerchief on a stick, or to use some similar device for bamboozling these exceeding wary birds. I can imitate their call (which believe few can do), and used to have many a pleasant and successful day among them. I have not seen one for many years. KELPIE.

Aroostook County, Maine.

LITTLETON, Me., May 4.—The robins and blackbirds put in an appearance together this season, April 11; the first frogs were heard April 22 and the first swallows seen on April 25. The season is somewhat backward, but indications are good for lots of sport with trout this summer. They are already betraying a considerable interest in the contents of my fly book and I shall shortly have a good score to report. I note that woodcocks and partridges are unusually plenty in the woods this spring, the former being quite tame. That the fall shooting will be exceptionally good there can be no doubt. A number of deer have been seen in the open fields, and your correspondent quite recently ran across a herd of five caribou within two miles of the railroad. The new Ashland branch of the Bangor & Aroostook road has made easy access to some of the finest fishing and hunting grounds to be found in the State. MISS ISQUIR.

The Man Behind the Gun.

Editor Forest and Stream:

Mr. Lew Wilmot's article headed "The Man Behind the Gun" is the kind of argument that should settle the gun question. One writer says a hunter is lucky if he hits a running deer anywhere between the head and tail, and for that reason he should shoot a large, hard-hitting gun—or words to that effect.

He evidently loses sight of the man behind the gun.

A hunter should be able to hit a running deer within a circle whose diameter is the width of the deer's body, and at any distance that his gun will shoot accurately. He may be able to do this with a short, compactly built gun like the .38 40 or .44 40 Winchester, but fail with a long-barreled gun shooting a long cartridge, for the simple reason that he cannot handle the large gun. But if the gun feels right in his hands—is light, and comes up to his face properly, so he does not have to look a second time for either the sights or the mark—he should hit his deer nearly where he chooses. He can tumble rabbits on the jump and clip the heads off walking partridges in the second of time the head is still before making the forward or backward movement.

I once shot two deer as they ran past me about 75 yds. distant, the first some three jumps in advance of the other. My little .32 20 Winchester put a ball through the foremost one a little above the heart. I had only time enough to pump my magazine and catch the other deer on the same ground—a small open depression between ridges covered with undergrowth and scattering trees.

The holes in the two skins did not vary over 2 in. from the same spot. It does not matter whether a man is able to hit a deer or not, he is entitled to a trial; but he must not expect his gun to do more than its share of the work. A good gun will shoot where it is held. I prefer to be sure of my aim and hit a deer in a vital spot, or clip a partridge head, than to shoot an unwieldy rifle or a shotgun at random.

G. W. CUNNINGHAM.

Sea and River Fishing.

THE INDIANS AND THE FISH LAWS.

CATTARAUGUS COUNTY COURT.

THE PEOPLE VS. JAMES PIERCE.

G. W. Cole, Attorney for the People.

D. C. Reilly, Attorney for Defendant.

Opinion—O. S. Vreeland, County Judge.

The defendant was convicted by and before a Justice of the Peace of the town of Salamanca of the offense of having on the 13th day of October, 1895, killed fish in the Alleghany River, in Cattaraugus county, by the explosion of dynamite, contrary to the provisions of Sec. 102, Chap. 974, of the laws of 1895.

Upon such conviction the defendant was sentenced by the justice to pay a fine of \$40, and in addition to be imprisoned for thirty days in the county jail of the county.

It was substantially conceded upon the trial by defendant that he had exploded dynamite in the river for the purpose of killing fish; and by the people that defendant was a Seneca Indian, a member of the Seneca Nation of Indians, and that the particular spot in the river where the explosive had been used was upon the Alleghany Indian Reservation.

Upon this statement of facts the defendant asked to be exempted before the justice from liability to the provisions of the statute cited, and upon this appeal makes the broad claim that, since he is a Seneca Indian, and the alleged offense was committed upon the reservation which his tribe occupies, therefore the Legislature of the State of New York has no authority or jurisdiction over the reservation or its waters; that it cannot control or restrict the right of himself or his people to take fish from this river in any manner they choose to adopt, and for these reasons the act referred to is invalid and void so far as he is concerned. These Indians have possessed a right to occupy these lands from a time in the past, "whereof the memory of man runneth not to the contrary," and the story of such right and of their relations to the United States and the State of New York has been often told.

In 1628-9 the king ruling England granted to the colony of Massachusetts Bay, in America, certain lands described, in the quaint language of the day, as follows: "All that parte of Newe Englande, in America, which lyes and extendes between a greate river there commonlie called Monomack, alias Muriemack, and a certen other river there called Charles River, being in the bottome of a certayne bay there commonlie called Massachusetts, alias Matichussetts, alias Massatusetts Bay, and also all and singular those landes and hereditaments whatsoever lying within the space of three English myles on the south part of the said Charles River, and also the landes lying and being within three English myles to the southward of the southmost part of the saide bay.

"And also all those lands and hereditaments whatsoever which lye and be within the space of three English myles to the northward of the said river called Monomack.

"And all the landes and hereditaments whatsoever lying within the lymytts aforesaide, north and south in latitude, and in length and longitude, of and within all the breadth aforesaide, throughout the mayne landes there, from the Atlantic and western sea and ocean on the east parte, to the south sea on the west parte."

On March 12, 1664, the king then ruling England granted to his brother, Duke of York, certain other lands "of Newe Englande." Out of the latter grant was carved the Colony and later the State of New York, and from the former grant were formed the Colony and State of Massachusetts.

During the long years embracing the French and Indian wars, and the period of the Revolution, no notice appears to have been taken of the fact that the grant to the Duke overlapped the earlier grant, but when the affairs of the Colonies began to take more definite shape, after the treaty of Paris, the Colony of Massachusetts took steps to locate the boundaries of their grant, mapped the same as extending between parallels 42° and 45°, from the Atlantic to the Pacific, and laid claim to almost the whole of the State of New York not actually settled.

New York resisted the claim and a convention between

the two States was held at Hartford in the Colony of Connecticut in 1786, where, on Dec. 16 of that year, a stipulation was signed by Rufus King and three others for Massachusetts, and by Robert R. Livingston and five others for New York, establishing a line across the State north and south from the Pennsylvania boundary, commencing at the southeast corner of Steuben county, running along the westerly shore of Seneca Lake and terminating in Sodus Bay on Lake Ontario.

New York ceded to Massachusetts "the right of pre-emption of the soil from the native Indians, and all their estate, right, title and property (the right and title of government, sovereignty and jurisdiction excepted) which the State of New York hath" in the territory lying on the west of the line marked; and Massachusetts ceded to New York "all the claim, right and title which the Commonwealth of Massachusetts hath to the government, sovereignty and jurisdiction" of the lands in question.

Under the authority reserved in this stipulation the State of New York has assumed to extend its laws over all this land once claimed by Massachusetts, and has enacted and now seeks to enforce the act in question, as against the tribe of Indians still occupying a portion of the original tract.

It seems reasonably clear that this may be done.

The words chosen—"government, sovereignty and jurisdiction"—are among the broadest in the language.

"Government" is "The exercise of authority in the administration of the affairs of a State, community or society; the authoritative direction and restraint exercised over the actions of men in communities, societies or States."—*Century Dictionary*.

"Sovereignty" is "The supreme, absolute, uncontrollable power by which any State is governed."—*Cooley, Con., Lim.*

"Jurisdiction" is "Controlling authority—the right of making or enforcing laws or regulations—the capacity of determining rules of action or use, and exacting penalties; the function or capacity of judging or governing in general; the inherent power of decision or control."—*Century Dictionary*.

These definitions certainly cover the case under consideration.

It is not the purpose of the statute to absolutely prohibit the taking of fish from the waters of the State, but to regulate and control such taking, and to prevent the wholesale destruction of this important food product.

This fish law is the result of years of study and experience in the nature and habits of the finny tribe with a view to prevent their destruction, and to promote, to the greatest extent, their growth and increase.

Its purpose is as much for the welfare of the Indians as for that of their white neighbors.

Experience has taught that unless the methods of taking fish can be controlled, and the season for taking them regulated so as not to interfere with their propagation, all the fish in the waters of the State are doomed to destruction.

Such a result would be more disastrous to the interests of the Indians, and be more quickly and keenly felt by them than by the whites.

To confine the question, however, to the exact point at issue, it does not appear that the slaughter of fish by the explosion of dynamite in their native waters is "fishing" within any fair interpretation of the term.

By this means large numbers of fish are destroyed and only a few are secured—young and old alike are killed. Their habits of breeding and taking food are disturbed and interfered with.

Under these conditions it is clear that the provisions of this law are wise and just, and ought to be upheld and enforced.

The claim of the defendant that the terms of this statute are hostile to existing statutes of the United States, or to the stipulations contained in the treaties heretofore made with this tribe of Indians, is not tenable.

So far as I can discover, the United States has never enacted by its Congress any statute, or given out any decision by its courts, in opposition to the right of the State of New York to exercise its "sovereignty" over these lands.

The relations of the United States with these Indians began soon after the close of the Revolution, when a treaty was held whereby the Government "gave peace" to these Indians, and "secured and confirmed" them in the possession of their lands.

Beyond this, excepting to supervise their dealings with the whites, the general government has done nothing.

The claim is made by the defendant that the United States expressly guaranteed to his nation the right to fish without interference in these waters by express treaty, but such does not appear to be the case.

The only reference to their right to fish and hunt appears to be in the deed executed by the nation to Robert Morris in 1797, made under the supervision of the general government, whereby all the vast tract comprising western New York was conveyed to him, and in which the right to hunt and fish in the lands conveyed was reserved.

Under this provision, the right of the Indians over the waters in question is in no way superior to their rights in all the other streams embraced in the lands so conveyed. It is not likely that any express treaty was necessary to entitle them to the reasonable use of the waters for fishing, but the fact cited does prove that they have no such exclusive authority over this river as to entitle them to defy the "sovereignty" of the State of New York when exercised with reason and judgment over the same.

The Indians themselves have also invoked the "sovereignty" of the State upon repeated occasions. As early as 1813, laws were enacted by the State to prevent trespasses upon their lands by white persons, and these laws have been frequently amended and extended in scope and their aid invoked by the tribe. The very corporate existence of the Seneca Nation itself depends upon a statute of the State.

The statutes forbidding trespasses upon their lands by whites and providing for the removal of intruders have been upheld as a police regulation (*The People ex rel. vs. Dibble*, 16 N. Y., 203), and it seems plain that the present law may be sustained upon the same ground.

The case has been considered at greater length than the precise question involved demands, but in view of the surroundings it has seemed advisable to ascertain the result to which an examination of the whole question might lead.

Such examination leads me to the conclusion that the State of New York has the authority to make and enforce

these laws, and that Indians are amenable to their provisions in the same manner and to the same extent as are the whites.

The sentence imposed by the justice was a fine of \$40 and imprisonment in the county jail for thirty days; and was apparently imposed under the general provisions of the statute regulating punishment for misdemeanors.

Sec. 102, under which the prosecution was conducted, provides the punishment, which may be imprisonment for not less than thirty days, but does not authorize a fine.

The judgment of conviction must therefore be modified by remitting the fine, and, as so modified, the judgment of conviction and the sentence affirmed.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 2.—Hearing of the sport along the Fox, and being minded to have a day out of doors this week, I made a solemn agreement with three friends of mine, each of whom declared himself ready to depart on an hour's notice, to take a run out to St. Charles, on the Fox, and have a look over the country with an eye to a trip a little later on. One of these friends is an ardent bicyclist, and announced himself ready to ride out across country with me almost any evening to have a look at the river. Of course, when the time came to start, this solemn compact showed itself to be about like most fishing-trip agreements, and no one was ready to start. One man had bought him a yoke of oxen and another had married a wife, or was going to, and one or another such insufficient reasons broke up the deal all around; so I was left alone. Now, I have a superstition that it is unlucky for a man ever to change his mind, especially about going fishing, when he has once made it up. It seems to me that when a fellow has gone to all the trouble of making up that member he ought not to go and lightly rub that make-up off without great provocation. Believing this, there was only one thing to be done, and that was to start alone, which accordingly I did, leaving Chicago at 9 P. M. on bicycle-back for the ride of thirty-eight miles to St. Charles. The weather probabilities said there would be local thunder showers that night, and that was the first time I ever knew the weather man to guess it right. I was not three miles down the boulevard before it began to get black and blow great guns, while the lightning played hide and seek around a big cloud in the west, the direction in which I was traveling. I knew I was being another variety of idiot in going on, but I was too mad by that time to turn back, so went ahead. I had intended to ride out slowly till the moon rose, about 10 P. M., and then push on over the country roads as far as I could that night, hoping to get over most of the distance by 2 or 3 o'clock the next morning; but what I planned to do and what I really did were two very different things. The storm caught me at Oak Park, and I got wet in just about half a minute. Oak Park is a very respectable suburb, devoted to private residences of wealthy folk and not laid out with a view to transient travelers' comfort. I looked all up and down the street and saw no place where a wet bicyclist could hide. Everything was highly respectable and repellent. At last I saw a bright and cheery light shining in an inviting way at a store window, and I ventured up on the stoop and withdrew into the shelter of the archway, the way the wronged maidens do in cathedrals in the novels. I found that my house of refuge was an undertaker's shop; but it was the cheerfulest place in the town, so I didn't mind. The undertaker was a pleasant man, and he looked me over with interest, but possibly undertakers are always glad to see a man drop in now and then. He gave me his card, and I promised to see him again some day; but then the rain stopped a trifle and I determined to ride on. When a fellow is going fishing he always wants to have his main idea fixed in his mind, and must not allow himself to be diverted by the temptations which offer by the wayside.

I rode on for three or four *stadia* and a couple of *parasangs* more until I came to Maywood, and here I found that the moon, which was slated to appear at that time and place, was not working at all that night, and that my ride was going to be cut short. There was a temptation to turn around and ride back home and go to bed, but this I rejected with scorn, and instead sought lodging at a hotel I discovered near by. This was a large hotel with about a thousand rooms in it, once devoted to the use of the operatives of a factory or something of that sort, and as the factory was shut down I thought I could get a room there. The night clerk said I could, but when I told him I wanted to get up at 4 o'clock in the morning he mutinied, and said he didn't see how he could afford to sit up all night to call me at that hour; but he finally agreed to chance it, and I took harborage with him.

I have been thinking it over since then, and I sort of believe that that night clerk was a humorist or something of that kind. He must have been joking about calling me in the morning. What really happened was that he put me into a room next to one that had a light in it and was evidently occupied—these being the only two rooms of the thousand that had anybody in them that night. I waited and waited for that light to go out, but it never failed all night long. Neither did there cease the conversation audibly in progress between the inmates of the room, which were apparently of Semitic cast, as I inferred from sundry exclamations of, "Chrashus me; vat would you exbeci?" "No! no! id was all right!" "Bud I dell you, Rosenbaum," etc., etc. Those people argued for five hours by the watch, for I kept time on them, they only pausing momentarily when I wrapped on the wall and swore at them. Meantime there was a lamp placed in the hall in front of my door, so that the light streamed in cheerily over the transom, and the sound of heavy footsteps, as of a man engaged in deep thought, continued up and down the hall all the time. I supposed this was the night clerk, and that this was his way of waking me up at 4 o'clock, so I had no right to criticise his methods, and as I don't mind a little thing like that anyhow when I am going fishing, I didn't say anything to him about it at the time. I didn't really need to be called at 4 A. M., for at 3:30 I saw the streaks of dawn appear, and so arose and dressed and went out in the hall to see how my uneasy friend with the footsteps was getting along. I asked him what was troubling his mind, and what was the matter with the fellows in the other room, and he said they were witnesses in a lawsuit over a fire there had been in town, and he was the bailiff stationed over them to keep them from getting away.

"Oh!" said I.

"Yes," said he.

But he couldn't say why I got the room next to theirs. Neither could the night clerk, whom I woke up and asked about it. "They's no kick comin' to you," he said. "That's one of the best rooms in the house." Then I asked him about breakfast.

"Why, man, you can't get no breakfast here for three hours yet. They ain't anyone to cook, and nothin' to cook nohow. Maybe I can get you a glass of milk."

I wanted a cup of coffee, and told the clerk I could make plenty good coffee if he could find the raw ingredients. But though we searched for over half an hour through the dungeons of the kitchen, we never did find where that cook kept her coffee can. I never went through a house before where I couldn't find the coffee, but I couldn't there, and had to set forth grumbling and uncomfortable, after loss of much valuable time.

A Glorious Morning.

But the morning in the country was glorious. The air was sweet and fresh and the birds sang ecstatically, and all the fields and hedge-rows were vivid green and fair to look upon. I felt repaid already, and went bowling along at a good gait in spite of my hunger, congratulating myself on a pleasant journey and a quick arrival. Alas! the evil luck attended me. I had traveled only six miles when I ran into the rain belt. Here the shower of the previous evening had been a furious downpour, and the black gumbo was bottomless. I pushed on as far as I could, but had to dismount and push the bicycle. Then the mud rolled up on it till the wheels clogged and refused to move. I tried to carry it, but it weighed 100 lbs. with the mud on. My feet were wet, and I was hungry. I realized finally that I was engaged in another one of the divers fool things I have occupied my life with doing. Still I was sure I was going fishing, and when going fishing one must never lose his temper, or he won't catch any fish. I picked out a likely looking farmhouse, fought the dog for a chance to knock at the door, and at last unearthed a German woman who said her husband had gone to town with a load of milk, and who concluded she could boil me some eggs and make a cup of coffee while I was waiting for the sun to come up. This was before 6 o'clock in the morning.

My new hostess told me that I was now arrived at the village of Elmhurst, and told me that if I would go a half mile to the south I would strike a road with more gravel in it, and could perhaps ride a little and certainly walk a great deal better than I could on the gumbo road I had been trying. I took her advice and found it good. Indeed, I rode for a mile, but unfortunately it was not in the right direction, and I got in the mud again. Then a farmer who came along with a load of milk took me back to Elmhurst again in his wagon and headed me right for what he said was the St. Charles road. This I followed as best I could till I came to Lombard, and thence I went on to Glen Ellyn, and thence north of Wheaton. The roads were awful. A few teams had passed that morning after the rain, and the only place to ride was right in the ruts of the wheels. I had a good chance to try the bicycle as a road machine in bad weather. I found that about half the distance I had to walk and push the wheel, appreciating very much the rare stretches where I could use the speed of the wheel. To make it all short, I held on, walking and riding, on my solitary fishing trip, until at exactly noon I arrived at St. Charles, having been eight hours in doing twenty-eight miles. This is one way you can go fishing to St. Charles on the Fox. There are others.

At the little village on the Fox I found everything charming indeed to a man from the city. The river is beautiful at that spot, falling in a wide cascade over a big dam, and it was at just such a stage of clearness and yet of fullness as one would ask if he were going to fish. Of course, my fishing trip was more of a bluff than anything else, but I went down to the river and watched other people fish. Pretty soon a young man, the foreman of the file works there, came out at his noon hour and tried a line for a time near the corner of the mill. With him I struck up acquaintance, with the result that he soon offered me his stock of minnows and his tackle to have and to hold, and to enjoy the profits and usufruct thereof while he was in the mill at work. "I like to see a fellow have a good time," said he, and so I knew I had struck one of that brotherhood of sportsmen which exists all over this big country. I fished and caught a lone-some rock bass or so, and a little rock bass that I threw back, and one a little larger which I looked at a while and didn't throw back, he looked so fat and sleek and good to eat. Then some boys came along who had some "gramuses," "water devils," or helgramites, whatever title suit them, with which they would not part for love or money, though I knew, as did they, that this was the best bait to use at that time. I was forced to sit at the Barmecide entertainment of watching them catch bass under my nose—no large ones, none above 4 lbs., and none with spawn so far as I could see. A half dozen of these bass I was further forced to purchase at the sum of 5 cents apiece of the stern young anglers, for I really couldn't resist the tempting look of their shiny sides. I found that for once appearances were not deceitful, and have never eaten any bass in this country so good as these little ones. Late in the season, when the weeds have come in the streams, the bass are sure to have more or less of a muddy taste, even the small-mouths, and the bass of the lakes, especially the big-mouths, are not fit to eat, so musky or muddy do they become. But these sweet little small-mouths, fresh from the cold water of the swift river—they were divine. They tempt to go out there again soon. It is a lovely and an easy locality to reach, and boats are to be had, possibly with guides, if one cares for such encumbrances in so easy a country. The best place to go to is up the river about three or four miles, toward Clintonville Rapids, near the mouths of the creeks, and I should think that at any time within the next two weeks one might be sure of a decent day's sport and of a fine table delicacy if he cooked his catch. These Fox River bass just now are fine performers in the water or on the table.

St. Charles is by rail (Chicago Great Northern Road) only about thirty-two miles from Chicago, and the trains run very nicely for a trip. A good way is to take a train out at 1 P. M. or later, have that evening's fishing, fish the next day and come in at 8:45 P. M., reaching the city at 10 P. M. I found the fare to be \$1.07. I also found that the bicycle man is going to charge me just \$1.50 to clean up my wheel for me. The friends who didn't go

with me when they said they would are saying now that they knew all along what was going to happen, and that I am the biggest fool on earth for going out on the road after such a rain, etc., etc. Still my conscience gives an approving throb once in a while, and I still remember how good these little bass were. And when these friends of mine go out there with me in a couple of weeks I shall find revenge in not telling them of a good hole I found when I was there. They will feel bad when they see me come in at evening with my fish.

Bass.

CHICAGO, Ill., May 9.—The weather for the past few days has been fit for treason, stratagem and ice cream—so hot that there was no comfort even in going fishing. The sudden advent of the warm wave stopped the biting of the bass in Fox River at once, as I had occasion to learn. On the day I was out the wind was high and the waters troubled and coffee-colored, so that nine fish were all two men, Mr. H. L. Stanton and myself, could do by patient effort, and of these only three were black bass. The bass fishing is now betwixt and between, the time being too early and too late. I think the bass are spawning two or three weeks ahead of time, and believe that most of the spawning is over, even in the rivers. At least there are many beds reported seen in Fox and Kankakee rivers last week by those who were out on those streams. Lake fishing at Fox Lake continues good, and the bass are said to be well on with the season's spawning there.

The Kankakee River is doing well this spring. Points to be recommended on that stream are Mokena, Hanna and Koutts, the latter two better later in the summer. I find the Fox River at St. Charles a very beautiful and easily accessible stream, the trains running exceptionally well for Chicago anglers who have only a day to spare. The best way to do on this trip is to run out to St. Charles, thirty-two miles, in the evening, then take boat six miles up stream to Cedar Rock, above the second creek about three miles, staying there over night and fishing the next day. In June this is a fine fly-fishing trip, for the Fox River bass are very obliging about taking the fly, and there are also many rock bass to offer a moment's fun. The rock bass may not have quite the same *gaudium certaminis* (as we say in Chicago) about him that a black bass has, but he is more regular in his habits, which is something in his favor.

Trout.

No very large takes of trout are reported as yet from the woods country to our north, but a few gentlemen have been out and had sport enough to repay them. The Prairie River, near Dudley, Wis., is about as good a stream as I can direct one to at this writing. This stream was stocked heavily by the Wisconsin Fish Commission some years ago, and the fact was kept quiet. There have been 5 lb. trout taken out of it since. The big brook trout at the World's Fair came from this stream. The Paint, the Pine and the Fence, to say nothing of the Pike, will no doubt produce their quota of trout later; but these streams, like all others, do not have trout on tap, so that whosoever drops a line may pull them out. Trout fishing remains there the same mystifying and alluring pastime, with one good day to remember and twenty to forget; but the trout are there. They are in the Brule too, but you can't always get them out.

Grayling.

It is all a mistake to think the grayling is "extinct" in Michigan, though of late it has attracted little a tention in print. I am told on good authority that the Little Manistee this spring will be well worth a visit, and Bear Creek last year was described to me by an expert who fished it as being productive of some very fine grayling. The boat trips across the lake to the south peninsula points have never been much appreciated by Chicago anglers, most of that traffic being of the holiday and summer resort order, but there are several points, as Petoskey, Ludington, etc., which are good enter points for some very fine fishing country for bass, trout or grayling, and I wonder our anglers do not more frequently take advantage of them.

Wish-i-ninne Club.

There will be a meeting to-night of the Wish-i-ninne Club, of Chicago, for the purpose of making arrangements for the annual camping trip of the club, which this year will be held on Manitowish waters in Wisconsin about June. This club is composed of Messrs. Geo. E. Cole, J. V. Clark, Lon Clark, C. S. Dennis, Frank Wells and brother, John Flanders, Geo. B. Walker and W. L. Wells. These gentlemen have had many pleasant camps together, mostly duck hunting in Minnesota, and their annual trip has become a fixture of interest. The club is named after Chief Wish-i-ninne, a Chippewa once of repute in Minnesota. This red gentleman was about 7 ft. tall, and bad all the way up and down. For an act of a criminal nature he was arrested by local officers, or rather several of them attempted to arrest him, and he laid most of them out in order of arrival. An Irishman by name of O'Regan exclaimed, "I'll hold ye now, me man," and drawing up his Winchester shot Wish-i-ninne square in the side of the head. It was said at the time that his whole skull was blown off, and O'Regan was tried for that. Anyhow, Wish-i-ninne was buried, and nearly twenty years afterward his body was dug up and his skull passed into the possession of Mr. W. L. Wells, who now has it in his studio, next door to the FOREST AND STREAM office here. The truth about Wish-i-ninne's skull is that it was not blown off at all. It shows not even a hole through it, merely a deep dent in the side above the ear, not making a fracture, but causing a shock sufficient to cause the death of Wish-i-ninne, and so to give the club which became lawful owner of his head a name of unique and gruesome interest.

In Doubt.

Mr. Albert Bruning and Mrs. Bruning (Lulu Klein), of the Salvini company, have passed more than a week in Chicago, the company playing handsomely to handsome business and concluding its engagement here last Saturday. Mr. Bruning is a FOREST AND STREAM man and very fond of the camp, the stream and the forest himself, so it was natural that he should pay the FOREST AND STREAM fold here a visit during his stay. He and Mrs. Bruning are in the habit each year of taking a camping trip of some months together at the end of the dramatic season, usually going to Canada or Maine. This year they are in doubt whether to go to the woods on their camping trip, or go to Europe for a journey. They came

to me for expert advice on such matters, and I told them to go camping, because they can go to Europe any time, and so can anybody, but they may not always be young and hearty enough to eat as many trout as they can now. Mr. Bruning is the leading gentleman of the company, after the star, and as such, for instance in the part of the Duke of Buckingham, has to do a lot of fencing, because the Duke of Buckingham's habits, as I understand it, were such that he was always getting into trouble. Mr. Bruning has contracted a fine case of rheumatism in the glorious climate of Chicago, and was for some days obliged to fence left handed; although it seems to me this would only add *vraisemblance*, as we say in Chicago, to the part of the gallant Duke, who must have been a good two-handed fighter. But what I wanted to say is that a camping trip is the best cure on earth for rheumatism. Yet no one pretends that a trip to Europe cures rheumatism.

Slightly Disfigured, but Recognizable.

Messrs. Sampson Low, Marston & Co., of London, England, are good enough to send the writer a very pretty little book on a very pretty theme, named "The Amateur Angler," the same being a series of English angling sketches written by a gentleman who signs himself The Amateur Angler. Any book on angling must labor to escape being charming, and this book is charming in its quiet little way, though I fear it will not replace the Walton which it distantly imitates. One thing which attracted my attention in this book was the expression "hackneyed in business," which was quoted, being used in connection with the idea of being able to go fishing. It was really unnecessary to use the quotation mark; for the *Fishing Gazette*, of London, for which The Amateur Angler writes, stole the whole idea, picture and all, from the FOREST AND STREAM, and came out with the "chained to business" warning verbatim and without quotation marks or credit of any kind. The author of this pleasant and pretty little book on a guileless and clear-conscience sport need not have disfigured the expression, which is still recognizable and was much more effective as first written by the editor of FOREST AND STREAM.

Classified Bears.

It was with a feeling of exultation that I read in a late issue of FOREST AND STREAM of the new classification of the American bears, which is put forth by Dr. C. Hart Merriam, who divides the grizzly bear into five equal parts, and even the black bear into four species, as against the old arrangement, under which scientists insisted there were only two species of bears in the United States, the black and the grizzly. All the old bear hunters have time out of mind set apart several sorts of long-toed bears, as the columns of the sporting press for years back have recorded, and they have uniformly been told that they didn't know anything about bears anyhow. And now comes Dr. Merriam and tears the whole thing down and begins over again. Science, it seems, can't very well get these bears to "justify" in the make-up sometimes, as this new classification shows. It is a good classification, and will be popular; but I notice Dr. Merriam has omitted one species, the pine nut bear, cold and hard. I suppose it was received too late to classify. But I still have hopes of seeing this kind of bear obtain the recognition for which it has long struggled in vain in the hands of myself and the other two men who believe in it. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Forest and Stream Fishing Postals.

Drop us a line about the fishing.

HARRISVILLE, N. Y., May 5.—Trout fishing is better at present in the vicinity of Forest Home than it has been for years. Last week about 200 were caught, weighing from 1 lb. to 2 lbs.

Streams are now getting in condition for good fishing. W. E. HUMES.

PINE POINT, N. H., May 4.—Here is some of the catch at Lake Webb to-day: Withum and Maisterman, 10 trout and 3 salmon; Swett and Houghton, 10 trout; Rollins and Courier, 13 trout; Payne Bros., 8 trout; Schotfield and Son, 82 trout; L. Newman and Holt, 36 trout; F. Phillips and wife, 7 trout and 2 salmon. These trout weighed from 1 to 4 lbs.; the salmon were small, weight of 2 lbs. each. Our fishing is opening fine, and the fishermen are beginning to arrive at Pine Point. W. K. C.

ST. CLOUD, Minn., May 4.—Pike fishing has been successful here since the opening of the season on the first. C. C. C.

Mr. J. Halpen sends us a copy of the *Kennebec Journal* of May 6, in which it is reported that trout fishing is proving capital in Lake Cobscookseecontee, near Augusta. The fish run large and are in good supply.

Michipicoteu River Trout.

PORT ARTHUR, Canada.—In your paper dated April 25 I read one article by S. R. Clark, of Toronto, on the rivers of the north shore of Lake Superior. I agree with him that the trout caught in Michipicoteu River are much superior to those caught in the other rivers mentioned. I have fished this river many times. The trout will average about 2 or 3 lbs., each, and they have rich colored fins, deep red bellies, and rich deep pink-colored flesh of such a delicate flavor as is seldom found in the Nipigon trout. The river is good to fish with the fly; you can wade almost any part, and the stream is about 30 to 50 ft. wide, with a continuation of pools that are the favorite haunts of the trout. The best time for fishing are the months of July and August, the water being too high in the month of June. There will be a small steam launch on Lake Missanabie this season to convey tourists from Missanabie station on the C. P. Railway to the headwaters of Michipicoteu River, a distance of ten miles, where the sportsman can commence fishing the stream, and continue on to its mouth on Lake Superior, which will take from one week to one month, just as you please. The sportsman will require a canoe and guide to descend the stream. The scenery is beautiful, and a trip down the Michipicoteu River to Lake Superior will never be forgotten. J. E. N.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Men lay, and as much earlier as practicable.

DAYS ON THE NIPIGON.

[Concluded from page 377.]

WHEN morning came we feasted upon trout, but they did not taste as good as before, so we decided at the breakfast table that a change of fish should be had. An inspection would be made of those dorsal fins sticking out of the water, and if they were not trout some should be caught, so each of us was left to his own device.

Knowing that whitefish were taken with gill nets, I never for a moment thought they would bite upon any sort of bait. Taking one of the boats, we started out, and while my fly was skipping over the top of the water not 50ft. from shore I got a strike that sent my reel whizzing, and when I landed my fish you may imagine my surprise to find it a *Coregonus clupeiformis* of about 2lbs. weight. We crossed the river and fished up the west shore, where I took two wall-eyed pike of 5 and 5½lbs. each, and that ended my catch. I afterward learned that any one who catches a whitefish won't have any luck that day—so that the rule in my case held good. My patience being exhausted, we returned to camp, where I saw the Judge sitting on a big rock and Fred in the rapids up to his knees. The Judge was holding his sides and laughing fit to kill, while Fred would cast into the stream, bring up the white sides of a fish, and at times would land one, and when I examined into the cause of this fun it was to discover that Fred was snooding whitefish, and he and the Judge had a bet of catching or not catching sufficient whitefish for supper, so the poor fellow worked with all his might and won the bet. Whitefish caught and planked on the fishing grounds are far different fish from those frozen or purchased at market, and one who has not taken them right from the water and cooked them at once cannot realize the delicious morsel that they are. Wall-eyed pike furnished another change in that they were boiled, and tasted very well.

Fred seemed to be charmed as well as chained to the rapids near the falls, for there he stayed and fished, and when he hooked one he would sound the tocsin by yelling until even the Indians were excited and would go rushing to where he was. He made up his mind that the Judge should not throw him down and sit upon him by catching two 5lbs. trout at once without his making an effort to redeem himself, so he came down with a big trout in his hand and called for the scales. But, alas, they would not lie; it only weighed 4½lbs. He was disappointed, but not discouraged. Back he went again to his favorite place, and again that whoop was heard, louder and deeper than ever, and this time his face was like the glowing sun, but the best the scales would do was 4½lbs., and there the score remained and still remains.

Taking one canoe and two Indians, we made a half day's trip up into the lake proper, and saw the Indian in his tepee, his squaw, papoose, and last and by far the greatest part, his dogs. The Indian that we saw had three or four papooses and twenty dogs.

While we were gone the other two Indians rested in camp and set a snare for a fox and caught a nice large one with a fine brush, but we threw it away, not caring to bring it home.

In the waters of the rapids below the falls the white sucker (*Catostomus teres*) could be seen in schools, and it was great sport to amuse ourselves with a dip-net trying to catch one, but they are like a flash, and before your net would touch the water they would be out of sight. By sitting still you could see each kind passing in review before you.

This would be a good place to camp were it not for the fact that every night that we camped here it would rain, thunder and storm at about the same hour every evening. No record was kept of the number of fish nor the weight of fish caught, as we only wanted what we could eat, but as the time came near to going home our pond was full of fish and our wants supplied, so we took some half dozen to eat in case we should not kill any more and put the rest back to grow until we came again. As our time was about up and we had forty miles to go down stream, we struck camp and started down the river under full sail of Indian paddles, without any accidents.

Coming down stream we camped on the east shore of the narrows on the high ground, where we again tried our luck, but with little success. Our last night out was at Camp Alexandria, where we fished Frazier's Creek and learned of Bass Lake.

The creek I called Frazier's is also known as Black Waters and Black Creek, and rises in Bass Lake somewhere up in the unknown woods, and empties into the Nipigon River above Alexandria Camp and below Cameron's Pool. It was the scene of our first trout catch in this country.

On our way down, between Split Rock and the narrows, the Indians pointed out to us what they said was the figure of a loon cut in the face of the solid rocky mountain about 150ft. above the level of the ground, between it and the river, and about 50ft. down from the rocky, uneven surface of the mountain top. To us it looked like the picture of a bear, a tiger, and other different shapes, as the imagination created them. They said it had been cut in the rock by their ancestors many hundred years ago, when the water was at that line in this cañon. We of course accepted their version and doffed our hats with due reverence, whereupon they were satisfied.

We left our camp at the narrows after the early morning fishing and made the portage at the foot of Lake Jessie, where we got an early dinner; and then we all three left in charge of the young chief, bound for the small creek. We struck the creek at our old point (described in another part of this letter), and began fishing, with Fred as usual in advance getting a big trout. Each one makes his own selection of pool and begins casting. I go up, Fred goes down, and the Judge seeks his cool, shady retreat overlooking the largest pool. As my catch is all small trout, I throw them back and wade down, casting far in advance, and with the rod draw the fly from side to side, but I get no good trout. I soon reach the Judge's pool and see him take out a 3½lb. trout, and as he slyly slips it on the stringer I catch a glimpse of a second large one. When I reach a good position I send a fly to the further end of the pool, just below where the Judge sits, and slowly reel up my slack line and draw it up the current. I get a strike that makes my blood boil with excitement, and as I try to strike my foot slips and down I go up to my middle. When I recover my fish is gone. The Judge happens to cast his eye in my direction, and seeing my misfortune greets me with loud yells and laughter, and when I get on my feet again he composes

himself and goes to smoking. I repeat the same cast over and over again, but get nothing but a hook caught in some underbrush in the pool. I had to disrobe and swim in and loosen it. This disgusted me with the Judge's pool, and I went down stream to Fred. There he stood, knee deep in that ice-cold water, actually playing with the trout. They would catch his bait and swim back and forward from one side of the creek to the other until one or the other got tired, then the trout would let go and swim away. I got into trouble by using a smaller bait, and got some trout that weighed 2, 2½ and 2½lbs.

Fred and I concluded that the water below where we stood was good and deep, and we started down together, each taking opposite sides of the creek. I do not say bank, for the reason that the banks are covered with heavy underbrush, which hangs over into the water, completely hiding the banks and the shore. The water sometimes was up to our armpits and the rocks on the bottom were slippery, and the current so strong that often a splash was heard and "Ooch!" would come like a grunt, and either Fred or I would be down and up again, soaking wet all over. Then at times a trout would catch our hook and the reel spin, which would distress us further. We had caught sufficient to supply our camp, and we got very particular as to the size and color of our fish, and rather than kill we experimented.

A change of bait was made, and a small-sized bass spoon hook was tried, and it gave us an abundance of fun. We reached one pool where the water was deep, dark and shaded by some monster forest trees, and into it a rapid current ran, creating a white streak. Into this we both made a cast, and although I could not see my line nor spoon, I could see Fred's and he could see mine, and there was following his spoon a trout that seemed to be 1yd. long, and he could say the same of mine; but there was not a strike nor a catch. Those trout would follow spoons all over the pool and come within 15 or 20ft. of us before they would disappear, and would repeat it as often and as long as we cared to play. We left them all in the pool, and when some other fishermen go up there they can repeat our experiment in the same place.

We came on down the creek repeating these delightful experiments until we heard a "Hullo!" in the woods to our left, and ascertained for the first time the hour of the day, and that the Judge and the young chief had gone to camp and sent the Indians out after us. To say that we were glad to be found but faintly expresses our feeling, as we began to feel weak and were hungry, and turning over our catch to the Indians we started for Camp Alexander, where we sat down to a good meal.

When we came to look around we found others encamped there, and learned that we had the pleasure of meeting those eminent and successful fishermen, Dr. L. M. Yale, of New York, and the Hon. T. M. Stetson, Congressman from New Bedford, Mass. As this was their first day out and they had no trout we shared with them.

The Judge had struck an acquaintance with them before we reached camp and had secured their confidence, but when I had put in an appearance they seemed to doubt whether it was safe to camp there. When I went up the river I had put on a pair of white canvas trousers and a brown felt hat, and as I had gotten wet heels over head, and had crawled up the muddy banks at several places and had sat down on rotten logs, the nice white color was all gone, and I do not blame these gentlemen for their thoughts. But before they could say anything Fred came limping down to where we were. One sole of his shoe had come loose and he gently wrapped a white handkerchief around it. It was white once, but after traveling down the creek and through the woods and on the trail, it had become any other color, and he was wet all over. One knee was all torn out and the back portions were all gone, and his face was unshaven and sunburned. I did not wonder at these eminent gentlemen wanting us to move on down stream beyond the reach of their camp. But after a display of badges, signs, etc., they became satisfied of our respectability and invited us to eat "kill dog" for supper.

Coming down the creek we were fortunate enough to catch two lake trout (*Salmo namaycush*), but did not get any in the main river at any point. On our way down, at Pine Portage, we met Mr. L. M. Williams and his son, from Cleveland, O., who were just ascending the river to enjoy the good fishing that we had left. We also met several times a gentleman from Windsor, Ont., whose name has entirely slipped my memory, and I am sorry, for he was a jovial, good-hearted fisherman.

This being our last night out we got to bed early and enjoyed a sound rest, and in the morning, after a trout breakfast, went down the river and enjoyed the scenery and everything else until we got into Lake Helen, where we saw the heavy, dark clouds gather in the north and west, and the wind blew at a rapid rate. Our Indians soon had a sail rigged up, and as the wind caught us we went spinning through the water; but our speed was slow compared to the rainstorm that was chasing us. Down it came until we were soaking wet. In a short time the sun came out and the warm air made us feel cheerful, and it did not take us long to get into good shape again. When we reached the landing near the station we left the Indians in charge and sought the comforts of the Taylor Hotel, glad to be back and sorry that our trip was so short.

Out of the trout brought to the hotel I selected twenty-five from the largest down to one of 1lb. weight, and having used a preservative in which I placed them for thirty-six hours, I wrapped each one in new muslin and boxed them up and brought them home. I am sorry to relate, however, that for some unaccountable reason my fish did not reach here in a condition fit to eat, yet they were not decayed. I had the pleasure of showing them to a large number of gentlemen who are expert fishermen, and who have caught plenty of trout, and who acknowledged this to be the largest display of large brook trout they had ever seen, and I can also say that I am interviewed every week and sometimes every day by those who wish to make the trip.

When you go to the Nipigon see Mr. McKirdy and give him a \$5 bill for a license to fish on the Nipigon for each member of your party; this will save arrest, fine and imprisonment.

Get a canoe for each two men of your party and two Indians, and leave them to do the work and labor for you. You fish, eat and sleep and they will do the rest.

The head guide costs \$2 per day and the others \$1.50 per day. The tents and fly cost 75 cents per day, canoes 50 cents per day, camp outfit, consisting of cups, plates,

knives, forks, spoons, cooking utensils, etc., costs 50 cents per day. The bill of provisions that we got amounted to \$36.53 for three men and five Indians for seven days, and the camp equipage bill was \$16.75 for the same time.

Now as to the going up the river without the aid of the Indians, let me say this: If you are not afraid of work in rowing and paddling the canoe, and carrying the goods over the seven or eight portages, there is nothing for the ordinary fisherman to fear. A map of the country can be purchased from William McKirdy at Nipigon, or at most of the stations along the Canadian Pacific R. R., and they will show every place to go. The canoes are 18 to 20ft. long by 4ft. wide, and will stand all the hard wear that will be required of them, and if you want to take your own tents along it will save that much of cost. But if you want to do nothing but fish then take the Indians along.

One of the rules of the Nipigon is to burn the brush after you leave your camp, so that when others come they will have a clean camp ground.

The water of the Nipigon is ice cold, as I have said before, but I think it must come from "Greenland's icy mountains" or the North Pole, and the only time we could stand a bath in the river was shortly after the noon hour, when the sun was the hottest, and even then it would shrivel us up until we would be an inch or two shorter, then have to hurry out and rush to the log fire to warm up. There are places where not a handful of sand, mud or clay can be seen or found; the shores are rocks piled upon rocks, and in some places as regular as if piled by human hands. In Lake Nipigon in particular I recall one place that I looked over the bow of the canoe and could see the regular piles of rocks for 500 or 600ft. extending from the bank above the water down in its depths until lost to my vision. I can hardly venture to guess at the depth of the lake, but we were told it was tremendous.

The old chief that we had with us was a medicine man, and had his rabbit-skin blanket along, with which he performed wonderful cures. The young chief got a bad cold going north, and the old chief wrapped him up in it and performed his pow-wow over him; but when he got real bad, so that we feared a delay on account of it, Fred fixed up a concoction that he drank, and the next day was all right; but to the Indian the blanket did the work.

When we got to Port Arthur on our way home, it was our good fortune to meet, at the Northern Hotel, Gen. John McNulta, of Chicago, on his way to the Nipigon; and we had the pleasure of inspecting his instruments, by which he would ascertain the coldness of the water, measure the depths of the river and lake, and also of seeing a reel which he invented. The General is one of the most eminent, widely known and successful fishermen of the present age, and I have no doubt he had a grand time among the whales that we left in the Nipigon River.

I am of the opinion, and strongly so, that men may talk all they want to about different kinds of bait for taking trout, or in fact any other kind of fish, but when it comes to taking the big ones there is no bait like the live minnow, as this will always coax a fish to strike when no other kind of bait will do so. I have no doubt that many of the large trout taken both in the Nipigon and elsewhere have been caught with a live minnow; not that many have not been taken on the artificial fly, but it stands to reason that the small minnows can always be had, while flies, bugs, etc., cannot, and they seem to be the natural food for the larger fish of all kinds and everywhere, so I conclude they are the most successful.

I have asked my two companions to assist in the contribution of this article, but they have left it to me, and I have endeavored to give you a true outline of our trip on the Nipigon. I can assure the readers of FOREST AND STREAM that when they make the trip they will find that half of the wonders and glories of the Nipigon Cañon are not half told, and would not be exhausted after many and repeated trips.

The Judge tells me repeatedly that the "life and strength he gained on that trip are not yet half exhausted and that he will repeat the trip again." Fred says the same, and I can but add that I got rid of la grippe, which worried and harassed me all last summer, and I have been free from it ever since. So ends the best and most glorious trip ever taken to the fisherman's paradise.

J. W. HAGUE.

A Net Teaser.

THIS device is of British origin; we copy it from *Land and Water*. It is for use only in waters where netting is forbidden and is to be discouraged. Specifications: Any

old barrel, any old iron done into hooks and crooks, and a load of stone *quantum suff.* to fill the barrel. Set in a cool place under water and it will do the rest.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

BOSTON AND MAINE.

BOSTON, May 9.—The landlocked salmon fishermen are having good success in some of the many lakes and ponds that have of late years been stocked with that beautiful and gamy fish. But Lake Auburn, Maine, scarcely comes up to the standard, though well stocked. On Saturday last twenty boats were on the lake, and every possible method of fishing was tried, with "not a strike" to any boat with one exception. At nightfall two men appeared with a string of two pickerel and two trout. They would say but little as to their method of fishing or as to where they caught the prizes, though everybody was interested. Commissioner H. O. Stanley was on the same lake that day, with the success of one trout. He is one of the best of fishermen, and would have taken trout had there been any that would bite. The theory is that the trout and salmon are still gorged with smelt, and that there will be some good fish later.

The reports from Sebago Lake are better. Mr. Stevens, a Portland sportsman, took there last week a salmon weighing 11½ lbs. A Norway dry goods merchant took six salmon there last week, the united weight of which was 31 lbs. But high line at Sebago, so far this season, belongs to Mr. Rodney P. Woodman, of Boston. He is just back with a record of nine landlocked salmon and three red-spot trout. His salmon weighed from 3 to 6½ lbs., and several of them went to make his friends happy. Mr. Woodman is more pleased than ever with Sebago, and speaks in the highest terms of his guide, Arthur J. Shaw, of South Naples. He also has many kind words for his landlady, Mrs. Lewis Crockett, at the same place, who is usually crowded with fishermen, for the simple reason that she looks after their comfort and knows how to broil a salmon "fit for a king." South Naples is one of the beauty spots of the beautiful Sebago. It is easily reached by rail—Boston & Maine to Portland, thence to South Baldwin, South Baldwin by Wm. B. Chute's stage to South Naples. The best fishing location is two miles from Songo Bay, near Muddy River. Mr. Woodman says that the best time is now on, and that the fishing will be good till June 10 at least. Guide Shaw feels sure that a great many salmon are to be taken there this spring. The Sebago is now very high, fully 12 ft. above normal, by reason of the freshets and the repairs on the mills and dams. This is regarded as very favorable to the salmon fisherman.

Grand Lake and Grand Lake Stream, or the Schoodics, are popular with the landlocked salmon fishermen this spring. Mr. William Beggs, with his friend, Mr. Hoyet, started for that location on Wednesday. Henry Savage, with William P. Tenney, were to start for the Schoodics on Friday. They go with great expectations, and it is hoped that they may get their share of salmon. All the minor salmon ponds and lakes in Maine and New Hampshire are clear of ice, and on some great sport is reported. Mr. E. G. Gay, of the Willows, Farmington, writes Richard O. Harding that there is great fishing at Varnum and Clearwater ponds. On Monday six salmon, four trout and four lakere were taken. Every day last week from ten to twenty salmon and trout were caught. Henry Fuller, one of Rangeley's best guides, took Tuesday evening three trout on a fly, a most unusual thing so early in the season. Those ponds were once almost given over to pickerel, but restocking with salmon and trout seems to have redeemed them. At Lake Maranocook, near Winthrop, there has been some good fishing. Hon. L. T. Carlton, lately appointed Fish and Game Commissioner, took several fine trout there a few days after the ice had departed.

The Rangeley Lakes are clear of ice at last, indeed rather earlier than anticipated. A special from J. A. French on Wednesday stated that the ice left Lower Richardson Lake, one of the Rangeleys, on Tuesday. This was unexpected, since the ice was not even out of Moosehead. Saturday evening a special from John B. Marble, of the Rangeley Lake Hotel, stated that the ice left the lakes, Rangeley and Mooselucmagantic, that afternoon. E. B. Whorff telegraphed Saturday evening that the ice is out. Capt. Fred. C. Barker sent a special Saturday, saying that he succeeded in getting through with his steamer to Haines Landing on Friday, but that there was a good deal of ice in the lake. Hence the real clearing of the Rangeleys this year cannot be dated earlier than May 9, not far from the estimates I have been able to give the FOREST AND STREAM, putting the probable clearing at the 10th. On former seasons for the past fourteen years I have kept a record of the clearing of the ice from those celebrated trout lakes, and have published it in the FOREST AND STREAM. Almost every paper in Maine has stolen the record and credited it to its own files, though no paper has ever had a word about it till a few years ago. In one case a country sheet claims the record from its own files, when in fact the paper was not in existence till several years after the record begins. The record is as follows: In 1882 the ice went out of the Rangeley Lakes May 12; in 1883, May 14; in 1884, May 13; in 1885, May 15; in 1886, May 3; in 1887, May 16; in 1888, May 21; in 1889, April 30; in 1890, May 9; in 1891, May 10; in 1892, May 4; in 1893, May 20; in 1894, May 2; in 1895, May 6; in 1896, May 9.

Moosehead Lake is also clear of ice. On Friday evening a special from Greenville stated that the lake was clear and that the steamer had succeeded in getting down from Kineo. Later, O. A. Dennen telegraphed from Kineo that the ice was all clear and that the steamers were running. Boston parties are not generally rushing off for Moosehead as soon as the ice is out, but a few took the train Saturday. The Produce Party will not go till later. Neither will the Linder Party go till after the fly fishing has begun. The record shows that the clearing of Moosehead has been as follows for the past eleven years: In 1885, May 9; in 1886, May 1; in 1887, May 15; in 1888, May 23; in 1889, April 29; in 1890, May 10; in 1891, May 13; in 1892, May 1; in 1893, May 19; in 1894, April 30; in 1895, May 6; in 1896, May 9.

BOSTON, May 9.—It is said that the present spring has been a wonderfully good season for snipe. The birds have been very plentiful, and the reasons given are that the meadows have been in exceptionally fine condition, left so by the receding waters of the early spring freshets. Again, the birds have been kept back on their Northern flight by the strong and persistent east wind which has blown steadily for almost four weeks. All that have been killed have been in prime condition, and the Boston gunners have had rare sport.

Charles Schworer visited the celebrated Purgatory

Meadows, between Canton and Readville, a short time ago, and in one day killed eighteen out of nineteen birds started. A few days later he went again to the same place with W. B. Farmer, of Arlington, but on this occasion they only bagged six birds. Mr. Schworer concludes from this that the birds have at last got away for their Northern haunts. A Mr. Patten, of Salem, while out shooting near this city some days ago killed a white or albino snipe. It is pronounced an exceedingly rare specimen, and is highly prized by the lucky shooter.

Besides being strongly attached to the gun, Mr. W. B. Farmer is devoted to angling, and gets away each spring, shortly after the ice breaks up, to one of the New England lakes. Accompanied by his friend, Thos. Dickson, of Boston, he left on May 6 for Lake Winnepesaukee to spend a few days fishing for togue. On his return he will go to the Rangeleys, where he has been for several successive years. He had great luck there in trolling last season, taking one of the heaviest strings of fish that was captured during the early fishing.

May 7 witnessed the departure of the Sebago Club for a few days' fishing at Sebago Lake. The club have a fine house on the shore of the lake, where they put up in truly home-like fashion. An outline of the largest salmon caught by a member is posted up on the wall, with the weight in letters of fire, and it is the constant effort of every man to beat that record and become high line. The gentlemen who left on this trip are Judge S. A. Bolster, Chas. A. Dean, Chas. B. Gookin, Chas. Mitten, Edgar Harding, Wm. Paine and H. S. Fisher, all of Boston. All of these men are members of the club except Mr. Mitten, who goes down as the guest of Mr. Fisher.

The big 8 lb. brook trout speared a short time ago at Lake Quinsigamond, near Worcester, has been handsomely mounted by C. K. Reed, of that city, and is now on exhibition in one of the windows of Dame, Stoddard & Kendall, in Boston, where it is attracting a great deal of attention. It is of peculiar shape, being quite short, but extremely large in girth. The Hon. E. B. Stoddard, of Worcester, had it mounted, and will present it to the Worcester Natural History Society, where it will rest as evidence to show coming generations what the local waters can produce in the way of mammoth trout.

The Inglewood Fishing Club have sent out notices to members stating that the new club buildings erected since the fire are ready for occupancy. The fishing season on the preserve will open about the 15th. One party will leave Boston by steamer on the morning of May 27, and others are expected to follow a little later. The club members are mourning the loss of their vice-president, Mr. Henry C. Brigham, who died very suddenly about ten days ago. Mr. Brigham had been a director ever since the club started, was a true and earnest sportsman, and will be sadly missed by a host of friends.

A party of Lynn men, consisting of Johnson C. Walker, E. E. Strout, W. Henry Hutchinson and R. H. Wheeler, went down to Hyannis last week and, engaging Capt. Sturgis's yacht, made a trip to Muskeget Island, where they spent five days in shooting. The first day they killed eleven brant, the second day eight brant and five sheldrake. With the remaining days of their stay they made up a total of three dozen birds, with which number they felt well satisfied. Mr. Hutchinson, with his friends C. Thompson, Marshall Nelson and J. C. Cochey, also of Lynn, are all ready to leave for the Upper Dam in the Rangeleys as soon as word comes that the ice has gone.

Another party who will go to the Upper Dam about the 16th consists of W. P. Clark and Rufus Brown, of Peabody; Frank White, of Brockton, and W. D. Brackett, of Boston. This makes the twenty-sixth year's fishing of Messrs. Brackett and Clark together from the same boat—a record unparalleled among New England anglers.

The Grand Lake fishermen are getting under way. One of the first parties to leave, consisting of P. B. Mansfield and J. M. Hoyt, of Lynn, and William Beggs, of Woburn, Mass., started on the 9th. They will spend ten days among the salmon, and as this is only one of many other visits to the same waters they should do well and come back with salmon to burn.

The Gallier party, of Boston, leave on May 13 for their annual trip to the Katahdin Iron Works. They will spend ten days in this rich fishing region, and their only hope is to have as good a time this year as they have had in their many experiences of the past. There is nothing demure about this crowd of congenial gentlemen. The fun begins as soon as they leave Boston and never stops until the return trip is completed. The party is made up as follows: Edward Nash, William Garrison Reed, Harry Hooper, Cyrus Elwell, Col. H. M. Benson and J. F. Gallier, all of Boston.

Fishing for big lake trout in Lake Winnepesaukee will be the sole occupation for the next few days of a party consisting of J. Waldo Page and William L. Clark, of Jamaica Plain, Mass., and Fred. Mitchell, of Lowell, Mass. They will go to Laconia on the lake shore, and take boats at that point for their trolling. HACKLE.

An Angling Millennium.

ONE of the features of the Hungarian Millennium Exhibition, now in progress in Budapest, is a display of fishing resources and appliances. Of this the London *Fishing Gazette* writes: "One section will be exclusively devoted to a living exhibition of all those native animals which have furnished sport in the country any time these thousand years. The Hungarian is preëminently a born piscator. He was a fisherman, and a skillful one, more than ten centuries ago; that is to say, while he still remained a half-civilized Magyar in the Ural Altai Mountains, and ere yet he had crossed the Carpathians, and, by dint of his fierce and stubborn steel, conquered the territory which his children inhabit to-day. In his primeval, ante-Hungarian mountain home, he had only two things to offer him that amusement requisite to preserve anyone from absolute ennui—fishing and fighting. He may not inaccurately be said to have fished with a line in one hand and a dagger in the other—for he had to keep his weather eye open for the possible descent of one of his enemies while he was engaged in the gentle and peaceful art of landing those huge specimens of fish which abounded in the valley streams. The Hungarian's instinct for the Waltonian sport is thus a traditional, an historical, and almost a pre-historical thing. Not, however, that when the ancient Magyar came to reside in Hungary he found that his new home was less prolific in splendid fish than the one which he had quitted. There are scores of noble rivers in Hungary where the fish are simply waiting, and almost longing, to be caught. As to the Tisza,

there is a Hungarian proverb to the effect that three parts of this river are fish and one water. "Is not the Danube, moreover—to take one other instance—superabundant in the loveliest and hugest fish which ever flapped a fin, or ferociously gorged a bait? In England, where we are huddled up so close together, and where the angling waters are inadequate to supply fine sport to the annually increasing army of rodsman, the cry is necessarily "Preservation" and "Re-stocking"—but for these precautions we should, in a very few years, find nothing but a few small "scrapers" extant. But there is no such danger in the broad domain of Hungary. It goes without saying that the fish in the comparatively unfished streams of Magyarland run to very much greater dimensions than our own—taking, that is to say, those fish (and they are innumerable) which are common to both Great Britain and Hungary. You may talk about the feathers which you tie together and fling to your salmon on the Tay or the Shannon, but on the Danube, if you are fishing for wels (which run up to 300 lbs. in weight), you do not bait with a few feathers plucked from a bird's wing, or tail, or breast, but with a whole live duck or goose.

The most verdant angler will find that even from the shores of Budapest itself he can—fishing entirely according to English methods—secure some remarkable bags. Every British angler, however, is a sportsman, interested in every branch of sport. Plenty of anglers who have gone to Hungary for the purpose of fishing have varied that amusement by the delight of pig-sticking; and the boars in Hungary are magnificent fellows, who do not yield the palm to their brethren in the Teutoburger Forest of Germany. The Hungarian boar is quite a character study in himself. He dies hard and game to the last gasp—even as he expires, his eyes flash and his nostrils snort defiance at you. He is mightily conservative too. If he feels a tickling in his thick hide, do not imagine that he will go and rub himself up against the nearest tree. Not a bit of it. There is some old oak or beech tree situated, perhaps, at a distance of a mile, where he has been accustomed to rub himself all his lifetime and where his ancestors rubbed themselves before him. Consequently, when the inconvenient tickling in question takes possession of any part of his hide, he trots off to the distant tree; you can see that he and his forefathers have rubbed quite a cavity into the bark.

A Webster Fishing Story.

IN the Rochester *Democrat and Chronicle* we find the following reminiscence of Daniel Webster as a fisherman. It is told by a Mrs. Dawes, a resident of Marshfield in Webster's time. Webster, she says, used to walk around his farm wearing the poorest clothes he could find, and always with a large colored handkerchief wound around his throat.

He owned two or three sloops and one small smack. When home from Washington his favorite pastime was fishing. Mrs. Dawes's uncle, William, was a cripple. He was exceedingly popular with the neighbors and also with the great statesman. Webster and Uncle Bill, as Mrs. Dawes's uncle was familiarly called, could almost always be found in each other's company, at least during the fishing season. Mrs. Dawes said that many times she has stood on the shore of the bay when Webster, coming down on the other side, dressed in torn clothes and the seldom absent handkerchief, would sing out in his deep voice, "Come on, Uncle Bill, let's go out on the bay fishing."

Fine breeds of cows, hogs and horses were bred by him; and his farm was known as one of the most fertile tracts in that portion of the State. He would, in the spring of the year, send one of his sloops out onto the bay after menhaden, which he used, as did the Indians, as a fertilizer. Webster would cause sloop-loads of this fish to be spread over his land, with ashes obtained from the north of Boston.

One day, when Mrs. Dawes was still a young woman, Webster and her uncle were busily engaged in fishing near the shore of the bay. She was walking along the bank when a stylishly dressed young man from Boston, who had been visiting at Marshfield, fell into the marsh. It was extremely difficult to walk across the bog at any time without sinking into the soft mud, much like quicksand. The youth shouted across the bay to Webster, asking how much the latter would take to pull him out of the mud and carry him across to the opposite side. "A quarter," replied Webster. After depositing the swell safely on the other shore he received the quarter and turned to go away. "And to whom am I indebted?" cried the unfortunate rusticator. "Only Daniel Webster," replied the famous lawyer. It was hard for the youth to believe that the poorly dressed fisherman standing before him was the same man whose name was perhaps the greatest in America at that time, but after having been convinced of its truth he apologized for his former patronizing air.

Shad in the Delaware.

PHILADELPHIA, May 7.—*Editor Forest and Stream:* Through the courtesy of Mr. Henry C. Ford, I inclose you the letter from Fish Warden Miller, who has charge of the Delaware River in the vicinity of Lackawaxen. It is to be regretted that the New York Fish Commission thought unadvisable to repair the fishway on the New York side of the river, as the one on the Pennsylvania side is giving such good results. The introduction of the fishways at Lackawaxen has successfully demonstrated the idea that the shad would use them. The co operation of the New York Commission is evidently needed for the protection of the ascending fish, and I trust the Commission will before another year deem it advisable to repair the fishway on the eastern side of the river. R. M. HARTLEY.

LACKAWAXEN, May 1.—HON. HENRY C. FORD.—*Dear Sir:* I have been staying here all of the week and part of last week. The river is alive with shad, and they are rushing through the fishways and over the dam by tons. The aqueduct and banks are lined with men from Port Jervis to Hawley, with spears, ready to pounce on them if I turn my back. Some days I go without my dinner and have it brought to me, and last night I couldn't leave for my supper until 8 o'clock. Sometimes a man will rush in and spear a couple and get into the crowd, when it is an utter impossibility to make an arrest, so you can judge what kind of a time I am having. J. M. MILLER.

Salmon Fishing for Sale. FREEHOLD, on the best fishing waters of the southwest Mirimichi River (Burnt Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York city.—*Adv.*

BENCH SHOWS.

May 20 to 23.—Alameda County Sportsmen's Association's show Oakland, Cal. H. W. Newton, Sec'y.
Sept. 7 to 11.—Toronto Exhibition Association's eighth annual show, Toronto, Can. C. A. Stone, Sec'y of bench show.
Sept. 22 to 24.—Milwaukee Kennel and Pet Stock Association's second annual dog show, Milwaukee. W. W. Welch, Sec'y.

FIELD TRIALS.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.
Sept. 9.—Kennedy, Minn.—Continental Field Trial Club's chicken trials. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 9.—Brunswick Fur Club's annual meet. Bradford S. Turpin, Sec'y.
Oct. 26.—Hempstead, L. I.—National Beagle Club's trials. Geo. W. Rogers, Sec'y, 250 W. Twenty-second street, New York.
Oct. 28.—Greene county, Pa.—The Monongahela Valley Game and Fish Protective Association's second annual trials. S. B. Cummings Sec'y, Pittsburg.
Nov. 2.—Bicknell, Ind.—Continental Field Trial Club's quail trials. P. T. Madison, Sec'y.
Nov. 2.—Oxford, Mass.—New England Beagle Club's trials. W. S. Clark, Sec'y, Linden, Mass.
Nov. 16.—Newton, N. C.—E. F. T. Club's trials. S. O. Bradley, Sec'y, Greenfield Hill, Conn.
Nov. 17.—Chatham, Ont.—International Field Trial Club's trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 23.—Newton, N. C.—U. S. F. T. Club's fall trials. W. B. Stafford, Sec'y.

A NEW HAMPSHIRE FOX HUNT.

LEBANON, N. H.—We have several fox hunters in our place, and three or four of us made our plans to go out fox hunting.

We have a young dog named Victor, or Vic, as he is generally called, who never hunted foxes until last fall, and so of course has not got all the tricks learned yet. He is a thin-haired, smooth-coated dog, and very sensitive to the cold. He is small in size, does not run very fast, and foxes do not appear to be very much afraid of him. We had not been out for several days. Wanting some exercise, I took Vic and my gun and started for a hill about two miles from the village, called Bass Hill, to see if the foxes were making any holes in the snow in that country or not—intending, if I found plenty of sign, to go there some day for a hunt. I had been on this hill several times in the fall, but had not been there since snow came.

As soon as I got out of the village, on higher ground, I found that the wind was not strong enough to fill the air with snow, but the latter was drifting along close to the ground all the time, and would fill a track very quickly. I did not find a scratch until I got to a small hill northwest from Bass Hill. There I found where two foxes had been playing and chasing each other all around and over the top of the hill.

The snow had blown pretty much all off on the hills, down to the hard crust underneath, so that Vic could not do much of a job at following; but by swinging around the hill into the hollow between Hough and Bass hills, we found where both foxes had gone toward Bass Hill.

There is a large piece of woods on the north side of Bass Hill, called Lowe's woods, where foxes used to lie a great deal, and I thought these might have gone there. Right above this piece of woods stands a large elm tree, near the fence that runs north and south over the top of the hill, and foxes going onto the hill from the woods most always go within gunshot of this elm.

I thought I would keep Vic with me until I found out if the foxes had gone into the woods. If they had, I would let the dog go, and get to the elm as quick as I could; and if they had not, I would give it up and go home, as I had found out what I wanted to know, viz., whether there were foxes there or not; and I knew it would be useless to try and drive a fox with the wind blowing as it did that day and nothing but crust on the hills.

I do not know how it is with my brother sportsmen, but with me there is always a kind of fascination in following tracks in the snow, and the harder they are to follow the more I want to follow them; so that, although I soon found the tracks, did not lead into Lowe's woods, but kept on over Bass Hill, instead of going home, I kept following on.

After we got up on the hill Vic could not get ahead much; but, knowing the route foxes usually took over the hill, and swinging this way and that, finding a track here where they had crossed a drift alongside the wall, or there where they had stopped under an apple tree to eat a frozen apple, and sometimes a scratch of their claws on the hard crust, I managed to follow them over Bass Hill to the south end. There I lost them. Swinging for them in the hollow beyond, we found a single track. Vic, as soon as he stuck his nose into it, said it was a better one than those we had been following. It was full of snow, but the scent was strong enough, so that he followed it at a fair jog with but little help.

The track led on south to Methodist Hill, and I judged from the course he was following that he was headed for a ravine on the west side of the hill, where I had jumped a number of foxes before. The field that the fox went through on his way to the ravine was quite a good run-way for foxes coming onto the hill from the west side; so, as the scent was so good here that the dog followed it without any help from me, I stayed back, thinking that if Vic jumped the fox in the ravine he might come back onto the hill. I had waited but a few minutes when I heard Vic break out, and knew the fox was afoot.

There was quite a long stretch of open country below me, and at the foot of it was a round, bare knoll, around the back side of which I could hear Vic driving; but he soon turned, and I could hear him coming toward the top of the hill. I looked around for something to get behind, out of sight. I was in the middle of an open field, and there was nothing there but a small heap of stones, with a few raspberry bushes sticking out of it. I got down behind that and made myself as small as possible; but do the best I could, I could not cover more than half my body.

By this time I could hear Vic coming over the top of the knoll, and began to look with all the eyes I had for the fox; but no fox could I see until I looked way back to what seemed but 3 or 4 ft. from Vic's nose, and there I saw the gentleman. He would run along for 8 or 10 rods

and then turn and wait for the dog, or run back toward him and jump at him, then turn and go on again. It looked sometimes as though the dog almost had him in his mouth before the fox would turn and run. Some of the time the fox would come straight toward me; then my heart would jump into my throat; then he would turn and go off to one side, and my chin would drop down to my knees. They had about a third of a mile to come in this way, and any brother fox hunter who has "been there" knows all the different alternations of hope and fear, joy and despair, a man can experience under such circumstances.

When the fox got within about 60 yds. of me, I got the gun to bear on him and kept it there, expecting every instant that he would see me and turn. I calculated if he saw me to let him have it as he turned; if he did not, to let him come as near as he would before I shot. He came on until he was about 50 yds. from me; then up went his head, flop went his tail, and away he started. I pulled. Click! The primer did not explode. I pulled the other barrel on him; but it was a long distance and a rear shot, and I don't think I touched him.

If there is anything in the sportsmen's vocabulary any stronger than the modern or ancient "eheu" to express a poor fellow's feelings on such an occasion, I think then would have been an eminently proper and fitting time to have used it.

Perhaps that fox did not make tracks out of there. A long ways apart those tracks were too. They pointed back toward Bass Hill. About this time the wind began to blow stronger and stronger, and by the time Vic got on the south end of Bass Hill it blew a smart gale. The air was full of snow, and when the particles struck one in the face they stung like nettles. They got into one's eyes, hair, pockets and everywhere they had the least chance to get. Vic got on to the south end of the hill, but could not get further with it. After some time he came back to me all curled up with the cold, his eyes and hair full of snow, a most disconsolate looking "pup."

I started for home, never expecting to see the fox again—that day at least. The nearest way home was back over Bass Hill. The wind was in the northwest. I had to face it all the way home. I got along very well until I got near the top. There the wind and snow were too much for me; I gave it up. It was more than Vic wanted too. He would shake his head, run into all the hollows and behind the rocks—anywhere to get out of the way of it.

I turned and started for the east side of the hill, intending to keep down low on that side until I got to Lowe's woods; then I could get along all right. I got down to some scattering trees about halfway down the hill, with Vic trying to protect himself from the wind and snow behind my heels, when all at once Ow-o-o-ow! ow! I looked around. Vic was flying around like a hen with her head cut off. I went back and found a fox track full of snow. I followed it backward for a piece, and found it came down from the top of the hill. I made up my mind it was made by the fox Vic drove on there, and that he started to go over the top of the hill, as they usually do, but did not like the wind and snow; so got over on the east side, same as I did, to get out of the way of it. While I was looking to see where the track came from, Vic was trying to pick it up the other way, and finally got it to a small sugar orchard; kept along by the edge of this over into the hollow beyond, out of my sight. I waited some time for him to come back, but he did not come. I could hear him bark every little while, but the sounds all seemed to come from about the same place. I was anxious to get down off the hill out of the wind, so I went back to the edge of the woods where I saw the dog last to try and get him.

When I got there I could hear him in the hollow beyond. I went along a few steps further, and I could see him swinging back and forth trying to get the track away. I was just about to call to him when I saw something that looked like a fox's ears just sticking up above the edge of a drift between the dog and myself. Thinking it impossible it could be a fox, I took another step toward it; and there, sure enough, lay Mr. Fox stretched out flat on his side watching the dog. He was quite a distance from me, and all I could see of him was part of his head and about an inch along his back. I think now I could have walked up within good gunshot of him. The wind made so much noise in the trees, and he was so deeply interested in the dog, that I do not think he would have heard me; but the wind was blowing nearly toward him from me, and I was afraid he would smell me, so I unhitched at him from where I was. He got up and out of there lively, and started for the top of the hill; just as he got to the edge of the woods I gave him the other barrel. I did not make allowance enough for the speed of reynard and the wind, across which I had to shoot, and so shot behind, hitting him in the hind quarters. He tumbled over, got up, and began whirling around and biting his hindlegs. I broke open my gun, put my hand in my pocket for another cartridge (I had but one left, hardly ever carrying more than four fox hunting) and found my pocket full of snow and a coating of ice froze all around the shell, which was a brass one. Another chance to say "eheu." I tried to scrape the ice off with my thumbnail, but it was too hard. Then I held it in my bare hand, closing my fingers over it tight, trying to warm it enough in that way to scrape the ice off.

In the meantime the fox had quit biting himself, and sat there broadside on watching the dog, who was still in the hollow below. And there I stood right in plain sight, not more than 35 yds. from the fox, trying to thaw out that shell, expecting every instant the fox would see me and run, or that Vic would come up and scare him.

Just imagine yourself there.

I got the shell thawed out finally, so that I scraped off most of the ice, the rest peeling off when I shoved it into the chamber. I tried to close the gun, but it would not shut far enough for the snap to catch. Some more "eheu." I tried the best I could to press it together, but it would not go. Then I pounded on the rear end of the barrels, to try and force them down. No go.

Now Mr. Reynard had endured all the rest of my fooling around patiently, but when I began to pound on the barrels with my hand that was a little too much; he gave me one look and started for the top of Bass Hill at his best speed.

I broke open my gun and found out very quickly where the trouble was. The ice that peeled off the shell when I shoved it into the chamber dropped down into the corner of the breech block and froze. Then I got out my knife,

cut out the ice, closed the gun, and went down to where the fox was when I shot at him last.

I found plenty of blood, and that the fox left blood at every jump. There was no tracking here at all—nothing but crust. I got Vic up there, but he could not make anything of it. I suppose the wind blew so hard it carried the scent away. I followed along the best I could by the blood. It was tough business facing the wind and snow, and grew worse as we neared the top of the hill. We got up to the old orchard, and looking over the fence just beyond, there was the fox, moping along 40 or 50 yds. from me. Hoping to disable him, I very foolishly fired my last cartridge at him. About the same time Vic got his eye on the fox, and away they went over the top of the hill out of sight. I hurried on to where I saw them last, and found on looking around that the fox had stopped bleeding, so I could not have that to help me any more.

I found Vic on top of the hill. He could not follow an instant after the fox got out of his sight. The wind blew a gale, the air was full of flying snow, it was almost impossible to face it. It would blow one's breath back down one's throat and chill him to the very marrow. Bowing my head to the blast, I started over the top, swinging to the right and left to see if I could find any trace of the fox. I found once in a while a track full of snow, but I was confident they must have been made by the fox. I found also one or two places where the fox's claws had scratched the crust when he was running. I followed on in this way until I got on the north side of the hill, and there I lost it altogether. Swing which way I would, I could not find it.

I was chilled through and tired out, for it was very hard traveling some of the way. I made up my mind I should have to give it up, although I hated to, as I do not like to go off and leave anything wounded in that way. I started down toward Lowe's woods but had gone only a short distance when I saw on a little ridge below me Mr. Fox trotting along. His ears were laid back flat and he looked mad enough to bite off railroad spikes.

The reason I had not seen him before was because the air close to the ground was full of snow. He was going toward Lowe's woods, and as that was just where I wanted him to go, I kept quiet until he got over the ridge out of sight, and then ran down there. From here I could see all over the country between the woods and myself. A short distance below me was the fox still going toward the woods. I knew that he must be wounded in the hindlegs, and my idea was to get him into the deep, soft snow in the woods, where, if he did not hole, the dog might catch him. I let him get near enough to the woods, so that I thought he could not dodge the dog and get back on the hill. Then I pointed him out to Vic and told him to go it. The fox heard me when I spoke to the dog, and started for the woods at his best gait. The dog was all doubled up with the cold, and could not run much faster at first than I could walk; but as he got warmed up he began to open and shut considerably and gain a little on the fox. About this time reynard began to find snow under the lee of the woods. He did not make more than three or four jumps in it before he found out his mistake, and whirling he started back for the hill. This was my cue to come on the stage of action; so I ran to head him off, swinging my empty gun and yelling like a steam gong. It was a close race, but I put on steam and just barely got there in time, and headed him back toward the woods.

Vic was gaining on the gentleman now at every jump. The fox tried hard to make the woods, but he lost too much time trying to get back to the hill. He was within a short distance of the woods, but saw the dog was bound to overtake him before he got there; so he turned and stood at bay. When Vic came up he made a grab for the fox and got nipped himself. After that he stood back a proper distance and waited for me to come up. He kept his eye on the fox until I was close to him; then he rolled his eye around toward me, as much as to say, "I shall have to have a little help here, old man!"

The instant Vic took his eye off him the fox whirled and started for the woods again.

There was a stone wall along the edge of the woods, with a couple of rails on top of the stone. The snow was up even with the top of the wall. The fox crawled through under the rails, and, jumping off on the other side, landed in a hole in the snow, and before he could gather himself I made a grab for his hindleg and he made a grab for my hand. We did not either of us get caught. I made another grab and got him by the leg this time. Vic got hold of him about the same time and made short work of him. It was a large dog fox. On stripping off his skin I found three shot had gone through both hindlegs, but without breaking the bones. The snow stuck in the blood on his legs, and that was what stopped the bleeding. Thus ended the queerest and most exciting hunt I ever had. How is it with you? SHAWNEE.

National Beagle Club of America.

A REGULAR quarterly meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, 55 Liberty street, New York, Thursday, April 30. The members present were: President Hermann F. Schellhass, J. W. Appleton, George B. Post, Jr., A. Wright Post, H. L. Kreuder, George W. Rogers and G. Miffin Wharton.

Minutes of last meeting were approved. Communications received from Messrs. Jamison and Summers read, and on motion was laid on the table. Moved and seconded that the treasurer be authorized to pay special prizes won at the New England Kennel Club show held at Boston. At the last quarterly meeting of the club it was voted to submit the following to the members for a vote: All special prizes offered by the National Beagle Club of America to be either of cash or plate. The vote stood as follows: for cash, 10; for plate, 8; option 2.

The above failed to carry in accordance with the by-laws. Adjourned. GEO. W. ROGERS, Sec'y.

250 WEST TWENTY-SECOND STREET, New York.

In our business columns, Wanoosac Gordon Kennels, Leominster, Mass., offer Gordon setters. J. H. Folley, Paterson, N. J., offers pointer bitch. E. Spalding, Shannock, R. I., offers fox and coon dog. Muckross Kennels, Springfield, Vt., offer Irish setter bitch in whelp. J. F. Curly, Fitchburg, Mass., offers pointer bitch. Kearsarge Kennels, Elkins, N. H., offer setters, pointers and hounds.

POINTS AND FLUSHES.

In respect to a dog having the privilege of a second bite before in law he can be charged with viciousness legally, the *Chicago Legal Adviser* has the following: "Every Iowa dog is entitled to one bite free of charge. This is official, for W. F. McMaster, Police Judge of Sioux City, has announced it from the bench. It was the action of W. A. Onstat's bulldog that gave rise to the decision. He bit John Fabier in the calf of the leg a few days ago as the latter was passing his (the dog's) master's house. Thereupon Mr. Fabier appeared before the bar of Judge McMaster's court, exhibited his wound, swore that his neighbor was harboring a vicious dog and demanded an order for the animal's extermination. Then the Judge explained that while he might, without laying himself open to prosecution, have slain the brute on the spot, yet in the eyes of the State law no dog is considered vicious until he has bitten one man two or more times or two or more men once each. Mr. Fabier was considerably dazed, but he acquiesced in the court's ruling. Now he is parading up and down in front of the Onstat residence waiting for the dog to take a fresh mouthful. If he does that, the sufferer will make another attempt to secure the issuance of his death warrant."

Col. John Thomas North, commonly known as the "nitrate king," died suddenly in London on May 5. He was best known in this country as a patron of coursing and racing, his greyhound kennel in particular making him famous in the canine world from its success in winning the Waterloo Cup several times. By favor a few dogs were imported to this country from his kennel. His death was attributed to syncope, illness and death following immediately after the attack. His wealth was so enormously great that it has been variously estimated from \$200,000,000 to \$1,000,000,000; but whatever the amount, he was credited with being most openhanded and generous, in particular giving large sums to charitable institutions.

Mr. George W. Lovell, Middleboro, Mass., writes us that he has sold the pointer bitch Wild Lily to Mr. W. Gould Brokaw, New York.

The supporters of field trials should bear in mind that the Derby entries of the United States Field Trials Club and the Continental Field Trials Club close on May 15. U. S. F. T. entry, \$10 first forfeit, \$10 additional forfeit, payable Aug. 15, \$10 to start. Prizes, \$250, \$150 and \$100. W. B. Stafford, Sec'y, Stanton, Tenn. C. F. T. C.'s entry, \$10 forfeit, \$5 second forfeit, payable July 15, and \$5 to start. Prizes, \$125, \$100, \$75 and \$50. P. T. Madison, Sec'y, Indianapolis, Ind. Eastern Field Trials Club entries close on May 20. Prizes, \$300, \$200 and \$100. Forfeit \$10, second forfeit \$10, payable Sept. 1, and \$10 additional to start. Judges, H. B. Duryea, S. C. Bradley and A. Merriman.

The London *Field* states that "Austria is about to inaugurate international dog shows on an unprecedented scale at Prague, Graz, Budapest and Innsbruck. Germany and Switzerland respectively have for several years past held from four to five dog shows annually. The 'war dog' section promises to provide additional sensation, seeing that in Austrian military circles, and more especially among artillery and cavalry men, the 'war dog,' well trained, has given signal proof of fidelity, sense and endurance little short of remarkable."

The brochure of the Eastern Field Trials Club, containing the club's rules, programme, list of officers, etc., is a gem. It is most artistically complete in every detail. Here and there in it are most apt classical quotations, such as: "By sports like these are all our cares beguiled"—Goldsmith. "There's a gude time coming"—Scott. "Thou marshall'st me the way that I was going"—Macbeth. "Come, give us a taste of your quality"—Hamlet. Mr. S. C. Bradley, the secretary, is deserving of much praise for his new departure in the artistic as well as the useful.

Under date of May 11, Mr. James W. Wood, Poughkeepsie, N. Y., writes us of the death of his famous setter bitch. He writes: "I regret to report to you the death of my well-known English setter bitch champion, Donna Juanita, on May 5, from paralysis. She was by ch. Rockingham ex Donna, and bred by the Rosecroft Kennels."

When your dogs fall out and fight, separate them by hanging on to their tails. It breaks the continuity of their argument, and even a ferocious and strange dog will not bite you for assuming that his end justifies the means.—*Stock-Keeper* (England).

Mr. John Brett writes us that Cactus was not present at the Boston show, and that any mention of him as being in the challenge class of that show is erroneous.

Mr. W. S. Clark, secretary of the New England Beagle Club, writes us as follows: "Entry blanks for the New England Beagle Club's 1897 Futurity are now ready, and will be mailed to beagle breeders and owners. Should any be overlooked I will be pleased to mail them on application."

Mr. P. T. Madison writes us, under date of May 10, as follows: "My knee is doing as well as can be expected. I am now on crutches. My physician says I may be walking with a cane in two or three months. The entries to the chicken Derby are beginning to come in."

Dog Poisoners.

PITTSFIELD, Mass.—*Editor Forest and Stream*: I write just to let you know the kind of people up here, for we have some who make it their business poisoning dogs, and nothing but a full-blooded dog do they touch. In one of three houses, four dogs—two English setters, one Irish setter and a St. Bernard—have been poisoned in as many months, and still we can't locate the offender with help, although we have not given up, and we would be thankful if you could suggest something or some way to help us. T. H. BALDWIN.

[Perhaps some of our readers can suggest something of value in the matter.]

Northwestern Beagle Club.

MILWAUKEE, May 8.—*Editor Forest and Stream*: A meeting of the field trial committee of the Northwestern Beagle Club was held at Milwaukee Tuesday, May 5. The trials will be held at Columbus, Wis., beginning on Tuesday, Nov. 10. The following classes were made.

Class A, for dogs, all-age, 15 to 18 in., that have not been placed first in any all-age class at beagle trials held in America.

Class B, for bitches, all-age, 15 to 18 in., same conditions.

Class C, for dogs and bitches, all-age, 13 in. and under, same conditions.

Class D, Derby, for dogs and bitches, 15 to 18 in., whelped on or after Jan. 1, 1895.

Class E, Derby, for dogs and bitches, 13 in. and under, whelped on or after Jan. 1, 1895.

Champion class F, for dogs and bitches, 15 to 18 in., having won a first prize at any beagle trial.

Champion class G, for dogs and bitches, 13 in. and under, having won a first prize at any beagle trial.

Entries for classes A, B, C, D, E close Oct. 27. Fee to start \$5, of which \$2 forfeit must accompany entry; balance before starting of class.

Prizes for classes A, B, C, D are \$20 to first, \$15 to second, \$10 to third. For class E, \$10 to first, \$5 to second.

Entries for classes F and G close immediately before starting of class. Fee to start \$5. First prize 60 per cent., second prize 30 per cent. of entry money. The judges will be chosen at next meeting.

LOUIS STEFFEN, Sec'y.

R. I. State Fair Bench Show.

PROVIDENCE, R. I., May 9.—The Rhode Island State Fair has claimed as dates for its bench show of 1896, Sept. 7 to 11. Mr. E. M. Oldham will superintend, as last year, a guarantee that the show will be handled in a thoroughly efficient manner. The same liberality in prize money will be shown as in '95. Forty-three classes have been provided for and some few specials will undoubtedly be hung up. Spratts Patent will bench and feed, and the fact that there is a slight if any probability of conflicting dates at the time of the Rhode Island show, there should be a large and choice entry list. The bench show committee for 1896 consists of President F. E. Perkins, Earl H. Potter and W. W. Dexter. A. K. C. rules will govern, and a show of increased attraction and amplified success is already an almost assured event. Superintendent Oldham feels confident that he will have more and better dogs than last year, and as the Narragansett show now ranks with the best in the country, this is not an unwarranted expectation.

WM. HANRAHAN, Ass't Sec'y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. T. Murphy's Beauty, cocker spaniel bitch, Feb. 13, to Corktown Cupid.
Corktown Kennels.
Dot Smirle, cocker spaniel bitch, Feb. 13, to Rideau Reveller.
Rideau Restless, cocker spaniel bitch, March 28, to Red Ooo.
Mr. Flanagan's Fantasia, April 26, to imported Brock.

WHELPS.

Mr. F. E. Conlin's Conlin's Baby, English setter bitch, whelped, March 27, eight (five dogs), by champion Sheldon.
Mr. E. Eldert's Duchess, English setter bitch, whelped, April 26, thirteen (nine dogs), by champion Sheldon.
Warwick Kennels' Nellie Llewellyn, English setter bitch, whelped, April 27, ten (seven dogs), by champion Sheldon.
Mrs. E. E. Beauche's Jessie, English setter bitch, whelped, April 20, thirteen (nine dogs), by champion Sheldon.
Mr. N. Knott's Nellie Bondhu, English setter bitch, whelped, March 19, —, by champion Albert's Ranger.

SALES.

Mr. Henry A. Estabrook has sold Kitty D., Gordon setter bitch, to Wanoosuc Gordon Setter Kennels, Leominster, Mass.

New York Game Law.

ALBANY, May.—Since the last issue of *FOREST AND STREAM* the Governor has signed these bills:

Senator Brown (S. 927), amending the game law so that the Fish Commissioners may permit persons owning or in charge of private grounds, reservoirs or the waters of the State, the privilege of taking therefrom carp, pickerel or other deleterious fish with nets and other devices, or by drawing off the waters from said ponds or reservoirs.

Assemblyman Sanger (A. 1337), prohibiting the catching or killing of any beaver, and providing a fine of \$50 therefor.

Senator Guy (S. 1052), adding to the game law special provisions as to the waters of the Thousand Islands.

The bills limiting deer jacking and bounding to two weeks are in the Governor's hands.

Yachting.

AFTER passing the House, as related last week, the Payne yacht bill was favorably reported by the Senate Committee on Commerce, and is now under the protecting care of Senator Frye. As this "born sportsman" was the author of the "Frye Bill" in 1891, which proposed to hamper and restrict even American-built yachts by burdening them

with additional red tape, and forbidding to the smaller yachts the privilege of flying the national ensign, there can be no doubt as to his efforts in behalf of the Payne bill.

The main object of the new bill, as explained by Mr. Payne in advocating it, is to prevent foreign competition. It is a most unfortunate thing for this country that those in charge of its navigation laws and shipping interests for more than a generation have been so narrow in their views and so wedded to particular theories that they are absolutely blind to the plainest lessons of history.

Those who will take the trouble to look up the record of American progress in naval matters throughout this century will find one fact that is prominent above all others, that the very soul and life blood of American progress has been that "foreign competition" which the American builder and his ally in Congress have labored for years to prevent. The fame of American ships and American sailors on the high seas and on the Great Lakes began in 1812 with the construction of fast privateers and gunboats and the bold and skillful maneuvering of both, the infant navy, manned by seamen and fishermen unused to war, defeating the British fleet alike on salt and fresh water.

A little later and America began to compete with Britain for the carrying trade, in a few years catching up with her older competitor, and then taking the lead with the American clipper ships and holding it in face of strong competition for over a generation.

When the steamship first appeared in ocean commerce, though all the odds in the shape of established plants for iron working and engine building were on the side of the older nation, the American steamship proved a formidable competitor for a time in the ocean trade.

Both the science of naval design and the art of naval construction reached their highest development in the fifties, with the American flag flying over American clipper and packet ships in every port of the world, the Collins Line of steamers in the Atlantic trade, the shipyards of New York turning out the finest warships afloat for various European governments, and the American yacht triumphant in the English Channel.

The many minor causes which have brought about such a condition of affairs as has existed for thirty years, and exists to-day, may nearly all be classed under one head—the absence of foreign competition, whether through altered conditions of trade, of mechanical art, or of legislation.

An example directly to the point may be found in the history of American yachting; its first growth began in the successful competition of the schooner America with the British fleet, in 1851. For various reasons international racing received little attention in the thirty years up to 1881; and, left entirely to themselves, American builders produced a type of yacht that in design, construction and equipment was little better than a national disgrace. The awakening came in 1881 through the visit of a small British cutter and her victories over the home craft; then came the renewal of international racing on a larger scale through the visits of the big cutters Genesta, Galatea and Thistle, each meeting defeat from an American craft of a new type called forth by the exigencies of the occasion. If they did nothing else, the victories of Puritan—the work of a new man, and based on new ideas—demonstrated how little the American yacht builders of the day, from 1870 to 1885, knew of their business.

Another instance in a very different class of vessel, that of the new American navy, built within the past ten years. For twenty years after the Rebellion the progress of naval design in America as applied to war vessels was plainly and distinctly backward. That its direction has now been altered and its speed increased is due to what? To the keen competition with the British designs from which the first of the new American war ships were built a few years since. Who did the work? Not the old hands, under whose management the navy had rotted and rusted away to a mere memory, but a body of keen, bright, young Americans who received abroad, through the courtesy of the British Government, the technical education which their own country did not afford. It is these men, taught mainly in British institutions, and working originally on British plans, that have in so short a time surpassed their teachers, just as American yacht designers, when once they were allowed to adopt British ideas, so soon outstripped the original models.

What has been the case in the smallest class of craft; the canoe, originally imported from England, has reached a wonderful development in America, defeating the best of the British craft in two international races; and last year the same has been seen in another class of English origin, the victory being with the American craft.

The more closely we study the work of his predecessors in many types of vessels, the less of an opinion we have of the American ship-builder of the present day—the one who asks for protection from a competition which he should welcome. So busy is he in recounting his grandfather's victories over the British privateers, and his father's achievements in the American clippers, that he cannot see the great vessels that now carry the British flag where once the Stars and Stripes were seen. While he has been talking about the glories of the clippers and building a lot of steamers of small tonnage for the coasting trade, his British rival has been setting afloat the Umbria, Etruria, Majestic, Teutonic, Lucania and Campania, with a countless fleet of successful tramps and freighters for all classes of commerce.

Those who are of the opinion that the science of naval design has progressed in this country during the past thirty years will find a fruitful field of study in the joint fleets of steamboats of the Hudson River and Long Island Sound. Let them take the old Mary Powell and compare her with the big Adirondack, launched last year and not yet completed, and say which represents the highest amount of skill. Let them take the performances of the latest Sunn steamers and compare them with those of the boats of thirty years since. The ship-builder of to-day has at his command metals of the highest quality and obtainable practically in any size and shape; he has steam hammers, lathes, bending rolls and special machinery never dreamed of by his predecessors, with the aid of electricity to drive his portable tools and light his work. Is the work of as high an order, considering these facilities, as was turned out in the old shipyards in the days of wood or the first days of the iron era?

The one thing which serves most to conceal the faults of design in the steamboat fleet, for example, is the progress in marine engineering, which has been far in advance of that in shipdesigning proper. Without their modern boilers and engines, without the fictitious aid of electric light, stained glass and over-ornamentation in their great saloons, the modern Sound and river boats would compare but poorly with those of thirty years' service. The absence of competition in this class of vessel is due purely to natural causes; but it is none the less a fact that through such absence the builders have done nothing to improve the model and have even retrograded.

Those who will look carefully and impartially over the history of American shipping for a period of almost a century will discover two important facts. The first of these is that when spurred on by foreign, which means British, competition, the American soon takes the lead and holds it as long as the contest continues. The second is that, lacking such competition, he becomes lax and drops into a rut whence it is hard to stir him; he retrogrades, as from the America to the Mohawk; from the Great Admiral, and other war ships built by Wm. H. Webb, to the war ship Trenton—a back number before she was launched; from the Mary Powell to the Adirondack.

To the true American there is something to be proud of in the skill and energy with which the little coasting schooners were converted

into successful privateers, and the fleet of Lake gunboats built in 1812; in the long contest of the American clippers against their foreign rivals, in the boldness and pluck displayed in the building and racing of Puritan. Compare all this with the position of the American ship-builder before Congress to-day; with an equal plant to that of his rival with even superior material, with the difference in wages largely offset by the altered conditions of labor in this country, with the waters of the world open to him if he can command them by his skill; but shirking the contest and asking protection for the toy shop affairs that he calls steam yachts.

THERE is something very funny in the name chosen by C. D. Rose, who last fall challenged in haste and repented at leisure, for his new 54-footer, I. R. She is to be called Penitent.

THE joint committee of the Lincoln Park and Royal Canadian clubs has decided on Toledo as the location for the race between Vincendor and the new Fife cutter. The dates selected are Aug. 24, 25, 26.

Paralos.

BULB-FIN 30-FOOTER, DESIGNED BY G. B. WILBUR.

THAT the bulb-fin yacht has certain important advantages both in construction and in a form peculiarly adapted for speed is quite as certain as the opposing fact that the excessive draft of many yachts of the type make them useless for cruising and general work. In the FOREST AND STREAM of Feb. 1 was illustrated a very successful experiment in the direction of a bulb-fin craft of moderate draft, the cruising cutter Palmyra, designed by Mr. George B. Wilbur, of Taunton, Mass., and owned by Mr. Wm. F. Palmer. The yacht here illustrated is an earlier experiment in the same direction, having been built for the same owner in 1894. Paralos, as she is named, proved an excellent craft in all respects, and, as the lines show, possesses very satisfactory room for a cruiser, the form being such that every inch of space is available. The fin and rudder are remarkable, the former from its small depth—but 3 ft. below the keel amidships—and the latter from its position—hung directly on the after edge of the fin. The result of this radical experiment, the first of the kind in this country, was very satisfactory, the yacht steering admirably, though being very quick on her tiller. The draft to the designed waterline, 30 ft., is just 5 ft.; but the yacht was trimmed intentionally deeper in use, making the waterline 32 ft. and the draft 5 ft. 4½ in. The dimensions are:

Length, stemhead to taffrail.....	42 ft. 7 in.
L. w. l.....	30 ft.
Overhang, bow.....	6 ft. 3 in.
counter.....	12 ft.
Beam, extreme.....	11 ft. 5 in.
L. w. l.....	5 ft.
Draft, extreme.....	4 ft. 7 in.
Freeboard, bow.....	2 ft. 6 in.
lowest.....	2 ft. 9 in.
transom.....	8.10
Displacement, tons.....	.29
coefficient.....	4.05
Ballast, iron keel, tons.....	1,520 sq. ft.
Sail area.....	25.10 ft.
Sailing length.....	253.16 sq. ft.
Area, l. w. l. plane.....	40.00 sq. ft.
lateral plane.....	15.23 sq. ft.
midship section.....	16.50 ft.
Fore end of l. w. l. to—	
Midship section.....	15.25 ft.
C. B.....	15.25 ft.
C. L. R.....	5 ft.
Mast center.....	31 ft. 9 in.
Mast, deck to hounds.....	14 ft.
pole.....	16 ft. 6 in.
Bowsprit, outboard.....	29 ft. 10 in.
Boom.....	28 ft.
Gaff.....	27 ft. 6 in.
Spinnaker boom.....	

The keel is 3 in. thick, in one piece from stemhead to transom. The frames are 2 in. square, spaced 10 in., with angle iron frames in wake of chainplate. The deck is braced by diagonal steel straps.

The planking is of yellow pine, finishing 1½ in. thick. The cabin is elegantly finished in butternut and mahogany.

In spite of its fullness the form has been carefully modeled to secure a good balance of the ends when immersed by heeling, and also easy fore and aft lines at all inclinations.

Paralos was sold to make way for the new boat, Palmyra, and the latter is now in turn on the sale list, to be replaced by Paradox, a new craft of the joint design of Mr. Palmer, her owner, and Mr. Wilbur. She will be of the same general type, a powerful bulb-fin with pole-masted rig and shoal fin. Her approximate dimensions are: Over all, 49 ft.; l. w. l., 34 ft.; beam 13 ft.; draft of hull, 2 ft. 3 in.; extreme draft, 5 ft. 3 in.; displacement, 11 tons, over 50 per cent. being in the fin and bulb. The forestaysail will be long on the foot, and set with a club, so as to tend itself. She will have the same balanced rudder as Palmyra. The thorough construction of the two older boats will be followed, the fastenings being mainly brass screws. With a low trunk she will have a large cabin, with 6 ft. 6 in. headroom, finished in mahogany, and a stateroom. She will be built by the John Saunders Co., of Greenwich, Conn.

The Society of Naval Architects and Marine Engineers.

THE Transactions of the Society of Naval Architects and Marine Engineers have attained the dignity of third annual volume, uniform with the two previous quartos, of 300 pages and numerous lithographed plates. The twelve papers read before the society last November, which are printed in full with the discussion on each, are quite up to the standard of the preceding years, and the three volumes already make a very valuable collection for reading and reference. The contents of the third volume are, in addition to the list of officers, members and associates, and report of the business proceedings, as follows:

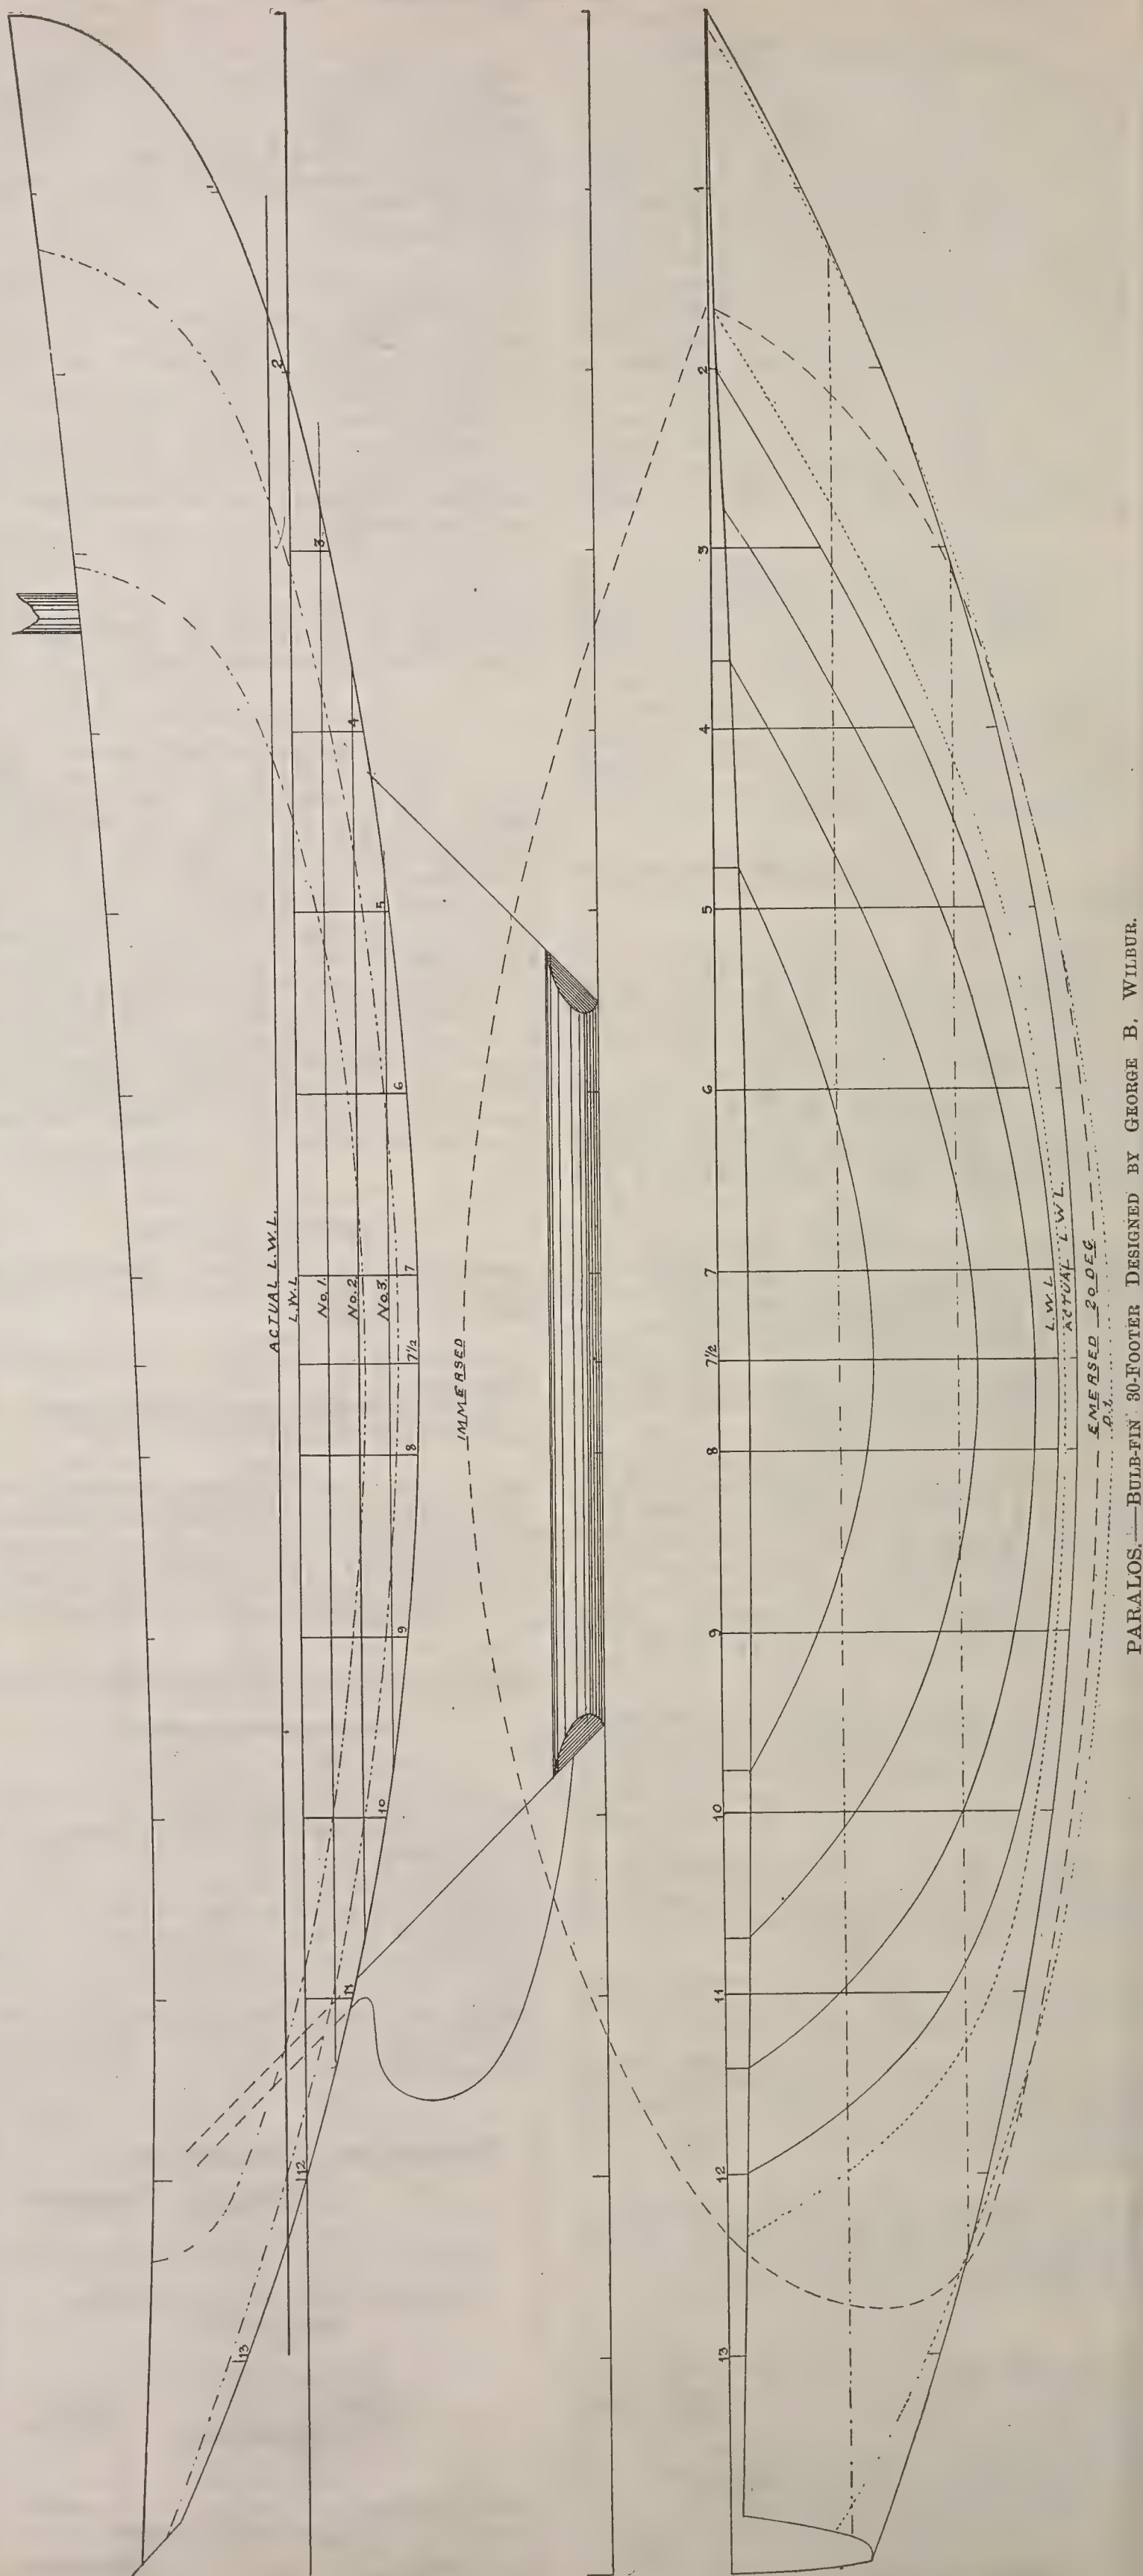

1. American Maritime Development. Capt. Henry C. Taylor, U. S. N.
2. The Centerboard: Its Influence on Design, its Value and its Proper Use. W. P. Stephens.
3. Rudder Experiments. U. S. S. Monterey. Elliott Snow, Assistant Naval Constructor, U. S. N.
4. Aluminum: Its Alloys and their Use in Ship Construction. J. C. McGuire, C. E.
5. Methods and Forms for Certain Ship Calculations. D. W. Taylor, Naval Constructor, U. S. N.
6. The Number of Longitudinal Intervals in Ship Computation as Affecting the Accuracy of Integration for Displacement, and Note on the Relation between Reduced and True Wetted Surface. Prof. W. F. Durand, Cornell University.
7. Tactical Considerations Involved in Warship Design. Albert P. Niblack, Lieutenant, U. S. N.
8. Recent Designs of Vessels for the U. S. Navy. Philip Hiebor Chief Naval Constructor, U. S. N.
9. Engineering Research in the Navy. Prof. Wm. S. Aldrich, University of West Virginia.
10. Performance of the Twin Screw Steamer City of Lowell. Prof. James E. Denton, Stevens Institute of Technology.
11. The Ventilation of Ships: F. B. Dowst, M. E.
12. An Experimental Test of the Armored Side of U. S. S. Iowa. Albert W. Stahl, Naval Constructor, U. S. N.

Two of the papers, those of Messrs. McGuire on Aluminum and Stephens on the Centerboard, have been published in part in the FOREST AND STREAM. The complete volume of the Transactions includes a dozen interesting plates accompanying the latter paper, with an appendix describing them, which could not be reproduced at the time. These plates include many types of centerboard craft—the North River sloop Victorine, the yachts Julia, Arrow, Iroquois, Volunteer, Quickstep, and others less known, but representing special types of centerboard craft.

The reports of the officers show a membership of 500, including 279 members and 175 associates, and a balance of \$6,000 in the treasury.

The successful growth and good work done by the society in but three years should commend it to the attention of all who are connected with or interested in the development of an American marine, for defense, commerce or pleasure. It is impossible to overestimate the importance to the nation at large of a general interest on the part of all its people in the national fleet of warships, merchant vessels and yachts; and this is best fostered by the general diffusion of knowledge, both popular and special, of ships. In its associate membership the society provides for those who, without being designers, ship builders or engineers, are still interested in the work of these professions and desirous of keeping in touch with it. This class of membership should attract yachtsmen especially throughout the country. The dues are but \$5 per year, and a copy of the Transactions is sent to each member.

The present volume is the third compiled by Naval Constructor Capps, the late secretary of the Society and one of the most active among its organizers. Since the transfer of Mr. Capps from Wash-

PARALOS.—BODY PLAN.

ington to San Francisco, his place has been taken by Naval Constructor Francis T. Bowles, now in charge of the Brooklyn Navy Yard. The official address of the society is 12 West Thirty-first street, New York.

Model Yachting.

The officers of the Wave Crest M. Y. C. and those of the American Model Y. C. met at the club rooms of the latter club to decide upon the committee to manage the race for the A. M. Y. C. perpetual challenge trophy, to be raced for on July 4, off the club station, foot of Thirty-fourth street, South Brooklyn. Mr. E. B. Hopkinson, Wave Crest M. Y. C., was chosen, and Frank Nichols, A. M. Y. C. It now devolves upon these two gentlemen to name a referee, and in all probability Mr. Frank Mitchell, of the Philadelphia Model Y. C., will be chosen.

A very friendly feeling was engendered by this meeting of the two clubs and no doubt will continue. The following are the names of the gentlemen who were present: Wave Crest: Com. E. E. Flynt, Treasurer A. Anderson, Fleet Capt. W. M. Thompson and Secretary E. B. Hopkinson. A. M. Y. C.: Com. J. H. Lane, Vice-Com. C. Van Ness, Treasurer G. W. Townly, Secretary G. F. Pigott and Measurer Frank Nichols.

YACHTING NEWS NOTES.

The regatta committee of the Indian Harbor Y. C., of Greenwich, Conn., has announced the following programme for the season: Opening day, May 30, race for yachts enrolled in the club. No special entry necessary. The committee is also endeavoring to arrange a race for the new 30-footers on that day. If this can be arranged further notice will be sent to the members. Special race, Tuesday, June 30 (second race of Yacht Racing Union circuit). Classes: 30-footers, 34-footers, 21-footers, half-raters, all cabin catboats under 30ft., all open catboats, shiftable ballast; all open sloops, shiftable ballast. Eighth annual regatta, Saturday, Aug. 1. Open to all classes. Special race, Saturday, Sept. 12. Classes: 30-footers, 34-footers, 21-footers and half-raters. The committee, however, may hereafter decide to open this race to other classes. Several cups have been donated by members of the club to be raced for during the season. The classes to which these cups will be allotted will be announced by the committee in a circular, which will be issued previous to each race. All the races given by the club will hereafter be sailed under the rules recently adopted by the Yacht Racing Union of Long Island Sound. The tables of time allowance adopted by the Union in 1895 will also be used. All members desiring to race their yachts should at once notify the chairman of the regatta committee, sending him a full description of their yachts, in order that they may be allotted permanent racing numbers under the rules which have been adopted by the Union. The committee requests the cooperation of all members to make this season the most successful in the history of the club. George E. Gartland, chairman, 11 Wall street, New York; Charles E. McManus, D. Willis Merritt. As it will be impossible for the club to complete its proposed new house in time, the adjoining property, the Hasell place, has been leased and fitted up with restaurant, sleeping apartments, and all conveniences for members and guests. Among the prizes offered by officers and members are three cups for the 30ft. class by Com. Wills, cups for the cabin cats by Vice-Com. Higgins, a cup for the 21-footers by Rear-Com. Tyson, one for the 34 footers by J. Kennedy Tod, one for the 15-footers by E. C. Benedict, and one for open cats by Percy Stewart; these first prizes being supplemented by the club by second prizes if the number of starters demand it.

The Chicago Y. C. announces the following events for the season: Saturday, June 20—Michigan City race; start at 1 P. M. sharp; judges' and guests' boat will leave the club house at 12:40 P. M. Saturday, June 27—Regatta for fourth and fifth class open yachts; start at 2 P. M. sharp; judges and guests will leave the club house at 1:40 P. M. Saturday, July 18—Dinghy race (sailing); start from club house at 3 P. M. Saturday, July 25—Club regatta for all classes; start at 2 P. M. sharp; judges and guests will leave the club house at 1:40 P. M. Saturday, Aug. 1—Dinghy race (rowing); start from club house at 3 P. M. Saturday, Aug. 15—Club race and cruise to Menominee, Mich., to be run on points between ports; start at 3 P. M. sharp. Saturday, Sept. 12—Open regatta; start at 2 P. M. sharp; judges' and guests' boat will leave the club house at 1:40 P. M.

We have received a copy of the official book of rules of the Yacht Racing Association of Great Britain for 1896, the usual neat little volume in blue. It contains the sailing rules, measurement rule, list of members and minutes of meetings, with the decisions of the council in a number of protest cases submitted to it by local committees. The new rule has recently been given in full in our columns. The allowance table is new, having been made to suit the rule. The list of yachts with their official measurements is no longer published in the book, though such a list is very useful for reference. The book is published and supplied to the clubs and individuals by Harrison & Sons, St. Martin's Lane, London.

Com. Rouse, Seawanhaka Corinthian Y. C., will this season test a novel combination of naphtha and electricity on the flagship Iroquois. The yacht's naphtha launch, one of the regular boats built by the Gas Engine and Power Co., will be fitted with a special dynamo that can readily be shipped aboard and connected to the engine. When the launch is not in use during the day, and lying at the boat boom, the dynamo will be put aboard and connected and the engine started up, the wheel revolving in the water. The electric current will be used to charge the storage batteries aboard the yacht which supply the electric lights with which she is fitted throughout. When not in use the dynamo will be stowed below on the yacht. How the arrangement will work in practice is yet to be proved.

The New Rochelle Y. C. will open its season on May 23 with a race open to yachts of the club only in the regular classes; a special prize of a silver cup being also offered for the 15ft. class, open to yachts enrolled in any organized yacht club. A second prize will be given if five yachts start. The races, which will be under Y. R. U. rules, will start at 2 P. M. Entries should be mailed to the Regatta Committee, New Rochelle Y. C., P. O. Box 785, New Rochelle, N. Y., in time to be received by the committee not later than noon of Thursday, May 21. Full instructions as to starting signals, course, etc., together with a chart of the course, will be mailed on receipt of entry, and may be had on application to the committee. Regatta Committee: Chas. P. Tower, Chairman; W. N. Bavler, Paul A. Meyrowitz, J. R. Thomas; A. P. Weston, Secretary.

The new 15-footer designed and built by the Herreshoffs for F. M. Hoyt is similar in model to Olita, with a long, low bow and no after overhang, and of very light construction. She will be rigged in English fashion, and a very good idea of her sail and sheer plan may be obtained from the cut of the canoe yawl Nautilus in the FOREST AND STREAM of last week. With the counter cut off square at the mark indicating the after end of the waterline and the piece added to the fore overhang, and the tack of jib carried forward, the Nautilus would resemble closely the new boat. The mainsail is identical, a lug sail with battens.

Yampa, schooner, R. S. Palmer, arrived at New York on May 6 with her owner in command, accompanied by Messrs. T. C. Zerega, George A. Cormack and Cambridge Livingston. The yacht has visited the principal ports of the West Indies since she sailed from Boston last February.

A yacht club has been organized in Kingston, Ont., under the name of the Kingston Y. C., starting with 110 members. The officers are: Com., W. F. Strange; Vice-Com., H. Richardson; Rear-Com., Dr. Clarke; Sec'y, J. H. Macnee; Treas., W. C. Kent; Meas., H. Cunningham; Committee—Dr. Black, R. G. Burns, E. Gildersleeve, F. H. Macnee and J. Fisher.

The club book of the Hudson River Ice Yacht Club for 1896 contains a list of forty-three yachts and sixty members. The club, whose station is at Hyde Park, was founded in 1885. The officers are: Com., Archibald Rogers; Vice-Com., Norman Wright; Sec'y-Treas., John Hopkins; Treas., Thos. Newbold.

The first race of the season at Atlantic City was sailed on May 7 in a fresh S. W. breeze, the course being forty miles to leeward and return. The small craft were from the Corinthian Y. C. and the Musquito Fleet. The corrected times were: No Name, 1h. 30m. 50s.; Ivy, 1h. 34m. 27s.; I Don't Think, 1h. 35m. 6s.; Vixen, 1h. 39m. 7s.; Nit, 1h. 40m.; Siren, 1h. 42m. 32s.

Owing to some dispute between her new owners, Ethelwynn was advertised at sheriff's sale on May 6, at Manning's Basin, where she has been stored during the winter. The sale was postponed for a month. Thus far there is no indication that the yacht will race under present ownership.

Black Pearl, steam yacht, E. R. Sheldon, has returned to New York after a cruise of two months in the West Indies. She will refit at Fletcher's yard, Hoboken.

The Philadelphia Y. C. will sail its annual regatta on June 13, and the cruise will begin on June 26.

The racing about New York will begin on next Saturday, May 16, with the open race of the Huguenot Y. C., of New Rochelle, for five classes: Cabin sloops, 21ft. class, cabin cats, open cats and 15ft. class. The latter class promises to be the most interesting, as several new boats will make their first race. The race will start at 1 P. M. over the club's four-sided courses.

Those young tars who are going aloft this season for the first time will find much that is useful to them in a little book entitled "The Amateur Sailor," by Alex. I. McLeod, a Detroit yachtsman. The book treats in a plain and practical manner of the rudiments of sailing and yachting usage; and while intended mainly for the less experienced yachtsmen, it has many little points that will repay the older hands for a perusal. It is published by E. H. Gilman, Detroit, Mich.

We have received from the secretary, Dr. Ed. Pilatte, the annual book of the Club Nautique de Nice, the first of the nautical societies of Provence and the vicinity of Nice, organized in 1893, since which time it has taken a prominent part in the advancement of yachting and yachting organizations in the Mediterranean.

The Pacific Y. C., of San Francisco, has elected the following officers: Pres., John H. Dickinson; Vice-Pres., Hugo D. Kell; Com., John D. Spreckels; Vice-Com., Martin B. Roberts; Meas., Alec. Svenson. Directors—John H. Dickinson, Charles H. Crocker, Hugo D. Kell, Will A. Powning, John T. Dare, F. Hohweiser and J. D. Maxwell.

The house of the Corinthian Y. C. of New York, located originally at Bechtel's Basin, Tompkinsville, Staten Island, where it was built by the Seawanhaka Cor. Y. C. in 1883, and afterward moved to the basin beside the steamboat dock, has been sold and moved to Atlantic Highlands, where it will be used as boathouse. The Corinthian Y. C., organized in 1886, has ceased to exist.

Phantom, schr., H. L. Parmele, has been entirely rebuilt for the second time. She is one of the older yachts, having been built in 1865.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.
Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. M. Dyer, 307 Adelphi street, Brooklyn, N. Y.
Central Division, Geo. E. Keyes, 193 Front street, Rochester, N. Y.
Eastern Division, R. H. Hammond, Worcester, Mass.
Northern Division, Douglas H. McDougal, Toronto, Canada.
Annual dues, \$1; initiation fee, \$1.
Annual meet, Aug. 14-23, Grindstone Island, St. Lawrence River.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Central Division.

Mr. GEORGE E. KEYES, 193 Front street, Rochester, N. Y., has been elected, by a mail vote of the Division executive committee, to fill the vacancy caused by the death of Purser W. H. Martin.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

THE ART OF PISTOL SHOOTING.

EVERYTHING is difficult before 'tis easy, says an old adage, and the effort to become proficient in the use of the revolver is no exception to it. The art is acquired only by earnest study and effort.

It is not an art of mystical methods, nor is there any royal road to it. Regular practice and intelligent observation of causes and effects are factors in attaining practical skill as they are in all other arts. Indeed, of all the arts it may safely be said that that of revolver shooting is the most exacting considering it in its highest perfection, for it requires faithful practice, a clear mind and good physical condition, which can only be established by abstinence from alcoholic stimulants, from tobacco, and by regular habits in general. So much for the perfection of the art. However, with a reasonable degree of application fairly good results may be obtained.

The intelligent effort to learn the art of shooting is opposed more or less to a popular fallacy that the skillful pistol shot is born, not made. The comparative ease with which the expert makes difficult shots, and the difficulty which the novice encounters in making any shot with any degree of precision, prepare the latter for ready acceptance of such fallacy. It then seems so self-evident that no investigation is considered necessary. Marvelous skill and its results are accepted as being a "gift," a capability born with its possessor. It is true that men excel in the art of shooting, but such is likewise true of men in all arts. In the art under consideration, the patient investigation, laborious and arduous practice in private which developed skill, not being directly in evidence, are not considered as having been at all. Yet, whatever one's natural capabilities may be, patient study and practice are necessary, though, as in the acquisition of all skill which requires profound effort, natural aptitude, resolute persistency and sharp intelligence will make more direct and fixed progress than can be made without them. But, as intimated before in this respect, the art of pistol shooting in its acquisition in no wise differs from that of all other arts. In every vocation and avocation in life there are men whose ability and industry distinguish them pre-eminently among their fellows. Again, as in all other arts, while all cannot devote the time, practice and study necessary to attain the skill of a specialist, nearly all can acquire a useful and reasonable knowledge of the theory of the art and a corresponding degree of proficiency in its practice.

There are a few men who are always awkward in anything which they attempt if it requires manual dexterity. They cannot jump off a car without tangling their legs or pitching about; they cannot drive a nail without hitting their fingers or breaking something; they cannot row, nor crack a whip, nor cast a fly, nor handle a cue, nor bowl, nor pitch quoits; in short, they seem to be left-handed all over. With this reservation, it is fair to encourage all in the possibilities of attaining skill in the art of revolver shooting.

Handling the Pistol.

The mere handling of a pistol with safety to one's self and to the bystanders requires a certain amount of training if it be done properly. There is one general rule which should never be ignored, that is, never for a moment point the pistol toward any one. The novice always grasps the pistol awkwardly, and the direction in which the barrel is pointing is a matter he rarely considers. Being ignorant of the workings of a revolver, he cannot have the necessary forethought in handling it.

A novice should never handle a pistol as a matter of idle curiosity. If he handle it at all, he should learn the simple matter of handling it right. Yet the handling of a pistol seems to have a strange fascination for the most ignorant.

The pistol is a deadly weapon, and from its short barrel and ready working is one of the most dangerous. Make it an invariable rule never to have the barrel pointing toward any person. When not actually firing it, keep it constantly pointing in the air when there are bystanders about, whether it be loaded or not. By persisting in this practice it will become a habit in time, and then will be observed constantly without any thought. Such carelessness will avoid any occasion for rebukes, will relieve friends of much alarm and anxiety, and will avoid the possibility of deplorable accidents. Were these simple rules observed, the fatal accidents which are an annual certainty would never occur. With the most vigilant and painstaking care, there will come a time when the pistol will be discharged accidentally, and then the habit of guarding against accident will come in good service. The unloaded weapon should be handled with the same formal care as if it were loaded. Above all, never permit yourself to indulge in the brutal sport of aiming a pistol at any one. The terror inspired is a poor means of obtaining amusement. The victim cannot know whether or not the weapon is loaded, and whether he can or not, it is a gross abuse of others and an unlawful act to point it at any one.

In handling deadly weapons there are thus important matters of training in respect to what should not be done as there are to what should be done.

Also, when handling a revolver or other pistol in the presence of others, it is always prudent to unload it, particularly if it is to be handled by men who are ignorant of its proper handling and who are idly curious. The man without a purpose is often the most dangerous to have about and is always the most annoying.

Timidity.

The fright or timidity or gunshyness which many beginners exhibit in their first attempts at firing a pistol is obstructive to progress.

When the shooter flinches when he pulls the trigger, or at the same time shuts his eyes or turns his head, the matter of correct aiming for the time being is at an end. To overcome his timidity, he should handle the pistol as much as possible. He should aim and snap his unloaded pistol in his room or elsewhere as often as opportunity offers, till he becomes so familiar with it that he can handle it fearlessly and without unpleasant apprehension. In his first attempts he should shoot light loads till full confidence is established. Once the habit of flinching at the moment of firing is acquired, it is not easily cured.

If there were any real danger of a general bursting, shutting the eyes tightly, or making distorted faces, or turning the head, would be no protection.

In this connection it is proper to advise the using of a first-class pistol only. The saving of a few dollars in purchasing a cheap and poor pistol is poor economy indeed. There is too much risk for the trifle saved.

Begin Correctly.

There are many men who have shot a pistol more or less for many years who improve but little, for the reason that they started wrong and persevered in the wrong manner in which they started. They simply shoot without giving the matter any thought. Their methods at last were not any improvement on their methods at first. Others, seeing no improvement in their skill, become discouraged. The possibility of so holding that the recoil is reduced to a minimum, or investigating to determine by what fault of the hand or trigger finger the errors arise, never seems to occur to them. And yet it is necessary

1. POSITION.

carefully to learn the causes of errors if they are to be corrected. Some errors are peculiar to one man, some to another. One will shoot to the right, another to the left, another here and there, so that the personal equation is a constant factor. There is no hard and fast rule, by which all can be governed. No arbitrary formula can be laid down. Each one can note his own errors and investigate their cause with a view to correction.

The Position.

In shooting at the target, the shooter generally assumes the position shown in Fig. 1, or one approximating to it. It does very well for target practice. For the practical purposes of pistol shooting, however, the effort should be to shoot well from any natural position of the body. Freedom and ease and quickness are superior to stiffness and slowness.

The arm should be slightly bent at the elbow, so that the recoil will be taken with more elasticity than it could be with a straight, stiff arm.

As all eyes have not the same focus, nor all men the same physical conformation, each man will modify this shooting position to best suit his own powers. Nevertheless, the expert pistol shot can skillfully handle his weapon in the most free-handed and unstudied manner. It is not essential to good performance that he assume a stiff and formal pose in the practical use of the weapon. By practice, the expert learns to shoot his pistol as freely and easily as the wing shooter handles a shotgun.

The Grasp.

The important matter of learning how to handle the pistol in general, and in particular how to grasp it correctly when firing it, should be learned at the outset. A wrong manner of grasping the handle will be a serious check to progress, and also will be a constant difficulty in making a good performance. It will perpetuate a fault. There is a right way to hold a pistol and many which are wrong.

Figs. 3 and 4 show the correct manner of grasping it.

Fig. 2 shows a wrong way, one commonly employed by the novice.

From the beginning, the novice should endeavor to grasp the pistol correctly and precisely alike every time till a correct grasp becomes habitual. Any variation in the grasp is sure to result in undesirable variations at the target, if sufficient powder is used to make a recoil. A loose, careless grasp will invariably result in bad execution. The novice rarely grasps the pistol twice alike.

To make the matter clearer to the beginner, in respect to recoil, it will be necessary in this connection to touch briefly on the theory of it.

If the hand were so placed as to resist the recoil at a point directly in a line with the axis of the barrel, there would be no upward jump of the pistol, as the force of the recoil and the resistance to it would both be in the same right line. But the grasp of the hand on a pistol is below the line of fire, leaving what is practically the arm of a lever between. The recoil thus is in a line higher than that of the resistance to it, and the two forces so act that the pistol flies upward at the moment of discharge.

If the hand is held as in Figs. 3 and 4, the resistance is so near in the line of the axis of the barrel and the line of recoil that the disarrangement caused by the latter is reduced to a minimum, and is no insurmountable factor against the best results, except in such instances as pistols are overloaded.

It is apparent that it is much more difficult to concentrate a firm resistance to the recoil when the hand is as in Fig. 2 than it is as in Figs. 3 and 4. It in Fig. 2 not only has room for greater play in the hand at the moment of recoil, but it makes a greater strain and movement in the wrist at the same time, the hand turning upward with it.

To hold the pistol correctly, grasp the handle firmly, with the hand snug up, as in Figs. 3 and 4, so there is no room for motion between the pistol and the hand when the recoil comes. With all the precaution which the novice can

compass, there will be a certain upward motion from the recoil even when the pistol is grasped correctly, a motion upward in the hand and in the wrist. The novice will note that the hand plays very freely and easily upward on the wrist, and it requires quite a training to hold the wrist firm as well as to grasp the pistol correctly, but it all comes right with practice.

After one has learned to hold the pistol properly and learned precisely what factor the recoil is in one's shooting, allowance in aiming must be made accordingly. For this reason, for short ranges, the fore sight in revolvers is longer than the rear sight, thus depressing the muzzle to make allowance for the upward jump at the moment of firing.

Nearly all pistols, even those which are of the same kind and alike, act differently one from another with the same loads when used by different men; so that the manner of aiming one pistol with satisfactory results might have different results with another. Slight differences of trigger pull, etc., all have their importance.

The beginner should not confound a firm grasp with an overstrained one. There is a degree of tension at which the hand and arm can be held firmly with moderate exercise of the will; if the nerves and muscles are forced to a higher strain, they do not coördinate properly and there is then more or less tremor. In shooting large loads, however, the hand must be trained to a tight grasp.

Whatever may be the explanation of it, whether it be reflex action or what not, the hand by experience and proper training acquires a useful education of its own. In handling any object it requires a special schooling to do so skillfully. In everyday life one is so accustomed to seeing it perform its functions at will that it seems to require no training, but it in fact performs well from long training. Once it attempts new efforts its inefficiency is apparent. To comprehend this statement more fully, let a novice attempt to draw with a pencil a perfectly straight line or a circle, or to eat rice with chop sticks, or perform on a piano, etc., and then observe how quickly and easily the educated hand of the expert accomplishes any of those acts.

In the art of pistol shooting, by practice the hand and arm seem to acquire a sense of direction of their own. If the pistol is not properly in the grasp, the educated hand readily detects it. The sense of direction is evidenced in other acts. The carpenter with accurate blows drives nails with a hammer, hitting them accurately on the head at every stroke. The wood-chopper gives no thought to his axe as he swings it blow after blow, and yet he drives it into the tree with hair-breadth precision. The baseball pitcher is a wonder in accurate delivery.

When the hand of the pistol shooter is so trained that the mind is free from studiously noting and directing it in its holding and firing, it is then at a stage when quick shooting can be practiced with more or less efficiency, and quick and reasonably accurate shooting with the revolver is the only kind of pistol shooting of any practical value. The revolver is a weapon of defense as society is organized in time of peace, and its use is at a time when the interested parties are commonly in active motion. An assailed party, who would require his assailant to stand stiffly while he stifly and slowly took aim and fired, would be slow in making a success. It is therefore self-evident that the freedom of action and skill which come from good training are a necessity in the practical use of the revolver.

Many of the best shots hold the thumb along the side of the frame, as shown in Fig. 4; this grasp in a measure guards against a side movement when the forefinger is pulling the trigger, and also at the moment of recoil. Still it is not an easy grasp and requires some practice to apply skillfully. The most natural grasp is as is shown in Fig. 2, and is the one most commonly in use.

Sighting.

The manner of sighting is very simple. The shooter aims so that the fore sight is in a straight line from his eye, looking through the notch of the rear sight and at the object aimed at. The same straight line in theory runs from the eye through the notch of the rear sight,

thence through the tip of the fore sight, thence to the object. In theory it is simple, in practice it is not without its difficulties.

The shooter should learn to stand steadily on his feet. There should be no swaying of his body. He also should learn to hold his hand and arm steady.

The most difficult part is to pull the trigger without disarranging the aim. The education of the forefinger, the trigger finger, is a matter of importance. It is not easy to pull the forefinger steadily and truly when the rest of the hand is at rest. Let the novice aim an unloaded revolver at some object and carefully note the motion of the muzzle of it when he pulls the trigger. The muzzle is almost certain to jump sideways one way or the other, or upward, indicating that the finger did not make a straight pull backward, but that it made a side or upward pull of more or less force, which took its own direction when the trigger became disengaged.

A great deal of good training can be obtained by carefully aiming and snapping the unloaded revolver as if in actual firing at a mark. The aberrations in the pull-off can be noted and corrected in so far as they are the fault of the hand and forefinger.

Much practice is necessary to so train the forefinger that it will work truly and independently while all the other muscles are passive or acting in another manner. To appreciate the difficulty of it, let the novice attempt to hold his closed hand perfectly still, with no wrist or other movement, while he steadily opens and closes his forefinger. Any little movements of hand or wrist, however slight, make a vast difference in the results at the bullseye.

It is an easy matter to train so as to be able to hit close around the bullseye, but such is a mere trifle compared to the training necessary to shoot to the center, and yet for purposes of utility, offensive and defensive, one is nearly as efficient as the other, all else being equal.

Nervous people, by training and self-discipline or will power, learn to hold with remarkable steadiness, though they can never hope to equal the precision of the shooters whose nerves are so steady that they can hold a rigid unvarying arm on the center. Some men seem to have a rhythmic swaying of the body with a corresponding movement of the pistol arm to and fro, and yet by practice they so time the pull of the trigger as the pistol sways to the bullseye that they make a good showing. They, however, are sure to get in a wild shot sooner or later.

All the spectacular features, such as the whirling of the revolver on the forefinger, cocking and shooting it as it comes into the hand, may profitably be omitted. It is a dangerous act, and moreover adds nothing to the betterment of the shooting. So of the style affected by some of the "bad men" of the West in removing the trigger, trusting entirely to cocking with the thumb and permitting the hammer to fall by slipping the thumb off it. This manner was supposed to have an advantage in its quickness, and quickness was considered indispensable in personal encounters, as a moment's time might serve to effect important changes. Many of these methods were mere personal eccentricities, and the shooter at best could not do any better with his fantastic methods than can be done in the regulation manner with a self-cocking revolver.

In aiming, nearly all shooters aim with one eye, the other being closed. It is rarely that a man can aim well with both eyes open. Few people have eyes which focus alike or are equally strong.

When the aim is established, the trigger should be pulled with a firm and steady pull, never a jerky one. When this manner is thoroughly acquired, the finger will act in the pull-off quite as quickly as if it were nervously jerked, with the further advantage that it is in the correct line, alike every time and with no disturbance to the aim. Any fault in the pull-off, as before mentioned, should be noted and corrected by aiming and snapping the unloaded pistol.

Regularity in practice is necessary to make the shooter dexterous in aiming and firing. On the other hand, practice can be overdone. If prolonged too much, there is a great strain on the nerve forces and too much fatigue

2

3

4

HOLDING THE PISTOL.

from it. It is better to practice a reasonable time every day than to practice long whiles with long intervals between.

When the shooter has learned to sight truly, to pull the trigger without disturbing his aim, and fire with quickness and ease, he has learned the art of revolver shooting.

Where the shooter practices or shoots so long as to make endurance a matter of importance, a general developing of the whole muscular system is necessary, and a supplementary course of athletics is needed. Exercise with dumb bells, Indian clubs, etc., in particular strengthen the arms, wrists and chest, and in fact the whole body, and with the more equal development and strengthening of all the muscles comes a greater steadiness in holding and a greater capability of prolonged effort.

While aiming, the shooter should take a full breath, hold it, then pull steadily on the trigger when the aim is fixed. It is very difficult to aim steadily while the chest is expanding and contracting from respiration.

Snap Shooting.

As for quick aiming and shooting, one must have learned first to shoot well with proper deliberation. If one cannot shoot well in that manner, it is absurd to assume that he can do so quickly.

Snap shooting is not necessarily hurried shooting, as the novice always makes it when he attempts it. In most instances it is done quickly after the same manner which is employed in slow shooting; that is to say, the shooter does quickly in one instance what he does slowly in the other. He observes the same forms of action in the main, but executes it instantly. Every part acts together, instead of in labored succession.

It is generally considered that the snap shot takes no aim, but in most cases he unconsciously does so. Let the snap shot put a circular piece of pasteboard around his wrist large enough to conceal the pistol from the shooter, but not the target, and in most instances there will be a perceptible difference in the results of the shooting with it so hidden.

Still, all snap shots do not take aim, though the number is small. Some men develop an extraordinary nervous sense of direction in pointing firearms, which cannot be described, nor can the men who have such power explain it themselves. Some men can shoot with wonderful precision from the hip—a position which precludes formal aiming with the eye—but this is the exception, and in no wise disproves that snap shooting can be done by true aiming.

Nervous men sometimes snap shoot well, their nerves and muscles in action being steadier than when at rest.

It is commonly accepted as a truth that, when one points the forefinger at an object, the finger is pointed as truly as if aimed by the aid of the eye. This idea, it is claimed, has been used successfully in snap pistol shooting. The forefinger lies alongside the frame in a line parallel with the axis of the barrel, the trigger being manipulated by the second finger. In theory it is very plausible, in practice it varies much from the theory.

The Trigger Pull.

The trigger pull of a revolver should never be less than 2½ or 3 lbs. Such is a pull is light enough for all practical shooting. Less than that makes a very light pull, and few fingers are so delicate in touch or steady in action as to manipulate the hair trigger properly. It requires a long training of the finger to skillfully work a hair trigger. A finger which is not entirely free from nervousness finds great difficulty in pulling on the trigger at the correct juncture, and any attempt to steady a nervous finger on a hair trigger results in premature discharge. But whether the trigger pull be easy or hard, remember to keep the muzzle of the pistol pointing upward when not actually aiming and firing the pistol.

As for nervousness, there are many who cannot shoot well before a crowd or in actual competition. In the first instance they have a kind of stage fright, in the latter they may have the same, with the added excitement which many men have when entered in any competition or the excitement which they feel when anything is at stake.

Revolver Shooting.

It is comparatively an easy matter to acquire skill with a heavy small bore single-shot pistol, or a heavy revolver used with light gallery loads. With such there is practically no recoil, or at least none sufficiently strong to affect the shooting. Such precision as is shown with the small bore pistol, or revolver with a light gallery load, is no index to one's skill with a practical load. Such practice furthermore is of very little benefit in shooting the heavier loads. The only way to learn to shoot accurately with the regulation loads is to use them. With the latter there is a recoil which the shooter can never learn to regulate in any other manner than by practice in which it is a factor. The exceedingly heavy charges, 40grs. for instance, have a violent recoil, and strain the hand and wrist unpleasantly besides requiring long practice to shoot them well.

No instructions can take the place of practice. They can only advise as to the best manner of practice and as to what errors to avoid. The degree of proficiency one attains is measured by his own ability and his own effort. In any event, every man who handles a revolver should learn to handle it with such skill that he will not kill or maim his friends in time of peace or war, whatever he may do otherwise.

The foregoing is evolved from my own experience, an experience covering the many years during which pistol shooting has numbered me among its enthusiastic admirers; and what I have written here is given for such benefit to others as may be found in it.

B. WATERS.

Manhattan Revolver Club.

NEW YORK, May 1.—For excellence in revolver shooting during the month of April, Dr. Reginald H. Sayre was awarded the prize—a handsome silver cup—by the shooting committee of the Manhattan Revolver Club.

The exhibition of English and American targets showing the scores of some 2,000 crack shots is attracting considerable attention in the gymnasium of the New Manhattan Athletic Club. They are owned by Captain James S. Conlin, the club's shooting instructor.

Orioles in Gotham.

ON Tuesday night, May 5, half a dozen members of the Baltimore contingent at the E. C. tournament, including Dr. Fort and Messrs. Waters and Claridge, paid a friendly visit to the range of the Gotham Revolver Club. Several of the visitors tried their hand at revolver shooting, but no records were broken.

San Francisco Riflemen.

SAN FRANCISCO, April 27.—The fine day drew a large number of marksmen to Shell Mound range this A. M. The Schuetzen department of the Red Men held an old-fashioned eagle shoot. C. Stein won the kingship.

The other prize winners and the parts they clipped are the following:

First prize, John Tiedeman, crown on the eagle's head; second, W. Kreutzkamm, scepter in right claw; third, H. Bach, reichs-apple in left claw; fourth, John Feldermann, ring in beak; fifth, E. Gobel, head; sixth, C. Stein, neck; seventh and eighth, John Oldag, right wing and claw; ninth and tenth, John Trester, left wing and claw; eleventh, P. H. Ruffs, tail.

The distribution of these prizes and the crowning of the shooting king will take place next Sunday evening at the anniversary and ball that will be held at 620 Bush street.

The Columbia Pistol and Rifle Club held its regular semi-monthly target shoot, and several remarkable records were made with nitro powder. In fact, A. H. Pape broke the club record with this powder. He is now acting upon the suggestions of F. O. Young—that is a patch bullet of pure lead that starts easily from the breech. He uses Du Pont's nitro measure for measure with the black powder. In the record the following remarkable scores were made, Dr. Rodgers only using black powder:

Dr. L. O. Rodgers.....	9 2 5 9 2 7 3 7 6 7—57
F. O. Young.....	1 6 7 6 5 4 4 9 4 9—55
A. H. Pape.....	6 7 3 4 4 3 3 9 3 8—50
	2 4 8 6 3 5 9 4 7 4—52

Pape's 20 shots on the Columbia target are equal to 448 points on the German target, and his average was bunched in a 5½ in. circle. The best rifle scores of the day stood:

Unfired diamond medal, three shots: Dr. Rodgers 10, H. H. Burfeind 11, F. O. Young 16.

Ten-shot rifle record: A. H. Pape 50 and 52, F. O. Young 55, Dr. Rodgers 57.

Most flags for in-centers: Dr. Rodgers 2, F. O. Young 1, H. Hellberg 2, H. H. Burfeind 1, G. Barley 1.

On the 50yd. pistol range some fine work was done. Charles Daiss, who so far has been in the lead on the Blanding record for the best 10 scores, rested on his laurels and went off on a bicycle jaunt. While he was away Pape got in and ran up enough high scores to beat Daiss by 3 points. Gorman, in half a dozen strings, made several excellent scores. The best scores stood:

Open to all comers, pistol, Blanding medal: J. E. Gorman 7, 9, 11; A. H. Pape 7, 8, 8; F. O. Young 8, Dr. L. Rodgers 9, E. Jacobson 17.

Revolver, Carr medal: M. J. White 31.

All comers, 22cal. rifle, 50yds.: Ed Hovey 10, W. J. Burrows 19.

The monthly bullseye shoot of the San Francisco Schuetzen Verein brought out a large number of marksmen. The following are the prize winners and points:

H. Hellberg 161, J. O. Waller 301, Judge Bahrs 319, George Alpers 320, Henry Huppert 333, William Ehrenfort 348, H. H. Burfeind 356, J. D. Heise 411, R. Finking 475, F. P. Schuster 522, H. Stilling 552, A. H. Pape 579, H. Huber 739, T. B. Faktor 773, Charles Thierbach 778, L. N. Ritzau 810, N. Ahrens 835, F. Koch 854, F. Bolekman 855, D. von der Mehden 913.

The Germania Schuetzen Verein also held a bullseye shoot, with the annexed results:

L. Bendel 185 points, F. Schuster 307, H. Hellberg 425, D. R. Faktor 466, A. Jungblut 479, R. Finking 540, A. Mocker 614, H. Thode 711, J. W. Wicks 778, D. von der Mehden 780, H. H. Burfeind 783, C. Thierbach 805.

The monthly shoot of the Norddeutscher Schuetzen Club resulted in the following winning medals:

Champion class, A. Mocker 429 rings; first class, H. Burfeind 421; second class, J. Gerkens 376; third class, D. Schink 1252; fourth class, G. Schulz 281; first best shot, H. Hellberg 24; last best shot, O. Schinkel, Jr., 24.

Cincinnati Rifle Association.

CINCINNATI, O., May 3.—The following scores were made by members of the Cincinnati Rifle Association to day. Conditions: 200yds., off-hand, at the standard target, 7-ring black. A military match between Messrs. Copeland and Hasenzahl to-day resulted in favor of the former, 50 shots each, totals 320 and 307, Copeland winning by 13 points. Hasenzahl won his victory gold medal last shoot. The winners of the gold badge so far are as follows: Hasenzahl for December, Payne January, Gindele February, Trounstein March and April. This badge must be won five times by an individual to entitle to ownership. Two new members were added to our roster to day. Mr. Scherrer made his best score to-day, counting 89. It is needless to say that he was elated:

Gindele.	10 9 9 10 9 8 8 10 9 7—89	10 10 10 7 9 6 8 8 8 8—84
Payne.	10 8 8 7 10 9 8 8 9 8—85	10 6 8 6 8 9 9 10 7 9—82
Weinheimer.	10 8 7 10 6 8 10 10 8 9—86	6 10 10 6 7 8 5 10 8 8—78
Roberts.	10 6 8 8 10 6 7 8 8 8—79	9 6 6 8 6 8 6 10 8 9 7—77
Scherrer.	7 10 8 6 8 3 7 9 8 6—72	8 5 10 5 6 7 8 8 8 7—72
Hasenzahl.*	5 8 8 7 5 9 10 8 7 5—72	7 6 7 7 10 8 4 6 6 7—68
Al. Lux.	10 8 6 8 7 8 9 10 8 9—83	9 9 8 10 7 8 7 5 5 10 7—78
Burr.	4 8 6 8 5 9 10 10 9 10—79	6 6 10 10 8 7 6 8 8 8—77
Copeland.*	7 10 10 10 7 8 9 8 10 10—89	5 10 9 7 9 8 7 7 6 5—73
Hake.	7 9 8 9 6 9 6 9 7 9—79	8 7 9 6 6 6 10 5 10 6—73
Drube.	7 7 8 5 9 4 6 8 8 10—72	7 5 7 4 9 8 8 4 5 7—64
	6 7 5 8 8 8 6 5 8 6 9—63	6 4 5 6 5 8 8 3 10 7—62
	8 6 4 5 7 6 3 8 5 7—69	9 7 7 5 4 2 7 2 10 3—54

	6 7 8 6 5 8 8 10 6 10—74	6 6 7 7 10 8 6 5 7 7—69

* Military rifles.

The Gotham Revolver Club.

THE Gotham Revolver Club has adopted a new target for the 20yds. range, which is based on the 4caliber bullet. The bullseye measures 2½ in. in diameter, and includes the 8, 9 and 10 rings.

The 10 ring measures two diameters of a .44caliber ball, and the 8 and 9 rings respectively one diameter; the 6 and 7 rings measure two diameters. The targets are printed on cards 10x12 in. in size, and the design is the work of Messrs. Maynard and McPherson. Club members are requested to furnish Shooting Master Petty with score of six strings of five shots each, as a basis for handicapping. It is proposed to divide the members into three classes, and inaugurate class shooting at once.

Measures have been taken looking toward securing better ventilation of the range, and it is very possible that outdoor practice will form one of the features of the shooting this summer.

Rifle Club Constitutions.

We would be obliged if secretaries of rifle clubs would favor us with copies of constitutions and shooting rules, that we may send them to other clubs seeking such information.

Works on Sunday—

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

Reynoldston Enterprise Gun Club.

REYNOLDSTON, Pa., May 11.—Our club will hold an all-day shoot on May 30, beginning at 9 A. M. Articles to the amount of \$200 have been received from the dealers of McKeesport and Pittsburgh; others are being received, all to be shot for on that day. A full programme next week, open to all. Our club is not yet five months old and we have twenty good members, and we have without any doubt as fine shooting grounds as there are in the State. Everything new. All sports men are invited to attend.

Geo. W. MAINS, Sec'y.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 19-20.—NEPONSETT, Ill.—Semi-annual tournament of the Neponsett Gun Club. E. H. Miller, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.; \$2,000 in cash added to the purses. R. S. Waddell, Agent.

May 19-23.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 22-24.—MISSOULA, Mont.—Annual tournament of the Montana State Sportsmen's Association, under the auspices of the Missoula Rod and Gun Club. Will Cave, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 28-28.—INDIANAPOLIS, Ind.—Tournament of the Limited Gun Club; nobody barred; targets. Royal Robinson, Sec'y.

May 28-28.—BINGHAMTON, N. Y.—Annual spring tournament of the Binghamton Gun Club; first two days, targets; third day, live birds.

May 28-30.—MILWAUKEE, Wis.—Twelfth annual tournament of the South Side Gun Club, on the club grounds, Lake Station, Adolph Gropper, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. R. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16-18.—URBANA, Ill.—Third annual tournament of the Crystal Lake Gun Club. Frank L. Bills, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONOXOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. H. B. Shoop, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

October (second week).—BALTIMORE, Md.—Baltimore claims this week for her tournament. Dr. Samuel J. Fort, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 316 Broadway, New York.

The Oritani Field Club has issued a programme of its tournament to be held at Hackensack, N. J., May 15 and 16. Ten events will be shot on each day. This shoot should attract the local shots, and particularly the amateurs, who will be able to hold their own at this tournament while the cracks are smashing targets at Memphis. The shooters will be protected from the sun by a shed erected over the score, while refreshments may be had at the club house. Guns and ammunition may be forwarded to the Oritani Field Club, where they will be properly taken care of.

Frank Butler writes that three weeks ago Miss Annie Oakley broke her left collar bone, but despite this she has not missed for a day shooting twice daily. There is grit for you.

Fred Gilbert, the holder of the Du Pont trophy and the championship of the United States for live pigeon-shooting, has received and accepted a challenge from George L. Dieter, of Milwaukee. The match will be for \$100 at Watson's Park, Burnside, June 1, the day before the opening of the State Sportsmen's Association tournament.

We inadvertently omitted from our mention of the book "Pigeon Shooting" last week that it was published by the Shooting and Fishing Publishing Co., of New York, and the price is \$1.

The Memphis Mystery.

Special to Forest and Stream.

MEMPHIS, Tenn., May 11.—The special car that left New York on Saturday afternoon with twenty men on board, bound for the annual tournament of the Memphis Gun Club, arrived here this morning. Tom Divine and Irby Bennett met us at the depot with two rally-hos and a bugler. Among those on the car were: Dickey, Wheeler, Leroy, Heikes, Elliott, Fulford, Glover, Easton, Gilbert, Van Dyke, Trimble, Callender, U. M. C. Thomas, Elmer Shaner, I. A. H. Dressel, Bartlett, Lindermann and Dave Porterfield, who joined us at Chattanooga.

The weather is exceedingly hot and everybody got well tanned by the sun at to-day's practice shoot. There were about 70 shooters on the grounds, 61 taking part in the "Memphis Mystery," the prizes in this event were guaranteed to be equal to each man's entrance money. The guarantee was all right, as every man that shot received a bottle of P. P. S., a liquid well known down here. Besides the "Mystery" event, three other merchandise events were shot and two extras, all at 20 targets, except the "Mystery," which was at 15. This made a programme of 135 targets. Gilbert and Budd were in great form, each losing only 2 targets out of the first 95 shot at; Elliott also shot well. Parmelee, Budd, Joe George, Wallace Miller, L. U. Erhardt, Charlie Young, Cham Powers, Rike, Raymond, Macdonald, Shorty Bacon, Paul Litke and a host of others were on hand.

The club has made us free of the city and all members of the local club are doing their best to make things pleasant for us. Tom Divine and Irby Bennett are well to the fore. The grounds are thirty minutes' ride by trolley car from the city, but this is no hardship, as the cool ride is most refreshing. The outlook for a big shoot to-morrow is excellent.

MEMPHIS, Tenn., May 12.—Memphis third annual tournament opened this morning in glorious weather at 11:30. There were ninety-five entries in first event, with prospects of touching the E. C. record before closing. Elmer Shaner is running the shoot for the club. Best shooting of the week so far has been done by Charlie Budd, who has lost only 5 targets out of 165 shot at.

EDWARD BANKS.

Lynchburg Gun Club.

LYNCHBURG, Va., April 28.—The regular weekly shoot of the Lynchburg Gun Club was held to-day. H. P. Collins, of the Du Pont Powder Co., was a guest of the club. All events were at unknown angles. The weather was beautiful, but the boys were out of form and went to pieces, many of them falling down, getting good, hard bumps at that. Scores of the seven 20-target events shot to-day:

The E. C. Tournament.

Four days, May 5-8, 1896, will scarcely be allowed to fade from the memory of the trap-shooter for years to come. The E. C. Powder Company's tournament that took place on those four days at Guttenburg race track, at Guttenburg, N. J., deserves to be remembered for two good and sufficient reasons: First, it was up to date the largest affair of the kind ever held; and second, on the afternoon of May 8, for the first time in the history of our sport, trap-shooters cheered the inanimate target champion of the United States.

As regards the size of the tournament, a reference to the list of entries will quickly satisfy all doubts on that point. It should be remembered that this was no State shoot, with merchandise prizes and nominal entries; neither was it an amateur's tournament at popular prices. It was a crackerjack's tournament; nothing less than 20 targets, and no entrance fee smaller than \$3. Notwithstanding these conditions, the entry list on the first three days averaged a fraction over 76 in every event, while the four days' programme events averaged 61 entries. During the tournament, including about 5,000 targets thrown on Monday in the practice events, 53,000 targets were thrown.

The arrangement of the traps and the accommodation for the guns and shells of shooters was all that could be desired. The betting hall at the race track would make a good bicycle rink, being considerably larger than many buildings used for that purpose, and it was in that building that shooters found what was needed in the way of space for guns, shells, coats, hats, etc. There was plenty of elbow room for all. The betting hall, too, was just in rear of the four sets of traps (two bluerock and two empire), so shooters had not much ground to cover in going from one set to their shell cases and *vice versa*. Paul North was on hand to look after the working of the bluerock traps, while Al. Hebbard watched the empires at Nos. 3 and 4 sets of traps. Bluerock targets were thrown from the bluerock traps at Nos. 1 and 2, empires, of course, being thrown from the empire traps at Nos. 3 and 4.

EVERYTHING RAN SMOOTHLY.

There is always some little trouble in getting a tournament that is of any size started; a certain amount of confusion is to be expected at the start wherever the entry list amounts to anything out of the ordinary run of things. With 119 shooters ready and willing to shoot, the management had its hands full from the start, but it took remarkably little time to straighten out matters, and within an hour of the crack of the first gun the tournament was in full swing, with everything running as smoothly as possible. Capt. Money and Noel Money were indefatigable, and filled the posts of host, manager, trapper boy, squad hustler, etc., in a manner that went a long way toward lightening the duties of managers Elmer E. Shaner and Jack Parker. Seth Clover, as squad hustler, was never "out of sight."

It cannot be said that an early start was made on either of the four mornings of the shoot. Guttenburg race track is not far from New York, but it required exceedingly early rising on the part of any shooter who was stopping in the city to enable him to eat his breakfast in comfort and get to Guttenburg by 9 A. M. For the above reason it was always 9 or a little after before a gun was fired over the traps, yet the programme did not suffer save on the first day, when rain stopped the shooting on two separate occasions, delaying the game for over an hour altogether. The location of the traps, too, may have had something to do with a little apparent slackness in the morning; they faced to the south of east and the light was consequently very trying in the early hours, and it may be that some of the shooters preferred to wait a little until the sun got around more to the south.

In the cashier's box were Billy Hobart, H. M. Stevens and John B. Rogers; Hobart may be styled the paying teller, Mr. Stevens assistant paying teller, Rogers receiving teller, it being his duty to take entries and turn the cash over to his confreres at the other end of the cashier's office. The duties of these three gentlemen were decidedly heavy, but we think the shooters readily understood the cause of any slight delay in paying off that might occur.

FIRST DAY, MAY 5.

Our issue of May 9 has told what were the weather conditions of this day. It was as hot as July, and the sun beat down with almost tropical fervor on the heads of the shooters at the score; but it was most particularly annoying to the trappers, who felt its rays very severely, cut off as they were from any breath of wind by the screens at their backs. At noon it began to cloud up a little in the West, and thunderheads showed here and there around the horizon. Rain in large drops fell for about twenty minutes, but the worst of this storm passed to the south of us, and shooting was again resumed. In the afternoon another storm came up, and this time the rain fell for about forty minutes, while heavy crashes of thunder spoke of a severe electrical storm somewhere in our vicinity. The main body of this second storm passed to the north of the race track, but what we did get was sufficient to knock the finishing of the programme on the head, it was necessary, in order to be fair to all concerned in the championship events, that the pairs should be carried over until the second day; otherwise some of the men would have had to finish their scores in a bad light.

The background was a deceiving one, and the targets were thrown hard and far. The height at which they were thrown, too, made the shooting uncertain. It was first a low one and then a high one. This was due in many cases to the target being thrown down wind one time and up wind the next. Notwithstanding these features, it will be noticed that the averages show up well. Just 119 shooters took part in the first event, 123 shooters in all being on the ground during the day.

As stated above, only 7 events were decided, owing to the delay caused by the rain. The event left out will be decided to-morrow (May 6). The contest for the championship cup excited great interest, shooters, when not busy at the score, congregating in the rear of No. 4 set of traps, where the targets under expert rule (event No. 5) were being shot at. Below is table giving the

Events:	1	2	3	4	5	6	7	8	9	Shot at.	Broke.	Av.

stanch believers ourselves in the target-smashing capabilities of a rabbit's foot, but in this instance we fancy Gilbert's skill as an all-round shot stood him in more stead.

The championship events were shot as follows: The 100 targets, unknown angles, were divided into 4 events of 25 each, one 25-target event being decided each day on No. 1 set of traps. The 100 targets, expert rule, and the 50 pairs were shot on No. 4 set of traps. The 100 expert rule were divided like the 100 unknown angles, but the 50 pairs were split up into two events of 15 pairs and two of 10 pairs. The table below gives the results of each event that were included under the head of "championship events." The table also shows the grand aggregate and the position of each man at the finish. It will be noted that 26 men shot in all the championship events.

The table referred to above is as below:

	Unknown angles.	Expert rule.	Pairs.	Grand total.

The conditions of the championship events called for \$3.50 entrance in each of the twelve events, \$65 added to each purse. From the purses in these events 10 per cent. was to be deducted to form a championship fund, and this fund was to be divided thus: Cup, value \$300, donated by the E. C. Powder Company, and 25 per cent. of the fund to the winner; 50 per cent. of balance to go equally among the next four high guns; the remaining 50 per cent. among the next six high guns. Under these conditions Gilbert drew out \$48 and the cup; Elliott, Fulford, Heikens and Merrill \$18 each; and Barrett, Miller, Leroy, Byer, Wheeler and Budd \$12 each.

IT WAS FOREST AND STREAM'S IDEA.

Now that the championship contest at Guttenburg is over, and now that the trap-shooters of this country have a *bona fide*, all-round champion at targets, it is our privilege to blow a little, as the idea of this championship contest originated in FOREST AND STREAM's editorial rooms last fall. Capt. A. W. Money, who read our ideas on the subject in an issue of FOREST AND STREAM, at once recognized the merits of the scheme, and asked us, while at the Du Pont tournament last fall, to claim for the E. C. tournament of 1896 the privilege of running off the suggested championship events. To him and to his company, the American E. C. Powder Company, FOREST AND STREAM renders thanks for vindicating its principles of "open to all," and for so successfully bringing to an end the vexed question of who is the champion target shot of America. We may all have our ideas on that subject, but whoever holds this cup is *ipso facto* the inanimate target champion of the United States.

PARMALEE IN FORM.

The averages in to-day's events do not show up very well, only two men topping 90 per cent. for 180 shot at. Those two men were Parmalee and Gilbert, the former cracking out 18 out of his 10 pairs. Below are the

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av

Nos 1, 2, 3, 4, 7 and 8 were at unknown angles; No. 5 at expert rules; No. 6 at pairs.

MORE TO SAY NEXT WEEK.

Owing to our having to leave for Memphis on Saturday afternoon, May 9, it is impossible properly to do justice to such an immense and so successful a shoot. In our next issue we will attempt to touch upon many points of interest that should be mentioned. It is, however, not out of place to mention here that Gilbert, the winner, shot an L. C. Smith gun, 38 grs. of Du Pont's Smokeless in a U. M. C. Smokeless shell, loaded by Montgomery Ward & Co., of Chicago. Elliott and Hicks both shot Winchester, E. C. powder, and used Leader shells. Fulford shot a Greener gun, Schultze powder, loaded by the U. M. C. company, in a Trap shell.

GUNS.

A summary of the guns, powders and shells used by the shooters present on the first day shows: Smith 40, Parker 32, Winchester 15, Greener 7, Francotte 6, Lefever 5, Daly and Scott 3 each, Colt and Creedmore 2 each, and 1 each of Forehand, Spencer, Bingers and Baker.

POWDERS.

E. C. 62, Schultze 18, King's Smokeless 12, Du Pont 9, Du Pont and E. C. 3, W-A 3, Walsrode 2, Hazard 2, Hazard and Du Pont 2, Walsrode and Du Pont 1.

SHELLS.

U. M. C. Company (comprising Trap, Smokeless, Nitro and V. L. & D. special) 61; U. S. C. Company, Rapid 25; Winchester, Leader and Blue Rival 23; Peters 5, Winchester and U. M. C. 2, U. M. C. and U. S. C. 1. EDWARD BANES.

Texas State Shoot.

SAN ANTONIO, Tex., May 1.—There were only about twenty of the devotees of the gun at the recent Houston shoot, the occasion being the twentieth annual tournament and meeting of the Texas State Sportsmen's Association, but what was lacking in numbers was more than made up in *bonhomie*, as Du Bray would say it.

The Houston papers all said it was a jolly crowd, and if it had not been for Wallace Miller's frequent conversations with the referee, this meeting might have glided into history as a commonplace affair. But then, upon reflection, it would be impossible for a Texas State shoot to be even ordinary, as Critzer's jabbering about his new guns alone would be sufficient to place these annual meetings under the head of sensational, to say nothing of Miles Miller's Chinese songs, Jim Stewart's reminiscences, Wheeler's anecdotes of how near he came to winning the medal, and Brown's rectangular essays on how he could kill pigeons with one consecutive barrel.

There was lots of fun on board—and it was sure enough Texas fun. The targets were fairly thrown and the management was all that could be desired, just, partial and extremely obliging, but there seemed to be something about the entire business that prevented high scores. Some attributed their failure to smash the diving empires to the bad background, others claimed that the sun made the targets tough, but the writer, owing to a vast and varied experience in things liquid, knows better. In fact he knows exactly where the fault lays, and if it were not out of respect for some of FOREST AND STREAM's good friends he would press the button immediately. But let that pass.

Messrs. Donny, Haney and Dupree, of the local club, were indefatigable in their efforts to please their guests, and the Houston meeting of the State Association will always be a green spot in the memory of those attending.

The diamond medal donated for grand aggregate in the programme events was won by A. B. Critzer, of San Antonio. The scores for the five days follow:

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

THE BEAVER.

FACT and fable cluster thick about the beaver and combine to render him one of the most interesting of our wild creatures. From childhood we hear about him as tree feller, mason, house builder and engineer. His industry and perseverance have passed into the proverbs of the land. If civilized man, who derives his knowledge of the beaver's admirable qualities merely from what he has read and heard about him, respects the beaver, not less does the savage, whose life is spent near the animal's home and who is more familiar with his ways than most white men ever can be. By him the beaver is highly regarded and is credited with intelligence of a high order—sometimes even with supernatural powers. The trapper, too, who pits his art and experience against those of the beaver, holds him in great esteem. He knows that in the beaver he has an antagonist that will call forth the highest skill that he possesses.

Mr. Hofer's account of his experience in catching beaver for the National Zoological Park is a suggestive paper. Many of the notes on the beaver's habits, which the writer has here set down, are, we think, wholly new, and some of them are very curious. The action of the animal, which drove away from the water the band of horses that wished to drink at the pond he lived in, is enough to justify the legends of the beaver's wisdom which we used to read as boys.

Along with this interest, great as it is, comes the melancholy reflection of how rapidly the range of all our wild animals is being circumscribed, and how, little by little, the species one after another are taking their places behind iron bars or behind wire screens and are being domesticated or caged. The range of the beaver was once as wide as that of almost any animal on the continent. It extended from ocean to ocean, and from near the limit of timber on the north, south to Mexico; but over how great an area has it been exterminated! It is still found in eastern Canada in small numbers and in occasional places in the Maine forests. There are reported to be a few in the Adirondacks, and a law has just been passed to protect them there; but from New York west to the great plains, almost to the foothills of the Rocky Mountains, there are none. Vague rumors of beaver in West Virginia reach us from time to time, but we believe that there is no tangible evidence of their existence there. A few are still found in Texas, but they are very scarce.

In the mountains of the West there are still many beaver, though there are but few in any one place and their numbers are kept down by trapping, so that only the cunningest and the most wary survive. It is not now as it used to be, when sometimes the traveler might sit on a high hill and overlook many square miles of territory, all of it occupied by beaver, which, undisturbed, lived there and when their time came died and knew no fear. Such a territory, once looked over, is long remembered. One such, seen long ago in Colorado, was thus described by a staff correspondent of FOREST AND STREAM:

"I was well repaid for my scramble up the hill, however, for in the valley at my feet, stretching away to the west for seven or eight miles, and to the north and south for fifteen, lay the largest beaver meadow that I have ever seen. I presume that there were 500 dams in sight, most of them kept in good repair. The water set back by these dams flowed through a thousand little canals and ditches, and the whole from the height looked like a silver net spread over an enormous carpet of emerald velvet. Through my glass I could count hundreds of beaver houses, and could even distinguish the green willow leaves on the branches recently used in repairing the works. Beyond this meadow was a narrow strip of brown prairie, and then the green pine timber began, and with it the foothills of the Snowy Range."

For the knowledge of such a spot—the exclusive knowledge—the old-time trapper would have bartered his all. Here indeed one could have set his traps all through a season, and could have reaped a rich harvest of fur.

Out on the wide plains, where beaver were, it is true, not so good—yet were good enough—the last fur brought in at the close of the season was sometimes taken in a less worthy way than by the trap; for the trapper took unfair advantage of the circumstances of the poor beasts, and when the spring floods rushed down the valley and the high water drowned the beaver out of houses and holes, and they sat miserable and blinking on the bank, the old man, floating down the stream in a canoe, drifted close to the poor beasts, and with a lightly loaded rifle carrying a tiny ball shot them through the head, gathering in one after another until the canoe would hold no more.

The large beaver dam near Obsidian Cliffs in the Yellowstone National Park, which is shown this week, is perhaps as fine an example of the modern beaver dam as can be seen to-day, and its appearance is of course familiar to many of our readers.

Like many of the fur-bearing animals whose pelts bring a good price, the beaver is continually pursued by the trapper, and in many localities this pursuit has brought about a change in the animal's habits. Not often in these later days do we see the great haystack-like houses that the beaver used to build; for now—except where they are protected in the National Park—most beaver have become bank beaver and have their homes in excavations in the banks of the streams in which they live. Often now they do not build dams, recognizing that these structures at once and unmistakably betray their presence in the water.

In several States of the Union laws forbidding the killing of beaver stand on the statute books, but they are seldom regarded or enforced. Yet certainly they ought to be protected, and especially in those regions where once they were abundant and are now extremely few in number.

We hope that the time is not very distant when, in all the large game preserves of this country, there will be colonies of beaver, whose curious habits, unflagging industry and remarkable works will be among the most interesting of the examples of wild animal life that are gathered there.

THE BEARDSLEE TROUT.

It is a new trout, named by Dr. Jordan in honor of Admiral Beardslee, who discovered it, and another new fish with it, in Lakes Sutherland and Crescent, up in the mountains, sixteen miles back of Port Angeles in Washington. The other fish was named, on Admiral Beardslee's request, the Crescent Lake trout. Dr. Jordan has determined both as new forms. The Crescent Lake trout, or *Salmo crescentis*, is a blueback; the *Salmo beardsleei* a speckled trout. The discovery of these two new forms Piseco is disposed to regard as the climax of his angling career; and as for these twenty years and more he has shared his fishing experiences with the readers of FOREST AND STREAM, he now has written out for them the story of the new fishes, and we shall give the first chapter in our next issue.

From the relation it will be seen that in size, beauty and game qualities the *Salmo beardsleei* is worthy to bear its newly bestowed name, and his brother anglers will heartily congratulate Piseco on his having so happily found a place for himself in the books wherein are enrolled the names of fishes and the discoverers of fishes.

SNAP SHOTS.

The members of the Forestry Commission recently appointed by the National Academy of Science at the request of the Secretary of the Interior are likely to begin their work in the West before very long. It seems probable now that the members of the Commission will leave here about July 1, and will spend the summer and early autumn in the forest regions of the West. They will devote especial attention to the Rocky Mountains, the Cascade and the Coast ranges, and are likely to return East early in November. It is earnestly to be hoped that all the members of the Commission will make this trip. Each one is a specialist in some direction or other, and the absence of any member will take away something from the excellence and completeness of the Commission's work. It is believed that a plan will be formulated by this Commission so plain, practical and wise that it will appeal strongly not only to the authorities in Washington, but also to the common sense of the people at large, whether residents or not of the forested areas under consideration. It is high time that this country made some

forward steps toward intelligent, economic forestry, and the prospects for such advances have never been so bright as they seem now to be.

The twenty-fifth annual meeting of the American Fisheries Society will commence on May 20, in the Aquarium, Battery Park, New York. On the following day, May 21, the second session will be held in the Biological Laboratory, at Cold Spring Harbor, Long Island, by invitation of the New York Commission of Fish, Game and Forests. The steamer John H. Starin is engaged for the members, and will take them to Cold Spring Harbor, where, besides attending to the purposes of the meeting, they will view the State fish hatchery. The meeting promises to be most interesting. Many of the members have signified their intention to contribute papers on live subjects, and others who have not yet been heard from will undoubtedly contribute also. Mr. J. E. Gunckel, Toledo, has promised a paper on the late Judge Emory D. Potter. Mr. H. P. Frothingham, secretary of the New Jersey Fish Commission, will report on the protection of fish and game in New Jersey. Dr. Bushrod W. James, Philadelphia, has prepared a paper on the interstate protection of food fish. Mr. H. Whittaker, of Michigan, has promised a paper, the title of which was not given. Mr. Fred. Mather will contribute a paper on natural food for trout fry. Dr. Tarleton H. Bean, superintendent of the New York Aquarium, will read a paper on pond culture of California salmon in France.

It has been decided that the Corbin buffalo shall be located at Van Cortlandt Park and the fence is now being erected about the space which has been allotted to the herd. This inclosure is roughly triangular in shape and lies between the main line and the Yonkers branch of the New York & Putnam Railroad, which bound it on the east and west, and Mosholu avenue on the north. The southern end of the inclosure is only a short distance north of Van Cortlandt Station, and so the northern end of Van Cortlandt Lake is included within the park, and Tibbett's Brook, which feeds that lake, runs through the inclosure. Thus in most respects the location is an ideal one, for food, water and diversified scenery are all present. It is uncertain when the herd will be removed from New Hampshire, but probably not for some little time yet.

It is to be noted of frogging that when one writes of the pursuit it is with a certain apologetic or deprecatory flavor, if not with absolute shamefacedness. The capture of the lowly prey, whether with lure of red flannel or with bullet, is written of as a form of sport not to be classed with a salmon bout or a trophy-winning moose hunt. And yet one might say much in defense of frogging. The bullfrog, though intensely musical, does not come within the protection accorded song birds; and its flesh is a delicacy fit to rank with other game, as the prices which follow the entry of frogs' legs on restaurant bills of fare amply attest. Also the frog hunter has the sanction of recognized authorities, as witness this paragraph from "Woodcraft," in which manual, by the way, Nessmuk more than once recurs to the taking of frogs for fun and food:

I hope no æsthetic devotee of the fly-rod will lay down the book in disgust when I confess to a weakness for frogging. I admit that it is not high-toned sport, and yet I have a good deal of amusement out of it. The persistence with which a large batrachian will snap at a bit of red flannel after being several times hooked on the same lure, and the comical way in which he will scuttle off with a quick succession of short jumps after each release; the cheerful manner in which after each bout he will tune up his deep bass pipe, ready for another greedy snap at an ibis fly or red rag—is rather funny. And his hindlegs, rolled in meal and nicely browned, are preferable to trout or venison.

Mr. Charles H. Ames spoke before the Appalachian Mountain Club, of Boston, last week on the "Preservation of Game," relating the great destruction which has overtaken the wild animals of this continent, and making a strong plea for an awakened public sentiment to protect what is left. As his frequent contributions to our columns have shown, Mr. Ames belongs to that growing class of men who are taking increased interest in restocking and restoring, instead of depleting, the fields and the woods with native and exotic game. This is the class to whom we must look for the saving of our really wild creatures in this country. There will always be game in preserves; but that which is to survive outside of fenced parks and posted tracts will be owed to the public spirit of conservative men, who recognize the situation and have the energy and the tact to undertake the work of conservation.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.—XXII.

Women's Day.

THE full light of morning had chased the shadows from the camp and even possessed the recesses of the tent when the drowsy inmates awoke and crept forth yawning and shivering in the unsunned air until the rekindled fire warmed them.

Then the women folks got the tidest breakfast the camp had ever known, and when all save Antoine, who sulked on his faded laurels, had eaten it with great relish, Huldah went out and feasted her eyes full of the wonder and beauty of the lake, where it doubled painted shores in the glassy mirror of near waters, its far expanse melting into ethereal hills and further sky, where distant islands hung in the blended azure.

Then while Joseph and Antoine, forlorn bachelors by brevet, kept camp, the reunited couples embarked in the scow for a cruise along the shore of the bay.

The experience gained while voyaging on the canal and the Western lakes put Aunt Jerusha quite at ease on these quiet waters, and with such an example before her Huldah was too proud to show any trepidation and too sensible to affect it.

"Wal, Huldah," said Uncle Lisha, watching her as he steered while Sam wielded the oars, "you be a nat'ral born sailor, an' you never in a boat before, I'll warrant. Why don't you jump 'raound and squak ev' time the boat jiggles?"

"Why, I hain't no time tu, the's so much tu look at," said she, her eyes roving far and near over the unfamiliar landscape. "Hain't them pine trees? We don't hev no sech tu home. An' if there hain't the Hump, for there can't be no other like it—an' hain't that 'Tater Hill? My, what a ways off they be, so blue they don't look much nigher'n the sky. I should hate tu live so far from 'em all the time. Oh, look at that boat, an' hain't that a black man in it? It sartainly is," and she pointed across and up stream to where Jim was paddling out of his marshy harbor.

"Why, yes," said Uncle Lisha, "that's one o' your husband's friends, Huldah. You'd admire tu see what comp'ny he keeps when he's daown here—Injins an' niggers an' I do know what all."

"Quakers an' lawyers an' shoemakers," Sam supplemented.

"An' you hain't no idee what cadidoes he cuts up," the old man continued, regarding his audience with a solemn countenance, "a-fishin' leetle boys aouten the crik, an' wuss 'n all, what you don't never want tu tell nobody, a-helpin' Quakers steal runaway niggers away f'm the owners. Yes, sir, he done it an' he da's n't deny it," and Uncle Lisha frowned benignly on the culprit.

"Why, Samwil," Huldah said, in a low voice and beaming affection and admiration upon her husband, while Aunt Jerusha laid a gentle hand upon his shoulder.

"Wal, no wonder both on ye's mad an' he 'shamed, but we won't tell on 't if he don't du it ag'in," said Uncle Lisha.

"Sho, Uncle Lisher, what nonsense hev you be'n a s'misin' up?" Sam demanded, with a bold assumption of innocence.

"Good airth an' seas, boy! don't ye s'pose I know brand when the bag's ontied? Wha'd ye go over tu that Canuck's boat for? Sellin' apples properly. Wha'd ye kerry them ducks up tu Bartlett's for? Thought they was starvin' properly. What made ye so tickled when ye seen the Canuck boat p'intin' for Canerdy? Turrible glad tu git red on him, wa'n't ye? Oh, you be almighty cunnin', hain't ye?"

Sam's downcast eyes discovered something on the boat's bottom which promised a change of the subject of conversation.

"Why, if there hain't a trollin' line an' hook wi' a piece o' pork rin' an' red rag on 't all rigged for fishin'. It must be Antwine had it, but I don't know when. You put it aout, Huldah, an' mebbly you c'n ketch a pickerel."

"Me? My goodness, I couldn't never, I've ketched traouts, but I can't never ketch a pickerel, I know. Wouldn't I feel big tu, though?"

The line was let out, the boat was slowed down to the proper rate of speed as it skirted the channel, and Huldah held the hand line with a grip that showed a determination to be hauled overboard rather than relinquish it. When the boat reached the mouth of the creek her resolution seemed about to be tested, for the line tightened suddenly with a jerk that drew her arms out to their utmost stretch.

"Whoa! whoa! Back up your waggin, Sam," she cried. "I've got ketched on a lawg or the hull bottom of the river."

"You hain't nuther!" shouted Uncle Lisha, at once recognizing the cause of the intermittent strain. "It's a fish, an' an' ol' solaker. Pull stiddy, Huldah, stiddy. O, good airth an' seas! If you c'n on'y git him! Keep a tight line on him!"

"I sh'd think he was a-doin' that," said Huldah, her voice shaking by the beating of her heart, though she presented an outside appearance of coolness. Foot by foot the big pickerel was drawn toward the boat, till the cold gleam of his wicked eyes could be seen, and then by Uncle Lisha's direction he was given line, then hauled in again till the old man could get a grip on his gills and toss him into the boat. Huldah gave a great gasp of relief and was ready to cry for pride, when Sam swung his hat and gave a lusty cheer that was echoed by Jim, who had been watching the struggle and now came paddling over, jerking his head and laughing and offering congratulations while yet 20 rods away.

"I tell ye what, Mr. Lovel, he is a good one!" Jim cried, as he ran his canoe alongside the scow and looked at the fish with a sort of proprietary pride and with almost as much satisfaction as if he had caught it. "Yes, sir, he is a good one, Mr. Lovel. Is it Mis' Lovel 'at ketched him? Well, ma'am, you handled him just as well as ever I see anybody. Yes, sir, you did. Couldn't no man done better—couldn't myself. Naow, if you want tu try it, you might troll aout raound the island. Mighty good place that is for ol' big fellers," and Jim emphasized every item of praise and advice by a jerk of the head, continuing both till the crew of the scow passed out of hearing, and Huldah remarked, still gloating over her captive:

"Wal, Uncle Lisher, Samwil might find wus comp'ny,

for he 'pears tu be a real sensible, candid sort of a man."

When they entered the lake Aunt Jerusha was induced by much persuasion to take the line and a chance of distinguishing herself. She held it anxiously and under continual protest of inability to do so at all.

"I can't hold it so 't any fish'll ever bite, I know I can't. If anything gits a holt of it I shall lose it, I know I shall. You'd better take it, Huldah; you've got used to 't! There! There! There's suthin' a nibblin'! No, the hain't nuther. I knowed the' wouldn't nothin', never! My land! The' is tew! Lisher, Samwil, Huldah! I've got him. He'll git away! He'll pull me in!"

With frequent abortive snatches at it, she frantically hauled in the line, that yielded to her spasmodic efforts with a heavy, sluggish resistance. Uncle Lisha unconsciously lifted the paddle from the water, Sam quit rowing and Huldah withdrew her admiring gaze from the fish at her feet, and the three spectators watched the struggle with intense interest.

"Lisher Paiggs," cried Aunt Jerusha with unusual sharpness, "why don't you take a holt an' help me stid o' settin' there like a scairt fool?"

In ready obedience to this demand, Uncle Lisha under-run the line with the paddle and brought it to hand, and then slowly and carefully hauled it in till, reaching down to the surface, he lifted the burdened hook and swung inboard a big clam.

"Wal, ol' woman," said he, collapsing from high expectation to deep disgust, "you hev done it, hain't ye?" With his knife he loosened the vice-like grip of the mussel and was about to toss it overboard.

"Here, don't ye never, Lisher Paiggs," cried Aunt Jerusha, suddenly recovering speech; "you gi' me that. It's jest what I wanted."

"Good airth an' seas, Jerushy, wha'd ye want on't? You can't eat one on 'em no more you could a chunk o' soaked so' luther."

"No more, I don't want tu. You jest clean the meat aout on't an' heave it away an' gi' me the shells. There," she continued when possessed of them, and holding them up she regarded them with unaffected admiration, "them's jest what I be'n a wantin' ever sen I be'n a haousekeepin', for they be the completest thing tu scrape aout a kittle an' tu skim milk an' tu scoop sugar 'at ever was. Mother hed some 'at she fetched f'm Rhode Island, an' I've allus be'n a wantin' tu git a holt o' some. Naow I've got 'em, an' I'd a great sight druther hev 'em 'an a fish 'at 'll be eat right up. Naow, Lisher, you heave that 'ere fishin' thingumbob int' the water ag'in an' I'll ketch Huldah some clam shells."

Aunt Jerusha did not succeed in fulfilling this benevolent intention, for they were now in deep water, but as they coasted along the gray southern wall of Garden Island she was thrown into a second fever of excitement by a livelier tug at the line. This time it was a pickerel, which, by dint of stout tackle and good fortune, was brought to boat, and in spite of her protested indifference to such a capture, she rejoiced over it exceedingly.

They landed on the island, and with Sam acting as guide explored its interior. The garden-like bloom of its shrubbery no longer verified the island's name, but there were evidences of it in the abundant black clusters of viburnum berries and scarlet haws of wild roses, and there were yet enough blue and white blossoms of asters to make the place pleasant to flower-loving women.

The money diggers' pit in the center of the island was a place of interest to the men, for whom a hole in the ground always has a fascination. Then all went over to the east end, where Aunt Jerusha found some stranded clam shells for Huldah, cleaner and brighter than her own, and all found arrow points of flint on the narrow strip of gravelly beach.

"It does beat all natur' haow the critters made 'em!" said Uncle Lisher, a-pondering over a handsome hornstone arrow-head. "We couldn't, wi' all the tools we got, an' I hearn an ol' feller tell aout West 'at the Injins done it wi' a sort o' bone thingumajig, jest by pushin' on't with the hand, an' he claimed he'd seen 'em at it, but I d' know 'baout it. That 'ere 'd make a toll'able good gun flint, an' I guess I'll keep it. An' naow," he continued, after trying the flint with his knife and pocketing both, "if you've looked at posies an' curiosities long enough le's go over int' the bay under an' g' up tu the haouse where I was yist'day an' git some apples for the women folks. They're dre'd'f'l clever folks up there."

This plan being approved, the party voyaged across the tranquil bay, and then making a detour to avoid the realm of the warlike old Spaniard, went across the fields to the house.

As they drew near they sniffed a familiarly pleasant and pungent odor of smoke and lye which led them to an outdoor fire where Uncle Lisha's yesterday's acquaintance was boiling soap. Uncle Lisha introduced his companions, who were cordially welcomed by the mistress, without an apology for the man's hat and coat she wore, except to say:

"If you ever made soap you know folks don't want tu dress up much for it, an' you c'n see I hain't."

"I guess you don't want tu," said Aunt Jerusha, sympathetically. "It is turrible messin' clarifyin' the grease, an' the lye 'll take the color aout'n eve'ything it teches."

"An' so onsartain," Huldah added. "You never know whether it's a-goin' tu be soap."

"I know it," cried the housewife. "It is the provokinest! Your lye 'll bear an aig like a cork, an' your grease 'll be all right, an' yit they won't be soap. I wonder what's come of my man. If you men folks could find him mebbly it 'ould be more interestin' 'an aour gabbin'. He went tu git some chunks. Soap-b'ilin' 's a good time tu burn up chunks. Gid—Gid-eon! where be ye? I guess he'll come," she said, after listening a moment; and then returning to the subject of soap making, "Some says it's 'cause the wind 's north, but I do know. Anyways, it does act onaccountable."

"I believe the witches or the Ol' Cat hisself gits into 't," Aunt Jerusha declared.

"Same as intu cream sometimes," said Huldah. "Solon Briggs says 'at a piece o' silver money 'll drive the witches aout o' that, an' mebbly it 'ould aout of soap."

"Wal, I'm goin' tu see whether it's soap or not," the soapmaker said, tucking her dress between her knees, pulling her hat over her eyes, and blowing the steam away while she dipped a few spoonfuls of the contents of the kettle into an old saucer. This she stirred and cooled with her breath, watching it anxiously, while her feminine guests looked on with almost as much interest as the liquid dribbled in a thin stream from the spoon.

"Mebby they was beech ashes," Uncle Lisha suggested, regarding it and the disappointed and vexed face of the matron.

"No, they was most all ellum," she answered. "Plague on 't, it don't look like nothin'."

"Wal, the' hain't no better ashes than ellum, so it ain't that," said the old man.

"Try a leetle dash o' water in 't," Aunt Jerusha suggested, and when this was done the liquid at once thickened in the saucer and the face of the fair soapmaker relaxed to an expression of supreme satisfaction, which was sympathetically repeated in the countenances of her visitors.

Gideon now appeared with an armful of refractory outcasts from the woodpile and the little girls at his heels. He was introduced in the same breath that the good tidings were communicated to him, and he rejoiced also, while the little girls silently welcomed their doughty old champion with bashful smiles and nibbling finger tips and apron corners, shyly made the acquaintance of his companions.

When the guests were comforted with apples and stayed with flagons, they went over to the ferry harbor and beheld with intense admiration that maritime wonder, the horse boat, arrive and depart. Uncle Lisha recounted once more to Aunt Jerusha's willing ears the events of his life as a soldier, and she was proud to be on the very ground where he began his military career and declared with great satisfaction: "This was 'nough tu pay her for comin'," while Sam and Huldah were so much interested the old man felt himself quite a hero.

Then they strolled back to their own humble craft and coasted along shore toward camp. Long before they saw his figure idly pacing the beach they heard Antoine's sonorous voice doing its best with some words of the "Exile of Erin" which he had picked up somewhere:

"Dar come on de beach a poor eggshell of heron,
De dew on hees chin rub it heavy an' chill."

He was at the landing to receive them and was profuse in his compliments to the anglers when their trophies were shown him.

"Bah gosh, Aunt Jerushy! Bah t'under, Ma'am Huldah! You bese of it beat One' Lashy an' Zhozeff an' Sam for feesh, an' 'mos' me, w'en Ah a'n't try. Probly if Ah'll was go wid you, you ketch lot of it. But you do pooty good, Ah tol' you."

"Yes, they did sartain," said Uncle Lisha. "An' you'd ort tu seen her haul in a clam. He fit like a good feller, but 't wa'n't no use, the ol' woman was tew much many for him an' she mucked him. An' both women's a heap better sailors 'an Jozeff is."

"Zhozeff," said Antoine, with supreme contempt, "Ah'll was jes' soon try for mek feesh walk on de graoun' as for mek Zhozeff be sailor mans. An' all de tam we keep haouse to-day he worry, worry for 'fraid you be draown' on de lake."

The next morning the preparative bustle of departure began, and though no one openly confessed it, each felt a shade of sadness as the place grew bare and desolate where such pleasant hours had been spent.

"It beats all natur' haow a feller gits wonted tu a place where he's hed a good time, an' hates tu leave it," Sam said, as he turned away, "but it's hopesin' we'll come ag'in."

"What's sass for gander 's sass for goose, an' when you come ag'in I'm a-comin' tew," said Huldah decidedly.

"If de whomans was comin', Ah'll a'n't, me," Antoine declared, "it was spile up all de funs for try for live too pooty."

"Wal," Uncle Lisha sighed, "it hain't noways likely 'at I'll ever come ag'in."

"But if ye du, Lisher, I'm a-comin' tew," Aunt Jerusha said, as they departed.

The last ember snapped out in dull explosion and the last thin wisp of smoke dissolved in the colorless air, and amid the silence of desertion the falling leaves began the slow obliteration of a living place of man's transitory sojourn.

ROWLAND E. ROBINSON.

LABRADOR SKETCHES.—I.

My Pastor.

IT was Jan. 23, 189-. The weather was dreadful, the cold intense and the gale howled through the woods in which I was camped, breaking off in its gusts the tops of the spruce trees already bending under the weight of the snow. One would hardly have thought of putting a wild animal out of doors.

Lying down in my tent, luxuriously stretched out on a couch made of the flexible branches of the balsam fir, with my feet close to the stove, whence spread a delightful heat through my cotton house, made wind proof by the snow piled up around it, I listened to the gale as it roared past me and I dreamed—of nothing in particular.

Suddenly the door of the tent was quickly pulled open and a mass of ice threw itself toward the stove, whose heat it seemed anxious to monopolize. Soon it began to thaw and as the mask of ice disappeared I managed to make out a light-brown beard, eyes of the same hue and hair of a deeper shade. I watched the metamorphosis in silence, merely sitting up to fill the stove with fuel to increase the heat and hasten the thawing out of the frozen personage before me.

At last, as the snow and ice melted away, I recognized the features of a fellow hunter, of a friend who was and is very dear to me.

"Hello! is it you?"

"Yes, it is I," replied my pastor, for he it was.

"Well, *Monsieur le curé*, have you come to trap along my line? There are still some martens left."

"No, I am attending to my mission."

"Your mission"—I thought he was mad. "Do you think there are any chapels along my line of traps, or have you come to convert me? If so, you have chosen a nice time for it."

He seemed slightly embarrassed and then he smiled and asked me whether I had anything to eat. I told him I had a hare, a partridge and some trout which I would cook for him if he would take some of my whisky first. He took a mouthful and lay down on my bed, where in an instant he was fast asleep.

During my culinary operations and while the partridge was roasting and the water for the tea boiling, I watched my sleeping friend. Abbé N. is a young man, barely 33 years old. Short but sturdy, with brown hair and beard, an open countenance, a frank and decided look.

While he slept I vainly asked myself what motive could have impelled him to come through forty or fifty miles of bush to join me in such weather. The storm had lasted for three days. He must have slept out without shelter or protection against the cold, which was sufficient to freeze a polar bear, but a watch-fire—and I know what watch-fires are like: you freeze on one side and roast on the other. He must have walked for nearly three days, beating a road through the heavily falling snow, a heavy and fatiguing work, which when two or more hunters are together they take turns in doing with their snowshoes, to relieve each other.

He had risked his life—a valuable life—and for what? A sprain, a broken limb, the loss of his match-box, any of these meant death. He was not the first priest I had seen facing death. I had seen them on the field of battle. I had seen them return from China and Africa all broken up and bearing the glorious scars of martyrdom. But this one seemed above the others. No one saw him; no one would have understood his death; perhaps they would have blamed him or laughed at him and called him mad. I myself had thought so and, as I watched him, I felt ashamed of myself, for I knew him. But why had he come out to me?

Meanwhile the partridge was roasted and I put the trout in the frying pan with some slices of pork, which sizzled cheerfully, while the tea gave out a pleasant aroma. I hesitated some time before awaking my companion, but at last I decided to do so, for he required food more than sleep.

In spite of his fatigue he awoke at once and ate a hearty meal. He then lit his pipe, while I rolled a cigar-

Natural History.

BEAVER CATCHING FOR THE ZOO.

[Concluded from page 392.]

NEXT day we cleaned out several dams below the main dam, took some of the support away from the base of that, and had everything in shape for an early start the next day. In the morning we had most of the work to do over again, but it did not take so long. As soon as the main dam was cut, we left one man there, while the other two put out the netting. Where it crossed the old channel we had to put in extra pieces, and had to stake some runways and also put in pieces of netting. We wanted to be sure that none would escape. I cut a channel from the dam as deep as possible, but could not get the water next to the house less than 3ft. deep. Here too was where the cache was located. The main part of it was a little below the house and connected with it. Before we drew the water off it showed above the surface over 3ft. We had to move it out of our way. There was a great mass of it, willows and quaking asp. Some of the aspen sticks were very heavy, weighing at least 100lbs. All through the upper part of the cache were little bunches of willow and aspen twigs similar to those I had seen the small beaver gather; they were wedged in here and there to hold them from floating. That romance about beaver sucking the air out of sticks they wish to sink will do to tell to the marines. We found the parts of the cache under water held together so that no stick

Soon after getting the hole large enough, I crawled through into the room, and with a long willow drove a small beaver out to our net. This made two so far, and that was all we could find without cutting the house to pieces. I could not discover any more rooms, neither could we attempt to finish the house that day, it was so strongly made; so we searched some of the runways and holes above, up to the open meadow. It was late and our work had been hard; we were at it from early in the morning, were hungry, wet, tired, and a bit discouraged with our poor success. We thought that possibly the other beaver had escaped.

Next morning we went back, and found some animal had gone up the creek over our nets, as they were bent down. We commenced to search all the holes carefully even getting down to look through after cutting holes through from the top.

Jump and Hague were on the opposite side from me. I noticed a bit of discolored water running from one hole and called Hague's attention. He got down, looked up as far as he could, and then ran a willow up, and reported nothing there and the passages short. Jump called out from above that he had found a new dam. We left everything and went above. Sure enough, the beaver had put in a new dam in the night, raising the water so that the creek was bank full above. The dam filled the creek, which here was 5ft. wide.

Our tools, cages and dip net were brought up, and a short piece of netting put in above. We soon had the dam out, and commenced searching out all hiding places, but could find nothing. We were very much disappointed with our want of success, and filled with a growing

OBSIDIAN CLIFFS AND BEAVER LAKE. YELLOWSTONE NATIONAL PARK.
From Report United States Fish Commission.

ette and asked him the object of his visit. He would not answer, but turned the conversation to hunting and trapping, of which, like me, he was very fond.

He expressed his regret at being unable to remain with me, but pleaded the necessity of returning at once, as one of his flock was dangerously ill and his services were required at her bedside.

He set out on the following day after breakfast. The wind had fallen, but the snow was soft and at each step our snowshoes sank 6 or 8in. in it. I left him at the end of my line and came back to my tent, overhauling all my traps, which were buried in the snow.

A month later a trapper, whose line was some miles above mine, passed by my tent and brought me a letter from my wife, whom I had left in the settlements. I then found out why my pastor had paid me a visit.

I am one of those who are born to ill luck, and that is doubtless the reason why every year, at pretty nearly the same date, I am always reported to be dead or in danger of death. As a rule, I am killed in summer during the season of navigation. This year, after having reported me drowned near English Point, a little below Natashquan, Dame Rumor, dissatisfied no doubt with her want of success in the warm weather, reported that I had hurt my foot, was without provisions and dying in the woods. My pastor heard of it and alone—for no one would accompany him in the storm—he had set out in the midst of the frightful blizzard and had risked his life to save mine. He had found me all right and had returned, without even hinting at the devotedness and spirit of self-sacrifice which had brought him to my side.

I often think of him when the snow falls and the wind shakes the trees, and ever with a feeling of grateful affection.

H. DE PUYJALOUY.

[Written for the FOREST AND STREAM by Count de Puyjalouy, and translated from the French by Crawford Lind-say.]

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by May 1st and as much earlier as practicable.

could float unless it raised one lower down, until, where possible, the beaver had shoved the ends of the sticks under the banks and edge of the house. Some of the long and large sticks of aspen were placed against the pile, one end projecting above the surface of the water, and some very large but short ones were on top, high and dry. The cache was a very large one and would measure at least two cords. It had to be handled a stick at a time.

When all had been removed to the water level we started in getting the house ready for our hand net. All holes were closed except one next to the water, and part of the house cut away, with stake driven so that there was a runway to the net. A very large beaver had come out in sight when we first went to the house, and tried to drive us off, as it had the horses the day before, but it soon gave it up, going out of sight under water.

Soon after starting to remove the top of the house we had a large beaver. This one showed considerable fight, chewing away at the wires of the netting, and diving at us when it thought it could reach us through the wires. Even after it was in the cage it would growl at us, and dash against the cage until it had hurt its nose so that it was quite bloody. This was the only beaver hurt, but not by our handling; we could not help its bumping itself if it wanted to.

Soon Hague gave a yell and said, "Here's another little one!" When I got a look at it, it proved to be a muskrat. There were two of them. One went through one of the meshes, the other we let go. Several times we got these rats in our nets. I found them in all the large houses; they had independent runways and passages in the walls of the houses. I do not think they assisted at all in the work of construction, but let the beaver do it for them. I think they are careful to keep out of the beaver's way, and as they are small they can easily do so. In the shallow parts of this same pond we saw some muskrat houses, but did not examine them.

It was a long time before we got into the living room of this house. All the material was new and very long, well bound together, and plastered with mud and moss,

admiration for the cunning animal we were after. Jump felt sure the beaver must be still in the house; Hague thought they had gone out of the country; I had hopes of finding them, as they had spent part of the night putting in the dam. So we divided our work. One took tools to the house; I with the shovel and a willow hunted out holes on one side, and Hague on the other.

We looked into every possible hiding place until I came to the hole where I had seen the discolored water. The entrance was wide and low. I cut part of it away with the shovel, got down in the mud, so that I could feel around with a short stick and use a long one too. I found the end of one hole—the one Hague said there was nothing in—and could whip around with the stick and hear it strike the ground. Feeling in with a short stick, I found another passage leading off to the right, and running my long willow up that I found it was crooked, bending more to the right; but I could feel something soft at the end, either mud or an animal. I twisted the stick a bit, and then looking at the end found two fine hairs. I called to Hague to bring the net and Jump to bring an axe. Hague could not believe there was anything in the hole until he had felt in with a willow. Then he concluded there was a beaver or muskrat.

By measuring the length of the hole, and getting the end located, I found its end under a bunch of willows. I cut the roots so that I could use the shovel, and commenced to dig, surface water filling the hole as fast as I took out the peat-like soil. Getting down to where I thought the hole ought to be, I commenced to shave off the sides with the shovel, when suddenly all the water disappeared, showing me a bit of fur for an instant. We now had to enlarge the front end, so that we could properly place our net. When all was ready I carefully pushed my shovel in and very slowly a small beaver walked into the net. We waited until it got to the end, then raised it. Hague said, "Halloo, Pete! what do you think of this?" The little fellow sat up just as the first one had done, its little hands closed and held as though it was going to raise them to beg of us not to hurt it—to spare its life. It was not sure which one of the three of

us it ought to beseech. Its eyes looked as though it had been crying.

We told it to keep still; we'd give it a nice cage and a trip to Washington. Jump brought the cage—which he had taken to the house—opened the door, then tipped the net over, and in walked the beaver as slowly as it had come out of its hole. We replaced the net, I pushed again in the hole with the shovel, when out walked another small beaver. Jack joined its mate in the cage.

DAM AND HOUSE BEGUN.

Again the net was placed at the entrance, again I pushed in the shovel, and after a little persuading a very large beaver walked out and into our net. When the net was raised, it sat up like the little ones and walked into the cage, filling it pretty full. We were satisfied with that hole, but looked in to see if there was any more of the family at home. We had them all.

Swinging the cage on a pole by wires, two shouldered it, and the other carrying some of the tools, we started for Yancey's, a mile away. It was quite a load to pack, but we all felt so pleased over our catch that we did not mind it. We put the beaver in the tin-lined box with the first two taken from the house. The beaver seemed glad to see one another again. After smelling of everything they all crawled into a corner until there was only a pile. I thought some of the little ones would be smothered. I gave them hay for a bed, a part of a barrel for a bath tub, and some quaking asp for food. I had noticed that the first beaver captured would not eat anything for three or four days, and even after that only a very little for a few days more. After about ten days they would eat the bark off a large quantity of wood. Of the family the little ones were the first to eat and showed less fear. When their tub was filled with fresh water, one of them would come at once. As I wished them to get as tame as possible, I did not object to anyone's seeing them. Everyone who passed along the road was very much interested, even old trappers.

I now had eight beaver, and as I thought I could pick up a few more not far away, we moved all our implements back to Yancey's and down the creek to the two-house dam. Working up the creek, we broke dam after dam. The weather was getting colder. Ice formed every night and in the morning the dams were a mass of ice. Every stick was covered except where the water ran. Our hands were in very bad condition; we could not get them healed. Cracks, cuts and bruises made them swell during the night, so that when we went to work in the morning it was not very pleasant to take hold of the icy willows, sticks, stumps and stones to remove the dams. There were no houses in the ponds we were draining while we were looking for bank beaver. After cutting ten or fifteen dams and searching out every hole, this time very carefully, after our experience above, we found a hole the end of which we could not reach with a long willow. Cutting in and feeling again, we could not find the end. A second cut was made, when we felt something at the end. Digging down, we soon routed out a beaver. The dip net was in the channel below, at a bend; Hague ran to it. The beaver dove into the water, and partly floating, partly walking, went down with the current and into the net. As soon as it found itself cornered it commenced cutting the wires of the net with its teeth. Getting hold of a wire, it would bite and cut at it until it parted; then seizing another, it would soon cut

of each. Some of them were over 20ft. long. Beaver had been there lately. While cutting away a bit of overhanging bank from between two holes, we found another passage, longer than the others, and cutting three holes in this to find the end, Jump started another beaver that came out with a rush, and attempted to get into the old holes, which were blocked with sod. It would lie on the bottom, close under the bank, and within a few feet of Hague, while he was at work getting a good place for the net. I was above, to keep it from getting away. It looked more like a chunk of rotten wood than a beaver. When Hague was ready I poked it with a stick; it turned and went back into the tunnel it had come out of. Jump started it out again. When it came out of one of the holes we had dug to get the direction of the tunnel, it made a jump over a bunch of willows at least 5ft. high, landing in the creek, whence it dove under the bank again. We were so astonished at its jump that at first we thought we had started some other animal out of the hole. We were quite a while getting it into the net, and when we did so the iron frame broke where it had been bent. It was soon in the cage, not showing a bit of fight at any time, although it was the largest beaver we had captured. Jump said it was the largest he had ever seen. We all thought it would weigh 75lbs.; but when put on the scales it only showed a little over 47lbs. I believe the largest beaver on record weighed 62lbs. I am not sure but that was weighed like we did our big one at first sight—by guess. When we packed it to the house, we were sure it weighed 75lbs., if not a little more. If we'd carried it a mile, I'm afraid it would have been 80lbs. Scales spoil and shrink many big things; 10lb. trout become 3 or 4lb., and 75lb. beavers become 47-pounders, and 1,000lbs. of iron shrink proportionally.

The big beaver made our tenth and last. We had worked out all the houses and holes that we could very

PINE TREE CUT DOWN BY BEAVER, WASHINGTON ZOO.

well get at. We were in a very dilapidated condition—boats leaked so that we were wet through; we had enough for one year. So taking a good dose of Uncle John's "Kentucky High Step," we drank success to the beaver.

I went out again another year with another crew and captured more beaver; found they all had different dispositions, and learned more about their ways and habits; but I think you have enough this time. E. HOFER.

WILD PIGEONS.

Editor Forest and Stream:

As the American wild pigeon becomes every year more and more a *rara avis*, and as its ultimate extinction seems certainly assured, it becomes each season a matter of greater interest to the readers of your esteemed paper to hear something of the whereabouts and habits of this most interesting bird. When I came to this country from

The birds breed in the tallest timber in the foothills of both mountain chains, and come down to the Sound to eat salt mud and feed upon the grain fields of the farmers.

They fly in small flocks, say thirteen to thirty-five, often in pairs or in bands of seven or eight, are very wary and suspicious of human approach.

They may sometimes be surprised in the early morning while feeding upon the elderberries or while busy around a sheltered water hole, but the usual method pursued by the few who systematically hunt them is to lie in concealment around a favorite haunt and pot them while sitting.

They begin to come down into the valleys and about salt water in late May or early June, and their first appearance is the signal for the onslaught by the pitiless pot-hunter.

At this season the birds are nesting, as shown by the fact that a large percentage of those killed have their ovaries filled with immature eggs, and so the process of extermination, which is bad enough at any season, is rendered tenfold more effective by this early shooting.

I am unable to state whether the pigeons here are a survival of the innumerable hordes which swept over my early boyhood home in the valleys of the Appalachians, or whether or not they ever were here in greater numbers. Judging, however, from the absence of reference to them by the old inhabitants whom I have interviewed, and from the fact that the kind and quantity of food which sustained such countless millions of their species in New York and Pennsylvania is not here for their use, I am led to the conclusion that they were never much more numerous upon this portion of the Pacific coast than they are at present.

That they cannot long survive the destructive methods of the market hunter is only too apparent in their rapidly diminishing numbers.

May 9.—The slaughter of the pigeons has commenced. Out of nine which were brought into town to-day and examined by me, five were hens and were laying. The killing will go on from this time until the next rainy season. The pigeon is afforded no protection by law, and it would not make much difference here anyway, as there is no attempt made to enforce the laws we have.

J. A. BEEBE, M. D.

TACOMA, Wash., May 8.

[Are these birds really the passenger pigeon (*Ectopistes migratoria*) or are they the band-tailed pigeon (*Columba fasciata*)? The latter is a common West coast species, while the passenger pigeon is a bird of eastern North America, occurring only as a straggler in Nevada and Washington. The two birds are not very like, one belonging to the genus *Columba*, having the tail much shorter than the wing, and composed of broad, obtuse feathers—as in the domestic pigeon—the passenger having a long tail equal to wings of narrow and pointed feathers. The difference between the shape of the two tails is that between the common ground dove and the domestic pigeon. The band-tailed pigeon is purplish red in color, with white half collar, white belly and a black bar across the tail. The passenger is slaty blue, with some small black spots above, changing to reddish on neck and below. If the passenger pigeon really occurs in Washington and in such numbers as stated by our correspondent, the fact is very interesting and ought to be established beyond question.]

NATIONAL ZOÖLOGICAL PARK NOTES.

It will be remembered that last February we mentioned the case of a female Virginia deer in the National Zoölogical Park at Washington, whose leg had been broken in two places by a vicious male of the same species. The leg was set as well as possible by Head Keeper Blackburne, and when we saw her last February the doe was doing well. She is still further improved, and except for a little lameness, which she shows when running, her condition seems very nearly perfect. It is hoped that she will produce twins this month, as usual. The especial factor in the recovery of this female was her amiable disposition. She is as tame and gentle as could be, and it is this gentleness which has pulled her through.

When we visited the park last winter there were two large buffalo bulls, kept in an inclosure on top of the hill. Each of these bulls had at different times in the past been the master of the herd, and each had been defeated and had given way to a stronger and younger one. So they lived together in this small inclosure apart from the other buffalo, and got along very well together. The younger one seemed quite willing to keep out of the way of the old one until March 28 last. A nod from the old bull was the usual signal for the younger one to step aside; but this day he refused to do so, and returning the nod stood fast. The older bull tried to drive him, and their heads went together with a tremendous thump. Keeper Blackburne, who was not far away, saw in a moment that the younger bull was the most active and the stronger of the two, and that the old bull was no match for him, and the old bull realized the fact almost at once, and turned and ran. The younger one, however, kept after him, and, whenever he chose, drove him against the fence with terrific force, knocking the old one down eight different times, and ripping him at will when he was down.

Every effort was made to stop the fight, but for some time it was impossible to drive the young bull away. Finally, however, he left the old one for dead, and made proud by his victory went to fighting with the other buffalo through the fence. Keeper Blackburne then managed to get the old bull on his feet and pushed him into the house, where he died half an hour later. Three of his ribs were broken, one lung was punctured, and his body was a mass of rips and bruises from his shoulders to his hips on both sides. The other bull showed no marks of the fight whatever.

The large black-maned lion which was in the Park died not long ago from a rupture of a blood vessel.

Black Foxes.

THE Chignecto, N. B., *Post* records that last autumn Edward Sonier, of College Bridge, bought of an Indian two young foxes, a male and female. He had them cared for during the winter and the pair became perfectly domesticated. Two weeks ago the vixen presented her owner with four young cubs, all perfectly black.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

BEAVER WORKING AT DAM BUILDING.

Photo by E. Hofer.

that. We were afraid we were going to lose it. Even when we shook the net it would not let go. Getting the cage as soon as possible, we turned down the net by the open door; but it would not go in until we turned it toward the water, with the cage at the edge of the creek. Then, thinking it was going to escape, it went in with a rush, and was at last safely confined. We examined the net, and found it cut so badly that we had to get another piece of netting to put inside. This one fought more than any of the others, but did not dive at us as much as the one spoken of above.

Next day, after cutting many dams, and at last the last one, we found several long passages, with nests at the end

an office only a few doors from your own beautiful headquarters seven years ago, I plunged into "the forest primeval" and gulped down huge drafts of the balsamic air of freedom with an enthusiasm that took me into nearly every section of this most picturesque and delightful country.

Almost immediately I discovered that the wild pigeon, which lived in my memory as a cherished remembrance only, lived here in reality and could be obtained in such numbers as to make their pursuit satisfactory sport. I have shot a fair number of strings every season, and during the summers of '93 and '94 two half-breed market hunters brought many hundreds of dozens into this city.

PHILADELPHIA ZOÖLOGICAL SOCIETY.

THE twenty-fourth annual report of the board of directors of the Zoölogical Society, Philadelphia, was read at the annual meeting of the members and loan holders of the Society, April 23. The report of the board of directors shows a slight increase in the number of visitors for the year 1895-96 over the previous year, but the increase is only 3,000 for the year. The increase in the receipts from admissions is over \$1,200. As usual, Sunday is the day when most visitors come to the Gardens, and Saturday is the next, while Tuesday and Monday are the lightest days.

The report of the superintendent shows that during the year there were accessions to the collections to the amount of 92 mammals, 181 birds and 710 reptiles and amphibians. Among the important specimens received are a male and female ostrich, an ant-eater, a pair of polar bears, two examples of the East Indian snake-eating cobra, a species which grows to the length of 12ft. or more and is the largest terrestrial venomous serpent. A number of interesting East Indian birds were purchased in August last, among them a pair of argus pheasants which are probably the first that have ever reached this country alive. Unhappily these two died soon after their purchase.

Probably the most interesting specimens obtained during the year by the Philadelphia Gardens are the three mountain sheep, two of them brought East from Dakota by Mr. Howard Eaton, and the third deposited, along with two prong-horned antelope, by Mr. Alfred Harrison, of Philadelphia. The male mountain sheep (*Ovis cervinus*) is 4 years old, and the two ewes are yearlings. The male was captured near Red Rock Lake, Idaho, while one of the females comes from the Bad Lands of the Little Missouri River. With the sheep brought on by Mr. Eaton were received six trumpeter swans, a species which is very rare in collections.

It will be interesting to watch the antelope which are now in the Gardens. It has been for many years a common saying that it is impossible to keep the prong-horned antelope alive east of the Missouri River, and we are inclined to think that past experience has justified this statement. We heartily wish Mr. Brown better success with his antelope than others have had, and trust also that he may now have a foundation for a herd of mountain sheep. As Mr. Brown is a mighty hunter, he will unquestionably guard these last-named animals as the apple of his eye.

CONFIDING QUAIL.

LOS ANGELES, Cal., May 5.—*Editor Forest and Stream:* After an interval of nearly a year I again claim a portion of your valuable space to chronicle an incident which, I think, seldom occurs. But do not attribute my long silence to any waning of interest in "our paper," or in the sports of the field. Far from it; but the fact of the matter is, nothing has happened worthy of mention, and a mere recital of the many pleasant hunts which I enjoy would prove monotonous, especially when the subject is so delightfully handled in almost every issue by pens far readier than mine. But this is digression; the incident above referred to is that a pair of valley quail have built their nest (or rather apology for a nest) in a luxuriant heliotrope bush which climbs in rich profusion over the porch surrounding our house.

This morning, as the gardener was watering the flowers, he was startled by hearing a quail flush noisily out of the heliotrope, and upon examination he found a nest full of eggs. In a short time the hen returned and immediately took possession of her home; and she may rest assured that she will not be again disturbed.

Our house is situated on a hill, surrounded by orchards of orange, olive and lemon trees, and although quail have been unusually numerous this spring and have been seen running all around the house, I did not imagine that they were so charmed with the beautiful view which can be had from the hill that any of them would locate here permanently. Or, maybe this particular pair are wise in their day and generation, and do not care to expose themselves and their tender brood to the ravages of the hosts of their enemies on the mountain side—the coyotes, wild-cats, foxes, weasles, skunks, snakes and other "varmints" which prey upon them, their eggs and their young.

Fortunately for the quail, but, alas, unfortunately for me, I have no dog at present whose ambition might impel him to demand a closer acquaintance with the interesting family than would result in their good. My last dog joined the great majority of his kind last summer, and he was the fourteenth that I've lost; but that is another story and a very melancholy one. However, I see danger ahead in the form of several lynx-eyed and semi-wild felines that have taken up their abode beneath the house, and occasionally make the night hideous with their serenades. But dire vengeance will be wreaked upon them if they interfere, and as this enterprising quail has thus far escaped, I have great hopes of her ultimate success.

The fact of her nesting where she has is rendered all the more surprising from the fact that the nest is not more than 10ft. from where the horses are tied when the carriage is brought to the house, and that the gardener is daily passing back and forth and working in the very flower bed where she has her nest.

I shall watch with great interest the progress she makes and shall report the result—favorable or otherwise—and that it may be the former is the prayer of

CULPEPPER.

Starlings in the City.

NEW YORK, May 19.—*Editor Forest and Stream:* On Sunday, May 17, as I was returning from riding, I started from the lawn of one of the places in Audubon Park, between 156th and 157th streets, west of Eleventh avenue, New York city, a bird quite different from anything we are accustomed to see here. The bird was black, with a white bill and a short tail, and was less in size than a robin. In short, it was an European starling, unless I am very much mistaken. On the following morning, not far from the same spot, two birds like the one seen the day before flew up from the lawn and disappeared, flying north. I have no doubt that a family or a little colony of starlings have made their home somewhere in the neighborhood, and I shall endeavor to investigate the matter further. GEORGE BIRD GRINNELL.

Game Bag and Gun.

IN THE ROCKIES.

(Concluded from page 395.)

Oct. 3.—Everything covered with snow. The day beautiful and clear and warm. After decorating my face under and around the eyes with pot black in order to prevent snow blindness, Van, Doc and I struck out in search of game, but with little result. I wore old rubber boots and slipped all over the mountains. We descended one place which had a sheer drop of perhaps 35ft., Van first, and struck bottom in a snowdrift. I followed and Doc brought up the rear. When in midair he turned over and came in head on. We had to dig him out. Then we climbed a mountain side almost perpendicular and nearly played us both out, as the boots wouldn't take hold. After reaching the summit we rested for a few minutes and then worked up a draw, where we found fresh sign. We tracked it for probably half a mile, when Van suddenly stopped and says, "Captain, we don't want them." Of course I wanted to know why, as I was anxious to kill the fellow who could make such a tremendous impression in the snow as the one we had been following. Van says, "No, it's a cow." Then calling to me he says, "See where those tracks go between the trees? Well, a bull couldn't get through there; he would have gone to the right or left." It was now getting on toward 4 o'clock and he says, "Boys, can you walk five miles further? If so, I can promise you all the elk you care to see." "How far are we from camp?" "About ten miles." "And the extra five will make fifteen to camp. No, thanks, not for me. I'll take another day." So we started for camp and struck a windfall that was a "lulu." Doc had fallen behind, and in trying to do the squirrel act as Van did it slipped and sprained an ankle. We called a halt and waited for him to come up. This little rest for fifteen minutes quite refreshed me, so that I felt ready to renew the tramp. Doc was badly used up and suffered much before reaching camp, though too plucky to give in. Reached there about 8 P. M. and stowed away a quantity of hot food. It is surprising how quickly fatigue leaves one in this country.

Friday, Oct. 4.—Van and I rode west by south over the mountains in search of sheep or bear sign. Saw both, but were two or three days old. Climbed a very high peak, which I have christened Painter's Peak. This peak is one of several used by the Indians as signal stations. On top they have built, by piling stones one on top of the other, a circular place large enough to admit one man, and about 4ft. high. They are built in such a way that they look exactly as one would suppose the mountain peak would appear. These stations command the entire range.

The country here seems to be eruptive rock formation, and both sides of the mountain seamed with dykes, looking for all the world like huge troughs for carrying off the water. At this point in the cañon there is a stream that flows in two directions, one flowing northeast and the other southwest. There is much mineral float here, and I hope in the near future to return, prepared to thoroughly test it.

On our return to camp we saw a bunch of twelve black-tail deer within a mile of camp, but did not molest them.

Saturday, Oct. 5, was the banner day for me. I shall never forget it. Van, Doc and I started on our horses, determined to bring in at least one fine head. We had scarcely gone more than three miles from camp when

Van got in one shot, however, before he reached the timber, but only succeeded in wounding him slightly. We followed him for perhaps a mile and a half through windfalls, and eventually gave him up. Mounting our horses, we rode on through windfalls until you couldn't rest. About noon we came out into an open park, dismounted and listened, as we had shortly before heard a bull whistle; soon found fresh sign, followed it for half an hour, and had the satisfaction of hearing him break and run 100yds. ahead. We retraced our steps to Doc and the horses, mounted, and rode on through more timber and windfalls for half an hour, when once more we came out into open fields, as Pop calls them. Here we found more fresh sign and soon Van says, "Look ahead, see the elk." Van started to the right and I followed one which turned to the left as fast as I could run. My first shot had already wounded him, so that he wasn't making much better time than I was. He made for a narrow strip of timber ahead, passed through it, crossing another open space about 50yds. wide to heavy timber. Before reaching it he slowed up, giving me time to get through the first piece of timber, gather some breath and get my tongue, which was hanging out, back into its proper place. Before entering the wood he paused a moment and looked back. This pause was a fatal one for him. Quickly raising my rifle, I fired and broke his neck. The head was very symmetrical, but with only eleven points.

Doc and Van came up, and we followed on into the timber and got into a band of perhaps 200. They winded us and scattered. Here we made a running trail of five miles, horses going at full speed and Van hanging out of saddle, his face within 2ft. of the ground, picking out the trail of one immense bull. This was the most beautiful bit of trailing I have ever seen done in all my life. The trail led along the edge of a cañon for fully five miles. Van would yell, "Keep right to the crack in my coat, boys; we've got to head them off and turn 'em back, must have that bull, sure." We finally turned them into the timber, then began a zigzagging that almost gave me the blind staggers. Finally Van sighted one big bull and says, "Captain, slide off and look ahead; see that bull standing there? Now I want you to shoot him in the ham, and when he turns give it to him in the shoulder (he was standing with head directly from us). It's your only chance, as the timber is thick, and two jumps will take him out of sight." No sooner said than done, and down he went. "He's all right," says Van. "Now let's turn our attention to another big fellow on the right." Scarcely had we turned around when I heard No. 1 going through the timber like a locomotive. Van wouldn't believe it, but on going up to the spot where he had fallen, sure enough he wasn't there. "Now we've got to do some tall rustling or we won't get another shot, as that old bull will get them all on the go." He had scarcely finished speaking when we heard a whistle on our right, soon another, which we had no difficulty in locating. Sammy, these whistles remind me of the factory whistles blowing for 12 o'clock.

Carefully picking our way through the timber, we came out into a park; crossing it and into another strip of timber, we paused to hear the whistle again so that we could locate him exactly, as it was now a case of skill against instinct. Soon the old fellow gave that unearthly yell sounding more like the bray of a jackass than anything I can recall. Van says, "Do you see him? Look straight ahead, but don't move, wait until he whistles, then run, following my steps exactly." Almost instantly his head went up and the whistle begun. "Run, and stop when I do, and as I do; he's facing us and is liable to git a move on any minute."

THE CAMP ON COLD CREEK.

Photo by J. R. Painter.

Van sighted a bull elk feeding on top of the mountain on our right. We immediately made for the timber and rode toward him, bearing off to the right in order to get to the windward. When within 200yds. of where we supposed he should be, dismounted and climbed toward the top; on reaching it we looked ahead and within 50yds. of us stood a bunch of cows and calves; fortunately only one calf saw us. Quietly backing down until out of sight, we ran to the left and up the slope. By this time they had become startled and were making off toward the timber. There seemed to be only one bull worth shooting, and he was surrounded by the cows and calves in such a way that to shoot him was almost impossible.

Step by step we crept on him, often having to pause with one foot in the air, and keep the position until he challenged again, when we would run perhaps 10yds., but it was all as noiseless as possible to go. When we got to within 100yds. of him he suddenly wheeled around and walked off around the timber. This was what we wanted; as he walked from us we ran toward the opening, on reaching it halted, while he described a circle, unconscious that we were waiting for him to turn so that it would give us a broadside shot. As he did so Van says, "Now, Captain, take your time and do it right." We both fired simultaneously. I never felt so mean in my life as I did after the shot was fired. It was painful to

watch him stagger around and try to get toward us, his strength failing all the time. Then he would make a sweep with those immense antlers and the dead limbs and small trees would be broken like reeds. He finally went down. We soon had his throat cut and began to skin out the head, while Van went for Doc and the horses. He found Doc up a tree, where he had gone either from fright or to get his bearings; he claims the latter, so we let it go at that. By the time they returned I had the scalp off, and it didn't take long to saw the skull apart. Van tied the scalp on his horse while I mounted Booky, and the horns were, after some trouble, taken aboard with me. They rested on the pommel of the saddle and were ugly things to handle. I had a circus, I can assure you. My broncho seriously objected to carrying those horns, and every time he glanced back he had a bucking fit immediately at both ends. Oh, I tell you it was fun. Sammy, you would have enjoyed it.

We had scarcely gone 100yds. when Van suddenly slipped off his horse and fired, knocking down a fine bull, telling Doc to go get him; but he rushed in on him too quickly, and the bull, in his last efforts, gained his feet and the edge of the timber and ran and rolled down a precipice and was lost. Van went in to look for Doc, and while they were in the timber a fine, large, six-point bull walked out to within 25yds. of where I sat, on Booky. He advanced with head and mane erect. The horse had his head down grazing and did not see him. This bull stood there for perhaps a minute and only turned to leave when the horse raised his head. He would stop every few yards and look back, wondering possibly what that monstrosity was. What would I not have given for my camera to-day.

When the march to camp was resumed the sun had set and we had fifteen miles to go in order to make camp, part of the way over windfalls that would make your hair curl in daylight. We didn't even have a moon until about 9 o'clock. I had enough before we had gone a half mile and on several occasions felt like throwing the horns away. Sometimes we would pass between trees too narrow to admit the horns, they would catch and pull me back on Booky's rump; that was a signal for his heels to shoot upward and he would land me on his neck, then to get me off that part of his anatomy he would walk on his hind feet for several yards; it would have the desired effect. Oh, it was a pleasant ride. My position at times was ludicrous in the extreme, yet in spite of it all I had to laugh. Once when he objected, and I was in the air, I thought of these lines from Hudibras, and I fairly yelled with laughter:

After many strains and heaves,
He got up to the saddle eaves,
From whence he vaulted into th' seat
With so much vigor, strength and heat,
That he almost tumbled over
With his own weight, but did recover
By laying hold of tail and mane,
Which oft he used instead of rein.

Doc and Van thought I had gone crazy. We now halted, and Doc took one horn and I the other. This was a great improvement.

I repeat I shall never forget this ride. Talk about hurdle and steeple races, they are not in it with the ride over these windfalls, loaded as we were. With any other man than Van Dyke, and with other horses than his, I could not have been tempted to have made the return to camp that night. We reach it about 10 o'clock, not very tired, but all-fired hungry. It seems to me that is our chronic state always.

I am now ready to say to you that Ed. E. Van Dyke is without exception the best guide, hunter and rifle shot on game I have ever seen. I have hunted with some clever men, but none are his equal. He can tell you almost every time where his bullet has struck the game fired at. Aside from his hunting qualities, he is a most excellent guide; careful both with men and pack, never taking any risks with either, trustworthy and honest, knows every acre of ground from Montana to Colorado. I don't believe his equal lives in Montana.

Sunday, Oct. 6.—Still delightful weather. The Judge is getting restless again and wants Van to take him to Cooke to-morrow, so we shall in all probability break camp and move back into our first Bear Camp. I shall hope to have a letter from you when he returns. With kind regards to all the boys, I am with best wishes,

WABASH.

CANOE LAKE CAMP, Wyo., October 7.—We broke camp bright and early this morning and took the trail back over the divide toward High Camp or Bear Valley. Poor old Roany looks like some horned monstrosity, with his load of horns, and has to be led in order to keep him clear of trees, etc. There is one thing about hunting with Van Dyke; he gives you an opportunity to see all there is to be seen, as he never takes you the same route twice, hence our ride to-day is entirely new and as usual very beautiful and rugged. We traveled for miles along the ragged edge of the divide, which in places was scarcely wide enough for a horse to walk, down mountain sides so steep that one could scarcely realize his ability to make it in safety. But then we are on Van's horses, and I believe they can go anywhere a goat can. When it becomes too slippery to walk they simply put all four feet together and slide. So far we have had but one accident, and that was going up an almost perpendicular wall to-day. Coally's pack was a very wide one, and in making a sharp turn the pack struck a projecting rock and upset her. She rolled 150yds. down the mountain and landed against a clump of pine trees. When we got down to her she wasn't much the worse for the roll, and with a little help was on her feet, with only a few skinned places on head and limbs to show for it. This accident delayed us some little time, as the pack had to be gotten together and carried up the divide and repacked. The sun was now setting in a sea of gold and we had to move on rapidly, as darkness would soon settle down. The descent on the other side of the divide was in snow, knee deep, while on the side we went up there wasn't a particle. Camped in the valley at 7 P. M. Supper was soon cooked and dispatched. We were not long in hunting our beds. This has been a hard day's work.

Tuesday, Oct. 8.—Van says this is Indian summer. The days all seem alike, yet how different. The beauties of the surrounding country are so varied and beautiful that it is like an ever-changing panorama. Van and Doc got into a large band of elk, and shot three, principally for

meat, as we needed it. The Judge and I went out for something, wasn't particular what old thing we ran against; mine was a porcupine, which I declined to disturb, and the Judge's was a brown bear, and they were both disturbed—that is, the Judge and the bear. He says that for quite a while it was an open question with him whether or not he could keep the sand on top. He eventually quieted down, and the noise of the creek did him a good turn, as the bear couldn't hear him approaching. He had been looking for bears all day (when he wasn't looking for camp) and ran on to him, feeding along the creek, shot him three times and missed him once for luck. We heard the shots and thought he was lost, as it was getting late. Induced Lee to mount his broncho and go in search of him. He had scarcely gone fifteen minutes when we heard a shouting and out came the Judge a-straddle the broncho, which at any other time he wouldn't have touched with a 40ft. pole, and yelling, "I've got him, I've got him, and he's as big as this horse." I went back with him, and found a nice small bear which would weigh about 250lbs., but with a beautiful pelt. Now, you can imagine the condition of his mind when he shot him. Toasts to "The Judge."

Wednesday, Oct. 9.—Snowed for about an hour this morning and then cleared. The sun smiling and as beautiful as ever came peeping out from behind the gray rifts, and all nature seems glad again.

Lee, our packer, left this morning, and I assure you we were jolly glad of it. I believe he could do more swearing to the square inch than any man I ever heard. He kept me covered with goose flesh half the time.

All the elk which we didn't use for meat was snaked down to different parts of the valley and draws, and used as bear bait. Had lots of fun with Daddy; he steered the train with guy ropes; he says, "Cap, that's the darndest pullin' I ever got; why, I didn't make mor'n six jumps down the side of that mountain, and the only way I stopped her was by taking a half-bitch around a pine tree that I ran ag'in'."

Thursday, Oct. 10.—Clear and warm. Visited the bear pen and baits, but no sign. Rest of the day we loafed around camp, played cards and smoked, and swapped lies. Ben amused himself with making "b'ar grease."

Friday, Oct. 11.—Same style day as we have been having. Van and Ben start for Cooke City. Ben is going home happy. And we are happy because he's happy, though we do not grudge him the trip.

Saturday, Oct. 12.—Just the same kind of a day, only it is my birthday. Visited the bear baits, but Pop drew the lucky straw and a bear as well. Came into camp on a trot. "Say, Cap, I wish you and Doc had gone with me, you'd have seen sport." It proved to be a very fair-sized grizzly. Van returned from Cooke with supplies.

Sunday, Oct. 13.—Thermometer seems hot and feverish this morning, so we all went to the creek and took a cold plunge. Broke camp en route for Red Lodge. Trail lay along the beautiful and picturesque Crandall Creek. Camped at night on the creek in a little piece of timber. It is the stillest night I ever remember; not a sound of any kind. It is Camp Silence.

"All is gentle; naught
Stirs rudely; but, congenial with the night,
Whatever walks is gliding like a spirit."

Monday, Oct. 14.—Clear and warm. Had trouble in packing the horns, and didn't get away until noon. Still on Crandall. Just before reaching the cañon we pass by a mountain of white marble. Some specimens lying along the trail show it to be of good quality. Here is another exquisitely beautiful and charming cañon. The walls for quite a distance are perpendicular. On one side the mountains rise several thousand feet high. I could not resist the temptation to photograph the scene, a copy of which I inclose.

Tuesday, Oct. 15.—Feels like a May day. Broke camp about 11 A. M. and went down Van Dyke's Stairway, a series of steps of rock, some of them 5ft. high. A frightful place for horses to attempt, but Van says, "That's only play for them animals." After witnessing their descent of this place I am willing to swear that they can go anywhere. On reaching the valley we follow the hillside above the creek, and soon pass the spot where Crandall and his chum we killed by the Indians. Crandall was, I believe, a friend of Bill Hamilton and Liver-Eating Johnson. Two more interesting pioneers are not be found in Montana. The ride through the valley was indeed a charming one. Here and there remains of the buffalo. I got off the horse and picked up a few teeth as mementos.

Going out of the valley northeast we cross Clark's Fork and move on toward Table Mountain. Electric Peak and Old Bear Tooth loom up in great style. Cross one corner of Table Mountain and camp in Devil's Gut. This is an interesting place, being a narrow valley inclosed by high and precipitous mountains. Along this end of the valley are remains of some kind of pens built of fallen trees and high enough to hide in comfortably. Van says, "They were built by the Sheep Eaters years and years ago to kill game from." The Indians would conceal themselves while the game was driven from the other end of the valley; at this end it wasn't over 100yds. wide, so that the slaughter must have been great. Four men could hide conveniently in each pen and there were perhaps 100 of these "shooting boxes" scattered around.

Wednesday, Oct. 16.—Crawled out this morning about 6 o'clock and heard a noise down the cañon, which I believed to be a deer or elk. Without waiting to dress I slipped into my moccasins, grabbed my rifle and went to investigate, and ran on to a small grizzly.

He was standing rear end on, so fired and struck him. He immediately turned and made for me; second shot caught him back of shoulder as he turned, down he went, but was up instantly and coming like a locomotive; third shot missed him completely, and in throwing out shell it stuck. By the time I got in a new one he was within 25yds. of me. Sammy, I was so cold when I fired the third shot my teeth were chattering, but when that cursed shell stuck the perspiration broke out all over me and I was as hot as a furnace. I must have been having one of the Kid's "fever and ager fits." The nearest tree was 100yds. away and up hill. In an instant I thought of everything, home, friends and country, and wished for more home and less country. Then by some hook or crook the old shell dropped out and a new one went in. Dropping on one knee I blazed away and caught him full in the breast; he went down, never to get up. Talk about your Turkish baths! The whole thing happened in less

time than it takes to tell it, but in that time I lived about ten years.

Broke camp at noon and started northeast toward the Sheridan trail.

The section of country has enough fine granite to supply the world. It is equal if not superior to the finest Westerly granite. Many beautiful little lakes are nestled here among the mountains and are fed by the eternal snows and glaciers. Camped on the Little Rocky in front of Heffener's Glacier.

Thursday, Oct. 17.—Weather perfect. This is our last camp. It has been several days since we pitched our tent. That is one of the advantages of a sleeping bag.

The ride over the divide was interesting. On the very top we found a bog which in places had scarcely any bottom. The trail led along Line Cañon. In one place there is a very narrow trail along a bluff. There is scarcely room for a horse to pass along; below there is a sheer 500ft. fall. Some years ago a noted hunter by the name of Legg came over this trail, with his saddle and one pack horse. The pack was in the lead; suddenly he stopped and began to snort. Legg looked up and there, not 50ft. in front of him, stood a big bull elk, disputing the right of way. The elk advanced, the pack horse tried to turn, lost his footing and went down over the mountain. Legg quickly slipped off back of his horse and drew his rifle, took careful aim and fired; the elk followed the pack horse, with a bullet in his brain. We reached the A. O. trail about 3 o'clock, and it was dark when we got down it. We reached Red Lodge, cold, tired and hungry, at 9 o'clock. Van and I rode in ahead to hunt grub, but alas, there was a wedding in town and the restaurants were all closed. At Delmonico's the Chinaman said "No sabe," which translated meant no supper. We then rode through the town on a dead run looking for food, and every fellow at home grabbed his gun, thinking the town was being "held up." We finally got into a store and bought all the cheese, cakes and crackers the merchant had, and struck out for the hotel. I don't think five men ever enjoyed a lunch as we five enjoyed that one.

Friday, Oct. 18.—Cold and windy, looks like snow. Packed up and left for home at 8 P. M. Stayed over night in Billings. Was entertained very pleasantly at the Billings Club, thanks to Mr. J. D. Losecamp. It was through his kindness we had the pleasure of seeing photographs of Bill Hamilton and Liver-Eating Johnson, perhaps the only photos in existence of these two men. You remember, some time ago, of reading an article on Bill Hamilton in FOREST AND STREAM, contributed by that able correspondent, E. Hough. There is great character in Bill's face.

Saturday, Oct. 19.—Left Billings at 9 A. M. Glad again to get into the Northern Pacific dining car. Mr. Austin, Asst Gen'l Pass. Agt. of the Northern Pacific road, had arranged two or three days' duck shooting for us at Perham. On arriving there, much to our disgust, the lakes were frozen over and the flight had come and gone, and but few remained. Still I thank him very much, as he did all it was possible for a brother sportsman to do to give us a good time. Expect to arrive in town on the 24th, at 4 o'clock, provided we don't run up against Ben's friend in Chicago.

WABASH.

SPRING NOTES FROM THE YELLOWSTONE PARK.

ABOUT the middle of April, the snow was 4½ ft. deep on a level over much of the Park. In some parts of the timber it was less, and again more. Now it has all disappeared about the Mammoth Hot Springs, but there is still plenty of it after passing through the Golden Gate.

The first robin was heard here on the 10th of April, and bluebirds are to be seen at any time in the hot country where they winter. Swans, geese and ducks were all here early in April, and many of them have now passed on to their more Northern summer home.

Things in the Park seem to be getting on well, and the season is opening early. It is believed that the roads will be completely open by June 1—something that had never happened before, previous to last year.

Game is very plentiful, and has wintered well. Elk, deer and sheep are especially numerous. Late in April, Scout Morrison saw sixteen sheep on the north side of the Yellowstone River, not far from the mouth of Hell Roaring Creek. A week later eight were seen on the same side of the river, but a long distance from Hell Roaring Creek, and the same day the same person saw five more on the south side of the river. Elk have been seen in great numbers all over the Park, and they are abundant close to the post.

Many white-tail deer are now to be seen near here, while a few years ago this species was very seldom met with in the Park. Deer are now abundant and tame.

Little is heard about the buffalo. People here who ought to be well posted claim that there are not ten head in the Park to-day.

New York Game Law.

GOVERNOR MORTON has signed the Sanger bills, which are now laws, forbidding the use of jack lights for deer hunting at all times except from Sept. 1 to Sept. 15 inclusive, and forbidding deer hounding except from Oct. 1 to 15 inclusive. Hounding is forbidden at all times in counties of St. Lawrence, Delaware, Greene, Ulster and Sullivan (except in towns of Highland, Cumberland, Tusten, Cocheton and Bethel). On Long Island deer may be hunted on each Wednesday in November, by hounding or otherwise.

The open season for black and gray squirrels, hares and rabbits throughout the State (except Long Island) has been made from Oct. 15 to Feb. 15 inclusive. Ferrets forbidden except in Wayne, Onondaga and Oswego counties.

That Old Maryland Terrapin Statute.

HARRISBURG, Pa., May 14.—*Editor Forest and Stream:* I have just read your editorial on "Salmon, Ducks and Terrapin," which reminds me of a conversation I had with a gentleman who, in company with others, had been eating terrapin with President Cleveland. If my recollection is not very much at fault, he told me that one of the gentlemen produced a certified copy of an old Maryland statute which prohibited owners of slaves feeding them more than a certain number of times a week on terrapin. I should like to see the act in print. EUGENE SNYDER.

ADIRONDACK DEER.

Editor Forest and Stream:

Jack Hunter's line of reasoning may be all right, but if I had set out to defend the practice I don't imagine that telling how easy it is to kill deer that way would be one of the theories advanced, even if the tale of easy shooting was of a thirty-five years old event. It is no harder to kill a deer now by jack hunting than it was thirty-five years ago, considering the number of deer there are left. The glare of a jack light is just as stupefying, and one can approach just as close to a deer as he could in the old days, and with just as crude materials as in the past one can kill a deer.

If Jack Hunter considers shooting deer at a time when the sights of his rifle cannot be seen, at a range so close as to make a miss almost impossible, yet an instant kill almost improbable, a sport for a real man, it looks as if somebody's mind "must be badly distorted," if I may use his own phrase.

One of the most potent arguments that work against still-hunting is that it takes a hunter to get a deer that way. Few deer are killed in the Adirondacks by hunters these days. They are killed by men to whom the head is a great deal and the flow of blood more. They do not enjoy waiting on the runways. It is not for the pleasure of watching nature that they are there. The sigh of branches and the splash of muskrats at night means nothing to the average jack hunter. He is strictly a meat and skin hunter, and the trip that fails to give him a deer head is a failure absolutely. These men are not sportsmen and they have not the skill of hunters.

I would rejoice to see deer hunting absolutely forbidden in the Adirondacks for a term of years, but stop the jack hunter and his partner, the hounder, and the deer will increase. There is a wholesome fear of the law among the woodsmen, and although I agree with Jack Hunter that the game laws could be better enforced, a non-hounding, non-jacking law, as well observed as the close season is now, would give sport a-plenty for sportsmen, till the Adirondack forests are gone.

Jack Hunter need not trouble himself to hide me behind an alias. I have no use for any such subterfuge, although I fully appreciate his kindness and thank him for it.

RAYMOND S. SPEARS.

BROOKLYN, N. Y.

A DAY WITH THE GROUSE.

THE country in this vicinity is a region of high hills and deep ravines. It is thickly wooded and well watered. Nearly every farm has its bush of sugar maples with one or more small streams meandering through it. Thickly associated with the maple is the beech, while here and there a birch, a basswood or an elm may be seen, the whole frequently interspersed with clumps of evergreens consisting of spruce or hemlock, presenting in the autumnal months veritable islands of green amid a sea of color.

The ravines are almost invariably margined with a thick growth of evergreens, while the lowlands, cradled in among the hills, are blanketed with cedar and tamarack and with a fair sprinkling of ash. It is pre-eminently the home of the ruffed grouse. The beech uplands, the scrubby hillsides, the evergreen thickets and water-worn ravines, with their trickling streams, combine to form a suitable haunt for this wary bird.

If perchance you should meet with her in the more open wood, or even outside its margin, at the least sign of alarm she is off with a rush and a whir, winging her way to the densest cover. Should you seek her here, you will find her ever ready and alert. It is only the quickest shot and he who has educated the eye and finger to work together at an instant's warning that can hope to bag her now.

On the morning of Oct. 5 my friend C. and myself drove some three miles into the country to what is known as the Lewis place, where we had heard there were one or more broods of grouse still undisturbed. Our conveyance was a not over roomy top buggy, and with Dan curled up on a blanket in the back end, which inconvenience he cheerfully submitted to, no doubt in anticipation of the good time coming, and with Trim between our knees in front, whose philosophy, from youthful inexperience, did not quite equal Dan's—constantly endeavoring to get along faster by climbing upon the dash—and with the rest of the impedimenta tucked in here and there, it was well loaded, and so the single horse that hauled us up the long hills seemed to think, for we were over an hour in reaching our destination. We took possession of an unused barn, and having cared for the horse, we donned our hunting outfits and set forth toward the wood, some 200yds. distant.

A small creek wound about one corner of the wood, and both sides of it were thickly grown with alders, covering perhaps an acre of ground. We ran the dogs through this first, as it is suitable ground for woodcock; in fact I had killed woodcock here in previous years, but they found no birds, nor did I see any borings. We then entered the wood proper, which here is on low ground and consists almost entirely of evergreens.

C. kept just within the margin, while I held a parallel course, but deeper in the wood. We had not gone over 100yds. when C. fired at a bird which flushed from a tree in a dense spruce thicket. She passed back of me, going high above the trees. I fired both barrels, taking some pains, but without apparent effect. We decided not to turn back for her, as she seemed bent on taking a long flight. We continued our course around the margin and heard, close after one another, three or four birds take flight, but did not catch the glint of a feather. Our experience now made us certain that these birds had been well hatched, and if we got any of them it would have to be by careful work and hard shooting.

Our course now took us to higher ground. Here C. made a couple of shots at birds that rose wild and instantly lost themselves to sight among the light brown leaves of the scrubby beeches. I heard a bird flush at some distance to my left, instantly followed by the cry of "mark bird," and facing at ready the only opening out of the dense evergreen thicket where I was, caught a snap shot as she passed, but to no purpose. Her course led across the wood to the alder patch where we first began our hunt. Here Dan made a point and at the word "up bird" sprang forward, only to retrieve a dead bird. C. flushed a bird in the timber further to the right, making a snap shot, but missing, which he is inclined to think was the last one I fired at. If this is true, then the dead

bird must be the one flushed at the beginning of the hunt. We knew the bird was hit, for C. feathered her well when she started.

We now hunted C.'s bird, which led us a long chase, quite to the opposite side of the wood. Here she rose without offering a shot, and making a somewhat erratic flight found cover in some underbrush growing in the highway, which here ran alongside of the wood. We had given up finding her, and were fairly caught napping; for we were in the road when she raised from its side, and spreading her tail almost in our faces, pitched over the fence back of the brush, and went skimming the ground over a hill to another wood, some 200yds. away. We now felt that our reputation was at stake, and doggedly continued the pursuit.

I had gone but a short distance into this wood when C. from the outside called to me to hear to the right till I reached a maple which he pointed out. This would give me a commanding position of some thick cover in his front, since there was an open space both to the right and left of this point. I had barely reached the place pointed out when two birds rose together not 20ft. distant, taking the opening to the right. Of course I fired the first barrel at the head bird, and at the shot a confused mass of feathers showed over the end of the gun, whirling downward, and was replaced the next instant by the other bird, which fell a little further on to the second barrel, the gun scarcely varying at all in its line of direction for both shots.

While closing the breech after reloading, another bird shot almost vertically upward from the center of the clump. I fired a snap shot into the moving boughs that marked her course, missed, and as she broke cover close to my right and almost over me I turned my back upon her and faced the same opening the other birds had taken, down which this one now fairly hummed. I aimed carefully, but waited a little too long, she being well away when I fired. Two or three little puffs of feathers started out at the shot, but I could see no decrease in her speed.

The cover contained no more birds, and the two dead being retrieved, we hunted the course of the last one quite across the wood without meeting with a sign of her. C. then bore to the left, but I, not satisfied, quartered the ground back again, outside the wood among some small, scattered evergreen bunches I had noticed. Here Dan pointed, and at the word "up bird" drove her out. She rose with difficulty and was easily cut down with the first barrel. I now hunted a course parallel with C.'s and soon heard the report of his gun at my left. On coming up with him he said he had flushed a single bird and making a long shot had brought her to bag. We accounted this the bird that had given us such a long chase.

In an adjoining wood we succeeded in routing two more birds; one of them I hit hard as she rose, but did not bag her. We chased them for some time, C. making a couple of ineffectual shots, and then we lost them altogether. We now returned by another route to the wood we first hunted. Two or three birds yet remained here. After traveling for some time, C. in making his way through a thick slash drove out two birds, one of which, going back of us, gave him a snap shot, and the other, taking an opposite course, passed in front of me. I feathered but did not stop her. A little later she was pointed by Trim, and making a vain effort to take wing, an exciting race occurred between them, the pup running full tilt against a stump, but finally retrieving her without injuring her in the least. In this line Trim is an adept, and handles a bird as daintily as a lady does her fan.

It was now a little past noon, and leaving the wood we crossed the field to the barn where we had put out the horse. Here we left our dead birds, and having fed the horse we set out to our next hunting ground. From lack of suitable drinking water we had not yet lunched. A little run in the first wood we entered supplied us with this want, and here we ate our lunch and rested a bit. This wood was without underbrush, but in passing through it we flushed an old bird which rose far in advance of us, and making a flight to its outermost limit sought cover under a small clump of evergreens which overhung the bank of a little ravine. Here Trim nosed her out, affording C. a fairly good shot. He cut her well with both barrels, but she held on, crossing an open lot and finally settling in a scrubby growth of young beeches. Here Dan routed her; I fired and missed as she dodged around a thicket, but the next instant C. sent her to ground with a thud.

We expected to find a half dozen birds in this wood, as it was excellent cover, and in fact the birds had been seen there, but we met with only two. These we flushed twice without getting shots, there being such a thick canopy of leaves to the underbrush. Finally I made a snap shot, missing, but the bird left the close cover and made a long flight through the more open timber, circling into a remote corner of the wood where there were a few bunches of alders and an occasional evergreen. The highway bordered this corner of the wood, and here C., making a little detour, located. I advanced from the wooded side, Dan quartering in front of me. He soon lined her course, pointing where she struck the ground and moving his nose a trifle one way and another, and not finding her down, slowly led on. A little further and he seemed all at fault, running the cover over again and again, and showing no little anxiety at the turn the affair had taken. C. and I were facing each other a few yards apart and discussing the possible whereabouts of the bird, when suddenly from above and a little back of me came the peculiar drum-like whir which a grouse makes when she plunges outward and downward from a tree top. Turning instantly at the sound and dropping the muzzle a little below the line of flight, I cracked away and down she went, turning over and over in the air, striking the ground with great force and rebounding like a ball.

We now turned our steps to the last wood we were to hunt, stopping en route at a neighboring house to indulge in a glass of cold well water. A few minutes walk, and we were again working good cover for birds. A little further ranging of the dogs, and whir! whir! four times, and not a feather exposed to sight, and even the course they took in doubt.

However, we laid out a probable course and proceeded to hunt it out. One bird showed in front of C., offering an easy chance, but she got clean away. As he replaced the empty shells I heard the breech close with a vicious snap, while he muttered, "I can't hit a barn to-day." I offered no sympathy, for I have been there myself, and realized fully that it would not be appreciated. This bird

we failed to put up a second time, so turning to the right we worked a parallel course back again, but flushed no birds; bearing again to the right, we hunted another parallel strip.

This time a bird rose to me, but a long shot in advance. I missed with the first barrel, but quickly followed with the second as she buried herself among the leaves well up in the branches of a beech. "Did you down her?" came from C. at my left. "I guess not," was the doleful reply. But Dan soon showed himself with a large bird stone dead. C. had seen her fall and thought I was unaware of the result, hence his question.

For the third time we turned back, and while crossing low ground a bird rose to C. who knocked her down before she had gone 15ft., leaving a cloud of feathers in the air. Trim was just reaching for her when she straightened up and again took flight. We now quartered her course with both dogs for 100yds. or more, when Trim, bearing to the left, pointed, and at the word retrieved a dead bird. Twice had this occurred during the day. It shows that the shot kills many a bird that does not find its way into the game bag.

Crossing to a part of the wood as yet untouched by us, we found it margined with evergreens, affording excellent cover. Dan at once showed sign and shortly pointed, but the bird flushed from a small evergreen on the opposite side of a thicket from me. C. made an ineffectual shot at her as she passed him. I now followed the margin, keeping in the open outside, while C. remained in the timber, the dogs beating up the cover between us. Again the bird rose, and attempting to run the gauntlet of C.'s fire a second time, got in the way of the shot and was brought to bag. Further on and a shot came to me, the bird bursting out of the cover, and turning offered a straightaway shot and was quickly sent to grass. This concluded the day's hunt. Three birds yet remained, but they had found safe hiding places, and the afternoon being well spent we were satisfied to leave them. The bag on examination showed twelve grouse, six killed during each half day.

AMBULATOR.

A MORNING'S FROGGING.

WAL and I had just finished a score up in the gallery when the former remarked:

"Art. I want to get out in the open air and try this new Winchester on something alive. What is there, and where is it?"

"How would frogs go?" I answered.

"Frogs? Shoot them with a rifle? Why, what a snap," replied he. "I know where there are plenty; up at the Nursery. Any quantity of them in the pond hole and along the river. I have seen them many a time while fishing; but say, are you fooling? It's kind of baby sport to shoot at such stupid things with a rifle when we have been priding ourselves on being cracks here in the gallery."

"Well," I remarked, "we'll go out some morning and try, and if you don't have some sport and rid yourself of the idea that they are easy game, I'll pay for the shells. You can hit them easy enough, but the rub is to see them before they get tired of waiting for you."

Consequently the other morning I mounted the bike as the sun was slowly climbing above the horizon, stopped for Wal, and together we wheeled out into the country.

"Have you everything?" asked W., who is a very careful and thoughtful companion for a rattle-brain like myself.

"Yes, everything."

"How many cartridges will we need, do you suppose?"

Cartridges! I had come away without mine! I had everything else, even to rags for cleaning the rifle, but cartridges, nary a one had I.

"Well, I brought along two boxes," was W.'s assuring remark; to which I added, "And I will use one of them."

Storing the wheels and rifle cases in the woodshed of W.'s accommodating brother, we walked through the wet grass toward the pond hole and, arriving at the edge, began a careful search for our game. Presently W. remarked:

"I think I see one, or is it a stick. I'll be hanged if I can tell."

"It's a frog all right, let him have a taste."

W. brought the little Winchester to shoulder, there was a spiteful crack, a commotion in the water and Mr. Frog turned belly up. Reaching out with the rod, to which was lashed a large fish hook, we soon had him ashore.

"Hit him in the head, W.," I remarked. "Hold a little low at such short range, or you may overshoot with the open sights."

Keeping along the bank, W. soon spied another brown head and big, bulging eyes, the owner of which was soon deposited alongside the first victim.

"There are two, W.," I whispered. "Take the one on the right and we'll both let drive together. Two sharp reports rang out and two more plump pairs of muscular limbs were added to the bag.

"Well, this is rather a novelty, isn't it?" said W. "It takes more than one would think to get a glimpse of those chaps; but say, don't the .22s bore them though? But say, there's a big one," and before he finished speaking the ball hit the water and the green fellow lay stiff. As he laid him on the bank W. remarked in surprise, "Where in the dickens did I hit that fellow? There is no mark on him."

"Didn't hit him at all. You shot over, but near enough to stun him, so we will just carve his backbone, or he will jump the claim and clear."

"I think that is a more scientific way of killing them anyway," was W.'s rejoinder; it leaves no mark; reminds one of barking squirrels."

"It is well enough, but take my word and hit them," I replied, "or you won't always put them to sleep as you did this one."

Going around the bank a couple of times more resulted in a few small frogs, and W. suggested that we go down to the river. Down we went and soon came back with a half dozen good ones, and then set to work to deprive them of their trousers.

"How do you like it?" I asked W.

"Great stuff. Didn't believe there was so much fun. This is only a starter. We will come out here some day when we can spend plenty of time and get a good mess." To which I readily acquiesced.

So back home we went, washed up, had breakfast and then went down to the office and told frog stories to the boys.

Now, by a good many of our noble moose hunters and grouse hunters this short morning's experience will be scornfully looked at and then passed with a mental thought or two, probably not to the credit of the writer; still, if those same brother sportsmen could have a taste of the crisp, brown hind quarters—which, after being carefully cleaned, were placed in salted ice water for four or five hours, then rolled in meal and fricasseed—I am inclined to think they would smile a goodly smile, and borrow, hire or buy a light .22 rifle, and when the close season is on their especial game go to some pond, bordered with water lilies and green scum, look carefully along shore and find no little pleasure in using their skill in sending the tiny ball true to its mark. Frogging is good sport in any way, but the rifle beats the stiff rod and flaming flannel, and a good mess obtained in this manner requires a good eye and some hunting instinct; for a frog is not as stupid as he may look, and often one will be heard to jump from concealment where he has been solemnly watching the approaching hunter.

We lay aside the deer and moose rifles with some regret at the end of the open season, and then argue as to the proper caliber, work ourselves in a frenzy and call one another sarcastic names through the columns of *FOREST AND STREAM*. But there is only one gun for the frog, a light .22 rifle. There is no room for argument about that, and a lover of the arm can certainly get a bit of sport in its use after this "game." ART.

The Decrease of the Wildfowl.

To secure the protection of game, nothing is more imperatively needed than a uniform measure which will afford reasonable immunity to wildfowl that make their home in the United States during the autumn, winter and spring. The assertion that any alarming decrease in the number of wildfowl that frequent our waters is in process of accomplishment has been often denied. This negation is based on the fact that localities where they were formerly abundant have, after years of apparent desertion, witnessed their return in large numbers. This is a false assumption, as wildfowl, other conditions being equal, always congregate where food is the more available. Their absence is due to the lack of it. If they return, it is at the expense of some other locality, where the aquatic plants and crustacea upon which they feed are, for the time being, scarce. An illustration of this is found on some of the bays of the south side of Long Island, where broad-bill ducks were more plentiful during the autumn of 1893 than had been known for thirty years previous. This was owing to such an ample supply of food that no amount of shooting could drive the ducks away. In the autumn of 1894 the same fowl were exceptionally absent from those waters. They came, but did not stay. The nutriment which was in great plenty during the previous autumn was no longer there to tempt them. Some years ago, when the wild celery beds of the Susquehanna River were covered with sand, brought down by unusual freshets in that stream, canvasback ducks almost totally deserted the locality. Those that formerly tarried there during the season resorted to other waters, where they found suitable food, and where they had not been seen for many years previous. With the recuperation of the wild celery beds in the Susquehanna the canvasback ducks returned to the flats in the usual numbers. This shifting habit of wildfowl creates a false impression as to their numerical increase. That they are rapidly on the decrease is apparent to those who understand the dangers which environ them.—*Gaston Fay in Atlantic Monthly.*

An Oregon White Deer.

THE citizens of Crook county are much put out on account of the slaying of a white deer which has been roaming over that section for a number of years, and which was looked upon as a sort of mascot, and which no one would harm, until a short time since one Poindexter wantonly shot it. This white deer was no myth, for its snowy hide is now in pickle in a taxidermist's shop in this city, and Game Protector McGuire is preparing, at the request of the people of Crook county, to make big trouble for Poindexter, who killed the animal about Feb. 1, during the season when it is not lawful to shoot deer of any color. There have been many stories about this celebrated white deer, one of which was that Barnum had offered \$10,000 for the animal alone, and it is now said that Poindexter shot the deer to get \$200 for its skin. The people of Crook county generally are much enraged at the wanton slaughter of the deer, and collectively aver that they would not have had it killed for thousands of dollars. Many hunters have had opportunities to shoot the deer, but none of them would harm it. There is no question about the skin of the white deer being in this city, for Mr. McGuire has seen it, and has all the information necessary to convict Poindexter.—*Morning Oregonian.*

The Kootenai Lake Country.

THE following is from a private letter written by that well-known sportsman Mr. Thos. Johnson:

"WINNIPEG, May 5.—I have just returned from a trip to the Kootenai Lakes, situated in the heart of the Rocky Mountains and in the center of the great gold fields just discovered. This country was interesting to me from a sportsman's standpoint. The Kootenai River just teems with trout, and the surrounding mountains abound with goat, sheep, deer and the different species of bears. It was quite interesting when getting off the boat at a point named Trail Creek, seven miles from my destination (a camp named Rossland), to have pointed out to me the peak of a snow-capped mountain 2,500ft. high, and told that Rossland was 'over that hill.' Unfortunately the stage upset going up the mountain heights and one of our party had his arm broken. If any of your friends contemplate an outing this summer and the country alluded to has any attraction, if you will put them in communication with me I will be pleased to give them any information they desire."

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Where Mathematics Failed.

THE story told by a New Haven correspondent of the New York *Evening Post* of the locating of a meteor by Prof. H. A. Newton, of Yale, from data obtained from a chance photograph of the meteor's flight, recalls to the Hartford *Courant* "another story recently related hereabouts by a Yale graduate. This young man, when a student, occupied a room in Divinity Hall. One night he undertook with a toy rifle to hit one of the lights on the campus. His aim was poor and the ball passed through the window of an eminent and venerable professor of science (not Prof. Newton) and embedded itself in the wall. This was the opportunity for the professor and for science. He, too, set to work and 'computed the curve,' and with the exact skill of infallible figures he traced the ball right back to the room of an innocent colleague, who didn't even know the rifle had been fired. The unfledged minister flatly denied all knowledge of the affair. But men, even ministers, have been known to make denials in self-defense and the professor had the proof with him. There was the bullet, there were the marks of its course and there was the computation worked out. It looked as if a pulpit career was to be nipped in the bud. But the guilty student heard what was going on. He called on the professor, confessed the offense, pointed out that the man of science was 200ft. out in his computation, and advised that the matter be dropped right where it was. And that was done."

Sea and River Fishing.

FLY-FISHING

On the North Shore of Lake Superior.

"I in these flowery meads would be;
These crystal streams should solace me;
To whose harmonious, bubbling noise
I with my angle would rejoice."

WHEN the bright sun gladdens the cold earth with its warm rays and the robin sings among the reeds and rushes, where meander tinkling brooks in silvery glitter, the ardent angler is fully aroused, and in memory the dash and gleam of a tinted trout form a picture of radiance he would then love to dearly realize.

In this retrospective mood he seeks his cherished and valued fly-book as a soothing solace, and as he turns its feathery laden leaves, which glitter with the colors of a rainbow, he clearly reads the exciting battles with his rod and reel as he sought his trophies among the spangled beauties of the translucent waters of the great Northwest or elsewhere. Here he sees fly after fly that had done noble service, and that had brought him many a victim in red and gold, and is therefore in deep and pleasurable emotion over the inspiring reminiscence. Anon he revels over a golden pheasant, in lovely architecture, that had allured many a weighty princeling of the stream, then a Parmachenee-belle is revealed that looks like a veteran in the strife and that in its dainty beauty, so like a primrose yellow, had proved more attractive in its seductive mission than the artful smiles of an enchanting circe. Once more the reminiscent angler is in the realms of bliss as he toys with a somber Montreal, ever an unfailing lure, and that had to its credit the capture of several ponderous patriarchs of the fl-ckered family, while the same rapturous affirmation could be made of the tempting guile of his favorite hackles which have a royal record in the raiding of many hapless victims who have had emblazoned on their gleaming armor the colors of a sunset sky.

As he thus lovingly renews familiarity with the enticing book, so generous in skilfully wrought artifices, the praises of which should be sung in mellifluous verse, the visions of purling streams and storm-tossed seas of the great Northern lakes come to him as old friends, with the same impressive beauty, the same absorbing fascination, the same golden spoils. He is now in full fellowship with the gentle craft and counts every passing hour till the joyful time comes when he can but too gladly sever the toulsome chains of business and hie himself to the sylvan and ragged shores that are musical with rippling waters and caroling birds, and where, under skies of golden tints and snowy fleeces, he can once more enjoy an angler's rhapsody in enticing the ever gameful trout of the radiant dyes to the artistic fly, and again hear

"The chirp of the cricket in the grass,
The snap of the grasshoppers as they pass,
The anthems of song birds in the hedge,
The whistle of snipe across the sedge,
And all the entrancing symphonies
Of breeze and wave, of birds and bees,
All paintings of nature's matchless art,
All music of nature that thrills the heart."

The days at last come when the summer's glow is upon forest and field and stream, when the roses have budded and bloomed and reddened, when azure skies and gentle winds softly sing and sigh. Then the dreaming hours of the patient angler promise happy realization, for in mountain stream and shadowy pool the shapely trout of ravishing tints is eagerly seeking the unsuspecting prey and as eagerly snapping at the treacherous line. Ah! but those are welcome days, days of incomparable felicity, days for strolls along grassy margins of rippling waters, where the "lilies are green with gold," and where the violet seeks its darkest blue and its purest white,

"And when night from day is straying,
As twilight gives its gleams."

Idyllic reveries are now losing their charms, as we are about to enter upon the pleasant pastime that will give us many eventful and exciting incidents which we hope to faithfully recite. We are to embark for the picturesque North Shore of Lake Superior, under the shadows of whose towering mountains and lonely crags we will find delicious repose and drink deep of the refreshing and exhilarating atmosphere, while the lake and its numberless streams are sure to yield us many a scarlet-finned *fontinalis*.

The meridian of an early June day, which was then indulging in a tropic breeze, found us idling along the banks of the "Soo" Canal, awaiting our Mackinac, with its contents for camp comfort, which was then being locked through the great entrance gates. At last after

much patient anxiety it was seen approaching, and when it reached us we cheerfully stepped aboard, happy as any ardent rodder could well be when he feels the coveted quarry so near at hand. Our boatmen in charge were the same we have had for the past three years, being the intrepid Kenosh and his wideawake son Jo. Let us here remark as a simple act of justice to these faithful half-breeds that they are the best men that ever sailed a boat or made camp life serenely enjoyable and comfortable. Nothing seemed too arduous for them, no distance too great for a toilsome row, no weather too unpropitious for an advance. They are evidently rare exceptions, and the sportsmen who secure them for an outing have indeed drawn a valuable prize.

We were in good luck at the start, for just a rod or two ahead was a slow-going steamer with a large tow, and our men, ever on the *qui vive* for just such an opportunity, quickly had the oars in position, and with a few minutes' rapid and vigorous rowing were astern of her last boat, and then a line was kindly tossed us for a tie by one of the crew, who had been watching our earnest efforts to overtake them. It meant fifteen good miles up the lake, and luxuriant ease in the meantime. The half-breeds were in good humor at this unlooked-for stroke of fortune, for a light head wind confronted us, and if sailing would have greatly delayed us.

Gros Cap was our first stopping place, for it was too late in the day to reach Grindstone Point, which we had mapped out for our initial camp. We would only have a two or three-mile sail over to the little island when we parted from the steamer, but that was a mere nothing to the gain which would evidently accrue to us.

Steamer after steamer, vomiting forth huge clouds of black smoke, passed us *en route*; a few sailing craft were slowly beating up the lake, while some small rowboats were lazily moving along the shore as if the heat were too intense for a hard pull by the overtaxed oarsmen.

"What charming weather," says Ned, as he took in the situation. "Not a scud in the west nor a thunderhead in the east, and a sky as unflecked as a flawless gem."

"My bones are aching severely," suddenly spoke up Kenosh, "and they tell me that we will soon have a storm, and that with plenty of rain and maybe thunder and lightning."

"Nonsense," replied Ned. "Nothing in the elements foretells it."

"You wait a while and see. My bones are a good—what you call 'em'?"

"Barometer," I said.

"Yes; that's it."

Ned laughed at the prediction, and told him that all signs failed during dry weather; and a very long spell we had truly had of it.

I had much faith in the half-breed's prognostications about the weather, for during the time we were partaking of lunch, which was a couple of hours after our start, the golden glow of the water, the purple o'er the distant hills and the blue of the sky were undergoing an apparent and unpleasant change. Presently the breeze increased and leaden clouds began to peep o'er the rim of the horizon, and soon the sea ran in ridges and the forests began to moan in an unmistakable manner. This condition continued for a brief time, and then the elements, as if ashamed of their timidity, became emboldened, and the sea in consequence rose up in majesty, with the "white horses" crowning every curving wave. The sky responded, and dropping her wardrobe of blue took up her mourning garb, while the wandering winds made sonorous music among the leaves and grasses.

"What you think of my bones now," said Kenosh, with a significant smile wreathing his face, when a huge white-cap sprayed us with its snowy beads.

"Your bones are giving us the introductory oratorio of a grand storm, and I think if we reach that little island without a rainstorm we will have much cause for congratulation," replies Ned.

We were now all impressed with the gathering storm. Clouds fringed ominously with the deepest jet drifted heavily yet swiftly over the undulating hills, while the wind whistled and shrieked to the sullen roar and battle of the billows. On plowed the steamer with much stress and strain, though her headway was perceptibly checked by the furious onslaught of the heavy waves that struck her with terrific violence. It was evident that we would have a rough ride to our harbor and doubtless receive a wet jacket from either the rising ridges or the much threatened downpour.

Two miles more of a tow and we could part company with the big barge and sail for our destination. It seemed a long distance just then, for every moment the wind was rising in her chromatic scale and we indeed thought the pitch for our untuned ears sufficiently high. At last we cast off and then up go our sails and away we speed o'er the rolling seas with a beam wind that makes the cords rattle and the canvas hum. It was a good three-mile sail, and if we could hit the little island without resorting to a tack all would be well. It, however, proved a decided failure, for long before we were under cover of the shore it was apparent that we would be a half mile below it, and then it would be either a hard row or a distressing tack, which doubtless would insure us the long threatened rain ere we reached our harbor. The shore once reached, in went the oars and vigorously worked the half-breeds. The fierce wind now moaned sobbingly through the swaying trees and the racing waves washed the shore with stubborn and steady spitefulness, while ever and anon beamy threads of lightning played along the dark horizon, veining it with long arrowy flashes of orange and silver.

"When loud winds from different quarters rush,
Vast clouds encounter one another crush."

Soon a long and loud roar of appalling thunder came from the fierce rack of clouds o'erhead which looked like "huge witches astride eagle-shaped monsters," and then the raindrops pattered on the lake and strove exceedingly hard to beat down the foam-crowned peaks the seas were lifting up in royal grandeur.

At this uncomfortable state of affairs the men dropped their oars, and while the boat drifted out among the billows they nicely covered the provisions with some available oilcloths, while we slipped into our big rubber coats.

The packages being well secured from the heavy rain, the boatmen again sprang to their blades and soon had the big Mackinac tumbling over the snowy ridges and then shortly into the little island, where all hands wen.

willingly to work in unloading the boat and securing the entire outfit and erecting the two tents and flies. It was rapid work, and in less than fifteen minutes everything was under cover. The boat now had to be secured from the battering waves, and soon we had it high up the rocky shore snug and tight, but dripping with the steadily falling rain. My assistance in this matter caused me a very severe wound on my right shin, by slipping on some smooth and sharp-edged rocks, which took two good months to completely heal, and which has left a scarred imprint larger than a silver dollar, which I am positive will remain with me while life lasts as a visible reminder of that particular trout-trip.

We quickly sought our tent after the boat had been made safe from the violence of the vicious waters, and there remained until the rain was over, which ceased in a short time. The wind also began to fall, but the waves thundered on, and the spray rose up in slender columns around the exposed sides of the diminutive island.

A stream of summery fragrance that contrasted strangely with the wild tones of the storm now poured forth from the resinous forest, refreshing everything o'er which it passed and soothing the rugged rock-brows of the shore with a gentle touch and gesture wholly divine. Kenosh and his son came to us at this favored condition of the elements and requested the loan of a rod and landing net, stating they were positive they could catch from the craggy bluffs of the north wall of the island a nice mess of trout for our supper. As the rocks were too wet and slippery for a "pale face's" feet and the bushes too heavily beaded with moisture, we thought it prudent just then to do our angling by proxy, and so putting a rod in good condition we turned it and the net over to the half-breeds, who immediately started off and began breasting their way through the moist bushes that surrounded us and over a treacherous and flinty surface that none but a moccasined savage or half-breed could then safely traverse.

After the absence of a full hour they returned, dripping wet, with two handsome trophies, one being a 2-pounder and the other a fraction or two less. Kenosh said that the largest one, which he had coaxed to the surface with a brown hackle, rose three times before he impaled it. The waves which were beating so fiercely against the shore confused the trout in his grabbing greed, but on its last and fatal rise the fly was very slowly drawn and happily secured the victim on the snowy crest of a surging swell.

They were surpassing lovely in their gold and vermillion dyed robes, and as the checkered rays of a stray sunbeam fell upon them, we fully realized why the poet declared them the

"Most beautiful in shape and hue
Of all that swims the waters blue,
Fairer than the plumes of the bird,
Or fur of the wild forest herd."

It now being time for the preparation of the evening meal, the axe was immediately brought into service, and then the chips began to fly, the smoke to upward curl, and the blaze to snap and sparkle, and the slaughtered beauties to send forth a savory fragrance indicative that they were to be the crowning dish of the approaching feast.

Our first meal in camp was a royal success and tempting enough for the most fastidious appetite, but as ours were inclined to be ravenous, no rich sauces were required to sharpen them, for as that hackneyed quotation asserts, "Good digestion wait on appetite, health on both."

That evening the sun set in a rich bank of rosy clouds tinged and streaked with lines of burning crimson. The night with dying twilight softly came, the stars brilliantly spangled the skies, and then cooling winds came from the sea that made the fire a cheerful companion. But what of the approaching morn? Will it bring us the delightful south wind with its fragrance of flowers, or will the north wind come with its arctic breath and tossing seas? We, however, will wait for realities and with hopeful hearts seek our restful beds and let the gentle waves as they beat against our rocky ramparts sing us to sleep and sweet forgetfulness.

ALEX. STARBUCK.

[TO BE CONTINUED.]

SANTA CATALINA ISLAND.

PASADENA, Cal.—"Look out!" Zee! zip! zee! "Stop him!" Zip! "Clap on your thumb-brake!" Z-z-e-e-e-e! "Look out!" Zip! z-e-e! "Gone, by thunder!" and a very hot and red-faced man, his hands and arms trembling with exertion and excitement, swung a much-strained rod into the air with its swinging 4ft. of line—all that was left of 600ft. of tarpon line, at 1 cent a foot.

"Now, what was that, a cyclone?" asked the fisherman of the Santa Catalina boatman, who, with a suspicion of a smile, had been giving instructions to the novice.

"That's a tuna, sir," he replied, handing over a fresh line for the reel.

"Well," said the New Yorker, a well-known patron of sport, "I have fished in every water under the sun, I was going to say, but I have never had so much bottled lightning on a line before. That reel gave one scream and threw up its hands. Never mind, I'll have one of these fish if it takes all summer."

The line was soon reeled on, this time a 20oz. bass rod, used something like the tarpon rod, and putting out about 100ft. the oarsman renewed his oars and pulled up the abrupt shores of the beautiful island, a huge jumble of mountains rising out of the water; twenty miles off Los Angeles county, on the edge of the warm Japanese current, a region where big fish congregate in summer, coming up in great bands from Magdalena Bay and other localities in Lower California, where they winter in warmer waters.

The fisherman was taking his first trial, and with two rods out was watching the strange panorama of mountains and cliffs as they moved along.

"So Cabrillo discovered this island 350 years ago, did he?"

Zee-e-e-e—ze-e-e! came an answer from the reel, as 50ft. of the delicate fifteen-strand line was torn off in successive jerks.

The fisherman had the rod in a second and clapped on the extra leather brake, thus stopping the tremendous rush of the fish, that threatened to repeat the maneuver of ten minutes previous. This stopped to a degree, and 10, 20ft. came in on the reel, and the fisherman was congratulating himself that it was not so dangerous a fish

after all, when the oarsman shouted, "Look out! he's coming in for a rush."

And so he was. No sooner were the words uttered than the fish turned, and zee-e-e-e—ze-e-e, screamed the reel. The fisherman, unused to such tactics, was not quick enough, and the handle, revolving so fast that it was invisible, struck him on the hand, tearing off the flesh.

"Stop him, sir; stop him!" cried the oarsman, as yard after yard of line flew out, threatening to overrun.

Again the big leather brake was brought into play, and this time the fish rounded to so that the reel could be used. Then came the fine play of the desperate game. It tried all the tricks known to fishdom; dived deeply into the blue water and pounded on the line, hammering with its head in regular blows, then dashed away to the wild accompaniment of the click, click. Checked, it darted to the surface, glistening in the sun a moment and displaying all the splendors of the rainbow; then dived deeper and deeper, to sulk 150ft. in the heart of the blue channel, bearing against the line with all the power of a big salmon; lifting, rushing, pulling, bearing down, turning quickly—all the tricks known to fish and played before it was finally reeled within reach of the boat; and then, mad with fright and rage, it dashed away with a splendid effort, the zee—zee-ee of the steel click rising like the wail of a lost soul.

But it is the last rush and it is well that it is so, as the fisherman, in the twenty minutes' struggle, is shaking like a leaf. Up the fish comes, looking now like a great blaze of silver against the deep blue. One more turn and the magnificent fish sweeps alongside, the sun playing over it in a thousand tints; then the gaff lifts it struggling, quivering, into the air and the fisherman drops the rod, and breathing hard, gazes with admiration at his first Santa Catalina sea bass.

"Magnificent!" he exclaims. "How much will he weigh?"

"Thirty pounds," replied the boatman, and 31lbs. was its weight later on.

Another smelt is hooked on and the little boat goes gliding over the waves. Soon some large fish are seen following them. They have a golden hue and seem to slide down the waves. "Yellow-tails!" said the oarsman, looking over the shoulder of the fisherman at the fish not 10ft. away; then the water seemed to take on a golden glow and great fish divided, as the boat passed, and fairly filled the water.

"A school of yellow-tails," again said the oarsman; "lood out for the rods."

There were hundreds, apparently thousands, of fish from 15 to 50lbs. that actually colored the surface.

"Look out for the rods," repeated the oarsman, and at the moment the reel sounded the alarm. Bravo! what a rush!

The New Yorker had gotten the hang of it and the light rod was bending, the lighter line singing musically through the water. Every rush was met, and the gamy fish turned this way and that. It plunged deep into the ocean, then rose like a flash of light, dashed along the surface to plunge again like an arrow and sulk, and sulk, and sulk.

"Great sport!" exclaimed the sportsman after the tenth rush, "the greatest I've ever had;" adding, "it's a pity to kill so game a fighter."

In it came, making great rushes to and fro as the fisherman turned it, finally succumbing to the gaff; 28lbs. of as game a fish as ever swam.

These two fish were types of the principal game fishes of Santa Catalina Island, Southern California. The sea bass (*Cynoscion*) is an ally of the weakfish of the East, and runs from 20 to 60lbs.; it is a rich golden bronze in color. The yellow-tail (*Seriola dorsalis*) runs from 3 to 4½ft. and from 15 to 60lbs.; the average being 20lbs. In general appearance it looks something like the bluefish, the upper portion being a rich, iridescent blue, while the fins and tail are yellow, giving the fish a beautiful appearance in the water. The fish is caught with light rods and tackle, the oarsmen or fishermen being noted for their skill and endurance, and it may be truly said that a new sport is born.

A St. Augustine Drum.

A ST. AUGUSTINE correspondent sends us this report of drum fishing, from the *Herald* of that city:

Messrs. Taylor, of the Casino, and Frank Dodd, Gardner and Bowers, went drum fishing yesterday, assisted by three wards of the nation whose duty it was to prepare bait and bring the fish home, but the gentlemen named did the fishing, and deserve all the credit for the big catch, which consisted of six drum, of which Mr. Taylor caught three. These three, after being dusted off, and having their scales combed down, their wounds hidden from view, and otherwise made to look as pretty as possible for the inspection of the ladies, were placed on exhibition at the Alcazar, with their weights marked on card board stuck in their mouths, and looked so much like they were telling the truth that nobody had the heart to doubt the figures, which were 52½, 52½ and 36. Mr. Taylor thinks that the drum must have shrunk fully 18 per cent., which statement is entitled to consideration anyhow, and no one can disprove it. But it isn't the fish that were caught, that are entitled to extended notice, so much as the one that wasn't caught, which was one of the most accommodating and versatile drums on record. All of the gentlemen agree that it was the largest one they ever saw, and although it was brought to the surface several times it could not be landed, because its body was impenetrable to the gaff hook, and even a set of grappling irons which were brought into use were of no avail. This was on account, it is said, of a thick growth of oysters which had attached themselves to the body of the fish. From the size of the oysters, it was judged that they had been growing on the fish for at least eighty or ninety years. Another peculiarity of his drum was that it would, when brought to the surface of the water, stand erect on its tail, flap its fins and drum for a minute at a time, much to the delight of the audience and apparently to itself. There is not another case on record where a drum fish ever gave utterance to its unusual sounds while out of the water, and the gentlemen say that there was a peculiar musical harmony about it, not unlike the effects of the kettledrum in the grand climaxes of the works of some of the famous composers. Another peculiar thing about this fish was that after giving a performance of nearly three quarters of an hour, it got tired and slid off with hook, line, gaff hook, grappling irons and all. It is really a pity that it was not caught.

ANGLING NOTES.

"My Guide had a Strike."

I HAVE just read an angler's letter to a contemporary journal, in which he says: "We had been out but ten minutes when my guide had a strike. Then we were all excitement until we landed our first salmon."

I do not know as it is the acme of sport, but it comes pretty near it, to pay a guide \$3 (or such a matter) a day and board, with extras for bait, boat, dogs, etc., and have him catch the fish or kill the deer, as the case may be; but there are a few men in this wide world who do not enjoy second-hand bliss any more than they enjoy a second-hand shirt, and the man that I am most intimately acquainted with of all the inhabitants of the globe is one of them. Perhaps it is a mere matter of taste—and matters of taste should not be introduced in this column—but anyone who objects can, with this advance notice, skip what I will write. After all, the frankness of the writer whom I have quoted excites my warmest admiration, for instead of saying "me and Betsy," he says, "we landed our first salmon," after admitting that it was the guide who had the strike. There are men who would have used the first person singular in that sentence and let it go out to a receptive public without any notice of copartnership, as required by law.

A few years ago a friend of mine, a well-known New York angler, was fishing at a resort on Lake Champlain, and one evening he told me that he was tired of waiting on his boatman, and the next day he would insist that the boatman should leave his rod on shore. He did so, and for one day this boatman waited on the man who paid him for his services and that night he threw up his job, for he would not row unless he could fish. I once had the same experience in West Virginia. On the other hand, when I was fishing at Parmachenee Lake in Maine I one day handed my rod to my guide to cast for a while, as my right shoulder was lame from a fall following a dislocation, and I had to urge him to cast while I rested; but John Danforth had the best trained guides to be found in all my experience, as they had to serve an apprenticeship under his personal supervision before they obtained a diploma to guide the visitors to Camp Caribou.

I must except one man in this general round-up, John Cogswell, peace to his ashes! who served me as guide and friend in Wyoming and Utah nearly thirty years ago, but he, perhaps, was more friend than guide, which made him so unlike the average guide of this day. There are guides, however, who do not expect to get a per diem job of rowing and then do most of the fishing for the men who employ them, but they are the exception if I may judge from my own experience of fishing resorts.

Naturally a guide will understand his home waters far better than the visiting angler, and if he is one of the kind who wishes to have the best fishing for himself he will be quite apt to get it.

Such a guide once anchored his boat very carefully and prepared to fish, when the angler quietly told him he would change places in the boat with him, and he did. The boat was anchored over a wall of rocks running at right angles to the length of the boat, and the bow offered good fishing and the stern did not, but the angler would not have known of the situation had he not been warned by a previous victim of the guide's enterprise and love of fishing where the most and biggest fish were to be found. It is always safe to change places with the guide if he develops a fondness for getting his hook first into the water and the last out, and has no time to pass the bait bucket. Fortunately all guides are not of this pattern, and the others are devoted to the interest of those who employ them, and if they fish their fishing is an incident and not the principal feature of the day's outing. It is funny, but one rarely sees the guide's score in print, or if it is printed I must have overlooked it, and that is what made the words I have quoted at the head of this note seem so queer to me when I read them.

Special Fish and Game Protectors.

One amendment to the game law of New York is chapter 284 of the laws of 1896, approved April 17. I am specific about this, for I happen to have business in Albany, where they know something about game laws, new and old, and it was stated in one of the departments that this amendment had not become a law, but I found in the office of the Secretary of State that it had become a law under the title I have given. This amendment provides that the Board of Fisheries, Game and Forest Commission may, in its discretion and at pleasure, appoint or remove a person recommended by a majority of the supervisors of any county, or by any incorporated game club for the protection of fish and game as special protector and forester, who shall possess the same powers that are enforced upon the State protectors and foresters. Such special protectors and foresters shall receive no compensation from the State. They shall make similar reports to those required from the State protectors and foresters.

Before the passage of this amendment, special protectors and foresters could be appointed only on the recommendation of a board of supervisors at their annual session.

Acting under the new law, the Fisheries, Game and Forest Commission at their last meeting appointed John Commerford, of Bisby Lake, and James H. Miller, of Honnedaga Lake, special protectors and foresters, upon the recommendation of the Adirondack League Club. John Callahan, of Hamilton county; George A. Monk, of Rossie; Fred Apple, of Cedars; Chauncy Shaven, of Turnwood, were appointed special protectors and foresters upon the recommendation of the Black Lake and Alder Lake clubs.

Squat Net.

A correspondent asks what a "squat" net is, and says he cannot find it in the Century Dictionary. I do not know as a squat net can be found in any dictionary, for I never have looked for one in a dictionary; but they can be found a-plenty along the Hudson River and elsewhere, and many of the State game protectors could produce a number of them if they have not been destroyed. The net is a square, nearly flat net, supported by sticks arched from opposite corners and crossing over the center of the net. A rope is fastened at one end to the sticks or the place where they cross and the other end is fastened to a lifting pole. It is operated by lowering the net into water and lifting it again. The man or boy sits on the shore end of the pole as the fulcrum, his hands grasping the pole in front of him is the power, and the net is the weight, all

of which would make it appear that it would be fully as appropriate to call it a lever net, if the operator did not "squat" on the shore end of the lifting pole.

Steelhead Trout.

Commissioner Brice, of the United States Fisheries Commission, has assigned 75,000 eggs of the steelhead trout to the Fisheries, Game and Forest Commission of New York. The eggs came from the Fort Gaston station in California, and 50,000 were sent to the Caledonia station and 25,000 to the Cold Spring Harbor station on Long Island, and all have been hatched successfully considering that one lot of eggs *en route* encountered the hot spell. The fry from the Caledonia station will be planted in Lake George, and the fry from Cold Spring Harbor will be planted in streams on Long Island flowing into the sea. They are the first of this species to be planted in New York. At one time the rainbow trout was declared to be the young of the steelhead salmon, as it was first called, but later on investigations proved the two fish to be separate species, and the steelhead was declared to be a trout and not a salmon.

The steelhead trout is a large game fish growing to 30lbs. in weight, and is a better breeder in confinement than the red-throat trout, also called the black-spotted trout of the Rocky Mountains. This too is the only trout on this continent, according to Jordan, that is entitled to be called salmon trout, and even the name salmon trout has given way to steelhead.

The lake trout, a fish which inhabits deep, cold lakes, and is never by any chance anadromous, is still called salmon trout in New York State, in spite of resolutions of the Fish Commission and repeated protests.

Hewitt Pond.

A few days ago the telegraph informed a large number of the daily papers that Hewitt Pond in the Adirondacks had been sold, with the land surrounding it, to private parties, who would erect a lodge on its shore, and the implication was that the pond would be closed to the public. At once a number of anglers who have fished Hewitt Pond for years were in a flutter. My first knowledge of the alleged sale was in a telegram, asking me if it was true, but I knew nothing about it except what the newspapers said.

I have looked into the matter to this extent: Hewitt Pond is partly on lots 108 and 109, in township 26, Essex county, and partly on lot 1, in township 30, of the same county. Lot 1 and lot 109 belong to the State, and they are within the boundaries of the Adirondack Park, and the State could not sell the tract if it wished to. I understand that the shore of the pond on lot 108 belongs to ex-Senator Collins and ex-Clerk of the Assembly De Freest, of Troy, and they would not sell it, and if they did it would not close the pond to the public. The pond is not far from Aidee Lain, and since I was a boy it has been open to those who wished to fish it.

"An Angler's Basket."

It seems but a few weeks ago that the English angling papers announced the death of T. E. Pritt, angling editor of an English newspaper and perhaps best known on this side of the ocean through his books upon the grayling and artificial trout flies. I can remember well the impression it made upon me when I opened Mr. Pritt's book, "Yorkshire Trout Flies," in a book store in Boston, and saw the colored reproductions of what he believed to be the correct flies for trout fishing. I thought they might do for England, for Mr. Pritt was an authority on the subject, but they would not do for America. To-day I have in my fly-books many of the flies portrayed in the volume I would not buy because I thought it useless to me.

At Mr. Pritt's death he left the MS. of a book called "An Angler's Basket," and Rev. C. P. Roberts, M. A., president of the Northern Anglers' Association, has kindly undertaken to see the work through the press in the interest of Mrs. Pritt. The names of subscribers will be printed in the subscription copies of the volume. The price of the book will be six English shillings, and orders sent to Abel Heywood & Son, 56 and 58 Oldham street, Manchester, England, will be credited to Mrs. Pritt.

Maine Trout and Salmon in New York.

At the New York Sportsmen's Exposition I fear that I unconsciously hurt Miss Fly Rod's feelings by referring to the condition of the large trout and landlocked salmon in the tanks of the Maine exhibit, but it was true that some of the fish had developed fungus, and some had been bruised by jumping from the tanks onto the floor of the garden, and it would have been difficult in my opinion to obtain an absolute clean bill of health for them from one familiar with fish in perfect condition. Miss Fly Rod was entitled to great credit, however, for bringing the fish to New York in as good condition as she did, for it is not an easy matter to transport such large trout and salmon, and the season was not favorable, for the fish had not recovered their form since the breeding season.

A few days ago I saw the same lot of fish at the New York Aquarium, and Miss Fly Rod would have been pleased to see them as I did. The bruises of the acrobatic salmon were nearly healed, and the fungus was nearly gone from the big trout that was the worst of the lot in this respect, and all were in good health and taking on flesh rapidly. Fortunately the fungus had not eaten through the skin of the fish when they came into the hands of Dr. Bean, the director of the Aquarium, and he placed them in salt-water tanks with the result that I have stated. The water was nearly the full strength of sea water in its saline qualities.

An English fishculturist has stated that he kept a trout (*fario*) in salt water for twenty-one days without injury to the fish. I think there is a trout in the New York Aquarium that has been in salt water for a year, but I may have confused the time with that of a trout I saw at the Central Station of the U. S. Fish Commission in Washington, which was kept in salt water for more than a year. Why the English gentleman should consider it remarkable that a fresh-water trout would live for twenty-one days in salt water, and note it in his book, I cannot say; but our common brook trout run down into salt water when they have the opportunity and remain until they are coated with silver. The sea trout of Canada are only the *fontinalis* that have made a journey to the sea, and put off their sea livery of silver and resume their spots when they have returned to fresh water. The trout at the Central Station and the one at the aquarium,

however, have not put on the silver of the usual sea-run fish. This is because the surroundings of the fish in the tanks are so like a brook that there is no change in coloring the fish, which quickly adapts its external coloring to its surroundings. This is an indication that a brook trout at sea does not remain at the bottom, or if it does, that the bottom is of white sand.

Years ago in this journal I told of trout in fresh water that never tasted salt water putting on the silvery mantle over the spots. The trout ran down from a mountain stream into a lake where the bottom was of white and glistening sand, and there they turned as silvery as a sea-run fish, and remained so until they returned to the brook and discarded the silver for their normal coloring.

The trout in that stream do the same thing to-day, and the natives living there still swear that they are two kinds of trout totally different.

Dr. Bean will have an opportunity at the aquarium to show how many different colors trout may assume at will by changing the colors of their environment.

A. N. CHENEY.

NEWS OF BOSTON ANGLERS.

BOSTON, May 16.—A friend writing me from Bangor under date of May 11 says that the fishing at the Bangor Pool during the past week has been very fair. About a dozen large salmon have been taken during that time and the indications point to a continuation of the sport. Several anglers from other cities have been fishing there recently, one of the most prominent being Archibald Mitchell, of Norwich, Conn. This gentleman may truthfully be called an expert on the Bangor salmon fishing, having fished there each spring for many years. He passed through Boston on his way home a day or two ago and called on me during his short stay at the Hub. With J. M. Johnson and W. A. Briscoe, of Norwich, he has been fishing the pool during the last ten days, and the party captured eleven fish. Mr. Mitchell landed five, weighing respectively 7, 10, 21, 22, 22½ lbs.; Mr. Johnson three, weighing 11, 19, 21½ lbs., and Mr. Briscoe three, weighing 18, 21, 24½ lbs. There were eighteen fish in all taken during their stay at the pool, and the eleven taken by the Norwich party speaks well for their skill and perseverance. Although fairly successful in this year's fishing, Mr. Mitchell thinks the fishing at Bangor is gradually growing poorer, and without a determined effort is soon made to limit the seining down the river the pool will soon cease to be an attraction for anglers. Time and again during the last few years I have heard of intentions to protect the Penobscot salmon, but these intentions have borne but little fruit as yet, and I fear will not until it is too late. I hear that F. C. Ayer, of Bangor, has done no fishing at the pool whatever this season, although in past years he has devoted many days to the sport and has always been very successful. Mr. Ayer will go to the upper waters of the Restigouche later on, accompanied by his son. Mr. Mitchell will leave about June 1 for the Restigouche, to fish the Grog Island pools. He will stay there during June and probably a part of July, and will be joined by Mr. Ayer at some time during his stay.

A feature of the fishing at Rangeley since the ice went out, according to a letter received by a Boston man from a friend who is at the lakes, is the fact that the salmon have been rising freely, while the trout have been very backward. Mr. C. H. Edson has received a message from his friend Henry Hobart, who, with his daughter, is at the lakes, saying that they have taken four salmon, two of 7½ lbs. each, one of 8½ lbs., and one of 3½ lbs. The news caused Mr. Edson to decide that he wanted a part of that kind of sport himself, so he will leave to join Mr. Hobart on Saturday. The Tuttle party, consisting of R. A. Tuttle, W. N. Boylston and C. F. Hutchins, of Boston, and E. H. Sampson, of New York, with two or three other friends, leave for the Rangeleys in a special car on Saturday morning. They go to their old headquarters, the Lake Point Cottage, at the outlet of Rangeley Lake. Last year Mr. Boylston made a phenomenal score in one day's fishing—a regular record breaker—and he has every hope of duplicating it on this trip.

On Friday evening, W. L. Emery and G. R. Whitcher, of Brockton, Mass., started on their sixth annual spring trip to Moosehead Lake. They go first to Greenville, at the foot of the lake, and taking one of the small steamers, which they have chartered, will cruise around the lake ten days, fishing all the best places. They have two guides engaged and will live on the boat, and, according to Mr. Emery's statement, it is the best fun on earth.

Dr. J. C. French, of Boston, has just returned (a perfect picture of health) from a winter's shooting trip to Texas and Arkansas. He has had great sport with the wild turkeys, and killed one immense gobbler of 32½ lbs. weight. He thinks these birds about the smartest specimens of wild game he has ever hunted, and has so much admiration for their ability that he suggests placing them on the American dollar instead of the eagle, which he thinks stupid as compared with his favorite. The Doctor is now planning his summer campaign of sport, and leaves Boston in a few days for Moosehead. From there he will go to the Katahdin Iron Works, then to Lake Edward, and the Grand Discharge at Lake St. John in Canada.

The Boston Athletic Association have purchased a half dozen canoes and will place them on the Charles River at Riverside for the benefit of members who wish to use the paddle. In addition to the club purchase several individual members have ordered separately, and it now looks as though the B. A. A. colors will be a common sight on the Charles this summer.

There is a regular thinning out of Boston anglers going on now, and every man who can possibly get away from the iron grip of business has either left for the lakes or is planning to go very soon. J. B. Carpenter is one of the fortunate ones who has a fair future before him. He leaves on Sunday for the Schoodic Lakes, intending to return after ten days only to prepare for going away again, with the idea of devoting the entire summer to fishing and its attendant pleasures. Waldron Bates is another Boston man who will try hard to enjoy himself with rod and reel during the next few weeks. Bar Harbor will claim him first, and while there he will have the pleasure of trying the Mount Desert streams and ponds, which, by the way, have a good reputation for trout. He expects to run up to the Bangor salmon pool quite frequently, and between the two places ought to find fishing enough.

Business or other causes may for a time compel a man who enjoys fishing to abandon his annual trips, but as

soon as these causes are removed his mind reverts to the old scenes and he seizes the first opportunity to brush up his tackle and get away to the old waters. An example of this kind has just come under my observation in the person of T. D. Blake, of the Blake Pump Co., of Boston, who left a few days ago for Grand Lake in Maine. He used to go there a great deal years ago, but has not been for seven years. It is needless to say that he entered into this trip with the keenest enjoyment, and I trust his success will be so great that he will feel well repaid for the seven long years of inaction which he has undergone.

The Bangor and Aroostook country is reaping a fair harvest of sportsmen now, and there are many inquiries as to the best fishing waters of that region and the best way of reaching them. One of the largest parties I have heard of that is bound for northeastern Maine will leave on Sunday night and consists of B. and F. T. Fuller and Frank Crane, of Boston; Dr. A. K. P. Harvey, of Somersworth, N. H.; Samuel Shaw, of Brockton, Mass., and two or three other gentlemen. They will enter the woods at Stacyville on the B. & A. R. R., then to east branch of the Penobscot, and up that stream twenty miles to their camps. Every man will have his own canoe and guide, making each individual independent of his companions. They will be away about two weeks and are well enough equipped to achieve great results.

A letter from Harry M. Pierce, under date of May 12, states that the ice went out of Big King Lake on the 9th inst. This is the chief lake on the King & Bartlett preserve, and Mr. Pierce prophesied clear water on May 10, as mentioned in FOREST AND STREAM two or three weeks ago. He adds to his letter that the fly-fishing on the day after the ice went out was the best he ever saw. Three 1½ lb. trout at a cast were quite common, and he honestly thinks he could have filled his boat had he so desired. Harry is no trout hog, however, and all except enough for the needs of the table were placed back with care. I know a number of Boston men (myself included) who would have given much to have been with him on that occasion.

E. S. Thayer, of Salem, Mass., returned a few days ago from Newfound Lake, N. H., where he has been fishing for landlocked salmon. He landed three, and lost some others through not being strongly hooked. Mr. Thayer thinks he was a little too early, and will go up again next week to try again. Samuel and N. S. Wax, of Boston, who were at Newfound at the time of Mr. Thayer's visit, landed a 6 lb. trout and a 5 lb. salmon. Mr. Samuel Wax had one crushing disappointment which he cannot speak of without strong expressions of disgust. He hooked a very large salmon (estimated weight all the way from 12 to 60 lbs.) and had him right at the side of the boat ready for the guide to lift in, when the ungrateful monster lazily flopped over on his side, the hook let go, and away he sailed, well tired out, I opine, but still in the swim.

HACKLE.

Boston, May 13.—The first party of the season to the camps of the Duck Lake Club, at the Schoodics, is off, and a happy party it is. In the party are some of the most prominent members of the boot and shoe manufacturing trade, as well as merchants, and one member of the gun and fishing tackle trade. The party is composed of Herbert L. Harding, Geo. W. Wheeler, E. C. Johnson, C. W. Shaw, H. R. Brown, Edward Read, W. B. Lambert and H. O. Underwood. A party of eight would at first seem unwieldy, but it must be remembered that the club has three fine camps at the Schoodics: one at Duck Lake, one at Pleasant Lake, and one at Grand Lake. Mr. Lyman Underwood is already at the camps, having been there for some days superintending the getting ready. The camps are all within a radius of about 12 miles, and each is provided with all arrangements for sport and comfort, and the party can easily be divided. All the members of the club speak in the highest terms of what they enjoy there. The fishing is as good as reasonable men can ask for, while the camps are fitted for comfort with big open fireplaces. The club has a membership of 24, a full quota, with several on the waiting list. One gentleman, who went there for the first time a year ago, is now an enthusiast, and has been counting much on his trip this year. Landlocked salmon are small there compared with Sebago, but they are gamy and fine eating. The lakers are mentioned as remarkably clean-built and good fighters, compared with the same fish in other lakes.

The first party of fishermen to the home of the Inglewood Club, in New Brunswick, will leave Boston on the 27th of May via steamer to St. John, and thence by teams to Inglewood.

Mr. Eugene G. Partridge hopes to get a few days of Rangeley fishing about the first of June. Later he will go to his camps on Anabesecook Lake, Winthrop, Me. His friend, Mr. B. G. Ackerman, of Brooklyn, N. Y., early fled to the Rangeleys this year, with a party of friends and his son, C. C. Ackerman. In the party are also C. E. Saffron and J. B. Watkins. A year ago Mr. Ackerman had concluded to give the Rangeleys the "cold shoulder" forever. But the resolution has lasted him a year. So it is with many. The Brackett and Clark party is off for the Rangeleys, going on the 16th. Mr. F. C. White, of Brockton, is in the party this year. Undoubtedly the Upper Dam will be the headquarters of the party, where Messrs. Brackett and Clark have fished for so many years. The Ackerman party is also quartered there.

E. H. Wakefield, Jr., is off for Dan Hole Pond, Ossipee, N. H., again. Mr. John E. Devlin is with him this time. They started Friday. This time Mr. Wakefield feels sure of a salmon, and a big one. All the spring the fish in that lake have refused to bite; indeed they have not been seen. But a report on Thursday said that they were "breaking in good shape all over the pond." Mr. C. S. Stearns, of Boston, fished Pleasant Pond, Scytheville, N. H., two days, April 30 and May 1, faithfully, with not a salmon to his creel. This pond was opened to fishing last year for the first time since restocking, and some very fine salmon were taken. But this year there has been little success reported thus far. On the pond the day Mr. Stearns fished there were about eighty boats, with only one trout ½ lb. weight taken. The pond is very easy of access from Concord and other cities, and the danger is that it will be excessively fished.

Mr. Chas. L. Bly and Mrs. Bly left Saturday for their first fishing trip to Round Mountain Lake this season. They are to be absent a week or more. The Mohawk Club will start for Round Mountain Lake on the 21st, in-

stead of the 28th, as first intended. The ice left that lake sooner than expected, and the members of the club fear that the fishing may be ahead of them if they are not on the wing. The party is a representative one, including some of the first business and professional men of Bradford and Haverhill. In the party are C. W. Arnold, D. F. Dudley, G. E. Emerson, H. I. Pinkham, D. T. Kennedy, C. H. Davis, A. P. Jaques, R. E. Traiser, Jacob Moses and P. B. Heintz. Most of the gentlemen visit Round Mountain Lake for the first time, and it is expected that they will bring away good impressions and all the fish reasonable sportsmen desire.

The Rumford Falls & Rangeley Lake's Railroad was opened to the public on the 15th from Rumford Falls to Bemis. Fishermen can now leave Boston at 9 A. M. and arrive at Bemis at about 7 o'clock in the evening of the same day. Another train is to be run, leaving Portland at 8:30, which will arrive at Bemis at about P. M. Parlor cars are to be attached to both trains. Sportsmen with whom I have talked, though sorry that the Rangeleys are thus opened to broad gauge railroad and parlor cars, say that they are willing to make the best of it and go through from Boston in one day with all comfort. New York can be left at night and Mooselucmaguntic Lake reached the next evening, with sleeping and parlor cars all the way. So the world moves. Stages and buckboards for many miles, with two and three days time to the Rangeleys, are within the early collections of all of us.

Salmon are being taken at Rangeley Lake in a very satisfactory manner. Mr. C. P. Stevens writes me that up to dark Monday seven landlocked salmon had been taken. Their united weight was 42lbs., and ranged as follows: One of 8½lbs., by Ed. Lowell; one of 5½lbs., one of 2½lbs., and one of 7½lbs., by C. P. Stevens; one of 8½lbs., one of 6½lbs. and one of 3lbs., by E. Wyman. This is a most remarkable opening of landlocked salmon at Rangeley Lake; for those most gamy fish have heretofore been far between, though the lake has been stocked for a number of years.

Mr. J. Parker Whitney is off for his home camps, at Mosquito Brook, Molechunkamunk Lake. He makes his beautiful camps his summer home, with his family. Mr. Whitney has visited his camps almost every season for very many years. He was one of the pioneer fishermen to the Richardson Lake. He has also spent whole winters there with his family, including servants and tutors for his children. A great lover of fish and game, he has never taken either out of season.

Mr. Augustus Phinney has gone to the Upper Dam for a couple of weeks' fishing.

SPECIAL.

OPENING OF THE CANADIAN ANGLING SEASON.

Editor Forest and Stream:

The Canadian angling season has been well and duly opened. As anticipated in my last it is even earlier than usual, notwithstanding the late lingering of winter in the lap of spring. The ice, which left most of the smaller lakes hereabouts ten days and more ago, left Lake Edward on the 11th inst. and Lake St. John on the 12th. On the latter mentioned lake it had been broken, especially around the shore, for nearly a week previous to its departure, and there was clear water in and near the mouths of all the rivers. In the bay at the mouth of the Metabetchouan the French-Canadian fishermen of the place have been catching ouananiche with bait for some days past, and by this time there is undoubtedly good sport to be had off the Roberval shore. Mr. Frank Ross, who controls the fishing in the mouth of the Oniatichouan, is about to open the fly-fishing season there with a party of friends from England. There ought to be good sport there by the 20th inst. I am still of the opinion that June 8 or 10 will be early enough to find good fly-fishing in the Grande Décharge for ouananiche; but by the 18th or 20th inst. the trout in the inland lakes, if not in the streams, should be rising to surface lures. Further south, in the immediate vicinity of the city, one or two fair strings of fish have already been taken out of lakes St. Charles and Beauport by fly-fishers, and bait proved killing as early as Saturday last in the Stadacona Lakes, where the catch of J. E. Livernois on that date included a 5lb. *fontinalis*.

The water, which has been unusually high this spring all over the north country, is now falling rapidly, as there has been virtually no rain at all since the disappearance of the snow. It is sincerely to be hoped that we may be spared a repetition of the uncomfortable spell of wet weather that greeted American anglers in Canada last year throughout the best of the spring fishing season in the last part of May and beginning of June.

In about a week or ten days a party of well-known anglers is expected here on its way to the Nomantum Club House, on Lac des Commissaires. The party includes G. E. Hart, superintendent of the Waterbury Watch Co., and I. L. Atwood, of Waterbury, Conn., and W. Durand, the manufacturing jeweler, of Newark, N. J. Mr. C. E. Turner, of Waterbury, who accompanied the party last year, will be missed both in Quebec and at the club house this season, for he is "chained to business," and writes me that he is doing the most of his fishing just now in the columns of FOREST AND STREAM. Yesterday I just missed seeing Dr. Porter, of Bridgeport, who passed through on his way to the Metabetchouan Club's preserve, on Lake Kiskisink. Messrs. F. N. Bonham, of the Bridgeport National Bank, and J. P. Warner are already at the club house, as also are Mr. P. Page, of Summit, N. J., and Maj. Bailey and Messrs. Buckingham and Parsons, of Washington. To-morrow the party will be reinforced by a baker's dozen of Meriden (Conn.), anglers, headed by Mr. Francis Stevenson, who are to leave Quebec by a special train on the Lake St. John R'y.

Among others who have passed through Quebec on their way to their fishing grounds within the past few days are Dr. Beardsley, of Brooklyn, Mr. C. W. Alling, of Newark, N. J., and Messrs. J. W. Cromwell and E. W. Caggishall, of New York.

Mr. E. C. Fitch, president of the Waltham Watch Co., is here on his way to his salmon river, the Romaine.

E. D. T. CHAMBERS.

QUEBEC, May 15.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

NEW FISH FOR THE PACIFIC.

A Review of the History and Results of the Attempts to Acclimatize Fish and Other Water Animals in the Pacific States.

BY HUGH M. SMITH, M. D.

From the Bulletin of the United States Fish Commission.

FEW subjects connected with the utilization of our natural resources present greater interest than the possibilities for the successful transfer of useful animals from one section of the country to another and their acclimatization in new regions. The benefits that may accrue to a community or section through the introduction of new resources are various, and there are few parts of the country in which valuable non-indigenous animals are not now found.

In the case of water animals the benefits of successful acclimatization are doubtless proportionally greater than with any other class, owing to the little attention they require after introduction, their extraordinary fertility as compared with land animals, and the slight labor and expense incident to their utilization. At the same time, it is apparent that the difficulties in the way of introduction of fish, mollusks, etc., are greater than with other animals; the drawbacks in the mere transportation are often very serious, especially when long journeys are to be made; while the uncertainties attending the deposition of the animals, the determination of the general results, and the gauging of the economic effects are much greater.

Among other influences militating against the successful introduction of fishes and other aquatic animals into new areas, in addition to those incident to their transportation, are the following: (1) Unsuitable water temperature; (2) unsuitable food; (3) unfavorable topographical condition of the bottom; (4) absence of suitable rivers for anadromous fish; (5) enemies and fatalities acting on a relatively small number of individuals.

The results attending the experimental introduction of aquatic food animals into the waters of the Pacific States must be regarded among the foremost achievements in fishculture. The striking illustrations here presented of the influence of man over the supply of free swimming anadromous fishes, to say nothing of his ability to affect the abundance of non-migratory species, are of great economic and scientific interest.

Aside from the direct economic results which have followed the introduction of East coast fishes into the waters of the Pacific States, a very important basis has been furnished for judging of the general effects of artificial methods in regions where the object of fishcultural operations has been to maintain and increase the abundance of native species. Attention was first drawn to this phase of the subject in an article contributed by the writer to the issue of *Science* for Aug. 18, 1893, in which the following paragraph appears:

Of scarcely less consequence than the actual results of shad introduction on the west coast is the important bearing which the success of the experiment must have in determining the outcome of artificial propagation in regions in which it is not possible to distinguish with satisfactory accuracy the natural from the artificial conditions. If these far-reaching, and no doubt permanent, results attend the planting, on few occasions, of small numbers of fry in waters to which the fish are not indigenous, is it not permissible to assume that much more striking consequences must follow the planting of enormous quantities of fry, year after year, in native waters? There is no reasonable doubt that the perpetuation of the extensive shad fisheries in most of the rivers of the Atlantic coast has been accomplished entirely by artificial propagation. On no other supposition can the maintenance and increase of the supply be accounted for.

The zealous efforts of the fish commissioners of California to increase the quantity and variety of food and game fishes of the State deserve special recognition. For more than twenty-five years the energies of the commission have been almost constantly directed to the acclimatization of desirable fishes inhabiting the waters of the Eastern States. Their remarkable success when acting on their own behalf and in conjunction with the New York Fish Commission and the United States Fish Commission entitles them to the great credit and praise which they have received both from the inhabitants of California and from the people of other States and foreign countries. The other States of this section have also exhibited great interest in the improvement of their fish supply through the acclimatization of Eastern species.

Mention should be made of the efficient services rendered to fishculture by Mr. Livingston Stone in successfully taking fishes across the continent at a time when fish transportation was an undeveloped art and when the difficulties encountered would have discouraged one less enthusiastically interested and less competently informed on the general subject. To Mr. Stone more than to any other person is the direct credit due for the introduction of most of those fishes which have since attained economic prominence.

In this report I have considered all those species not already indigenous which have been introduced, or the introduction of which has been attempted, in California, Oregon, Washington, Idaho and Nevada. Idaho has been included in the discussions because all its water courses are practically tributaries of the Columbia River, and fish planted in that stream might find their way into the State, while plants in the open waters of Idaho might produce results in Oregon and Washington. The proximity to California of the Nevada lakes and rivers in which new fishes have been planted, and the similarity of the fishery interests of the contiguous parts of the two States, have appeared to warrant the inclusion of Nevada in the list. In the case of a few species having special interest, reference to their acclimatization in Utah has been made.

An interesting chapter might be prepared treating of the experimental introduction of native Western fishes into new waters of the region; as, for instance, the acclimatization of the chinook salmon and rainbow trout in landlocked Nevada waters and the successful transplanting of the Sacramento perch (*Archoplites interruptus*) in Nevada; but this subject is foreign to the scope of the present paper.

It is intended in this paper to recount the history of the introduction of each aquatic species; to record the general results of the experiments; to state what is known of the habits of the animals in their new environment, and to give an account of the economic importance attained and of the fisheries prosecuted.

The following fish and other aquatic animals receive special mention and will be considered in the order given:

- (1) The bullhead or horned pout.
- (2) The white catfish.
- (3) The spotted catfish.
- (4) The carp.
- (5) The tench.
- (6) The goldfish.
- (7) The Hawaiian awa.
- (8) The shad.
- (9) The common whitefish.
- (10) The Atlantic salmon.
- (11) The landlocked salmon.
- (12) The Von Behr or European brown trout.
- (13) The Loch Leven trout.
- (14) The lake trout or Mackinaw trout.
- (15) The brook trout.
- (16) The muskellonge.
- (17) The pike or pickerel.
- (18) The eel.
- (19) The crappie or bachelor.
- (20) The strawberry bass or catco bass.
- (21) The rock bass.
- (22) The Warmouth bass.
- (23) The blue-zill or blue bream.
- (24) The green sunfish.
- (25) The large-mouth black bass.
- (26) The small-mouth black bass.
- (27) The yellow perch or ringed perch.
- (28) The wall-eyed pike or pike perch.
- (29) The striped bass or rockfish.
- (30) The white bass.
- (31) The tautog.
- (32) The American lobster.
- (33) The Eastern oyster.
- (34) The soft clam.

The Catfish.

At least three species of catfish—the white catfish (*Ameiurus catus*), the yellow catfish or bullhead (*Ameiurus nebulosus*), and the spotted catfish (*Ictalurus punctatus*)—inhabiting parts of the United States east of the Rocky Mountains, have been transferred to the Pacific States. Catfish were taken to California in 1874 by Mr. Livingston Stone,* of the United States Fish Commission, and subsequently one or two species were introduced into Oregon and Washington. Mr. Stone's assortment of Eastern catfish consisted of fifty-six large Schuylkill catfish (*Ameiurus catus*) from the Raritan River, New Jersey, and seventy hornpouts or bullheads (*A. nebulosus*) from Lake Champlain, Vermont. The large white catfish were deposited in the San Joaquin River, near Stockton, Cal., and the bullheads were placed in ponds and sloughs near Sutterville, Sacramento county, Cal.; both plants were made on June 12, 1874.

The spotted catfish is probably the best of the tribe, and is the principal one distributed by the United States Fish Commission. In food value it is regarded by Jordan and Evermann as not inferior to the black bass. Several plants have in recent years been made in the Pacific States. In 1892 the following adult and yearling catfish were deposited in Washington waters in response to requests: Seventy-five in Clear Lake, Skagit county; 125 in a private pond near Vancouver; 50 in Deer Lake, in Stevens county. In 1893, 100 were placed in the Boise River, Idaho, a tributary of the Snake River. Ten were put in the Balsa Chico River, California, in 1895. Plants of yearlings were made in Lake Cuyamaca and Feather River, California, in 1891, each water receiving 250 fish.

The results attending the introduction of catfish in California were immediate and marked. As early as 1875 the State Commissioners reported on the matter as follows:

The Schuylkill catfish and the Mississippi catfish, placed in the San Joaquin River, have grown rapidly and spawned, but several of the large fish and many of the young ones have been caught by the fishermen near the San Joaquin Bridge, and have been returned to the river. The fishermen at that point are much interested in their successful cultivation, and seem desirous that they should be preserved. By another year they will be so numerous that they may be caught with safety and shipped to market, as it would be impossible to exhaust the river by ordinary fishing. The hornpouts, a species of small catfish from Lake Champlain, which were placed in the lakes near Sacramento, have increased so abundantly that nearly 1,000 have been caught and transported to the various lakes and sloughs in the Sacramento Valley.

In their report for 1876-77, the Fish Commissioners stated:

The seventy-four Schuylkill catfish imported in 1874, and placed in lakes near Sacramento, have increased to a vast extent. They already furnish an important addition to the fish food supply of the city of Sacramento and vicinity. From the increase we have distributed 8,400 to appropriate waters in the counties of Napa, Monterey, Los Angeles, Fresno, Tulare, Santa Cruz, Shasta, Solano, Alameda, San Diego, Yolo, Santa Barbara, and Siskiyou.

In 1878-79 the California Commissioners distributed 39,000 Schuylkill catfish to public waters in twenty-two counties, and reported as follows about the fish:

These have increased to millions and furnish an immense supply of food. They have become so numerous that they are as regularly on sale in the city markets as the most abundant native fish, and are sold at about the same prices. They thrive in our rivers and lakes, and in the still-water sloughs of our plains, as well as in the brackish sloughs in our tule lands. They appear to be equally at home in lakes on the mountains and in artificial reservoirs in the valleys. Many farmers who have natural ponds on their farms, or who have surplus waters from windmills and have made artificial ponds, have stocked them with this excellent fish. The produce of the few fish of this species, imported in 1874, now annually furnishes a large and valuable supply of fish food to people in the interior of the State. The value of all the fish of this species now caught annually and consumed as food would more than equal the annual appropriation made by the State and placed at the disposal of the Fish Commissioners. This variety of catfish has valuable characteristics which admirably fit it for wide distribution and for self-preservation in the struggle for existence.

The report of the California Fish Commission for 1880 shows that over 24,000 catfish were distributed in the State waters, and that the fish had become so numerous and widely scattered that further attention from the Commission was hardly demanded.

In considering the question of the economic value of the catfish and of the effects of its introduction on the native fishes, the Fish Commissioners make the following comment in their reports for 1883-84 and 1885-86:

It has been stated by fishermen that they would destroy all the native fish. It is our opinion that it was a timely act on the part of the former State Commissioners to plant them just when they did, as our native fish were giving out. * * * They are coming more into favor with our citizens every year. The prejudice that existed at the time of their introduction is fast dying out, and the majority of our people claim that they are a better food fish than the carp. Whether such be the fact is a matter of taste. The idea that they would destroy our native fish is a fallacy, as in the last two years statistics tend to show that such is not the fact.

Catfish are coming more into favor with citizens as food, and by a large class of consumers are preferred to carp. The planting of these fish was regretted by many and approved by more.

Catfish have been successfully introduced into the Columbia River and its tributary, the Willamette, but the full history of the planting is not recorded.

The history of the introduction of catfish into the waters of Nevada is very interesting. It appears that in 1877 Mr. H. G. Parker, the State Fish Commissioner, obtained from the Sacramento River, California, a large number of "Schuylkill" catfish (*Ameiurus catus*), which were deposited in Washoe Lake, the Truckee, Carson and Humboldt rivers, and several sloughs, 25,000 yearlings being placed in the Humboldt alone. In all these waters the catfish rapidly became acclimatized. In the report of the Nevada Commissioner for 1881 and 1882 it is stated that 2,000 catfish were distributed in various waters in those years, and that the results had been marked in all the waters stocked, thousands of pounds of catfish being

* See Report California Fish Commission, 1875-76, pp. 5, 6, 22, 30,

taken from Washoe Lake with hook and line in 1892. From the reports for 1883-84 and 1889-90 the following extracts are taken, which refer to the value of the catfish in waters where better fish cannot flourish, and to the economic importance which the fish have attained in Nevada.

From nearly every plant of catfish I have reports several times a year, and in every instance I have been complimented on the introduction of this very prolific and superior food-fish. Its hardy nature so well fits it for our saline and muddy waters that in localities where the trout can not flourish this fish is sure to thrive and multiply far beyond any of our transplants. In Washoe Lake, Carson and Humboldt rivers they are now found in such great numbers that anglers never abandon the pleasure until well-filled baskets and sacks mark the day's sport. For two years the Carson and Virginia markets have been to a great degree supplied with these fish from Washoe Lake. They find a ready sale at the highest prices. Thousands of pounds have been taken annually for the last eight or ten years, every family living near these waters supplying their table for about seven months of the year, while the markets of Carson and Virginia cities, although receiving large consignments, find such large sale that their stock is exhausted long before the most desirable salt-water fish find a purchaser. Add to this the fact of the number engaged in fishing for the market, and it will be seen that an industry has been developed not only giving employment to quite a number of men and boys, but furnishing a food fish of a most desirable and salable quality, and this through the workings of the Nevada Fish Commission. (Report for 1889-90.)

It is not possible to assign to each species of catfish its present distribution in the Pacific States. There is nothing in the habits of the two kinds known to have become acclimatized that would prevent both inhabiting the same waters, although the yellow catfish or bullhead (*A. nebulosus*) is probably more likely to be found in warm, muddy ponds, sloughs and ditches than is the other species, which on the East coast is commonly known as the channel catfish, in allusion to its habit of frequenting the deeper, colder and clearer parts of the rivers.

In California the catfish have a more general distribution than any other fish. The State Commissioners in 1880 asserted that there is no county in which these fish were not found; the wide distribution which the fish had given themselves had been supplemented by the efforts of the Commissioners, who from 1877 to 1879 planted them in thirty counties.

In California catfish are most numerous in the valleys of the Sacramento and San Joaquin rivers, where the conditions are very favorable for their multiplication. They are found in most of the tributaries of those streams and in the sloughs connected therewith. They have ascended the Sacramento River as far as Kenneth, a station seventeen miles above Redding, and the San Joaquin to Tulare Lake. In 1886 Mr. William Utter, writing from Campo Seco, Calaveras county, reported that there were millions of catfish in the Mokelumne River, which joins the Sacramento River a short distance below Sacramento. Catfish are also found in several of the coast rivers of California.

In a "List of the Fishes Inhabiting Clear Lake, California," by Jordan and Gilbert, printed in the Fish Commission Bulletin for 1894, the bullhead (*A. nebulosus*) is recorded as very abundant, and the white catfish (*A. catus*) is reported as occasionally taken with the other species. In Lake Cuyamaca, near San Diego, catfish are reported as abundant, and some weighing 1½ lbs. have been taken with lines.

Catfish are generally distributed in the Lower Columbia River and in the Willamette and other tributaries. The limits of their range in the Columbia basin have not been determined. They are very abundant in the sloughs connected with the Willamette River below Portland. Mr. F. C. Reed, of Astoria, states that the catfish of the Columbia basin is the bullhead, and that the catfish proper (that is, the fork-tailed form) does not occur.

Food of Catfish.

The catfish have the reputation among the California fishermen of being large consumers of fry and eggs of salmon, sturgeon, shad and other fishes. This accords with their known habits in other waters. Mr. Alexander's examination, however, of the contents of several hundred stomachs of catfish in California and Oregon yielded only negative results as to the presence of young fish and ova.

Writing of the bullhead in Clear Lake, California, Jordan and Gilbert say that it is extremely abundant and is destructive to the spawn of other species. The scarcity of the valuable Sacramento perch in that lake, which they attribute to the carp, here as in the Sacramento River, may be partly due to the more numerous catfish, which feed almost exclusively on animal matter.

By some persons the catfish are held responsible for the scarcity of Sacramento perch in the Sacramento and San Joaquin rivers. Mr. Babcock writes that he is informed by reliable men living above Colusa that up to 1880 perch were very common there and catfish were seldom taken, but since that time the catfish have increased beyond all belief and the perch have almost disappeared. The supposed influence of the catfish on the abundance of the perch arises from the spawn-eating propensities of the catfish.

Mr. A. Paladini, an extensive and long-established dealer of San Francisco, believes that catfish are especially injurious to salmon in the Sacramento River, where he thinks they destroy large quantities of ova and fry. This matter is sufficiently important to warrant careful attention. It would seem that the centers of abundance of catfish are probably remote from the spawning grounds of salmon.

In California and Oregon catfish inhabit to a great extent waters in which few other fish could or do exist. In the lagoons and sloughs connected with the San Joaquin, Sacramento and Willamette rivers but few fish besides catfish are taken with the fyke nets and set lines. When fishing is done in the main streams, a number of varieties are caught with catfish, among which are split-tails (*Pogonichthys macrolepidotus*), hardheads (*Ptychocheilus oregonensis*) and carp (*Cyprinus carpio*), and, in the Columbia basin, young sturgeon (*Acipenser transmontanus*).

Few enemies and no diseases disturb the catfish in Pacific waters, according to Mr. Alexander. No fish are known to prey on them except the striped bass, and even that species must do so very rarely. In some instances the ingestion of catfish by striped bass results in the death of the latter, the formidable spines piercing the stomach and entering the abdominal walls of the bass.

As much of the largest part of the catfish yield of California is consigned to San Francisco, Sacramento and Stockton, figures showing the receipts in those cities will give a fair idea of the quantity caught. Mr. Alexander's inquiries at Sacramento and Stockton and the writer's

examination of the books of the San Francisco dealers showed that in 1893 the shipments to those places were as follows:

	Pounds.
San Francisco.....	43,975
Sacramento.....	59,025
Stockton.....	36,000

Total.....139,000
The quantity of catfish sent from the principal shipping centers on the Sacramento and San Joaquin rivers, as determined by Mr. Alexander, were as follows, the difference between these and the foregoing figures amounting to about 33,000 lbs., representing the aggregate of a number of minor shipments of which no record could be obtained:

	Pounds.
Red Bluffs, Fremont and Knight's Landing.....	40,000
Courtland.....	13,550
Isleton.....	12,000
Rio Vista.....	2,220
Bouldin Island.....	23,000
Jersey Landing.....	15,000

Total.....105,840
The catch by persons who make something of a business of fishing for catfish was not under 150,000 lbs. in 1893, and fully 50,000 lbs. additional would not more than cover the catch by farmers, boys and fishermen in other branches, most of which is consumed locally.

The gross value to the fishermen of the catfish caught for market was \$6,358, and the total value of the fish to the State in the year named may be estimated at \$8,500, making a very moderate allowance for the catfish used for home consumption.

The quantity of catfish taken for sale in the Columbia basin in 1893 was about 90,000 lbs., with a value to the fishermen of \$2,800. Comparatively large numbers were also consumed by lumbermen, farmers and others who fished for their own use. The receipts of catfish in Portland in 1893 amounted to 75,000 lbs.

The contention of the California Fish Commissioners in several of their reports already cited, that the value of all the catfish caught annually and consumed as food would more than equal the annual appropriation made by the State in the interests of the fisheries and fishculture, has probably been verified in a number of years. In 1893, when the fishery is known to have been less extensive than formerly, the appropriations exceeded the value of the catch by only \$1,500.

RHODE ISLAND FISHING.

PROVIDENCE, R. I.—*Editor Forest and Stream:* At the annual meeting of the Rhode Island State Association for the Protection of Fish and Game there was a large attendance and the prospects are very bright and encouraging for the coming year. The following officers were elected: President, Thomas W. Penny; Vice-Presidents, A. L. Andrews, Providence; John T. Fiske, Pascoag; W. S. Ballou, Woonsocket; C. Fred Crawford, Central Falls; A. S. Saugy, Providence, and A. D. Roberts, Woonsocket; Secretary, M. J. Flaherty, Providence; Treasurer, J. F. Russell, Providence; Advocate, C. A. Tower, Providence; Managing Board, William Moshler, A. L. Andrews, J. F. Russell, of Providence, and S. H. Roberts, Pawtucket, and President *ex-officio*.

There has been good sport along the trout brooks in this vicinity this season and several excellent catches have been reported. Among these I mention, Dr. J. W. Bond and Arnold Pickering, of this city, visited Greene, and that a streak of rare luck attended them is in evidence through the fact that they bagged thirty beautiful trout, the largest of which weighed 1 lb. and 3 oz., besides 40 lbs. of bull pout. F. Edgar Crumb, of Riverside, spent one day near Moosup, Conn., and upon his return showed about twenty trout, five of which weighed 8 lbs. They were beauties.

Albert Bates, of Hope, found a fox burrow on Nelson Colvin's farm near that village on the 2d, and in it a fox family consisting of eight members. He managed to dig out the entire lot without losing any, and the eight brushes will net him \$24 in bounties from the State. While he was corralling his foxes a party of hunters on a similar quest were 200 yds. distant and were considerably chagrined when they learned that he had probably captured all the foxes in that section of the valley.

William and Alpheus Chase, while cleaning out an old well near the village of Douglas recently, unearthed and killed thirty black snakes and seven adders, the largest, a black snake, measuring 6 ft. in length.

There was found on the Eugene F. Stillman farm, Westerly, the other day, a very old box turtle. On the top of the shell were the initials of Paul Maxson, with the date 1797. On the lower side of the shell were also these initials and dates: "A. S., 1808," and "J. F. S., 1855." These last initials stand for the names of Adam Stillman and J. F. Stillman, grandfather and father, respectively, of Eugene F. Stillman.

A resolution has been introduced into the General Assembly prohibiting fishing from traps in the waters of Narragansett Bay north of a line drawn from Seal Rock to Brenton's Reef and Beaver Tail.

George A. Lewis, of Wickford, on the 5th caught a basket of nine brook trout which measured from 9 to 13 in. in length. W. H. M.

The Ruination of the James River.

LYNCHBURG, Va., May 14.—The take of black bass in the upper James has been very much smaller this season than in several years past. The winter was very open, there being but little snow; the run of bass should have been early and large. I can only attribute the small run of this fish to the fact of the river being filled with all kinds and sizes of nets, traps and other devices—which have a tendency to drive the bass from the waters in which nets and traps are placed. The State of Virginia is doing absolutely nothing to protect the fishing interest in the smaller streams. F. M. D.

Forest and Stream Fishing Postals.

Drop us a line about the fishing.

LITTLETON, Me., May 11.—Fish are commencing to bite quite freely and a number of very good strings are brought in daily. Reports from Masardis and Ashland are very encouraging and the season is sure to be a good one in that vicinity. Quite a number of deer have been seen in the clearings and are asserted to be quite tame, all of which goes to show that pot-hunters have been kept well in hand since the commencement of the close season.

MISS ISQUOI.

Trout and Pike in the Mississippi.

WABASHA, Minn., May 11.—The Father of Waters is not generally noted as being a trout stream, but occasionally trout are taken when fishing for other fish, as was done here a few days ago by a party while fishing for pike with a minnow. I have known of several being caught in the same way in years past. They are the genuine *Salvelinus fontinalis*, and always of good size. They have also been taken in Lake Pepin. Some very large catches are made every year of pike and bass in this part of the Mississippi and at the mouth of Lake Pepin, where wall-eyed pike are caught weighing from 10 to 15 lbs. I hope friend Hough will happen up this way this season and catch and help eat one of the big pike, as he talked with me of doing last year. WABASHA.

Camp-Fire Flickerings.

"That reminds me."

The Problem Solved.

THERE seems to be a great diversity of opinion as to the proper caliber for large game. I have read from week to week in your glorious paper the ideas of some of our readers as to what is the proper caliber, and I have come to the conclusion that in case any one was really going to buy a rifle for large game and took the advice of every one of these different sportsmen, or even tried to average them, he would be in a pretty quandary. Here is one man says a .44-40 is just the thing, another recommends a .32 40, another a .40-82 and still another .50-110-500, and so we go on.

Now I inclose a little drawing of a patent, automatic, rapid-firing rifle. It can be had in any caliber you want, will use black or smokeless. Can be made to shoot single shot or 700 a minute when you feel extra bloodthirsty. Those who prefer still-hunting it is just what they want. All

you have to do is to get a couple of guides (?) to help you set the machine up in some unfrequented spot; take along enough provisions to last you for a month or so, and if any moose comes within half a mile he's yours.

To those who are still undecided as to the gun that they want, the best thing they can do is to send for this one. It only costs \$1,500, but it is a sure killer. The workings can be easily understood from the cut.

You first of all get it set up on the tripod, C, in some lonely spot where moose abound. Take along with you about 20 yds. of ammunition on a canvas strip, D. The barrel, A, is telescopic and slips into the breech, B. When you care you hear a moose—it may be a man, but don't you think—put the butt, G, to your shoulder; take aim in the direction from which you think the sound comes from through the sights, J J J; then pull the lever, F, for a second and let go of it. If in any case the moose don't jump out of the place you aimed at your ears must have deceived you. In this case, and you are pretty sure you did hear a moose, turn the wheel, H, and pull the lever, F, at the same time. This way the gun makes a complete circle firing at the rate of 100 per minute. If that moose, or whatever it happened to be, was within half a mile of you, all you have to do is to get up and look for its "carcass."

This gun can also be used successfully for cutting down trees.

THE SLAUGHTERER.

BOSTON, May 13.

The Kennel.

TRAINING HOUSE DOGS.

BALTIMORE, Md.—*Editor Forest and Stream:* "To the making of books there is no end," and the converse of this would seem to be that the mass of ignorance is so great that it has no beginning, for if there was not ignorance there would be no need of books. The making of books is a healthy sign, for it indicates on the one hand the enlarging of the world's store of knowledge, while on the other it indicates a most commendable readiness on the part of the masses to profit by the researches and discoveries of others. This fact was strongly impressed on me in looking over the list of books, rare gems of sporting literature, and comparing their variety and comprehensiveness with the dearth of sporting literature which prevailed within the memory of man. Not long ago we trusted to foreign publishers and foreign writers for our information on sporting subjects of field and stream. A writer then of mediocre ability, but with a well-rounded pretension, was accepted as a marvel of brilliancy, a genius, and so strong is the force of fame so acquired and the willingness of the people to accept their opinions at second hand that trashy and superficial writers on sporting subjects in the early days, ones who living in the present day would be ignored, still live on, and are quoted and heslaved with praise by a few hero worshipers, partly because it is fashionable, partly because the writers, if they cannot write anything original themselves, can at least attract notice by writing of those who have fame, and will thereby be more in view sitting at the feet of greatness than if they stood on their own feet with the multitude.

But I started to write of books on the dog. Of the training of hunting dogs there is a most complete literature, and all the different branches of training are frequently and fully discussed, but a matter of general interest, the training of house dogs and pet dogs, is rarely touched upon. This was brought emphatically to my attention a few days ago on accidentally coming into possession of a copy of "House and Pet Dogs, their Selection, Care and Training," published by FOREST AND STREAM; and it suddenly occurred to me that, considering the millions of dogs in the country, it was indisputably strange that so little attention was paid to their education about the house and yard. No doubt were its instructions followed dogs would be better behaved, would be more useful, would have their intelligence better developed and be in every way more companionable and serviceable at an earlier age. The author palpably had a most profound insight into dog nature, and interspersed in his teachings are many interesting and kindly expressed dissertations on dog nature, habits, ways of action and thought, besides the mere methods of teaching certain acts. It is all founded on the dog's intelligence. For instance, he says: "I commenced by giving the dog food in a saucer, over which I laid the card on which was the word 'food,' placing also by the side an empty saucer covered by a plain card. Van soon learned to distinguish between the two, and the next stage was to teach him to bring the card; this he now does and hands it to me quite prettily, and then I give him a bone or a little food, or take him out, according to the card brought. He still brings sometimes a plain card, in which case I point out his error, and then he takes it back and changes it. This, however, does not often happen. Yesterday morning, for instance, Van brought me the card with 'food' on it nine times in succession, selecting it from other plain cards, though I changed the relative position each time. No one that sees him can doubt that he understands the act of bringing the card with 'food' on it as a request for something to eat, and that he distinguishes between it and a plain card. I also believe that he distinguishes, for instance, between the card with the word 'food' on it and the card with 'out' on it."

This proves conclusively that the dog has powers of discrimination, and can vary his action in an intelligent manner, and conceding this mind is established in our beliefs of what are the dog's attributes.

For myself, I try to teach my dog manners. He knows how to behave in and about the house. I do not permit him to be riotous. He has certain nooks and corners in the house which he has learnt to consider his own, for in them he is a part of the household, yet is not in anyone's way. He gives a dignified alarm at the approach of strangers, without any of the fierce menace of actual hostility so common to most dogs. He will shut a door to order, will loyally guard anything intrusted to his charge, and will, when ordered, seek any member of the family and by his actions and importunities indicate that such member is wanted. He was taught most of these things by teaching him as a sensible animal.

Knowing how easy it is to teach dogs, if the teacher is kind, considerate and patient, it came to my mind that here was a field worthy of more consideration, more exchange of thought and information, with a gain in results in having well-behaved, good-mannered dogs, and as between the well-behaved and the ill-behaved dog, there is quite as much difference as there is between the gentleman and the vulgarian.

EDUCATOR.

Field Trial Evolution.

WINNIPEG.—*Editor Forest and Stream:* I was pleased to read the constitution of the Handlers' Club and your comments on same. Their action not to run dogs in any trials wherein a handler is a member of the club is most commendable and will do much to restore field trials in popular favor.

I have never swerved from the contention that the man who is receiving pay for his skill and ability in preparing a dog for a field trial should have no voice in the management of a field trial club.

In consequence of the stand I took I was charged with assuming a social superiority that was an insult to professional handlers. To one who is as democratic as was the son of Erin who contended "that one man was as good as another," and emphasized his remark by declaring "and a sight better," such charges are ridiculous. Let me say, however, that I have never advanced a theory in field trial matters that I have not tried to put in practice, and that I have no apology to offer to those who have misunderstood me.

I, however, desire permission to say that I number among my most esteemed friends men who train and manage dogs as a profession, and I think all handlers will admit, who have visited Manitoba, that my latch-key is always on the outside, and that, at my home and at all times and places, I have never created a suspicion of any

social superiority, for by so doing I should be guilty of an impertinent presumption.

Another objection to the successful running of field trials is the expensive machinery some clubs think requisite. I charge that if field trial clubs cannot find honorary secretaries it is a proof that there is no element of sport in their composition, and if this element is not the strong component of field trials, the sooner they die the better.

But living as I do in a city that has more sport and sportsmen to the square inch than any place in the world, I know the latter contention can be overcome—at least here—and that clubs can live and give substantial prizes without exacting entry and starter's fees that would disturb the equanimity of a Barney Barnato.

I have also been charged with inconsistency because I took an active part in the management of a field trial club and was a participant in the competitions. I admit—in theory—there is some truth in the above charges. I shall probably never again lay myself open to its repetition. Yet a reminiscence of my actions prompts me to think that nothing I have said or done in connection with field trials has left one thought of regret at having done anything I would not do again. It is, however, pleasing to me to see that after the hard knocks I have submitted to, that my antagonists now recognize by their actions that my only object has been to increase the prestige and elevate field trials as a sport for sportsmen.

THOS. JOHNSON.

IS DEATH THE END?

SOME of your readers may recall an account of the sayings and doings of a dog named Bug, published a year and a half ago, an account which brought many personal letters, and perhaps encouraged the writing of charming tales of other dogs which have appeared since.

Bug is dead. Her short life is over and no visible reminder of it remains now but the little mound of fresh earth in the corner of the garden which has not yet had time to settle. I suppose most people would say that is the end of her. But is it?

It is not easy to make clear the feeling with which she was regarded by her friends. She was not much like dogs—did not associate with them; showed few characteristic traits of heredity; demeaned herself much like people. If a human soul had been prisoned at birth in a dog's body, it is hard to conceive him as acting much different from the way she did. She was a friend and companion for twelve years. We felt as certain and true a sense of bereavement when she died as if some human friend were gone. It will be a long time before we shall cease to miss her from her accustomed places. The special tones and phrases with which we were wont to address her are laid aside now, not to be used with the other dogs. They are left, to be sure, but they are not like her. It hardly seems worth while, having known her rare intelligence, to try to teach them. From prankish puppyhood to sedate old age her eyes beamed with an intelligence, a reasoning mind, not widely different from ours. She knew she was a dog and we were people—why the difference or in what it consisted she probably did not know much better than we do. She understood our relations, was reflective and contemplative by turns; had fits of humor and hours of depression; was glad and sorry; knew many things she ought to do and many to abstain from, and behaved accordingly. Other dogs may give us their incorruptible welcome of wagging tail and joyous looks, but we shall miss the look of conscious good-fellowship in her kind old eyes. She had a dignity and character, a well-marked identity of her own. She had most human virtues and few human vices. For twelve years she acted well her part; did it willingly and lovingly; gave much to the entertainment of her friends; did all that was asked of her, all she was meant to do. Now the question is, Is this all?

Was she a skillfully contrived automaton, designed to feel and do all these things, wound up to run twelve years and then stop forever? Or did she have a spark of what we humans hope and believe in our own case is eternal fire? I say "hope and believe in our own case." Do we really have anything but hope and belief in our own case? Do we really know anything at all about it? Is not all our argument and conviction of another life for ourselves only a recognition of the unreasonableness and therefore unlikelihood of this imperfect, futile and sorrowful existence being the end? Are we not thrust into this life as one might be thrust into a dark room and the door then closed behind him? And do we not go feeling our way around the walls and across the middle, bumping up against the facts this dark room of life contains, sorely bruised in our blind gropings, learning nothing about the essence of things, only a little about their relations to each other and to ourselves, until, at last, another door opens and we are thrust out—into the dark of death or the light of another life, as we hope. And if so, who are we that we should deny a like prospect to our lesser brethren who wear their own fur and feathers, whose harmless and beneficent lives are often full of hunger, thirst, cold, blows, and unrequited toil and suffering, for much of which we are ourselves guilty? Who shall make recompense to them for these things if death is for them the end of all? If another life is necessary to even up the injustice, to repay the suffering, to requite the toil, to retrieve the mistakes of this, why is it not so for them as well as for us? Else, where shall the starved, worn-out and beaten horses have justice? Where shall the hunted thing, gasping its wounded life away in the hidden brake, be recompensed? Where shall the agony of the myriad innocent lives yielded up in inch by inch torture on the bloody altars of "science" under the vivisector's devilish rites be made good to them? And if there is a place and time where these things shall be righted, how many of us would like to meet there the ghosts of the dumb, innocent creatures that fell into our hands here?

Since none of us really knows what is ahead, it would seem that we have a right each to his conjectures, his hopes and beliefs. If there is no other life for such a creature as my dog was, I see no sufficient reason to expect one for myself. And if for her, why then for all living, sensitive creatures. If there is no justice for the starved and beaten horse, for the piece of mangled meat that gasped its life out in the vivisector's torture trough, then there is not likely to be any for me, whose deserts are probably no greater and whose wrongs are certainly far less.

For myself, I cherish the belief, to which my hopes as well as my sense of what is right and just inevitably lead me, that there is another and fairer life for all the victims of this, and that we shall see again in some shape the creatures faithful to us and beloved by us here. If we shall see each other, shall we not also see again these pets whose gentle ways twine them into our affections? If the prospect of reuniting the threads of love and friendship broken by death is one of the chief reasons for and allurements toward a belief in a life to come, why should it not include four-footed friends as well? It is in no sacrilegious spirit nor one of mock sentiment when I say that not the least pleasant sight to my eyes upon the "further shore" would be my dog friend who has just gone, and if she is there, I feel quite sure she will be standing with her fore-paws in the water's edge when it is my turn to cross.

E. K. WHITEHEAD.

THE IMPORTATION OF THE DOG.

MONTREAL.—*Editor Forest and Stream:* Did you ever import a dog? In the vast and varied writings in FOREST AND STREAM on dogs, which have kept the people up with the times in dog news and dog matters in the years since there were such news and matters, I have failed to note any instructive writing as to the best way to import a dog and present him to the public.

As one who has had some experience himself and who has noted the ways of others in similar undertakings, I beg to give you the successful manner of conducting such affairs. It is more than it seems. It is an art of some depth. A man who imports a dog must know human nature. Buying a dog and carrying him safely over the ocean is but a part. It is the least part—that is, it is the least part if we consider a broad financial policy. The importer of a dog is purposeful. He is making the most of opportunity. He has in view always the profits of his purchase, which he makes as an investment. To reap the greatest profit, no lost time must intervene after the dog is landed.

As a policy, there are two courses open to the buyer. He can import the dog openly. He or the seller causes a great tooting of horns in the English papers. The dog's past is praised and his future exalted. He is sure to change the whole American kennel world to a beatific degree. The moment of his departure for our shores is heralded to the world. The most fashionable steamship, and that is mostly the fastest, is engaged for his journey. His landing is a signal for renewed activity. Again the story is told with added unction. The kennel world is kept on the *qui vive*. And this is all right. The buyer has spent large sums of money. His doings have been open to the view of the world. He wins for his enterprise all the fame and good will which it deserves.

The second method is one of dexterity, one of *finesse*. The dog may be a good one. He may be of great reputation, or he may be the progeny of ones of great reputation. He may be a dog of genuine worth or he may not. In either case, it is the scheme of the purposeful buyer to make the public believe that the dog is a wonder. Then the kennel editor is a part. How can he be made to do the puppet dance?

I say it with all respect to that honorable and hard-worked body of martyrs, the kennel writers, that my ideas of them to-day are different from what they were some years ago. My ideal then was a man with a shiny bald head, under whose poll rested a pocketful, a wealth, of assorted brains. Since then I am led to believe that their heads are plentifully provided with hair. But there is one overwhelming weakness which the kennel editor has; he is not conscious that it is a weakness. Once skillfully contrive to let the kennel editor know that there is something afoot in a doggy way that he doesn't know and the spell is woven. Pretend it is a deep, dark secret. Keep him in suspense awhile—not too long. You want the world to know that you have imported a dog. You therefore do it as a secret matter. You inform the kennel editor mysteriously that you are constrained to tell only him that you have a sensational nameless dog of a nameless breed, which is to arrive on a nameless steamer on a nameless date, and that he must not use this news—lay great stress on the news, and in his eagerness he will not perceive that he is being worked for advertising. He will ask a hundred questions, but you tell him no more; nevertheless, as a last great favor, consent that he may make an announcement of what he knows, and that you will tell him the particulars later, out of the great personal affection you bear him. In his next issue he will write this: "In a few days, through the enterprise of that popular and wise member of the fancy, who has done so much for the advancement of the dog in general and the market dog in particular, the fancy will be treated to a sensation. He is importing the finest and best dog of the season, a phenomenon in its way, and we will treat our readers to full and exclusive particulars in our next issue." Here the buyer, by making the editor work hard for his news, makes advertising easy. The buyer plays on the editor's weakness and advertising comes easy. It is dead easy. If he had come to the editor and said, "Here, my boy, old friend, I am going to import the dog Scrap End, and I want you to give him a good send off, so as to advertise him," the spell would have been broken and Scrap End might never have been heard of outside of the advertising columns.

But Scrap End arrives, and as a special favor the kennel editor is permitted to receive the dog on landing. The next week he writes, "We publish exclusively this week an exceedingly life-like picture of Scrap End, of whom we made mention last week. He shows some effects of his sea voyage, as we needs must expect, but our preconceived opinion of him did not do justice to him. The English papers said of him: 'Rarely has it been our privilege to see a dog so faultless. His coat could not be improved on by art. Form perfect. We are quite sure that his present owner would not sell him for any money to a resident of England, although he might be tempted to let him go to America under satisfactory conditions.' And," continues the editor, "this news is exclusively in our columns."

AMATEUR.

The pulse of the dog runs from 72 to 90 in his normal condition, while his temperature is from 101.5 to 102.6.

The chicken trials of the Continental Field Trials Club will be held on Sept. 7, not on the 9th, as erroneously published.

Dogs for the National Zoo.

To the Kennels of the United States:

WASHINGTON, D. C.—For some time the National Zoological Park has possessed in its collection a few of the various breeds of dogs, which have been kindly presented or loaned.

It is the intention of the officials, in order to provide object lessons in the Capital for the people of the United States, to bring this department of the animal collection up to as complete a condition as possible. Accordingly, an extensive and modern system of kennels is to be erected this forthcoming summer, so that every breed may be represented.

The appropriation voted by the House of Representatives for this institution cannot be devoted to the purchase of any animals; at the same time a clause prohibits selling of the same. Consequently the Park has to depend on gifts or loans of animals.

The officials of the Park have instructed me to extend to the leading kennel breeders of the United States an invitation to co-operate in this movement, which is distinctly national in character, without attachment of any personal interest whatever.

They desire that I request from you either the gift or loan of a representative of the breed in which you are interested. Acknowledgment of the same will in every case be made permanent by a printed placard over each kennel, stating in bold letters the name and address of the donor or lender. The advantages that will accrue to the said donor or lender cannot be over-estimated when regarded as an advertising medium, because the collection will take the form of a permanent exhibition to the many thousands of visitors from all parts of the country.

The officials will, of course, be gratified to receive a clear gift from you, but should you not see your way clear to this, will be very glad to receive a specimen as a permanent loan. In the case of a bitch, which would be preferred from an educational point of view, inasmuch as any young that might be bred would be interesting and instructive, the progeny would be considered the property of the lender and would be returned or disposed of according to his directions.

In case of sickness the best medical attendance will be promptly given. The kennels will be in charge of competent attendants, and full information of the characteristics and points of the breed will be printed and attached to each kennel. All charges incidental to the removal and transportation of the animals will be borne by the institution.

CECIL FRENCH, D. V. S.

714 TWELFTH STREET, N. W.

Advisory Committee Meeting.

At the meeting of the Advisory Committee of the A. K. C., held in the American Kennel Club's rooms at 55 Liberty street, on May 14, there were present: Messrs. James Watson, H. F. Schellhass, F. S. Webster, A. C. Wilmerding and E. M. Oldham. It was ordered that the Bull Terrier Club of America be granted fifteen days within which to comply with the resolution of the committee at its meeting held April 11, 1896 in default of which said club and its officers holding office on Jan. 13, 1896, shall be thereby suspended. In the matter of the A. K. C. vs. E. H. Morris, *re* misconduct, it was ordered that Mr. Morris be suspended until Jan. 1, 1897. In the matter of the St. Louis Kennel Club vs. Fred P. Kirby, *re* misconduct in connection with dog shows, it was ordered that the matter be left in abeyance pending further investigation. It was also ordered that the award of first prize in the challenge class for Skye terriers, at the St. Louis show, to the bitch Bessie (35,411), be cancelled. The challenge class made for the black and tan terrier Glenwood was cancelled. The action of the secretary in removing the suspensions of W. S. Biglow and B. Alton Smith was confirmed. A penalty of \$10 was imposed on the New England Kennel Club for accepting the entry of a puppy under 6 months of age. It was ordered that a committee of three be appointed to report resolutions on the death of Dr. N. Rowe and Mr. H. B. Cromwell, and submit same at the next meeting of the A. K. C. The following prefixes were granted: Beaver Brook to Mr. Tyler Morse, Hiawatha to Mr. R. McDonald, Mount Shasta to Mr. A. E. Culver, Oakside to Mr. H. H. Carlton, Sangamo to Messrs. F. M. Wade and F. Pillo. The secretary was granted five weeks' vacation.

Kindness to Animals.

Editor Forest and Stream:

I wish to say that the position your paper takes on the question of justice to the lower animals must commend it to all right-thinking people. Your paper is the best there is in the current literature of sportsmanship. It is your privilege to educate merely by the position you take. You have it in your power and apparently in your disposition to express for us, who regard the ethics of our relations to the lower animals, our sentiments in an authoritative way.

E. K. W.

American Spaniel Club.

Editor Forest and Stream:

At the last meeting of the executive committee of the American Spaniel Club, the mail votes for a new list of judges were opened and the following gentlemen were declared duly elected official judges of the Spaniel Club: E. M. Oldham, James Mortimer, C. H. Mason, James Watson, A. C. Wilmerding, George Douglass, Andrew Laidlaw, J. F. Kirk, J. Otis Fellows, Dr. S. J. Bradbury. ROWLAND P. KEASBEY, Sec'y.

POINTS AND FLUSHES.

We are informed by the R. I. S. F. A. that the gratifying success of their 1895 bench show has determined it to retain in 1896 the efficient plans then employed. They are fortunate in again securing the services of Mr. E. M. Oldham as superintendent, a guarantee that the show will be managed in a thoroughly practical manner. Spratts Patent will bench and feed, undoubtedly the best service of its kind in the country, and the show will be disinfected and deodorized by the same company as last year. To insure the widest public interest and inspection, no admission fee will be charged visitors to the bench show, and the very large amount offered in premiums (\$2,200) should easily attract the best dog fanciers in the country. The show will, as heretofore, be held under American Kennel Club rules. The especial atten-

tion of exhibitors is invited to regulations governing the receiving of exhibits in the department. The judges for 1896 will be F. E. Perkins, Earl H. Potter and Walter W. Dexter.

Mr. A. P. Vredenburg, the secretary of the A. K. C., will take special action toward the enforcement of A. K. C. rules hereafter, and to that end has prepared a circular giving a digest of the important regulations directly governing bench shows and other pertinent information, the matter covered being under the head of dates, penalties, registrations and listings, challenge classes and prizes, rules to be published, additional rules, premium lists and catalogues to be filed, amount of prizes, winnings in catalogues, closing of entries, disqualified and suspended, ownership, no change in classes, transferring entries not allowed, weighing, veterinarians, puppies, vhc., reserve. In respect to no change in classes there is the following, which clubs would do well to read and heed:

"No change can be made in the classification not specially provided for in the rules, or of which public notice has not been given prior to the closing of the entries. It is permissible to make a rule that if there are more than a certain number of entries in a class not divided by sex, such a division shall be made. If any division or addition is made other than as above the additional class and the record will be cancelled by the American Kennel Club.

"No transfer of an entry is permissible either in classes where there is subdivision by weight or sex, or in case of an error in making the entry. The entry, as made, must govern in all cases, and any dog transferred will be disqualified by the American Kennel Club."

Capt. Keene, an officer of the English Kennel Club, and a popular exhibitor and judge in England, died on May 3.

The St. Hubert Schipperke Club (England), met on May 7 to discuss the important matter of docking. The propagation of the myth in respect to the schipperke being naturally tailless was condemned. The chairman explained that they had the choice of three courses: 1. Continue to remove the whole tail, which gives the animal the appearance of being born tailless, and so may mislead judges and public. 2. Leave on the whole tail, docking nothing. 3. Dock in such a manner as to inflict no more pain than fox terriers experience by the operation. After discussion, during which the question was viewed from every quarter, the following resolution was unanimously carried: "That the St. Hubert Schipperke Club inform the Kennel Club that they are in favor of docking schipperkes in a humane manner, that is to say, leaving a visible stump." This resolution will be communicated to the secretary of the Kennel Club in due course.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A Model Life Insurance Policy.

WITH the general proposition that life insurance is a wise precaution, and for many men an absolute duty, most of our readers would probably agree. When they came to saying what is the best kind of a policy to take, or the best company to insure in, there might be some discussion. We are not going to decide these latter questions, but propose to call attention to a policy form lately announced by the New York Life Insurance Company which seems to contain all the features of a model contract. There is only one condition imposed on the insured, and that is the payment of premiums. If he does this he is insured, and large liberty is allowed even in this respect. Days of grace, privilege of reinstatement, loans and cash surrender values, automatic non-forfeiture conditions, and the privilege of adjusting the value of the policy to one's circumstances, whatever they may be after a term of years, these are surely the marks of a model policy. The company sums up the virtues of this, its latest and most liberal contract, as follows:

1. No restrictions whatever as to residence, occupation, travel, habits of life or manner of death.
2. Claims paid immediately upon the receipt and approval of proofs of death.
3. The return of one-half or all premiums paid, if desired, in case of death during the accumulation period, in addition to the face of the policy.
4. The right of the insured to change the beneficiary while the policy is in force.
5. Policy incontestable after one year, if the premiums are duly paid.
6. Eight options in settlement at end of accumulation period.
7. Cash surrender values, or loans at 5 per cent. interest, after three years' premiums have been paid.
8. A month's grace in the payment of premiums, the policy remaining in force.
9. The privilege of reinstatement during the five months following the month of grace, if the insured is in good health.
10. Automatically non-forfeiting after being in force three years, the insurance being extended during a period shown in the policy if no request is made, or ordinary paid-up insurance granted on request within six months, and no abatement from the death claim in case of death during the term of extended insurance.—*Adv.*

Yachting.

In the FOREST AND STREAM of May 2 appeared a criticism of American steam yachts and their builders which the *Marine Journal* pronounced untrue, at the same time boasting of the number and skill of American designers of this class of vessel. In answer to our direct challenge to name these American designers and the steam yachts designed by them, the *Marine Journal*, in its issue of May 16, speaks as follows:

One of the arguments of the FOREST AND STREAM against the Payne bill for the protection of American yacht builders is that we have no yacht builders who make a specialty of that business and especially of steam yachts. All the more reason, then, why we should encourage yacht building. If it is a good business for foreigners, it ought to be so for Americans, and therefore an industry that should be developed. But it never will be extensively developed so long as our builders have to work against the competition of the British yards with the handicap of their established facilities and no encouragement from our Government. It is one of the essential features of the policy of protection to home industries that this kind of business should receive governmental acknowledgment and discrimination in its favor against foreigners. Indeed we are led to believe that the reason Americans, who own or charter foreign built yachts, have not opposed the Payne bill, is that they are so directly interested in American manufactures, from which they have made their wealth, that they cannot consistently take a stand in opposition to the protection of the yacht-building industry.

The above is in no sense an answer to our statements; if they were false, a much better and fairer course for our opponent would have been to reply to our challenge by printing such a list as we named, and its failure to do this, with the above evasion of the question, proves that we were right from the first. We must correct our opponent once more; our argument is not as it has stated above, but that the American builder, after ample encouragement from wealthy but ignorant owners, has shown a total lack of both skill and enterprise, and is entirely undeserving of the monopoly which the Payne bill, if passed, would create for him. We have never stated that there are no American builders who make a specialty of steam yachts, but there are, so far as we have been able to ascertain, none who are competent to turn out a yacht that will compare in appearance, utility and general excellence with those built abroad. We discussed last week the question of British competition as a necessary incentive to American progress in naval design, and need not repeat what we then said; we must take issue, however, with the *Marine Journal* on its statement that British competition is a bar to what should be a profitable business, the designing and building of a type of steam yacht specially fitted for American waters.

The development of steam yacht construction can never come through protection alone, coupled with ancient ideas and old-time methods, but must come from the earnest effort to excel the British steam yacht, just as American designers in another field have excelled the British sailing yacht. What has protection to do with the marvelous advance in sailing yachts from the old-time sloop of the builder to the modern Cup defender?

The true object of the Payne bill, as indeed of all similar measures now in force against merchant vessels, is not to stimulate improvement through open and healthful competition, but to maintain, through the possession of a monopoly, a fictitious advantage, which could otherwise be held only by the exercise of increased skill.

On one point we are in accord with the *Marine Journal*. Like it, we believe in Government encouragement to yachting and yacht builders; but the sort of encouragement we would advocate is, in the first place, that yachting be left severely alone by the national legislators, and that no measures such as the former Frye bill and the present Payne bill be passed; and, in the second place, that the existing duties on materials for yacht and shipbuilding be alike removed. What American merchant or mechanic is benefited by the heavy duty on African teak or American elm; two of the most essential materials of yacht building?

The American yards can boast to-day as complete a plant as any on the Clyde, as good a quality of steel at almost as low a price; the difference in labor, however great it nominally seems, is in reality largely offset by the vast difference in the conditions under which such work is done in this country. That the British yards are at a material advantage in the matter of the large amount of teak, mahogany and other costly woods, is very true; but who is to blame for it? What the American yard lacks, at least so far as steam yachts are concerned, is brains—not merely technical knowledge of the higher sort, but such common horse sense as would teach the builder that the sheer plan of a harbor tug cannot be used for a 600-ton steam yacht by the mere addition of a nondescript figurehead forward, a stern like a dishpan, and an unlimited amount of brass railing about the bulwarks and houses. In this same connection we may diverge a little and say that this same tugboat sheer plan is also incapable of enlargement to the dimensions of a 5,000-ton ocean greyhound, a fact not yet appreciated by some American builders.

We have laid considerable stress on appearance, as we know that most men who build steam yachts expect, and all are entitled to, a craft that is in every way pleasing to the nautical eye, something shipshape and graceful. In this respect the many steam yachts nominally or actually of American design are almost without exception notably lacking, the very best are old-fashioned and commonplace in appearance. What is worse, the adage "handsome is that handsome does" cannot bring saving grace to them, as in performance and too often in accommodation they are even worse than they look. There was a time when American shipyards were noted for the grace and beauty, the "eye sweetness," of the craft they turned out; when even the trading sloops, to say nothing of the grand old clippers, had their share of nautical symmetry and beauty. We look in vain to-day, whether in yachts or in merchant steamers, for any trace of either.

In our opposition to the Payne bill, as to previous similar measures, we are not arguing over protection as a national policy, whether political or economical; but we recognize in yachting as a national institution something so important in every way to our great maritime nation as to be entitled to, if necessary, exceptional privileges in the way of favorable legislation, or at least of no legislation at all, but merely to be allowed to work out unimpeded its own future. Whether selfishly or not, the yacht owner spends a very large amount of money, frequently for a very small return, in a way that is of material benefit to the nation in the encouragement of naval design, the maintenance of building yards, and the training and maintenance of a large fleet of skilled seamen. The more yachtsmen and the more and better yachts, the better for the nation at large. The idea that the building of some of these yachts in foreign yards is a detriment to the home industry is based solely on the narrowest and most illiberal theory of protection, and is absolutely contradicted by facts.

There was a time, about twelve years ago, when the tide of popular favor among American yachtsmen swung very strongly toward the British cutter. Under the existing law these yachts—which could be built for much less in England or Scotland than in America—could be imported free of duty, provided they sailed into an American port on their own bottoms. What has been the result of this experiment in free ships? There have been imported in a period of twelve years five modern racing yachts—Queen Mab, Jessica, Minerva, Clara and Uvira—all of small size; three very old schooners—Miranda, Hilde-

garde, Lady Evelyn—and two old yavls, Cythera and Nonparielle; we believe that this completes the list, though we may possibly have omitted one or two. Of these, Jessica, Hildegarde, Lady Evelyn, Cythera and Nonparielle have cut no special figure; they certainly have hurt no one, if they have done no good to their owners. Miranda, instead of making fresh orders for English yards, merely served to give a much-needed impetus to the then embryotic 80ft. schooner class, from which has since sprung the fine fleet of American yachts, Ariel, Lasca, Emerald, Sea Fox and a dozen more. Clara did still better service in putting some life into the moribund 53ft. sloop class for three or four seasons by beating all the home boats and furnishing a needed incentive to that improvement which has since been realized in the construction of Wasp and Gloriana. Queen Mab, the latest importation, has done a good service to American yachting in showing a remarkable combination of fine appearance, excellent accommodation and speed under a small sail plan, while making known here a system of construction previously unknown, the modern composite, and Uvira has helped materially in the same way.

The most striking example of the terrible wrongs and hardships inflicted on American mechanics by unlimited British competition is to be found in Minerva, the Fife 40-footer brought out to this country in 1888. This yacht was built at Fairlie, on the Clyde, the work of a Scotch designer and Scotch shipwrights. Compared with the American yachts of her class, she cost \$5,000 as compared with varying sums from \$8,500 to \$10,000; she was by far the handsomest of the fleet, her construction was materially better in all respects, and in speed there was no ground for comparison; she swept all before her for her first season, and in her second found but one yacht, a new one specially built, that could make a fitting race with her.

What was the result? A rush of orders to the Clyde, while American shipwrights went to tramping on the highways? On the other hand, not a single order went to Mr. Fife, but the yards of Boston and New York were filled with work in the grand struggle to "beat the Minerva" with an American yacht. Though not owing its origin to her, the whole 40ft. class, the finest and most successful racing class ever known in America, a boon alike to American designers, builders and yachtsmen, centers about this one imported yacht. Her importation, which would not be possible under such a law as the proposed Payne bill, has been from first to last an unmixed good to American yachting. For causes which we leave the *Marine Journal* or some other advocate of prohibitive laws for ships to explain, the success of Minerva, in spite of the natural odds against American yards, such as wages, etc., brought little work to the foreign yard where she was built. Mr. Fife in the seven years that have elapsed has built just one yacht for the United States, the 20-rater Jessica, originally built for an American residing in England, and for British rules and races, but afterward sent out here.

The importation of British sailing yachts free of all duty began just at the time when American yachtsmen had discovered many of the defects of the home built craft and the utter incapacity of the professional yacht builder to improve on the ancient models. After the success of the first important cutters and their advocacy by the *FOREST AND STREAM* and many of the more enterprising yachtsmen, there was an immediate demand for British yachts and British designs. What was the result? Within three years of the awakening, the best of the New York and Boston yards were busier than they had ever been before, building now, not from their own models, but from the designs of Mr. Burgess and Mr. A. Cary Smith; the keels of such yachts as Puritan, Mayflower, Sachem, Priscilla, Iroquois and Yampa were laid; and there began an era of prosperity previously unknown to the American builder. If such results arise from the free importation of yachts, or if they can even exist by the side of such importation, what possible grounds can there be for the passage of the Payne bill on a basis of abstract theory, not only unsupported, but positively contradicted by the practical experience of fifteen years?

In one respect the case of the steam yacht is different, it is true, from that of the small sailing yachts we have instanced, the cost is materially greater, and just at the present time American legislators as well as shipbuilders can see nothing more than the sum of say \$1,500,000 that is to go to the Clyde to pay for the steam yachts now building there for American owners. This is a great deal of money, but on the other hand the American builder who considers that he is robbed for the benefit of his foreign rival must take into account that while legislation may go a great way in saying what a man shall *not* do with his own, there is a limit, and it cannot say what he *shall* do. It is easy perhaps to prevent the building of yachts abroad, but it may be another matter to compel men to build at home a class of craft that they do not want, and that is what thus far the home builder is prepared to offer them. It is not impossible that, had the Payne bill been passed a year ago, Mr. Higgins, after a practical trial of the Columbia under charter, might have preferred to do his yachting by rail rather than to risk a duplicate of her; and that Messrs. Stuyvesant and Goelet might have determined to stick to sail rather than to venture into steam under such opportunities as would be open to them.

Apart from this, however, the question of the amount thus expended abroad, and in fact to a large extent of the difference in cost between the yards of the Delaware and the Clyde, are mere side issues. The main facts are that, as was the case about 1880 in sailing yachts, the average yachtsman does not know what he should and can have, or how to get it; he does not take the trouble to inform himself, but merely sends his captain to a shipbuilder to order a steam yacht. The builder, on his part, known little and careless of the most recent advances in steam yacht designing and construction; he does not know how antiquated and out of date his pet models are; nor does he realize that the ordinary routine of building leaves him no time to improve them; and that he must call in the aid of a professional designer even if it does cost a little money. What is needed now in steam yachting is just such a shaking up of dry bones and dusty block models as the early cutters created in the sailing fleet between 1880 and 1884; and the way in which this must come is not through a cowardly protection, but through open competition; the placing of the newest of American steam yachts beside the newest of their British rivals. If they can stand the test, so much the better; if they fail then the effort must be to improve them and not to protect them.

Those who believe in the superiority of the American steam yacht may find it worth while to make a special journey to the classic shades of Gowanus, or what has been left of it by the garbage carts of Brooklyn, and inspect the very latest product of an American yard—the steam yacht Anita, launched late last season and in commission for but a short time. We have no doubt that she is really of American design; there is a freshness and originality about her that betrays the absence of the usual German or Scandinavian aid. She is a brand new yacht, the flagship of a prominent club, presumably costing a large sum of money. We shall not attempt any detailed description, as words fail us; but it is sad to think how many humble but useful articles might have been built out of the same amount of wood, iron and paint. One of the many novel features that strike the eye is the employment of posts modeled after the old four-poster bedsteads, and painted the same familiar dull red color, as supports for the boat chocks, running up from the rail, the effect being to give a welcome air of retirement and repose. Those who see this latest addition to

the fleet of would-be "protected cruisers," even for the first time, are sure to know her, as there is nothing else like her afloat.

We publish with pleasure the following from the *Marine Journal* which is entirely correct so far as the opening clause goes:

We regret to announce that the bill to oblige American owners and charterers of foreign yachts to pay port charges on them has, after successfully passing the House, been hung up in the Senate through the same cause that killed the bill that would have raised the revenues of the country sufficient to meet its expenditures—a coterie of obstructionists with Senator Vest in the lead, who oppose anything bearing on the protection of American industries, who get their power through the misfortune of bad rules which prevail in the Senate and which enable a majority of one to kill any bill he may desire if he is long winded enough, even if the only cause is that of a personal grudge against a member favoring it. Senator Frye got the House bill favorably reported from the Committee on Commerce, of which he is the chairman, but gave notice that he would not call it up this session in consequence of the opposition as stated above, it being useless to take up the time of the Senate in discussion of the measure when it would be impossible to pass it. The bill is not dead, however, and renewed vigor at the next session of Congress will doubtless place it on the statute books, where it should have been years ago.

We sincerely hope that the Payne bill has gone to meet its unfortunate predecessor, the Frye bill; and that the legislators of the fifty-fifth Congress will find some other and less hurtful field for experimental legislation, and leave yachting to the care of those who know something about it, and to the healthful stimulus of fair and free competition.

Though the discussion of the bill has been entirely from the side of the large steam yacht, it must not be forgotten that its restrictions apply quite as severely to sailing yachts, and would prevent any more such experiments as the importation of Minerva and Clara, and would even go further in hindering, if not absolutely preventing, international racing. Nothing worse could happen to the American sailing fleet to-day than the cessation of all foreign competition, or even that due to the occasional visit of such a yacht as Queen Mab. So far as the prosperity of yacht racing and yacht building go, we can speak with a certain authority in the smaller classes, both as being interested ourselves, and for some at least of American builders who have profited by the present demand for the small raters. We should welcome gladly a provision that would admit free of duty the smaller British yachts and canoes; the introduction of such craft means a continuation of the interest in their races; under the conditions now existing, and little likely to be changed, it cannot mean a competition in either cost or quality that would put the American builder at any disadvantage.

The commonly accepted opinion of the Emperor of Germany is that he is at least original, if not deserving of a still higher encomium; but that this is a mistake is reasonably evident after the naming of his new Watson cutter, which was launched from the Henderson yard, at Patrick, Glasgow, on May 13. The name which he gave to Thistle when he purchased her a few years ago, commonplace and hackneyed as it is, has been transferred to the new yacht, and she will henceforth be known as Meteor II. The old boat, thus most inappropriately christened, has recently been named Comet, which is equally bad. His Majesty may be able to astonish Europe, but he evidently is not a success in naming yachts. The new yacht, which is at least deserving of a new and fitting name, will be raced in British waters by Lord Lonsdale, representing the Emperor, who is not likely to visit England this year. The stories about her as a possible challenger for the America's Cup are too absurd and indefinite as yet to be worthy of serious attention; she cannot challenge this year, and a thousand things may happen before next season.

YACHT DESIGNING.—VIII.

BY W. P. STEPHENS.

OF the multitude of forces acting on a vessel, the buoyancy on the immersed portion of the hull, the force of gravity, the impact of the waves also on parts of the hull, and that of the wind on both sails and hull, the former is by far the most important. This importance, especially as relates to the stability of vessels, has been recognized for over a century and a half; and the two allied subjects, buoyancy and stability, have received the attention of many eminent scientists, both French and British. The general subject of stability, intricate and complicated as some of its parts are, is a most fascinating one for the student and investigator, and until a comparatively recent date the study of it has been confined almost entirely to this class, the practical builder or even naval constructor devoting little attention to it. Since the loss of the British war ship Captain in the Bay of Biscay some twenty years ago, followed by a number of similar disasters to war and merchant ships, such as the capsizing of the Eurydice, the steamship Austral and the steamship Daphne, the latter on launching, much has been done by British builders to put into practical application the experimental and theoretical work of such men as Bouguer, Dupin, Reech, Daymard and Dargnies. Through the work of these brilliant men, beginning before the middle of the last century, France justly claims the first place; but within the present generation the British builders and constructors, Messrs. Denny, Inglis, Barnes, White, Prof. Elgar and Sir Edward J. Reed, have made the study of stability a part of the everyday operations of the shipyard, achieving results of the greatest practical value. Important as it is, the subject has received no attention from American shipbuilders.

In no other science than naval architecture is there so great a difference between the conditions existing in actual practice and those necessarily assumed in theory as the basis for all investigation, as well as for the practical work of designing. This difference, due largely to the unstable nature of the great media, water and wind, which control all floating bodies, must be considered at all times by the designer; in fact his professional success will depend very largely upon the accuracy with which he estimates it. The actual elements of a vessel are so concealed and so difficult if not impossible to obtain, the designer must perforce accept some very inadequate substitute. So far as the mathematical part of the work is concerned, results may be obtained that are, in a general sense, absolutely accurate; but there still remains a wide gap between them and the conditions existing in the vessel in every-day service. No very great amount of skill is required to make a set of drawings of a vessel and to calculate with practical accuracy the displacement, position of C. B., C. E., C. L. R., metacenter and many other important elements; but it must always be borne in mind that these are the elements of the *model* or the *paper design* only, and not of the *vessel* built from them, however carefully and correctly the work may be done. The C. E. of the sail plan and the C. L. R. of the hull may be located on the drawing with very little labor and absolute accuracy, so far as all this goes; but the corresponding centers of the vessel herself are changing every moment

under the influence of sea and wind, their positions, even for a certain force of wind and angle of heel, cannot be ascertained with even approximate accuracy, and if known would be of little value, being instantly replaced by others as short-lived. This particular case, of the adjustment of a sail plan, is typical of the indirect way in which the designer of necessity works; a certain balance of the C. B., C. L. R. and C. E. in the design of a known vessel gives some particular result, such as too much lee or weather helm, or possibly a perfect balance, in the vessel herself. The difference between the theory and practice in this case serves as a basis for deductions in the case of another vessel of similar type, or differing in a certain known degree. The method of the designer is indirect, and based on a very limited foundation of accurate methods, which stops with the mathematical calculations; but with experience and careful observation he is at last enabled to bridge very successfully the wide gap between theory and practice.

The working drawings of a vessel may be made with any desired degree of mechanical accuracy, dependent on the scale of the drawing and the time and labor employed; but there will still remain quite a margin of difference between them and the hull, spars and sails made by an enlargement from them. It is commonly assumed that with a sufficient number of accurate measurements, from a well-made drawing, the displacement can be calculated to within a very minute margin; but in the case of large vessels the possible errors in this one detail of the work may be both numerous and serious, due to errors in measuring the offsets, clerical errors in the lengthy calculations, the approximate character of many of the processes of computation, the actual errors that occur in getting out and setting up the many parts, the varying density of the water in which the vessel floats, and the difficulty of ascertaining the exact draft. However much they may be minimized by more perfect methods in the drafting room, the mould loft, on the bending floor and in the work on the stocks, as well as by the care and skill of the designer, these differences

between the design and the vessel must always exist to such an extent as to demand the serious attention of the designer at all stages of his work; he must constantly bear in mind that the drawing, including the calculations, is one thing, and the vessel when afloat quite another.

This difference between assumed and existing conditions constitutes one of the serious difficulties encountered in the study of stability, resistance, rolling and similar objects. In that abstract study which is the source of all our knowledge of the laws of stability in a floating body, the basis is an impossible vessel, floating in perfectly still water, either motionless or heeled in one of two directions, longitudinal or transverse, the heeling force being constant and regular. When we contrast this dummy with the vessel herself, now heeling at a steady angle, the next moment with planksheer deep under water, pitching heavily into the hollow of a sea and then supported on its crest, her sails perhaps becalmed one moment and then filled out before a squall, we are led to wonder what useful relation can be discovered between two such dissimilar objects. Inadequate as it is, the study of the dummy vessel under impossible conditions is the only course open to the student, and he must make the best of it. We shall not attempt to go far into the study of stability; it is one deserving of lengthy and special treatment at the hands of an expert, as has been done by Sir Edward J. Reed in his valuable work, "The Stability of Ships," but it seems desirable here, in view of the frequent occurrence of certain technical terms in the public prints and the general ignorance as to their meaning, to define as clearly as possible these terms and to explain the general method of investigation.

The figures 7 and 8 represent the transverse section of a

yacht, the center of buoyancy, C. B., is denoted by B, and the center of gravity, C. G., by G. In Fig. 7 the yacht is up right and at rest, in a position of stable equilibrium; but in Fig. 8 she is represented as heeled, or inclined from the upright position by some force. Taking first the transverse heeling, as soon as the line A. C. departs from the vertical, the form of the displacement changes and is no longer symmetrical, a portion of the topsides being immersed on the right of the figure, while part of the under-water body is lifted out on the other side. In consequence of this change of form and the increase of bulk on the right side, the C. B.—that is, the center of gravity of the hollow formed in the water by the yacht—shifts also to the right, to a new position, B¹. In the upright position, the C. G. was directly over the C. B., one balancing the other, with no tendency to heel the yacht. In the inclined position, however, it will be apparent that a couple has been set up, the force of buoyancy acting vertically up through B¹ and the force of gravity acting downward through G; both tending to return the yacht to her original position. The arm on which these two forces act is obviously the short line G Z, at right angles to both; and the righting moment is proportional to the length of this arm. If the C. G. be lowered, as by the substitution of lead for iron ballast to a position G¹, it is evident that for the same angle or heel the arm G Z¹ will be lengthened and the righting power increased; and if, on the other hand, as by the substitution of stone or iron ballast, the C. G. be raised along the vertical line A C to a position G², the effect will be reversed and the arm shortened to G² Z², with a proportionate decrease of righting power.

If this process of raising the C. G. be continued, a point will finally be reached, as at M, where the C. G. will be directly over the C. B.; then, continuing the process a little further, the C. G. moves to the right and outside of the C. B. From this time on the action of the two forces is reversed, tending to capsize instead of to right the yacht; the buoyancy, still acting upward, tending to lift the keel, and the weight, still acting downward, now tending to depress the lee side. The point M on the vertical axis of the yacht marks the point at which the arm of the righting lever shifts from the inner to the outer side of the C. B.; the point beyond which, if the C. G. be raised, the righting forces become heeling forces. To this point the name *metacenter* was given by Bouguer, the noted French investigator, in his book, "Traité du Navire," published in 1746; and to him is due the credit for the thorough elucidation of many important facts that were previously unknown. The derivation of the name is ascribed to the word *meta*, meaning measure, or limit; the limiting point of the center of gravity.

The term *metacenter* properly applies to but one point, that already described as limiting the range of the C. G., but as the vessel inclines from the normal position at each successive angle of heel the C. B. shifts out, and a vertical through it will cut the vertical axis. This is shown in Fig. 7, B, B¹, B², B³, being successive positions of the C. B. and the corresponding verticals cutting the vertical axis A. C. in M¹, M², M³, M⁴. These points are sometimes called the *shifting metacenters*, but they are not to be confused with the one true metacenter.

The intersection with each other of any two such verticals for slightly different angles of heel has been named by Sir E. J. Reed the *pro-metacenter*, and the curve passing through a succession of such intersections (1, 2, 3, 4, Fig. 7) has been named by Bouguer the *metacentric (metacentrique)*. Important as they are in any complete study of the subject of stability, we need go no further with these two than to present them as instructive definitions.

American Steam Yachts.

ONE prominent advocate of prohibitory laws for yachts has declined our challenge and virtually admitted the truth of our statements, but a bolder advocate has stepped into the breach in the following letter. We welcome his defense, as it shows just what are the weak points of the other:

BATH, ME., May 9.—*Editor Forest and Stream:* I do not quite agree with you in the editorial published in your issue of May 2 concerning the Payne bill for the protection of yacht owners and shipbuilders of the United States. The article certainly advocates free ships and as such it should be opposed by all patriotic Americans.

A steam yacht, in order to be granted American registry, should comply with the same rules as any other vessel. Why do Americans persist in going abroad for steam yachts? It may be to get something quite English, for many of our moneyed citizens seem to be Anglo-maniacs, and probably the slight reduction in cost is also quite an item with them. It certainly is not because of inability of American designers and builders to construct a steam yacht equal to the product of foreign shipbuilders.

It seems to me that it is an insult to this country for a citizen of it to have a yacht designed and built abroad instead of patronizing home industries and spending his money in the land in which he earned it. The four large steam yachts now being constructed abroad for American yachtmen will result in about one and a half millions of dollars going to British shipbuilders. This money should be kept in our own country and go to our own builders, or the revenues of the Government should at least be increased by the tariff and tonnage duties on these vessels if built abroad, for the class of men who have such yachts built are just those who could amply afford to pay it.

You say that the American steam yacht is a fraud of the worst kind and that with British yachts excluded such craft as Columbia and Thespia may sail about our home waters undisturbed on their claim of superiority to anything afloat, and those who continue to patronize steam yachts will have to be content with what the builders choose to give them. The representative American steam yacht is not a fraud, but it is to be regretted that so many large yachts that have been built in this country have proved such miserable failures. What is the reason of these failures? Simply because various firms have taken contracts to build steam yachts without having had any experience in this class of work, and without having any competent man employed to design them. Steam yacht designing is certainly a specialty and it requires considerable study and experience in order to make a man competent to successfully design this class of vessels.

There are a large number of excellent designers and builders of small steam pleasure craft in this country—indeed, the American steam yacht, up to about 100ft. waterline length, is unequalled in the world for looks and efficiency. Now as regards larger craft, no steam yacht ever constructed has a grander record than that of the American designed and built yacht *Eleanor*. In a sixteen month cruise around the world she steamed about 48,000 miles without an accident, excepting the breaking of two of her propeller blades. She proved remarkably economical in propulsion, and the foreign press unanimously proclaimed her a triumph of American yacht architecture and the finest vessel of her class afloat. For gracefulness, seaworthiness, strength, ability, efficiency, she floats to-day unequalled in the world as a large ocean-going yacht. The designer of the *Eleanor* is Mr. Charles R. Hanscom, superintendent of the Bath Iron Works, Bath, Me., a man who has made a great study of this class of vessel, and who has more recently designed the *Peregrine* and *Illawarra* for Boston gentlemen.

The *Peregrine* is now commissioned, having lately had her speed trials, and in these she proved remarkably speedy with the power developed. Her trials at sea have proved her seaworthiness, and as regards workmanship and excellence of design she is undoubtedly superior to anything of her size ever seen in our waters. The *Illawarra* is now being fitted out, and will be commissioned in about a month.

These vessels are a credit to the country, and tend to prove that the American steam yacht is not a fraud. Far from it; the American yacht designed and built by competent men is as far ahead of foreign steam yachts as *Vigilant* and *Defender* were ahead of the *Valkyries*. I do not mean to say that Mr. C. R. Hanscom is the only capable steam yacht designer in this country, but I speak principally of the three

yachts he has designed because I know myself just what they are. We have other competent designers in such men as A. Cary Smith, Herreshoff, Gardner, Seabury, etc. These men have all original ideas, and with steam yachts designed by any of them I feel sure this country could soon prove that the American steam yacht is not a fraud, but a grand success.

I do not think that it is necessary for a naval architect, in order to design steam yachts, to sever his connection with a shipbuilding concern, but I agree with you that it requires certain peculiar abilities which can only be attained by study and experience to make a successful designer of this type of vessel. The more acquainted a designer is with the details of construction, etc., the better designer he must necessarily prove, and I think it is a great fault to find so many designers ignoring this most important subject.

The failure of the *Columbia*, *Thespia*, etc., has undoubtedly influenced yachtmen to look abroad for their yachts, but before looking abroad they should have looked around in our own country.

Foreign builders and designers themselves often make mistakes, and without disparaging the ability of Mr. G. L. Watson to design yachts, it is queer that it has never occurred to certain gentlemen that he has never designed a yacht capable of capturing the America's Cup.

What we need is a law to make moneyed men look at home and seek to patronize home industry. We do not want them to look at a few steam yacht failures and then pass verdict on all American built and designed steam yachts accordingly, but let them look at our yachts designed by competent naval architects, and I feel sure that they will see in them a standard higher than that obtained by any foreign builders.

Our correspondent's letter covers quite a number of points, all of them interesting; we shall take them up, as nearly as possible, in the order of their importance. The first question is, what yachts may justly be called representative American craft? We have taken as such those built on the Delaware, and in particular those of the firm which can show the largest tonnage and greatest number built. The Delaware fleet includes *Columbia*, *Peerless*, *Thespia*, *Atlanta*, *Nourmahal*, *Yosemite* and a great many smaller craft. We are willing, however, to go further and include the Boston Wild Duck with her hideous sponsons patched on to her side. We recognize that the Bath-built yachts *Eleanor*, *Peregrine*, *Illawarra* and some others are superior to many of the Delaware-built craft. At the same time there is not one of these yachts which can compare in appearance with the Clyde-built craft such as *Rona*, *May*, *Maria* and *Sapphire*. In arrangement, workmanship and performance, *Eleanor* and her smaller sisters represent a decided and most encouraging advance over all the Delaware-built craft; but in appearance they are still ten, yes, twenty years behind. This is a matter which any man can decide for himself by a visit to Tebo's dock or the Erie Basin; let him compare *Eleanor* with the Watson yacht *Sapphire*, formerly *Cleopatra*, as they lie side by side; or *Sagamore* with *Conqueror*, *Utowna* or *Intrepid*. The spectacle at the America's Cup races last year was enough to open the eyes of the blindest advocates of American steam yachts; the British fleet represented by *Valhalla*, *Sapphire*, *Conqueror*, *Hermione*, *Erl King*, *Zara*, *Ituna*, *Sultana*, *Corsair* and *Intrepid*; the American by *Columbia*, *Peerless*, *Nourmahal*, *Atlanta*, *Sagamore*, *Alicia*, *Electra*, *Wadena*, *Wild Duck* and scores of smaller craft. In size, in cost and in numbers, the American fleet out-numbered the British; in fact many of the former belong to a far larger and pretentious class; but in appearance the odds were without exception on the other side. Excepting in appearance, and this we consider a prime requisite in a pleasure craft costing upward of \$1,000,000, we readily admit our correspondent's claims for *Eleanor*'s performance; but we would ask him, for information, being ignorant on this point, in what part of the United States her designer was born?

As we understand our correspondent, he freely admits that a great many American steam yachts are all that we claimed them to be; the only question between us is, which may justly claim to be representative; the many steam yachts, small and large, built throughout the country within the past fifteen years, or the few mentioned by him as built in one yard within three years.

Coming down to specific instances, we would be glad to have our correspondent name one large steam yacht designed by an American which cannot be surpassed by a British yacht of the same tonnage and class, as *Vigilant* and *Defender* surpassed the two *Valkyries*.

In our original criticism we gave due credit to the class of 100ft. or so for good performance and general excellence, appearance excepted; there are many very serviceable yachts of this class afloat and more, and better, are being built every year, but the majority are still crude and lumberly to the yachtman's eye. Notably is this the case with the Bristol yachts; whatever good points they possess, they are painfully lacking in symmetry, proportion and a yacht-like finish.

The list of designers supplied by our correspondent is particularly to the point of our original contention; whether Mr. Hanscom is an American or an Englishman we are not aware; that he has turned out some excellent yachts we readily admit, but that his craft are in any sense up to the modern standard in appearance we certainly must deny. It may be contended that this is merely a matter of taste, but we believe that there are certain established standards of what is fitting and appropriate in a yacht, and that these are not reached in *Sagamore* or even *Eleanor*. The second designer mentioned, Mr. A. Cary Smith, after some twenty-five years of successful practice in sailing yachts, was called on last year for the first time to design a steam yacht, so that he cannot be included. Mr. Gardner, in the same way, last year turned out two steam yachts of moderate size, and so can hardly be either praised or blamed for his share in the representative American craft. The Herreshoff yachts we have already mentioned; they not only belong to a smaller class and a different type from those under discussion, but, like the Herreshoff sailing yachts, with a few such exceptions as *Defender* and *Wasp*, their claims for excellence rest solely on performance and not on appearance.

The Seabury yachts also belong to the smaller class, and it may be said that they are improving each year in appearance, as well as in more substantial qualities.

Our correspondent makes the point that a plea for free yachts carries with it, out of consistency, a plea for free ships. Accepting this statement for the sake of argument, we would say that there is nothing in the least consistent in the protection offered by the Payne bill; it is not protection to all Americans concerned in the production of steam yachts, but only to American builders. The American designer is in no way protected; owners may still, if they so desire, go abroad for the designs of their yachts, and builders may continue to seek the aid of foreign designers and draftsmen. Under the lax administration of the contract labor and other immigration laws, the builder may still avail himself of the foreign workman, as he has done from the very inception of metal shipbuilding in America. If protection for American industry is a good thing, then let us have fair and equal protection for all Americans, and not for one favored class, the employer.

In our opinion, the questions of free yachts and free ships are entirely distinct; the two classes of vessels are on totally different footings before the country. The ship is a means of profit from which the owner presumably derives a substantial return; and it may be fair and just that the owner should be taxed through her. The yacht brings in no revenue to her owner, but, on the contrary, is maintained at great expense, primarily for the pleasure of the owner, but in the case of a maritime nation ultimately for the benefit of the State in ways which we have frequently pointed out. The yachtman asks nothing of the Government in the way of special bounties and subsidies, he pays his own way; and the very least recognition which a nation can make of the benefits accruing from its pleasure fleet is to exempt it from all unnecessary restrictive measures.

Sovereign.

THE steel steam yacht *Sovereign*, designed by J. Beaver Webb, and built by the John N. Robins Co., of the Erie Basin Dry Docks, for M. D. C. Borden, Esq., was successfully launched at noon on May 18. *Sovereign* is the fifth large steam yacht designed by Mr. Webb since he removed from London to New York, the others being *Utowna*, *Sultana*, *Intrepid* and *Corsair*. She is the largest of all, and, unlike the others, carries twin screws. Like all of the Webb craft she is a handsome and shapely vessel, and a yacht in appearance as well as name. The side view shows a bold, handsome sheer, the only defect being an excessive round of taffrail and archboard, making the latter the most conspicuous feature of the yacht. This defect will probably be remedied before the yacht is completed. The yacht is well arranged below and will be elegantly fitted. The workmanship of the hull, which was built under the superintendence of Capt. W. D. Dickey, manager of the yard, is excellent throughout. Mr. Webb has also designed for the yacht a very handsome outfit of boats, which have been built at the yard. All arrangements for the launch were so complete that the vessel went off promptly when the planks were cut just after noon. She will be finished as rapidly as possible.

Question in the Trial Races.

OUR attention has been called to the statement, in the *FOREST AND STREAM* of April 4, that *Question* was third in each of the trial races of the Seawanhaka C. Y. C. last August, which is incorrect, as she was third in but two of the three races, being second in the second race. The official times of the first three boats in the trial races were:

	1st race.	2d race.	3d race.
Ethelwynn.....	3 16 15	4 03 03	5 58 12
Olita.....	3 18 09	4 12 48	6 03 43
Question.....	3 26 07	4 11 25	6 04 33

It will be seen from the figures that in the second race *Question* beat

Olita by 1m. 38s., and was only 3m. 22s. astern of *Ethelwynn*. The error arose from the fact that in the official records of the races Olita was in each case named in second place, though by the figures she won only third place in the second race.

Huguenot Y. C. Open Race.

Saturday, May 16.

NEW ROCHELLE—LONG ISLAND SOUND.

THE racing about New York opened on May 16 with the open race of the Huguenot Y. C. for the 15-footers, 21-footers, cabin cats and open cats. The small class brought out six new boats: the Herreshoff *Gnome*, owned by F. M. Hoyt; *Imp*, designed and built by Thomas Clapham for J. M. Hamilton, of the Red Dragon C. C., of Philadelphia; *Two Step*, a duplicate of *Ethelwynn*, the new boat recently exhibited at the Sportsmen's Exhibition, owned by Herbert Jennings; *Guilla*, one of the new Rigby boats, built at Canarsie, owned by H. G. Wey; two improved "Question" models designed and built by Huntington; *Hope*, owned by Adrian Iselin, Jr., and *Willada*, W. G. Newman. The only old boat was *Olita*, Com. Rouse, S. C. Y. C., sailed by L. B. Huntington.

The official times were:

	Start.	Finish.	Elapsed.
Imp.....	1 32 00	2 50 11	1 18 11
Olita.....	1 32 00	2 50 49	1 18 49
Hope.....	1 32 00	2 51 00	1 19 00
Two Step.....	1 32 00	2 51 12	1 19 12
Gnome.....	1 32 00	2 54 39	1 22 39
Willada.....	1 32 00	2 56 40	1 24 40
Guilla.....	1 32 00	Did not finish.	

Mr. Clapham, who sailed *Imp*, and Mr. Huntington, who sailed *Hope*, were disqualified, as not being amateurs.

The other classes were timed:

In the 20ft. class *Celia*, Clement Gould, was timed at 1.11.00, elapsed, and *Houri*, E. Burton Hart, at 1.12.40. *Weasel*, T. E. Ferris, won in the cabin cat class, her time being 1.21.22. *Nanloch* won in the open cat class.

YACHTING NEWS NOTES.

The May meeting of the Seawanhaka C. Y. C. was held on May 12, with Vice-Com. Cruger in the chair. The trustees reported the election of Miss Susan De Forest Day as an associate member and Leonis B. Huntington, I. Dows, Henry Walters and Clifton H. Crane as active members. Announcement was made of the presentation to the club by Mrs. E. Mary Ludlow, mother of the late Robert Center, of the Cape May cup, originally won by *Vindex*, as a perpetual prize. For the present season Com. Rouse has given prizes to the amount of \$500, and Vice-Com. Cruger and Rear-Com. Todd each to the amount of \$250. A resolution of condolence on the death of Fleet Surgeon J. West Roosevelt was unanimously adopted. The special committee on town house reported a proposed plan for the purchase of a suitable site and the erection of an eight-story building, of which two floors would be devoted to the club, the remainder being arranged as bachelor apartments. The estimated cost of the scheme is placed at \$165,000. The committee will go further in the consideration of the plan, which, if found practicable, will give the club a home in New York that will be fully adequate to its requirements and a fitting supplement to the fine house and summer station on Center Island. The house committee announced the formal opening of the club house on May 30 in connection with the races set for the 15ft. class. The race committee announced the following events for the season: May 30—First race of 15ft. class. June 22—Commencement of the trial races to select a boat to defend the international challenge cup for 15-footers, against the boat to be sent by Mr. Duggan, of the Royal St. Lawrence Yacht Club, who has challenged for the trophy. June 27—Annual race of the club. July 15—Commencement of the international races. Aug. 29—Special race for schooners and the new class of 30-footers.

Serkara, schr., J. M. Fuller, sailed from Gloucester on May 3, at 5 P. M., bound for Rockland, Me., after fitting out at the former port. A few hours later she went ashore on the Londoners, off Thatcher's Island, becoming a total loss. Her owner and crew saved themselves in the two boats.

The Brooklyn Y. C. has elected the following officers, to succeed those who resigned in a body a few weeks since: Com., Peter B. Steele, sloop *Dorothy*; Vice-Com., J. H. Constant, sloop *Allis*; Rear-Com., George R. Whitehead, cat *Pilot*; Trustees, A. S. Richoffer, George P. Foote and W. B. Wardell. The annual open regatta will be sailed on Monday, June 15, over the club's course on the Lower Bay.

Steam Yachts and Marine Machinery.

COMPLETE machinery "outfits" for boat builders, made of Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

A Canoe Light.

NEW YORK, May 14.—*Editor Forest and Stream:* Doing a good deal of canoeing on such a busy waterway as the Hudson, and almost half of it after dark, a lantern has been a pretty necessary part of my outfit.

I hated to mar the mahogany decks by screwing a lantern attachment to them, and so, after much thought, tied a headlight driving lamp to the bow painter ring. The lamp gave a splendid light, but tie it never so snugly, it would wobble in a manner calculated to beat the band—and a German band at that. And when it came to untying it in a hurry—well, I simply hug myself to think that that performance is a thing of the past.

For I have hit upon a combination which, I believe, is good enough to tell of to the rest of the fraternity. It is simply a B. G. I. star lantern bracket made for the largest size bicycle head, and a bicycle lamp with red and green side lights.

When the canoe is used as a paddler, a miniature mast projecting (in, above the deck carries the bracket. A strip of leather on this mast prevents its turning in the tube, and keeps the light dead ahead.

When sailing under lateen rig I fasten the bracket to the top of the main mast; while using a fore and aft rig, such as the Baily, with nothing forward of mast, bracket can be placed just over jaws of boom.

The boat house is a mile from home and I always ride over on a wheel, and the same lantern does for both wheel and canoe.

Some of your readers may have thought of this scheme already, but if it prevents but one man from using the language which I did last summer, I will feel that I have in part atoned for my offenses in that direction.

I find that by placing the light up high on mast my boat receives more respectful attention and more of its proper amount of way, especially from row boats, than it otherwise would. E. T. KEYSER.

Wanted, Cruising Company.

Editor Forest and Stream:

A friend and myself have each a canoe. We are quite fond of canoeing, and last summer took several small cruises on the southern part of Long Island. It is our desire to take a cruise of 1,700 miles next summer over the following route: We start from New York, up the Hudson to West Troy, by canal to Lake Champlain, down the lake to the Sorel River and into the St. Lawrence, up the St. Lawrence to Kingston; from there by boat to Oswego, by Oswego River and canals into Cayuga Lake; from here by canal to Seneca, down it to Watkins Glen, by canal into the Chemung at Elmira, down the Chemung into the Susquehanna to the Chesapeake, by canal, etc., to Delaware Bay, up the Delaware River and by the M. & E. Canal home.

This is an easy trip through a good country and no hindrances but this: there are only two who will participate in it. We would very much like to have two or three more young men between 17 and 21—our ages are 18 and 20—to join us; of course they must have a canoe each and some canoeing experience.

A. C. K.

Amateurs and Experts.

TOPEKA, Kan., May 9.—*Editor Forest and Stream:* If you will kindly give space to a new kicker I should like to advance a few ideas, some perhaps new, others not so much so, touching the condition and the probable, as well as the possible, future of trap-shooting. There is not another sport in so demoralized a condition, and to find the reason, and then the remedy if one exists, should be the aim of every true lover of the sport. Trap-shooting will never be recognized as one of the legitimate sports until a properly authorized body takes matter in charge and formulates rules and regulations which shall control absolutely every public shoot given, accurately define the amateur and expert, and so brand the professional that there will be no mistaking him. It may be claimed that there is no difficulty now in determining who is the professional, which is not true; but even if it were, are there not many men now shooting who under the present construction of professionalism are not such, yet are equally as good shots as the best of the so-called professionals, and whose work at the traps is equally as deadly to the dollar of the genuine amateur. These professionals and experts are winning 90 cents out of every dollar shot for at the traps to-day, and whose money are they winning? Not a cent from men of their own class, for they are all winners and not losers. It is the money of the 60 to 80 per cent. man, the feeder, who from love of the sport and the delight of exercising the eye and nerve at the flying target contributes of his wealth to the greedy gun of the insatiable expert. Don't let us hear anything more of the stale and untruthful assertion that it is the gentlemanly paid expert who really makes a successful shoot. How many are there of them at the average 'big tournaments'? About a dozen or fifteen, as a rule; in fact, at the three big shoots recently given at Atchison, Omaha and Joplin the list would not reach twenty, while the number of entries in some of the events at Atchison passed the 100 mark. Now these few men won about all of the purses and added money, and contributed by their entry fees about one-fifth of the purses and not a cent to the added money. Can it be sensibly claimed that with the large amount of added money, merchandise prizes, etc., the entry list would not have been so large if these sportsmen for profit had been excluded? Look at the Joplin shoot, with \$1,000 or over added money; will any defender of the present system, or rather lack of system, presume to say that the entry list would not have been twice as long if there had been any possible show for the man who gets a livelihood from a legitimate business and is willing to forego profits in his pleasures? And right here I want to head off the fellow with the old and impudent advice to the low percentage man to "go out behind the barn and practice," for it is well known that in the great majority of cases practice, such as is within the possibilities of the average man, will not make him a 90 per cent. shooter any more than any amount of work will enable a 2:20 horse to go in 2:05. It is a fact that but few men with any amount of practice can ever reach 90 per cent. or upward; a considerably larger number can go 80 or a little over, and below these comes the great crowd of 65 to 80 per cent. men, every one of whom, under present conditions, must either make up his mind to be robbed if he shoots at all, or else stay out entirely and keep his money, but lose his sport. It is a bad system which enables a handful of men to deny to another body, a hundred times greater in numbers, the right of representation at the traps.

Relief has been sought in handicaps, and many ingenious and brain racking systems have been devised to delude the sucker into the belief that he was getting a run for his money, but none have sufficed for the very simple reason that no system of handicapping will ever equalize the low and the high percentage men and keep them both shooting. Your expert will not go against a game which comes anywhere near putting him on a level with other shooters, and any handicap which does the genuine amateur any good bars the expert entirely; for he, like any other good business man, will quickly desert a trade which doesn't pay, and the fact that he makes a business of a sport cuts no figure in the matter, for must he not live?

If there be any solution to this problem other than an entire separation of the expert and amateur it is yet to be discovered. The only way to keep the sheep from the goats is by a dividing fence, and no theoretical barrier will do it. But says some one, "You are going to penalize a man merely because he excels, and are putting a premium on mediocrity." I am not; let the strong contest with the strong, and keep them away from the weaklings lest the flock be destroyed. The fact that a few men possess superior skill gives them no right to monopolize the entire shooting field and force the low percentage man to either pay them a royalty for the right to shoot or not shoot at all. Big purses of added money have temporarily kept up the entry lists, but men are beginning to find out that in contesting under conditions where they are bound to lose the size of the purse makes no difference, and even big added money will not much longer prove effective bait. The days of large gatherings of trap-shooters are rapidly reaching a close, if the present style of conducting such meetings is continued, and the cause is not far to seek. The proposition is simple and the conclusion inevitable. There must be sharp classification based on known records of individual shooters, and men of widely differing percentages must be kept apart, or we shall see a sport, unexcelled as a means of recreation and pastime by gentlemen, destroyed by mercenaries, and brought into disrepute, from which recovery will be impossible.

A. J. HAWKER.

John F. Weiler Gun Club.

ALLENTOWN, Pa., May 5.—The John F. Weiler Gun Club held their regular monthly shoot at their new grounds at the Duck Farm Hotel, Griesemerville. The attendance was large and the scores were a decided improvement over those of recent events. The work of Schindler Weiler, the 14-year-old son of Judge Weiler, and the youngest member of the club, was remarkable, as the scores indicate. The gold medal was won by Porter and Hoke secured the silver trophy. The live-bird events were very interesting. The scores follow:

No. 1, club shoot, gold medal, 25 targets:	
Porter	111111110111110111111111-23
Rehrig	111111111111111111001111-23

Bradley vs. Hibbard.

LARCHMONT, N. Y., May 13.—An interesting 100-bird match was shot here to-day between Bradley, who stood at 30yds., and Hibbard, who shot from the 27yds. mark. Despite this handicap Bradley won, but he did not have an easy time by any means; for had he missed his last bird the score would have been a tie at 76. The race was close and exciting throughout. The scores follow:

Bradley (30)	2220021122100120111102111-19
	121201011210111110110122-20

On Long Island.

PARKWAY ROD AND GUN CLUB.

May 12.—The Parkway Rod and Gun Club held its monthly shoot at Dexter Park to-day. Nine members turned out to take part in the shooting. Scores:

Club shoot, 7 live birds, Class A.—Helgans 6, Botty 5, Short 5, Thompson 5. Class B.—Selover 7, Bramwell 7, Wye 7, Woolley 6. Class C.—Matthews 5.
Event No. 1, sweep, 8 live birds: Woolley 3, Short 3, Thompson 3, Matthews 3, Bramwell 2, Helgans 2.
No. 2, same: Bramwell 2, Botty 2, Helgans 2, Matthews 2, Thompson 2, Woolley 0.
No. 3, same: Thompson 3, Botty 3, Woolley 3; Helgans 2, Bramwell 2, Wye 2, Selover 2, Matthews 2.
No. 4, same: F. Thompson 3, Woolley 3, Botty 2, Selover 2, J. Thompson 2, Van Sicken 1, Bramwell 1.

ENTERPRISE ROD AND GUN CLUB.

May 12.—The Enterprise Rod and Gun Club's final shoot of the season, held at North Beach to-day, was well attended. The club shoot was won by Geo. E. Samuels, who had to shoot off for this honor with V. Bolton, H. L. MacTammany and L. I. Richard, all of whom tied at 6 birds. After the club shoot some sweeps were shot. The scores:

No. 1, club shoot, 7 live birds: Samuels (28) 6, MacTammany (25) 6, Bolton (26) 6, Longman (27) 5, Harper (27) 5, Dillon (25) 4, Nelson (26) 4, Henderson (27) 4, Schwartz (26) 3, Er o ley (28) 2.
No. 2, shoot off, miss-and-out: Samuels 4, MacTammany 3, Bolton 3.
No. 3, miss-and-out: Samuels 4, Schwartz 4, MacTammany 3, Hennessey 3, Dillon 2, Longman 2, Henderson 1, Briodey 0, Nelson 0.
No. 4, same: Schwartz 5, Dillon 4, Bolton 4, Briodey 3, Longman 3, Harper 2, Henderson 1, MacTammany 1, Hennessey 0, Nelson 0.
No. 5, same: Schwartz 5, Bolton 5, Hennessey 4, Harper 4, MacTammany 3, Dillon 3, Henderson 2, Longman 3, Briodey 1, Nelson 0.
No. 6, same: Samuels 6, Nelson 4, Schwartz 4, Briodey 3, Nelson 4, MacTammany 3, Henderson 2, Bolton 2, Hennessey 2, Longman 2, Harper 1, Henderson 0.

EXCELSIOR ROD AND GUN CLUB.

May 14.—The final shoot of the season was held here to-day. The shooting was close and interesting throughout, three men—Richards, Heimberger and Horton—tying for first place in the club shoot, which was finally won by Richards. The sweeps were also closely contested, the money being well distributed. Scores:

Club shoot, 7 live birds, A. S. A. rules: Richards (28) 6, Heimberger (27) 6, Horton (27) 6, Chauncey (25) 5, Henderson (26) 4, B. G. Williams (27) 4, Deegan (27) 5, D. J. Kingsland (28) 5, S. R. Williams (27) 4, Archer (26) 3, D. G. Kingsland (26) 4, Seegull (28) 4, Wilson (27) 4, O'Dell (26) 3, Jackson (26) 1.
Shoot-off, miss-and-out: Richards 5, Horton 4, Heimberger 1.
No. 1, sweep, miss-and-out: Jackson 4, Williams 4, Archer 4, Richards 3, Kingsland 3, Heimberger 2, Seegull 2, O'Dell 1, Williams 1, Wilson 1, Horton 1, Deegan 0.
No. 2, same: O'Dell 5, Jackson 4, Archer 4, Richards 3, Chauncey 3, Williams 3, Kingsland 2, Deegan 2, Heimberger 1, Horton 1, Henderson 1, Wilson 1, Seegull 0.
No. 3, 5 birds, \$3 entry, three moneys: Richards 5, Seegull 4, Heimberger 4, Chauncey 3, O'Dell 3, Horton 2, Deegan 2, Henderson 1, Williams 1, Wilson 1, Jackson 1.

UNKNOWN GUN CLUB.

May 14.—The Unknown Gun Club held its regular monthly shoot at Dexter Park to-day. H. Koebel, Sr., with 6 kills, won the club shoot and first money. Scores:

Club shoot, 7 live birds, handicap rise, badge and three moneys: Koebel (28) 6, Skidmore (25) 5, Sands (28) 5, Vagts (25) 5, Vroome (28) 5, Brown (28) 5, Flynn (28) 4, Potter (25) 4, Timke (25) 4, Voorhees (28) 3, Smith (25) 3, O'Hara (25) 3, Rankin (23) 2.
No. 1, sweep, handicap rise, three moneys: Skidmore 3, McClosky 3, Rankin 2, Vroome 2, O'Hara 2, Voorhees 2, Sands 1, McGuinness 1.
No. 2, same: Smith 3, Voorhees 3, McClosky 3, Sands 2, McGuinness 2, Skidmore 2.

DOWN TOWN GUN CLUB.

May 15.—The Down Town Gun Club held its monthly shoot at Ridge-wood Park this afternoon. None of the ten men who took part in the shooting succeeded in making straight scores in the club competition. In the sweepstake which followed the four lowest guns paid for the birds. The scores follow:

Club shoot, 10 live birds: Goetz (28) 9, Joost (25) 9, Zahn (30) 9, Bohlmann (25) 8, Muhs (28) 8, Lang (25) 8, Fagen (26) 8, Steencken (28) 6, Multer (25) 6, Schweitzer (23) 4.
Sweepstake, 3 live birds: Steencken 3, Goetz 3, Zahn 2, Bohlmann 2, Joost 2, Muhs 2, Lang 1.

NEW UTRECHT GUN CLUB.

May 16.—The New Utrecht Gun Club's shoot was held on Dyke's Meadow this afternoon. The shooting was varied and interesting. Events Nos. 1, 2 and 3 were at known traps and angles; Nos. 4, 5, 6 and 7 at known traps, unknown angles; No. 8, battery shooting, dat on back until bird is seen. No. 2 was the club shoot, and No. 3 for the Hegeman prize. In the shoot-off between O'Brien and Jones in No. 3 Jones broke 9 and O'Brien 10, giving O'Brien the badge. The scores were as follows:

Class A.	
Events: 1 2 3 4 5 6 7 8	Events: 1 2 3 4 5 6 7 8

New York State Shoot.

The advance programme of the New York State shoot, to be held at Buffalo, June 8 to 13, 1896, under the auspices of the Buffalo Audubon Club, shows a purse of \$1,000 added cash and \$3,000 merchandise prizes.

New York State events, open only to residents of New York State: \$450 cash and over \$3,000 worth of other prizes added, as follows: Tuesday, June 9.—No. 1, 25 singles, entrance \$3, \$75 added; No. 2, same conditions.

Wednesday, June 10.—No. 3, 25 singles, entrance \$5, grand merchandise; No. 4, 25 singles, entrance \$3, \$75 added.

Thursday, June 11.—No. 5, 25 singles, entrance \$3, \$75 added; No. 6, same conditions.

For ten best averages in above six events, \$50 cash and merchandise prizes.

Friday, June 12.—Team shoot, four men to team, 25 birds each, entrance \$12. First prize, Parker gun; second, cut glass punch bowl; \$25 cash added; also other prizes. Lefevre medal shoot, miss-and-out, merchandise, entrance \$1; birds included in all above entrance moneys.

Shooters cannot fail to get back more than the entrance in all above events, as the added money and merchandise amounts to several times cost of birds.

Saturday, June 13.—The Dean Richmond trophy event at live birds. Sweepstake events, open to the world, \$650 cash and an equal value in prizes added to open events.

Daily programme of sweepstake events, entrance \$2.50 each, birds included in all entrance money: No. 1, 20 singles, \$15 added; No. 2, 20 singles, \$15 added; No. 3, 20 singles; No. 4, 20 singles, \$15 added; No. 5, 20 singles; No. 6, 50 singles (see below); No. 7, 20 singles, \$15 added.

Tuesday, June 9.—Event 6 will be the Gold Dust powder event. Cash and 1,000 loaded Gold Dust shells added (divided). Entrance for above \$2, including birds and shells. Optional sweep, \$3 extra.

Wednesday, June 10.—Event 6 will be the E. C. Powder event. Hand-some cup and \$50 cash added. Entrance \$3.

Thursday, June 11.—Event 6 will be the Times event, \$125 added, entrance \$3.

Friday, June 12.—Event 6 will be the Buffalo Audubon Club event. Handicap, open to all. First prize, a new \$35 upright piano; second prize, fine Concord road wagon. There will also be added to this even t

several other prizes. Entrance, \$5 straight. Optional sweep, \$5 extra.

There will be added \$160 cash for general average prizes for those competing in all sweepstakes during the four days, divided as follows: \$35, \$20, \$25, \$20, \$15, \$10, \$10, \$10, \$5.

Mr. Wm. Crutenden will have charge of State events. Mr. John Parker will have charge of open events. Some arrangements will be made to place the amateur where he will have an equal chance with the expert.

Boston Gun Club's Prize Shoot.

BOSTON, Mass., May 13.—The Boston Gun Club's weekly afternoon prize shoot took place to-day at Wellington, and the usual coterie of enthusiasts alighted from the 2 o'clock train, followed an hour later by the duplicate squad. The wind might have been a little less persistent; otherwise the weather was splendid, and chairs were conveniently planted on the platform directly in the path of the sun's warm rays.

Somebody has asked how we extract so much pure fun and enjoyment from these meetings, where no money whatever is placed on the sweeps, and the thoughtful and regular Wednesday attendant answers from the fact that the fair and just handicap system of distance, used without question or dissension at every live-bird shoot, is in the first place responsible for much of the pleasant and true blue rivalry, and from the fact that all hurry and bustle to use up a large amount of powder, a ton of shot, so many shells, so many thousand targets, etc., is interdicted and against the rules. The events progress leisurely and allow moments for the timely joke or "jolly," the prime hunting story or the well-developed fishing yarn. The only scheduled shooting is the prize match run in two or three events, as the case may be, the balance of programme arranged to suit those present, and a glance at our varied card each week is the best evidence that practice and not straight scores is the object in view. The 10 cents or 25 cents per capita on each event is never requested, much less desired. Birds are settled for at the end of shooting, and the handling of the mighty dollar is almost forgotten. Scores:

The Memphis Third Annual.

A GREAT CLUB'S GREAT SHOOT.

In writing a description of any large sport, the main difficulty one has to combat is the general sameness that attends all such gatherings. This difficulty in the present instance is luckily considerably lessened, since the Memphis Gun Club and its members know so well how to make things pleasant for its guests, and to impart a certain touch of novelty to the otherwise monotonous bang bang of the rapid-fire system and the routine of an added money tournament.

We have attended many tournaments, large and small, but at none have we experienced a greater sense of being "at home" than we did while attending the third annual tournament of the Memphis, Tenn., Gun Club on May 11-16. Tom Divine and Irby Bennett are as well known to readers of FOREST AND STREAM (and not trap-shooting readers only) that it is practically superfluous to say anything in addition to the mere statement that they were here, there and everywhere during the entire six days of the shoot. Wherever there was any noise, any large crowd or any hearty laughter, it was longer odds than dollars to doughnuts that either General Bennett or Major Divine was right on deck.

NOT THE ONLY ONES.

But Memphis does not possess merely these two. There are others. Messrs. W. F. Allen, Abe Frank, F. P. Poston, J. Duncan, J. C. Neely, Jr., and a host of others, all good fellows, all gentlemen and all members of the home club, who go to make a homogeneous whole that is hard to equal and that can scarcely be beaten. This was our first visit to Memphis, but we can now readily understand how and why the Western end of FOREST AND STREAM's editorial staff finds a sojourn within her limits so exceedingly pleasant.

As mentioned in our dispatch from Memphis, dated May 11, which appeared in the FOREST AND STREAM of May 16, the special car that left New York on Saturday afternoon, May 9, at 5 o'clock, arrived at Memphis at 7 A. M. on Monday morning, and the delegation on board that car received a warm welcome at the hands of the two Memphians first above mentioned. Two four-in-hands were in waiting and the 21 occupants of that car were driven in style to the various hotels of the city. This made a fitting close to as pleasant a thirty-nine hours' journey from New York city as one could possibly wish for.

THE BELGIUM'S STRINGED ORCHESTRA.

Leaving New York at 5 P. M., Eastern time, on Saturday, May 9, the special Pullman car "Belgium," save in the darkest hours of the two nights spent between New York and Memphis, was little else than a concert hall, with an appreciative audience. Leroy and the violin, Heikes and Trimble with their banjos, Gilbert's soprano, Dick Merrill's contralto, and any quantity of tenors and basses formed an operatic troupe whose only weakness lay in its limited repertoire. U. M. C. Thomas is authority for the statement that no less than 365 verses of "There's Only One Girl" and 133 stanzas of "She May Have Seen Better Days" were sung during the trip. (We give U. M. C. as our authority with some trepidation, well knowing his usual custom of sleeping between every meal while on board a train.)

Once south of Mason and Dixon's line, the audiences at every station grew larger and more enthusiastic in their applause. "Dixie," "Marching Through Georgia," "Yankee Doodle," "Coochee-Coochee," etc., took well and made one realize readily the magic power of the muse. Soberly speaking, the stringed orchestra was immense, each one of the three artists being of an extremely high class.

Our route lay via the Shenandoah Valley, Norfolk & Western, from Roanoke to Bristol; thence by the Southern Railway to Chattanooga, and thence over the Memphis & Charleston R. R. to Memphis. Mr. J. E. Prindle, New York passenger agent of the Norfolk & Western R. R., Shenandoah Valley route, accompanied the car to Memphis, and aided by our chaperone, Tom Callender, made life on board the "Belgium" a thing of beauty. While speaking of this trip, special mention must be made (by request of several on board the car) of the really excellent dinner provided for the travelers at the Hotel Hamilton, the leading hotel in the city of Bristol, Tenn.-Va.

THE VISITORS' LIST.

The visitors came from all over. Twenty-one States had representatives present during the shoot. Below is a list by States:

Alabama: W. J. Vass, Mobile.

Arkansas: J. A. Woods (Jim), Earl, Paul R. Litzke, J. M. Pemberton, J. W. Dickinson and J. W. Irwin, all of Little Rock; J. T. Lloyd and W. A. Leach, Pine Bluff; G. W. Hughes and John J. Sumpter, Jr., of Hot Springs.

Connecticut: U. M. C. Thomas, of Bridgeport, the U. M. C. Co.'s popular expert and representative.

Georgia: L. J. Alston, Atlanta.

Illinois: C. W. Powers, Decatur; J. H. Robbins, Chicago; E. Hough, FOREST AND STREAM's Western representative.

Indiana: H. B. Hill, Aurora; C. W. Thomas, Logansport; J. A. Martin, Indianapolis.

Iowa: C. M. Grimm, Clear Lake; Fred Gilbert, Spirit Lake; C. W. Budd, Des Moines; E. D. Trotter, Kingsley.

Kansas: Lou Erhardt, Atchison; J. W. Sexton, Leavenworth; C. W. Calhoun, Weir City.

Kentucky: Ralph Trimble, Covington; J. D. Gay, Pine Grove; P. Ward, Hickman; A. W. du Bray, Dayton.

Massachusetts: O. R. Dickey, Boston; B. Leroy Woodward, Campbell; H. G. Wheeler, Marlboro.

Mississippi: C. W. Tway, Michigan City; Dave Porterfield, Vicksburg; H. L. Baker, Natchez; Alex. Smith, Greenville; L. D. Herrick, Soranton.

Missouri: Jas. A. R. Elliott, Kansas City; T. J. Liles, Aurora.

Nebraska: F. S. Parmalee and G. W. Loomis, Omaha; C. D. Linder-mann, Adams.

New Jersey: Ferd. Van Dyke, Dayton.

New York: E. D. Fulford, Utica; Slim Glover, Rochester; B. A. Bartlett, Lakewood; J. A. H. Dressel, New York city; C. C. Hebbard, New York city.

Ohio: J. A. Flick, Ravenna; J. P. Easton, Monroeville; Rolla Heikes, E. D. Rike, C. W. Raymond and W. Scott McDonald, Dayton; Shorty Bacon, Miamisburg; C. A. Young, Springfield; M. F. Lindsley, Cincinnati.

Pennsylvania: Elmer E. Shaner, Pittsburg; Will K. Park, Philadelphia.

South Carolina: Captain George Swan and G. Peterman, Charleston.

Tennessee: Andy Meaders and Tom Callender, Nashville; H. B. Lindsay and John Connor, Knoxville; J. B. Duncan, Lucy; L. W. Willis, Tiptonville.

Texas: Joe George, A. B. Critzer and J. M. McCormick, San Antonio; Wallace Miller and J. A. Jackson, Austin.

Wisconsin: R. R. Merrill, Milwaukee.

THE HOME CLUB

was well represented, among the members present and taking part being: T. A. Divine, W. F. Allen, Irby Bennett, F. P. Poston, A. B. Duncan, J. C. Neely, Jr., W. Lewis, Dave Cockerell, S. Poston, Phillips, Abe Frank, H. Ballinger, Frank Schumann, W. G. and H. Thompson, Fred Schmidt, W. S. Yahnke, L. S. Robertson, H. L. Fassett, Tom O'Sullivan, J. C. White, H. B. Denning, D. S. Weaver, F. W. Taylor, P. B. Plummer, Jake Clausen, A. G. Brow, J. E. Heard, Fred Orgil, W. R. Sims and S. P. Walker.

TRADE REPRESENTATIVES.

Among the lists above given, of course, many present represented firms of manufacturers or dealers in sporting goods. The Winchester Repeating Arms Company were particularly strong with Rolla Heikes, Jim Elliott, Ferd Van Dyke, Captain Bartlett and Irby Bennett; the U. M. C. Company was represented by J. A. H. Dressel and U. M. C. Thomas; Du Pont representatives were Ralph Trimble, Dave Porterfield and Fred Gilbert, the two former also representing the Hazard Powder Company. King's Smokeless was present in the shape of its inventor—the only Milt F. Lindsley; A. W. du Bray and P. R. Dickey represented Barker Bros.' guns; Charlie Hebbard was present in the interest of, and to look after the running of, the empire traps and targets of the Empire Target Company; E. D. Fulford came here to show what a capital combination Greener guns and U. M. C. factory-loaded ammunition make; Tom Callender, of course, represented Laffin & Rand, but, to the regret of many of his friends, a cold contracted on the trip from New York caught his lungs and laid him up during the shoot.

THE MEMPHIS MYSTERY.

Monday, May 11, was the practice day of the tournament—at least nominally. As a matter of fact it turned out to be an all-day affair, with some 61 shooters on the grounds. Quite a nice little shoot, wasn't it?

There were four merchandise events on the programme, the entrance fees in these events being regulated by the number of entries. As told in our special of the above date, which appeared in our issue of May 16, Charlie Budd and Fred Gilbert did some very fine shooting, Gilbert breaking 132 out of 135, and Budd 112 out of 115 shot at. The "Memphis Mystery," event No. 5, was a special feature, and several guesses were hazarded as to what this event would be. Some of the guesses proved to be extremely accurate.

The conditions were 15 targets, unknown angles, \$1.25 entrance, with the club's guarantee that each man who shot would receive a prize the value of his entrance fee. After the event closed Col. Frank S. Parmalee, of Omaha, Neb., by special request of the committee of management, distributed the prizes—a bottle of O. P. S. to each man, a brand of medicine well and favorably known in this section.

In addition to the above 5 events, two extras, 20 targets, \$2 entrance,

targets at 2 cents, were decided. Over 6,000 targets were thrown during the day.

THE NEW GROUNDS.

Since the tournament of last year the club has removed its belongings to new grounds, and is now located on the street car line to Raleigh, and about thirty minutes' ride from the city. Cars only run every half hour, so that it behooved every man to be on time or else enjoy a good wait, with only the muddy waters of the Mississippi to gaze on. The trip by electric car to and from the grounds is by no means an unpleasant feature while the weather is as warm as that which greeted us in Memphis.

The quarters of the club are not spacious, being merely temporary, still there was room enough for all, except during the heavy rainstorm on Wednesday afternoon. Three sets of empire traps were used, Charlie Hebbard coming all the way from New York city to take charge of them. A wire pull was used at the No. 1 set, electric pulls being used for Nos. 2 and 3. Of course empire targets were thrown during the shoot.

In the cashier's office were Cashier C. Bartlett Hills, who has acted in this capacity at every shoot the club has ever held, and his able assistant, J. L. Sellers. These important officials were located in a cage of galvanized wire netting on the western end of the porch that surrounds three sides of the club house. The shoot was managed by Elmer E. Shaner, so that nothing need be said about that portion of the work of the tournament.

After the above brief introduction, it will be in order to review each day's work in detail.

FIRST DAY, MAY 12.

After the preliminary practice of yesterday, with over sixty shooters on the grounds, everybody looked for an entry list of 100 at least in event No. 1. When that event finally closed the cashier's books showed that there were just 101 entries, a big list indeed.

The early morning hours were deliciously cool, owing to the heavy, but brief, downpour of the previous afternoon. But when the sun got away up in the heavens the heat was very severe, especially on those who came from the northern and northeastern portions of the United States. Even the breezes that swept loose pieces of paper into the air had nothing cool in them. We just sat still, perspired and generally enjoyed ourselves. There was no difficulty about the latter feat, thanks to the Memphis Gun Club and its members, all of whom saw to it that its guests did not lack in any particular. Of course, Tom Divine and Irby Bennett were the busiest men on the ground (not including Elmer Shaner), and how either of them managed to break over 80 per cent. is a mystery to us just at present. Irby broke 86 per cent. after shooting himself out of a place in No. 6.

The shooting was not hard, the targets only going between 40 and 45 yds. so far as we could judge, but still there was something that spoiled straight just when they looked certainties. Not that there were not lots of straight scores, on the contrary there were any number of them; six out of the sixty shooters in event No. 5 scoring 25 straight.

CHAN POWERS'S GOOD WORK.

Chan Powers carried off the honors of the day, losing only 1 target out of his first 105, and only 5 out of 165 shot at. Charlie Budd kept up the good work by losing 8 out of the same number. Captain Bartlett and Frank Parmalee were tied for third place with 11 lost birds. Critzer, of San Antonio, and his 16-gauge gun, did wonders to-day, making a run of over 65 straight, Rolla Heikes being credited with the same run. Gilbert, who tied with Budd in yesterday's practice events, did not keep quite up to the same notch, but still he landed with a percentage of 92.1 for 165 shot at.

ENTRIES AVERAGED 71.

The total number of entries in to-day's event was 558, making an average for the 8 programme events of just 71 entries; 101 in No. 1 and 60 in No. 5 were high and low water mark respectively. Including an extra with 21 entries in it, just 12,080 targets were thrown during the day. In the extra, Wheeler and Gilbert made straight scores. Below is a table giving, in order of merit, the totals and percentages of the

In addition to the 60 shooters in the above list four others shot in one event only, as follows: Du Bray, in No. 3, with 9 out of 20; Leach, in No. 4, with 15 out of 20; Alston, in No. 6, with 15 out of 20, and Robertson in No. 8, with 16 out of 20.

FOURTH DAY, MAY 15.

Another glorious day for trap-shooting, an exact counterpart of yesterday. If this is the sort of weather they have all the year round in Memphis the Bluff City must be specially favored. Anyway, the weather we've experienced this week has been all that we could ask, with the possible exception of the storm of Wednesday afternoon.

DROPPED FOR PLACE.

The single unpleasant feature of this shoot occurred to-day. Easton shot in about the last squad in event No. 1 and delicately dropped his last target to get into the 18 hole, as there were a large number of 19s ahead of him. The case was reported to Manager Shaner, who, willing as usual to give a person the benefit of the doubt, asked Easton if it was so, and if it was, why he did it. That Easton saw no harm in his action is evidenced by the fact that he replied that he had done it, as there were "so many 19s." Carrying out the instructions of the Memphis Gun Club, plainly and positively stated in its programme, Easton was told to put up his gun, draw his entrance money at the cashier's office and take no further part in the tournament of the club.

A GOOD ENTRY LIST.

To-day's scores show that there were fifty-six shooters on the grounds, fifty-four shooting in more than one event, while Easton shot in No. 1 and W. Harris shot in No. 3, the latter scoring 14 out of 20. Out of the above-mentioned fifty-four shooters forty-four shot the programme through, the entries for this day averaging 43.3, an excellent showing for the fourth (really the fifth) day of the tournament. This made the average entry for the thirty-two programme events reach the high mark of 57.3, a figure that the Memphis Gun Club may well feel satisfied with.

SURVIVAL OF THE FITTEST.

The last day of a target tournament always brings together the cream of those who have shot on the previous days. Those who have shot in bad luck or who were outclassed have dropped their money and disappeared, while business often calls many a shooter away before a tournament closes. It is, however, a fact that the company on all "last days" is always warm. To-day's entry list was no exception. Of the forty-four who shot through the eight programme events, twenty-two (or exactly 50 per cent.) broke 90 per cent. or better. Jim Elliott went into a trance and broke 162 out of 163 in capital style, making the high run for the tournament—76; Frank Parmalee was right after him with one less, running 104 out of his last 105. Bartlett and Leroy were also well in it with 160 breaks each. A glance at the other figures shows that there were several below the above who made averages that would have seemed much better were it not for the four top-notchers we have just mentioned.

Such figures as the above show plainly that the shooting could not have been very hard; and it really appeared to us from what we saw of the last two events that the targets were not going as far or as fast as they did on the three days prior to this one. Still, no matter how easy or how slow the targets were thrown, the scores are really remarkable, and speak volumes for the breaking capabilities of the empire target. Then, again, the company must be considered; it was, barring one or two notable absentees, composed of the very best of the trap-shooting talent of the United States. Below is a table of the

SCORES OF MAY 15.

GRAND TOTALS AND GENERAL AVERAGES.

Thirty-three men shot through the entire list of programme events, thirty-two in all, calling for 660 targets, unknown angles. Of the above-mentioned thirty-three shooters, Charlie Budd led the van with the fine average of 91 per cent. for the 660 shot at. Next to him, but five targets in the rear, came Frank Parmalee with 616 breaks and an average of 93.3. B. A. Bartlett and Jim Elliott tied with 615 breaks and a percentage of 93.1. The following list gives the standing of the men in order of merit:

	Broke. Per ct.		Broke. Per ct.		
C W Budd.....	621	94	Ralph Trimble.....	585	85.6
F S Parmalee.....	616	93.3	E D Fulford.....	583	88.3
B A Bartlett.....	615	93.1	C Linderman.....	581	88
J A R Elliott.....	615	93.1	F Van Dyke.....	581	88
R O Heikes.....	610	92.4	J W Sexton.....	577	87.4
C Powers.....	610	92.4	A B Critzer.....	576	87.2
O R Dickey.....	609	92.2	W Miller.....	573	86.8
B Leroy.....	607	91.9	O A Young.....	573	86.8
Fred Gilbert.....	604	91.5	A Meaders.....	572	86.6
H G Wheeler.....	604	91.5	Shorty Bacon.....	571	86.5

Broke. Per ct.		Broke. Per ct.			
E D Rike.....	600	90.9	C H Calhoun.....570	86.3	
C M Grimm.....	597	90.4	S McDonald.....	569	86.2
S Glover.....	596	90.3	G W Loomis.....	564	85.4
J Connor.....	594	90	D Porterfield.....	561	85
J M George.....	589	89.2	J A Jackson.....	555	84
C W Raymond.....	588	89	Abe Frank.....	527	79.8
H B Hill.....	585	88.6			

In the case of Rike, we understand that there is a discrepancy of one target between our figures and his actual score. The error, if such there be, occurs in the scores for the third day; our figures show that Rike lost 19 targets, whereas we believe that he lost only 18 according to his figures, which are corroborated by the cashier's book—excellent additional testimony. This would give him a percentage of 89.1 for that day as against 88.4, and a general average for the programme events of just 91 per cent. for 660 shot at.

GUNS AND LOADS OF THE CRACKS.

FOREST AND STREAM'S space is limited; there are only so many pages each week, and if the trap department does not keep within decent limits, the yachting and the kennel editors are both privileged to raise a kick. Under these conditions, therefore, we have thought it best to give only the guns and loads of the cracks who shot the programme through from start to finish, condensing as far as possible all mention of such matters. The table that follows explains itself:

Gun.	Shell.	Powder.
C W Budd.....Parker.....	Rapid.....	E. C.

A summary of the guns, shells and powders used by 107 shooters during the week, including of course those contained in the above table, gives the following:

GUNS.

Parker 30, Winchester 25, L. C. Smith 25, Lefever 5, Greener 5, Scott 3, Harrington & R. 2, Daly 2, and one each of the following makes: Franchotte, Remington, Westley Richards, Colt, Baker and a 16-gauge Kessler.

POWDERS.

E. C. 33, Du Pont 29, Hard Grain Schultze 12, King's Smokeless 8, Hazard Blue Ribbon 7, Walsrode 1, American Wood 1, E. C. and Hazard 1.

SHELLS.

U. M. C. Company: Smokeless 48, Nitro 4, Trap 1, Walsrode Special 1; W. R. A. Company: Leader 33, Blue Rival 3, Metal-lined 1; U. S. C. Company: Rapid 5, Peters's reinforced 3, Eley 1, Rapid and Smokeless 1, Rapid and Peters 1.

FIFTH DAY, MAY 16.

This was live-bird day, an innovation so far as previous tournaments are concerned, live-bird shooting having only been legalized by the Tennessee Legislature within the past twelve months. Everything was favorable for the shoot, the strong wind that would have bothered target shooters being just what the club and its guests wanted. A first-class lot of summer birds had been secured by the club, and in the earlier part of the day they flew well and fast. Toward evening, with a heavy thunderstorm brewing, the wind dying away and the air growing sultry, the birds were naturally not fast.

The conditions of the one event on the programme were: 20 live birds per man, \$20 entrance, birds extra at 25 cents each, handicap rise, the club guaranteeing \$500 in the purse. The entries footing up to 32, the club was out nothing, there being \$600 in the pot, 4 moneys. The handicap committee was composed of Elmer E. Shaner and Paul R. Litzke, and we must confess that, judging from the apparent total absence of kicks and the fact that 23 out of the 32 shooters got in for the money, this committee of two performed its difficult duties admirably.

Charlie Budd shot as well as he ever did in his life and that's saying a great deal. Heikes pumped his birds down with great regularity, but was somewhat lucky in drawing easy ones, at least while we were looking on. Wallace Miller, E. D. Rike and F. P. Poston, the latter a popular member of the Memphis Gun Club, all shot well, Poston and Rike exceptionally strong with their first barrels. Poston is unquestionably a dangerous man at the mark he was given to-day. Fred Gilbert, from the 32yds. mark, drew hard birds, but killed them well, losing only one, and that one dead out of bounds. Chan Powers was unfortunate enough to draw a hard bird for his last one, a driver from No. 2 trap that carried both loads of shot over the boundary. W. F. Allen, also a member of the club, shot a 16-gauge Parker with 2yds. of powder and succeeded in killing 23 out of his first 24; he then had to change to a 12-gauge gun for his last bird, as his 16-gauge shells were all gone; the change in all probability caused the loss of his 25th bird. Jim Elliott, Frank Parmalee and Charlie Grimm all three shot a capital race. Leroy shot probably the best up-hill race of anybody, losing his first 2 birds and then accounting for his next 23 without a loss. Abe Frank's 23 out of 25 fully deserved all the applause it elicited, this being the first time he ever saw a live bird leave the traps. We believe also that this was Mr. Allen's first essay at live-bird shooting. Ferd Van Dyke's dropping out on the 19th round is distinctly traceable to his being attacked and conquered by the Memphis water during the previous twenty-four hours. A. W. du Bray severely handicapped himself at the start by losing 3 out of his first 4 birds; he then ran 12 straight before retiring finally. Paul R. Litzke officiated as referee. The retrieving was divided between dogs and men, the dogs being really good ones at the business considering the heat and the dryness of the sandy soil on which they worked. Below are the scores:

THE LOST MAN.

LAST summer a party of fishermen were encamped in the wilds of the New Brunswick forest, sixty miles from Boiestown, the nearest point to civilization, when in the darkness of the night, coming no one of them knew whence and going no one knew whither, emerged a wanderer who proved to be demented. One of the party, our frequent contributor, Mr. Frederic Irland, secured a photograph of the wanderer and sent it to us with the story of the strange incident for publication. Mr. Irland's story of the lost man was printed in our issue of Dec. 14. It brought out shortly afterward a communication from another correspondent who wrote from Massachusetts that he also had come upon the lost man on the upper Millnoke Lake in the extreme northern part of Piscataquis county, in Maine. He too had secured a photograph, and this we printed in our issue of Jan. 4.

Now comes a letter, published in another column, from Miss Ada Carns, of New Cumberland, Ohio, in which she tells us that, having seen the photograph reproduced in our issue of Jan. 4, she has recognized the portrait as that of a brother who some time ago left his home in New Cumberland, and has since been heard from infrequently, as going from place to place, and in a condition of mind which makes it clear that he is insane. She adds a particular request that if any other readers of the FOREST AND STREAM shall come upon the unfortunate man they shall communicate with his family. We suggested in our note accompanying the second photograph of the lost man, that because of the wide reading of FOREST AND STREAM, it would not be surprising if the publication should lead to his identification. It is perhaps not too much to hope that if the wanderer has not already passed beyond human help, this appeal by his family may restore him to them once again.

ADIRONDACK DEER.

THE laws enacted by the last Legislature of New York State, shortening the time during which deer can lawfully be hunted with dogs or by the use of jack lights, will no doubt accomplish something toward lessening the slaughter of these animals in the Adirondack region. Every additional protection for deer will contribute something to the increase in their numbers, and the sum of these protective influences is already being felt in certain sections, where the deer are apparently increasing.

It may be well to remember that the passage of these bills by the Legislature is mainly due to the energy and persistence with which they were advocated by the Hon. Wm. Cary Sanger. Early in the session the importance of this subject was called to Mr. Sanger's attention by a committee of the Boone and Crockett Club appointed more than a year ago, and he was quick to see the bearing of the matter on the welfare of a large section of the State. Members of this committee urged the views of the Boone and Crockett Club on Game Law Committees of the Legislature at hearings held in Albany, while Mr. Sanger was insistent in the Assembly and was aided by Mr. Malby in the Senate, so that at last the bills passed both Houses, though not in the shape in which they were introduced. Gov. Morton, in his message to the Legislature, had strongly recommended greater protection of our deer, and when the bills came to him he promptly signed them.

The enactment of these laws cannot fail to gratify a very large number of persons who, in the face of many discouragements and defeats, have labored long and faithfully for the better protection of Adirondack deer. All persons who are interested in that region are to be congratulated on the passage of the bills. They are good so far as they go, but it must be confessed that they do not go very far. They will accomplish something in several

localities, and their influence will be good; but after all they are mere drops in the bucket.

The passage of these laws chiefly through the efforts of Mr. Sanger, and in the face of great opposition, is a personal triumph for him and for the club which he represented rather than the triumph of a principle. Until the repeal of that provision of the New York game law which practically opens the market to the State for the sale of game throughout the entire year, there is not much hope of effective game protection within this State. An organized effort must be made to restrict the sale of game to the open time. Not until this shall have been done, and the law enforced, can the game of New York State be protected.

It is unfortunate that the mischievous game bills brought before each Legislature could not all be opposed by the same forces which secured the enactment of these three game bills.

INDIAN HUNTING RIGHTS.

THE United States Supreme Court on Monday of this week rendered its decision in the case of the Bannock Indians, in which was involved the rights of the Indians to hunt at will on the unoccupied public lands without regard to the game laws of the State of Wyoming.

It will be remembered that in July of last year certain Indians from the Bannock reservation in Wyoming invaded the country in the vicinity of Jackson's Hole on an expedition for elk. The hunting of elk was at that season prohibited by the laws of the State. The people of the neighborhood turned out to drive the Indians back to their reservation, and made the most of the opportunity to shoot down some of the unresisting and defenseless savages. After having thus taken the law into their own hands and inflicted the penalty of capital punishment for misdemeanors which the law punishes only by fine and imprisonment, the Wyoming authorities took the case into court, to determine the actual rights of the Bannocks as secured to them by the conditions of their treaty with the Government. The Indians had always hunted out of season and in defiance of the laws governing the white residents of the State; and appeals to the Indian Bureau had been met by the statement that the conditions of the treaty were such that the Indians could not be restrained from hunting at will on unoccupied public lands. The determination of the existence or non-existence of such a right was made the point of issue, and the case was carried up to the Supreme Court.

In the decision handed down on Monday the Court holds that "the intent of the treaty must refer to the time when it was executed, and could not be construed to interfere with the laws of a State, erected into being by act of Congress subsequent to the exemption of the treaty, which contained no reference to the terms of that instrument."

The decision was read by Justice White. In a dissenting opinion Justice Brown holds that the decision of the Court violated the terms of the treaty between the Indians and the Government; and it is more important, he argues, to maintain our treaty faith with the tribe than to protect the game.

The finding of the Supreme Court will in all probability put an end to the conflicts between Indians and whites respecting game. Agents in charge of the Bannocks and other tribes will hereafter have no excuse for granting the Indians permits to leave their reservations for hunting in the summer time. The Indian hunter will be subject to all the limitations and restrictions imposed by the statute. In Wyoming big game may be killed only in such amount as may immediately be used for food, and only males may be taken. This will forbid the killing of elk heavy with young, a practice which has been common with the Bannocks as with other tribes.

THE PHANTOM FUCHS.

THE achievements of one Johann Fuchs, an armless sportsman, whose doings with rod and gun have been recounted with much parade of particulars in the daily press, excited our interest to an unusual degree; for after having read of the manner in which the maternal duck's efforts in Alaska are balked and come to naught, and other kindred recitals wonderful in their beginning and in their ending vacuous, it was a pleasure to read of the truly marvelous as an offset to the truly sensational.

Briefly told, the illustrious Fuchs was born in Baden 63 years ago, thus inconsiderately depriving this land of the honor of his paternity. His youth and early manhood were spent in fishing on the Rhine. Coming to America he took up his abode at Milltown, N. J., where he secured employment in a rubber factory. In an evil hour the arms of Fuchs were crushed in a large grinding machine, necessitating the amputation of the left arm at the shoulder and of the right below the elbow. To the stump of the left arm a hook was fastened, and with this and his remaining elbow and his head he became quite dexterous in manual accomplishments.

As his stipend of \$1 per diem was continued thereafter, whether he worked or not, he exercised forbearance in instituting a suit for damages, but a few years ago, as his emolument was cut down, he paid less attention to work and more to fishing, in which art he is said to be confirmed, and will sit out alone all day long in the sun waiting for a bite. In all particulars he is independent of others. In rowing his boat he grasps the oar with the stump of his right arm, presses it against his cheek, which he bends over to meet it, and by wriggling his body is able to move the boat. He holds the fishing rod under his armpit, allowing enough to project behind to balance it. He baits the hook with his mouth. His greatest trouble is encountered when the hook accidentally becomes fastened in his clothes.

In shooting, Fuchs places the gun at his shoulder by means of the hook attached to the stump of his right arm; within reach of his mouth when the gun is in position are two strings fastened to the triggers; taking one in his teeth and jerking his head back at the proper juncture, the gun is discharged. He is a good shot and often kills rabbits at sixty yards, and many of them in a season. He loads the gun, drives the powder home with a ramrod (which he forces with his elbow and withdraws with the hook), loading with great precision and dispatch.

Such is an abstract—feeble at best, as an abstract must needs be—of the life and doings of the armless Fuchs. What could be presented with a more touching combination of the pathetic, the industrious? What buoyancy under adversity, mind transcending matter. With hands on he avoided work and fished. Hands being gone, he fishes the more. He baited the hook with his mouth, presumably using a spoon. He held the rod as best he could. He pulled the trigger of the gun with his teeth and was a deadly rabbit shot. At last here was a sportsman with an impulse which neither misfortune, nor adversity nor work could deter.

But we wished to pay homage more directly to so worthy a celebrity. His identity was worthy of being verified specially. In an age when the fabulous and the sensational so often predominate, it was discreet to give Fuchs the benefit of all doubts as to his doings and his identity. So we wrote to the postmaster of Milltown for information concerning Mr. Fuchs's sportsmanship. Alas! there is no Fuchs. There is in all New Jersey no man without arms who puts helgramites on his hook with his teeth, who shoots a gun, who fishes, who saws wood. It is a fable.

Fuchs, the wonderful, is but an airy phantom, a creature of the fake makers, a product of the fancy.

THE BIOLOGICAL SURVEY.

The title "Bureau of Economic Ornithology and Mammalogy of the Agricultural Department" is one which for clumsiness and obscurity it would be hard to equal. Notwithstanding the load which the Bureau has thus long staggered under, it has succeeded in setting on foot under the able management of Dr. C. Hart Merriam some of the most important biological work that has ever been done in this country. Congress in its wisdom has seen fit to change the title of the Bureau, and it is now to be called the United States Biological Survey, a dignified name and one which has a meaning and which expresses just what the Survey is doing. The field work of this Survey for the year 1896 has already begun.

The Sportsman Tourist.

THE TROUT OF LAKE CRESCENT.—I.

PORT ANGELES, State of Washington, November, 1895. —In full confidence that after a long and varied career as an angler in various parts of the world and by as various methods, from fly-casting in our own New York and Maine wildernesses and in Europe to cormorant fishing in China, from drum fishing in Africa to smelting in Massachusetts and way down to cunner and floundering, Pisco's angling career has at last reached a climax, he, with the impressions of the few happy days that furnished that climax—days not yet a week gone by—fresh in his mind, will talk with his FOREST AND STREAM friends about them.

Climax, for within those days he has caught more large trout than he ever before has seen; he has with another caught the biggest trout he has ever seen, and he is full of faith that he has caught and will in this letter introduce to the world one at least new and as yet undescribed variety of the *Salmo* family. Of these and when and how he got them and of matters appertaining thereto this letter will deal, but it may be many months before this introduction can take place, for this is the situation:

First and lastly, the trout he writes of are eaten, and he carelessly failed to cause to be forwarded to Prof. Jordan specimen for identification. They were big trout, one weighed 11½ lbs., five averaged within a very small

pian range to the very edge of the high bluff which overlooks the harbor and the straits, and some fifteen miles away the island of Vancouver and the city of Victoria, whose lights now are, every evening when the fog permits, one of its views.

Along the base of this bluff there extends east and west a fine sand beach from 50 to 100 yds. in width, which at its western end sends out a broad, moderately elevated, stone gravel and sand spit, which after a gradual curve to the northward sweeps to the eastward at an angle slightly diverging from parallelism with the shore line for about three or four miles, forming a perfect breakwater to the C-shaped harbor with its embrace, a harbor well sheltered from all winds, with anchorage excellent in every respect, and good holding ground over an area of about nine square miles; into this harbor several mountain streams pour through valleys, and into these at their seasons salmon in great abundance seek spawning ground and at all times trout are abundant.

The horizon of Port Angeles is an almost unbroken circle of hills, hills so high that but for mounts Baker and Rainer or Tacoma, which with their 11,000 ft. apiece of altitude, and mounts Sante Shuskan, Olympus and Constance, with their average of about 8,000 ft. each, which project here and there, all would be entitled to the name of mountains, and indeed Constance and Olympus, not over twenty miles away, so gain by their proximity that they seem the equals of Baker, about 70, and Tacoma, about 150. But there is one point in which these two great mountains demonstrate their superior height; the great masses of snow which crown and flank their summits the year around, which at sunrise and set make of them most

the house a flower garden, in which white dahlias, roses, chrysanthemums, marigolds and poppies were in bloom. At the rear a vegetable garden well stocked with many varieties, near by a strawberry patch with full quantity of luscious plants, on which were blossoms and fruit both green and ripe, of which we had for our supper all we could eat. In the meadow the grass was green and succulent, and in the barn and racks was a goodly store of hay, potatoes and corn. This in latitude 48° north.

At Port Angeles there was a county fair going on, and the exhibits of vegetables, fruit, flowers and berries most creditable. I noted potatoes, beets, turnips, onions, cauliflower, cabbages, wheat, corn, oats, barley, hops, apples, prunes; berries, from cranberries to strawberries, were shown, that I was bewildered, all of large size and good quality.

Until about thirty years ago the splendid harbor was about all there was of Port Angeles.

About 1860-61 pioneers, a few at a time, attracted by the possibilities, began to reach this place, to squat, take possession of building sites and start homes. The thick forest in the rear on the bluff proved a barrier to advance inland, so the higher parts of the beach were selected and rude shacks and cabins constructed. Fortunately the winter climate was mild, and the forest supplied to the few who came welcome additions to their sea fruit diet of fish, crabs, clams and crawfish, abundance of venison, grouse, bear meat, squirrels to be shot at their back doors, from which the careless straying of children was prohibited, for there were also mountain lions and wolves. These, however, were seldom met, except by those who ventured to the elk benches not far away, and when met the hides paid for the tramp. The forest furnished abundant firewood; it was not then, as now, that for miles the beaches were buried in driftwood, the refuse of sawmills.

In 1862 the records show a white population of ten people, and of these the family of the keeper of the lighthouse on the end of the spit Ediz Hook formed a part; but about that time efforts which had been made to cause the transfer by the Government from Port Townsend to Port Angeles of the general Custom House for the Sound, and make of Angeles the port of entry, began to materialize and in 1862 the order was given. This produced a boom. Several hundred pioneers flocked to the place, and in 1864 there were about 200 bona fide inhabitants, who had bought from the Government about forty homestead lots; but the boom was not lasting, the Port of Entry and the Custom House were pulled back to Port Townsend in 1866, and this removal caused the almost complete abandonment of Angeles. All that could get away did, for they had found that their lots purchased from the Government were of far less value than they had thought. In 1864, when the land was thrown open to sale, there were reserved by the Government several thousand acres of the very best of the lots, and the purchasers found themselves on flank and rear crowded by wild land through which they had not even the right of way, or to cut a tree. The small area along the beach was of but little use without back country or commerce, and there was neither.

Most of the pioneers were in very moderate circumstances, quite a lot of them were wounded and for other causes pensioned soldiers, just out of our civil war, who with their pensions were esteemed to be capitalists, for they had money enough to pay fares to some other promising spot. By 1867 there were again left but ten white inhabitants; except that the boys and girls of 1862 had five years more growth, Port Angeles had not gained.

Thus matters stood for years; occasionally a newcomer would drift in and buy a lot, but from 1865 to 1883 the total sales were seven, and the population had in 1883 increased to but seventeen.

About this time there came a pioneer with new ideas. Mr. Frank Chambers, who, making up his mind to have a back yard, utilized the latent heat in a box of matches and underbrush, by which he soon became the quasi-owner of an annex to his 10-acre lot of quite a fair-sized lot that belonged to the Government. His example was followed, and many became land owners on the same terms. People began to come and buy, and the sales and population increased until in 1888 the climax was reached. That year there were about 450 lots sold, and the population was about 450—one to a lot.

In 1890 there came a boom. Over 2,000 emigrants flocked in, mostly impecunious. This sudden increase nearly swamped the town. There was no commerce, few farms and little money, and it was hard scratching for food and shelter. Nature did what it could. The sea and forest furnished fish and meat, and the climate's mildness reduced the need of shelter, but there were lots of hungry and suffering people in Port Angeles. Hard times took the place of the boom, and among the poorest were those

PORT ANGELES.

Photograph from a painting exhibited at the World's Fair.

fraction of 11 lbs. They are to him new trout, and beyond question should have been properly identified, classed and named, but he must wait until next spring, when, it is to be hoped, more of the same will furnish themselves to be sacrificed on the altar of science.

It was on Oct. 28 that he caught the fish, far too late in the season for any one familiar with the fishing to prophesy much success when he started, and now he must wait until the winter rolls by. He will while waiting make clear as possible the locality where the fish were caught, viz., lakes Sutherland and Crescent, in Clallam county, State of Washington, and about sixteen to eighteen miles back from Port Angeles.

A hundred years and more ago a Spanish navigator, Don Francisco Elise, cruising in his little caravel along the then almost uninhabited and excessively inhospitable shores of our new territory on the north Pacific, and struggling as do large ships and steamers nowadays with and against the rough seas, strong gales and treacherous tides which in winter characterize the north Pacific, slid by the dangerous rocks and reefs off Cape Flattery, and got but partial shelter in the straits discovered by his countryman, Juan du Luca; but calm enough at times, they too are in certain minds very turbulent, and it was with joy that, perceiving on his starboard an apparently safe harbor, he slid around the point of the long spit which protects an extensive basin, on which point, Point Ediz, there is now a lighthouse, and anchored in safety in this most excellent harbor, which out of gratitude and piety he christened Port Angeles—Port of the Angels.

It could not have been that the people he met, who came off to his vessel in their canoes, at all impressed him as angels, unless indeed he and his crew were short on provisions or water, for undoubtedly the Siwash, who then lived on its beach, brought him clams and crawfish and fish, salmon probably, and his boats had no trouble in finding abundance of most excellent mountain brook water, and if they were hunters as well as sailors they had but to enter for a short distance the then unbroken forest, which reached from the Olympic range to the beach, to secure fresh meat and birds, for deer were plentiful and bears and several kinds of grouse.

Port Angeles is still a harbor of refuge, not only for the "storm-tossed mariner," but for the mariner who, ready otherwise to leave the Straits and tackle the Pacific, discovers by his falling glass and other signs that a sou'wester is on hand to receive him. My own experience satisfies me as to this. The Philadelphia, on which I write, and live and have my being, has thus utilized the resources.

The Port Angeles of to-day, though, is a great improvement on that visited by Mr. Elise. It is a town of some seven thousand inhabitants, very good, pleasant and hospitable inhabitants, with stores and factories, mills, churches, town hall and an opera house, with enterprising people and large business interests—that is, large for so new a town. It has had since its inception alternating periods of growth and set-backs, booms and calamitous bursting of booms, but it has come to stay.

When discovered, except for a few Siwashes who gathered clam shells on its beach, and in the season salmon, salmon roe and smelt from its streams, the neighborhood was uninhabited, and so it remained for many years an unbroken dense forest, alternating according to altitude, of fir balsams, Oregon pines and other deciduous trees in belts stretching from the Olym-

beautiful features of the scenery, especially when, as often occurs, they reflect a rose-colored pink light, tell plainly of their superiority.

All of these mountains, especially on the Olympian range, are to the highest timber line densely wooded, as are their hills and foothills, and well tenanted with elk, deer and bears, with a fair proportion of mountain lions, wolves and panthers, grouse of many varieties and above the snow line ptarmigan.

Scattered throughout there are many lakes of wonderfully clear water, profusely stocked with trout of many varieties and unheard of size; at times abounding with ducks and geese and swans, and in the season the many mountain rivers and streams are filled with salmon, and it is claimed that prospectors have discovered among the Olympians coal, iron and precious metals, awaiting the progress of development and the advent of capital.

The inhabitants claim that a most uniform and mild climate adds to the advantages, and official meteorological records sustain the claim. Frost rarely comes before late in October and very seldom after the middle of April, and the soil, after the trees are cut, is very fertile.

Fruits, flowers, berries and vegetables yield abundant returns, and hardy vegetables are grown in the open air the year round.

On Oct. 25 I was driven to a ranch about six miles from Port Angeles, on the road to the Elwa River, known as Hatch's farm. Two years before the spot was covered with forest, now with every evidence of a thrifty farm. There were the house and barns, racks and pens, fronting

who, during the boom, built and improved on borrowed money—borrowed at from 1 to 2% per month, to pay mechanics and builders \$5 or \$6 a day; but the mortgagees did not get off unscathed. The bank in which they deposited failed, and then came even harder times.

Among the crowd were, as is usual in such adventures, many bad characters, genuine beach combers, thieves and rogues; but fortunately there was also a much larger proportion of respectable people, among them and prominently so the body of soldiers retired on pensions.

The town survived, but it had a lively season that year. The Government reserve encircled the town with a choking grasp and penetrated its very best locations. The people could not "spread themselves," they were far from homes, no money to get back or buy necessities, no ground to till. They came for homes, and they wanted them, they couldn't get them, and they grew desperate.

Meetings were held, and differing in all else, in one thing they were nearly unanimous: the reserve must be jumped, and jumped it was in a quiet, orderly manner. Rules and regulations had been established, and among them was this: "Each *bona fide* settler shall be entitled to preëempt two lots, each of 140×100ft. and no more, a house must be erected and improvements begun at once." At the early dawn of jump day the wilderness was invaded by men, women and children armed with axes, saws, hatchets and knives, the great trees were attacked and fell. The underbrush was cut and burned, the forest for a very large space disappeared, hundreds of little log cabins, "proving-up" cabins, sprung into existence; gardens, stump-trimmed and burnt-log ornamented, were

hands, lately recruited, the opportunities and advantages presented by Port Angeles and its environments were too valuable to lose, and I resolved to stay at least a month to utilize them to the utmost.

Shortly after arrival those among its hospitable inhabitants who became acquainted with my idiosyncracies included among the many hospitalities of receptions, balls, dinners, etc., invitations for a trip to the foothills of the Olympian, not far away, where hidden among the mountains were lakes and streams where I was assured there existed, anxious to be caught, more and larger trout than any other place in the world could furnish, or if I preferred hunting, deer, bears and grouse were within easy distance; if I chose to go further, a day's journey, I could take my pick from an elk band.

The first-named invitations chimed in with my wishes, and although I had my doubts as to facts sustaining the stories, I decided to take advantage of the first opportunity and go a-fishing, which I did, and for once in my life the results of a fishing trip exceeded my anticipations, so much so that, as I said on the start, the climax of my career as a trout fisherman was reached, that is to say I caught more big trout than I had done in my combined catches of many years, and I caught several of the biggest trout I ever saw, and I feel quite confident that I caught new and hitherto undescribed varieties, one in particular, the blue-back. But there is one drawback to my perfect success, not one of these trout was caught with a fly, and there are enthusiastic anglers to whom catching a trout by trolling would be in their letters about it beneath their dignity. To a certain extent I am with them. Could I

there were many times when a dash down the hill would have ended our trip, by a smash of the entire outfit.

To lessen the risk, three of the four of us got out at the head of each heavy down grade, lashed the front and hind wheels on one side together and footed it, trusting that Mallette, with his skill in driving, would be found whole at the bottom.

It was early morning and a beautiful day that we started. Our objective point was either Lake Sutherland, about sixteen miles to the southwest, or if we got along fast enough to give chance for the evening's fishing, Lake Crescent, about three miles further along on the same road.

The idea of stream fishing with flies had been discussed and abandoned, the Elwa and other streams we would meet and cross were full of spawning salmon, and there was no chance for any trout except by use of salmon-roe, and of using that my Alaska experience had surfeited me.

Our course after leaving the beach was to the southward for a mile or more up a winding steep road, so narrow that it was necessary to station a man at the top to warn approaching vehicles to wait till we got by, then for a couple of miles further on a bench or tableland, through the big clearing, profusely dotted with the "proving-up" log cabins of the original settlers, many abandoned and unoccupied. Each had its front and back yard, many a vegetable or flower garden, all had stumps, and between each and its nearest neighbor was a barren stretch. Then we bore off more to the westward. The forest through which our road led is composed largely of deciduous trees, although there are a few oak and other hard woods. The various growths of valuable timber are in belts, and I should judge that the white cedar and red fir belts are of the most valuable, or I should say the belt, for they grow at the same altitudes and side by side. These trees differ in many important particulars. The cedar has a soft, easily-worked, straight-grained quality which eminently adapts it for the principal use to which it is put—shingles, which are in every respect superior to those of any other than perhaps the cypress, and they are in endurance fully the equal of the cypress. The wood of the red fir, which is, I believe, the Douglas fir and commonly called Oregon pine, is tough and harder, and adapted for spars and timbers; the cedar being good for the joiner work and finish of the structure built of the fir. Unfortunately there is a great deal of waste in cutting the cedar for shingles. The butt, for some reason, is unsuitable, and the stumps, containing material for many bunches, are cut high up, always with the saw.

There were clearings which to a tree lover gave sadness. Acres of great cedar stumps, sawed to a height of 6 or 7ft., marked the ravages of the shingle makers, who have, however, had bad fortune in their enterprises; for shingle mills and sawmills have burned and impoverished their owners. One in particular, which had been a large one, judging by the magnitude of its ruins, was close by the road, and surrounding it a deserted village of neat cottages, many with bits of flower gardens, and broken toys in the yards, indicating the presence there in days gone by of women and children; families of the employees the fire had impoverished also.

There were other clearings in all stages, from wildernesses of burned logs, charred stumps and ashes (slashed and burned) to others with well started farms, where the fertile soil was already producing good returns for the labor.

We had with us a shotgun, and quite a number of times on our route the Doctor would bring down for our supper a blue or willow grouse.

The county road was for much of the distance in fair condition, and we were able to go on a trot, but there were a few very steep hills to go up one side and down the other which tried our wind and our wagon, and my companions dreaded those hills more than I, for as the oldest member of the party I was invited always and always accepted the drive going up, while the others tramped and panted, for it was a warm day; going down I walked and Mallette drove.

None of these tramps were very long ones until we came by gradual rise to the brow, which overlooked the valley stream and bridge of the River Elwa, 1,000ft. below, and from this brow the view was simply magnificent. The valley is about a mile across at the level of the bridge. In rainy seasons it is well occupied by the river, which is there wide, deep and rapid; now it was but a sprinkling of gravel or sandbars and islets, through and around which wound a number of narrow, shallow creeks, and across the expanse curved the bridge of the Elwa, a graceful and picturesque structure.

We rested an hour on this brow, lunching and enjoying the scenery and our pipes and feeding the horses. Then with lashed wheels the wagon began its zigzag descent,

LAKE CRESCENT—PYRAMID MOUNTAIN IN FOREGROUND, STORM KING IN BACKGROUND.

fenced in, and a town had been born to which the good and the bad had contributed; but when the excitement was over, when the people had settled down in their long-hoped and hard-worked-for homes, then came a trouble which as brooded on grew. They did not own their homes, they were simply trespassers and squatters, at the mercy of the Government they had defied.

Led by prominent and public-spirited citizens, among whom was Mr. M. J. Carrington, a gentleman who will appear later in this paper in another rôle; the Hon. John L. Wilson, at the time member of Congress for the district, and others, they appealed to Congress for relief, begging of it that the land should be sold to them. Mr. Wilson, himself a soldier who had fought in the same cause, took great interest in the matter, upon which the fate of many old, wounded, sick and worn-out soldiers depended, and through the efforts of these co-workers Congress at last authorized a sale, and in January, 1894, over 3,000 acres were sold, the Government reserving still a portion, including the spit and lighthouse point.

At this sale preference was given to those who had already taken possession of lots and improved them, and this preference agreed with the sentiments of the community. No speculator bid against the widow or cripple, and the whole affair was most amicably adjusted—that is, up to a certain point. There was one difficulty not easily tided over.

The terms of the sale were cash. Cash was scarce; the national bank had or rather had had nearly all of the hard-earned savings of the settlers on deposit; it suspended payment. In some way, many ways, however, a large portion of the money was raised; some benevolent capitalists furnished money at moderate rates; others not so benevolent did the same at high rates, 1 to 2 per cent. a month with bonus. These latter now own a goodly proportion of the claims and the abandoned cabins, which having got cheap, they can help further development, if they will, by low rents and prices.

The plucky Angels were rewarded for their work, the town has for several years grown healthily and steadily, and such industries as shingle making, sawmills, salmon canning, etc., etc., are being pushed, and others are in contemplation.

For many of the facts and figures foregoing I am indebted to Capt. Thomas H. Bradley, U. S. Army, retired, who has made his home in Port Angeles, his business and pleasure to advance intelligently its interests.

Most of the dwellings of Port Angeles, those of the better class, are situated on the bluff and along its face; back of these, covering many acres, are the proving-up cabins, a view of which is here given.

Most of the business houses are along the beach, which at narrow places and across low-tide flats is supplemented by platforms on piles, and there are many square miles of this plank foundation.

Communication between the beach and bluff is made by one long easy grade plank wagon road, running along the face of the bluff at the east, and a steep narrow wagon road at the west, and a number of almost perpendicular trails and stairways for pedestrians up the face of the bluff; these I found tolerably short cuts coming down, mighty long ones when going up.

My first visit to Port Angeles was made on Oct. 2, 1895. Owing to her long service in places in the tropics, notably Honolulu, where opportunities for drill exercise and training of a ship's company are very limited, and to the presence among the men of a large number of green

have caught these trout on flies I should have done so, but I couldn't and I didn't. It was too late in the season for such flies as we had with us, possibly for any. Efforts were made, but the fish with very few exceptions, and they small ones, failed to respond, so our catch was by trolling.

It was three weeks before I could spare myself the time for an outing, but at last, on the morning of Oct. 21, Mr. Charles Mallette, the Mayor, drove to the wharf, and meeting my boat took me into his wagon with my two companions, Lieut. Gorgas and Dr. Smith, both good companions and adepts with a gun, neither an expert on angling.

Mr. Mallette's team was his own and a good one, accustomed to mountain roads, but it was hitched to a two-seated vehicle procured from a Port Angeles livery stable company, and the wagon, proved to be a terror, a "holy terror" before we got through with it, and to it we owe nearly all of the profanity indulged in on our trip. For an excursion, uninsured, over mountain roads—where steepest of steep grades wind downward along the edges of cañons on one side, the face of the mountain on the other, through spaces narrowed by projecting cedar and fir roots, stumps and stones, at the lower end unsubstantial bridges over creeks and sloughs, reached at times by a sharp turn—a wagon needs be near to perfection and the driver as skillful. Mallette fortunately is a skillful driver, but that wagon! The pole was so short that the single truss rubbed on the wheels, a side bar had been broken and badly repaired, and worst of all there was no brake.

The want of this was the worst of the defects and was a source of actual danger, for had either of the horses, while holding back with the neck, concluded to do so no longer,

PORT ANGELES—SHOWING PROVING-UP CABINS IN FOREGROUND.

while we tramped stretched our legs, and by cross-cutting trails reached the river and the bridge well ahead of it.

The Elwa River will prove a very important factor in the future development of this region, for the time must come when the market will demand the lumber which the back country, drained by this river, furnishes in abundance, and which the Elwa will carry cheaply to the sea, where it can deliver it at points that will save lumber vessels long journeys.

A sawmill at Port Crescent could save a raft of logs from the long tow to Seattle or Tacoma, and the sailing vessel a journey of perhaps three or four days' time or expense in towing; and at Neah Bay, just inside of Cape Flattery, there is very good shelter, available for loading timber and lumber brought down by the Elwa. And another stream, the Solduck, emptying into the Pacific south of Cape Flattery, has a little harbor, quite as good as many on the Pacific coast, where commerce thrives, and the western parts of the timber belts adjacent on the east to the Elwa could be easily handled by it.

We found a camp of Siwash Indians, probably from Neah Bay, on the banks of the stream; they were collecting salmon—a mere matter of wading, gaffing and clubbing. They were evidently prosperous, and well outfitted with tents, wagons, horses, dogs, canoes and whisky, judging by some who came close to us.

The ascent on the western side of the river is longer and steeper than that on the eastern, and going up a short cut is a very different thing from going down, but when we did arrive at the summit we had the consolation that we were nearly as high up as we would have to go.

A few miles from the Elwa there appeared on our left a white sign board; on it we read "Lake Road," and we knew our journey to be nearly ended, for it was "but three miles" by this road to the lake. We turned into it, and for I am sure five miles we had a bit of as rough teaming as the Adirondacks or Maine woods can furnish. I have tramped them both and I know, and I have never encountered more rocks, stumps, roots, pitch holes, rotten corduroy, which with burned and burning logs, their ends projecting well into the road, made it lively driving for Mr. Mallette, who was equal to the emergency and came out smiling.

Just before sunset we reached a summit from which some hundreds, eleven or twelve I believe, feet below we should have been able to enjoy this view, and a very charming bit of scenery it is reported to be. What we did see was simply a chaos, a great bowl full of smoke through which here and there, a few miles away, a mountain top dimly peeped, and at various altitudes from 100 to perhaps 2,000ft. smoke dimmed, semi-luminous spots, in which we could at times discern a shadow like tracing of the trees, which were as unhappily so many throughout the Olympians yielding to the forest fires.

We were told that down in that hidden basin there were lakes, and houses and supper, so on faith we tramped again cut across by a trail, while Mallette guided the horses down the series of zigzags of the road, at the foot of which there emerged from the smoke the clearing and buildings of where we were strongly tempted to tarry, for Wilson has repute for well-cooked trout, venison and bear, potatoes, onions and coffee; but there was already a party of guests in possession of the most of the accommodations; so, although our stomachs urged, we resisted and drove on another mile to the "Hotel de Fisher," as I found it described in a blank book used as register; less pretentious than Wilson's in magnitude, but as we found it clean, cosy and comfortable.

Except that this hotel is somewhat smaller and has a less number of rooms than Wilson's, the style of architecture of the two hostleries is very similar. Both are fair specimens of the "proving-up cabins" of which I have written. I will, in consideration of the ingenuity of Mr. Fisher in utilizing space, give a pen sketch of his hotel.

The order of architecture is one-story log cabin; in character and style, sleeping and buffet car combined. The interior contains one room 16x12ft., and if a lean-to can be considered also as interior, another about 8ft. square. On the left the side of the principal room was devoted to bunks, of which there were six in two sections, one above another, the bottom ones being double. In front of each section a calico curtain insured privacy. There were no springs or slats to these beds, but the bottom was of canvas and very like a sailor's hammock; there were plenty of warm coverlids and blankets, all very clean. On the right a 10ft. oilcloth-covered table furnished space for meals, cards and tackle repairing. On the right of the door a little wood-burning stove, which would, in five minutes from the time the match was applied to the balsam sticks, send out such glowing heat that we were thankful for certain elusive cracks in the roof, through which came ventilation and peeps at the stars. In the spare square feet there were lockers, benches, chairs and a passageway; the logs of the sides were well fitted with pegs and antlers to hang things on, while overhead a skeleton of a plow made storage room for odds and ends. Eight of us slept and lived in that single room with great comfort—that is comparatively. The lean-to had also bunks, three of them, and a cooking-stove with outfit of utensils, over which the landlord presided—the landlord, dog and cat. Verily, it was *multum in parvo*, which means snug and comfortable by a liberal translation.

At the front of the cabin there was a porch, covered, and it held a bench, a tin basin, a bar of soap, a hair brush, a tin bucket of fresh water and a towel. What could a man ask more? especially if he had with him his own toilet outfit.

Fronting the house there was a garden; this consisted of a square shack fence inclosing about 300sq. ft., in which quite a flourishing crop of weeds was growing. Thus the requirements for "proving up" were met, and these requirements are not simple, one must in trying to meet them steer a fine course "between the devil and the deep sea." A certain amount of improvement must be done by a pioneer to make good his claim to a piece of land taken up under the "homestead" allowance from the Government, but every dollar's worth he does his county, or it may be his State, taxes; if he puts \$100 worth of improvement on his land, he has to pay every year \$2.75 for the privilege. Not much encouragement for a man with whom dollars are not plentiful, lots though of encouragement for the sharks who prey on their fellow men, growing rich on the labor and sacrifices of others who grow poor in proportion, who when men who have slashed and

burned and labored for years, living alone in the wilderness "proving up" their claims, need a few dollars, lend it to them for a bonus and at extravagant usurious interest, feeling sure that when the note is due their "pound of flesh" will be forthcoming, blood or no blood, there is no difference to them.

I have in my mind as I write an instance of just this: A pioneer owning, for he had made good his claim, a few hundred dollars with which to make improvements, borrowed that money from a friend in business, giving his note for a year for just double the amount he received, binding himself to pay 2 per cent. a month for the money, and securing the note by a bond and mortgage on a very valuable timber lot worth ten times the face of the note. In one year the lender owned the property. Call for example the amount borrowed \$500, the note was for \$1,000, and he paid in interest \$240, in taxes \$14— $\frac{2}{3}$, and he had nothing left.

But the shark owns the land now, which has cost him but \$250, and which he can afford to sell or lease at low figures, but which it is more likely he will hold, as he can afford to sell for high prices. A community in which such crushing of energy can be safely effected cannot thrive until it cures itself.

I sat up late that evening chatting with my host, Mr. Fisher, who is an intelligent man and knows a great deal about the lakes. He says that Lake Sutherland abounds in trout of many varieties, which in spring take the fly readily; and he pointed out to me in his "register" quite a number of records of extraordinary catches, several of which I copied and promptly lost the paper. From what he told me, and what I learned subsequently and previously from others, I have gotten up quite an hypothesis in regard to lakes Sutherland and Crescent, their origin and history, which I shall give after I shall have posted my readers on my facts by a description of the lakes. Sutherland and Crescent lie in the same line, nearly east and west. The eastern lake, Sutherland, is about three miles long, one-half broad; Crescent about eight or nine long, one to three miles wide. They are separated by a ridge of moderate height, 400 or 500ft., and two or three miles wide; land densely covered with large trees. This ridge is a famous resort for deer and bears. The surface of Lake Crescent, the westernmost lake, is about 70ft. higher than that of Lake Sutherland.

There are quite a number of mountain streams that empty into Lake Crescent, a few into Lake Sutherland, from valleys in the high and precipitous mountains to the southward—the Olympian foothills. These streams all contain many trout of several varieties, notably rainbow, Dolly Varden, mountain, cutthroat, silver and speckled.

All of these are found in both lakes, and in addition some nondescripts that the lake people call "half-breeds," and in Lake Crescent others called "blue-backs," which are not found in the streams.

There is no known stream or communication of water from one lake to the other. Sutherland has at its eastern end one outlet which flows into the Elwa, and through which, when the water is high enough, salmon run into the lake; Crescent has no known outlet, excepting by a fall of over 70ft. at its western end. At one portion of this outlet there is a contraction forming what they call a flume, through which the current is a very heavy one, nearly perpendicular, up which no salmon could go.

So far I give facts. Now the idea based upon these facts is that at some remote period the two lakes were one, and before that they were a part of a stream which flowed through a deep cañon; that there occurred landslides which dammed the stream in two places, some twelve miles apart, leaving it a single long deep lake, or rather a long dammed trough which in time by the accession from the streams became a lake into which the salmon entered; that then subsequently occurred another slide which divided the one lake and made two of it. Into the smaller eastern lake salmon could still come, and do; into the westernmost they could not; but when this slide took place, if, as is probable, there were salmon imprisoned in the upper lake, there was but one of two things for them to do, stay there or die. If they stayed it is probable that then ensued modifications of form and color due to their environments, and it is possible that the new fish hybridized more or less with some of the many varieties of trout in the lake, and that the results are the blue-back trout and others of the nondescripts. There is, I admit, considerable speculation in all of this, but it is a plausible theory I believe to account for there being in Lake Crescent strange trout, which fact, however, I did not find out on this trip, for Sutherland gave me such excellent sport the next day that I was well satisfied to stay there.

After a good night's rest and a warm up of coffee and bread, we at an unnecessarily early hour the next morning started in for a day's trolling, premising with a little unsuccessful fly-casting. I am not sure but if we had been better equipped we might have caught a few trout, but not one rose.

My outfit, and it was the only one for use of all, consisted of small gnats, caddis, ants, etc., procured for use in the Truckee, American and other streams in the Sierras, and were utterly useless here, although in all directions and constantly trout were taking insects, all of one kind, viz., a medium sized white moth or butterfly, with black spots on wings. These were hovering over the lake in great numbers, and every now and then a tired one would, probably deceived by the film of ashes which covered much of the surface, alight. We counted quite a number of times, and these averaged about four wing flutters before something came up from below, and quietly the butterfly disappeared. Occasionally we could when near get sight of the head of the something, and it was a trout, generally of good size. There was no leap or anything that could be justly called a strike; there was a feebly fluttering butterfly, a slight ripple and it disappeared. It was as though it were a salmon, not a trout, that took them, and I called to mind the Brackett's famous painting, "The Rise." Since leaving Port Angeles a young gentleman of Victoria, an adept at fly-tieing, the son of Mr. Dennis Harris, the grandson of Sir James Douglas, formerly Governor-General of Canada, has sent to me a card of flies of his own make which he thinks will seduce these trout. They are good imitations of the butterfly, and he says that if cast well out and very gently moved the wings will flutter. I'm sure I hope so and long to give them a trial.

We trolled with four lines, two on rods with no sinkers; two hand lines, one of which was of twisted copper,

and drew its spoon, a 4in. Tahoe, at from 20 to 30ft. under. We had also on our rod lines large spoons.

The weather was not favorable; it was raw and chilly, the air full of fog and smoke, so much so that we could hardly see the shore when 100yds. away, but we had rowed hardly 50yds. when a lively trout—it proved to be a 2lb. mountain trout—took the Tahoe spoon and I took him. Hardly was my line out again when on the same spoon I got so heavy a strike that but for assurances of it being impossible I could have pronounced it a snag which broke a double gut leader and cost me the spoon, which indicated that there were some big trout in Lake Sutherland. Having no other Tahoe, I substituted a large fluted black bass Skinner spinner, and during two days that we trolled this line and spoon took more large fish than the other three together, among them our largest, a 2½lb. silver trout.

Lieut. Stoney, of the Navy, a few days after took a 4lb. mountain trout, and Mr. Wilson one of 4½lbs. Our surface spoons did little good until after several changes, each of which decreased the size of spoon and increased the size of catch. We found out just what the trout liked and we gave it to them, viz.: small Akron & Emerich spoons No. 2, about ¾in. long, silver and copper; then we had to reduce our lines to two, for we could not attend to four, and we preferred the rods. This of course made the boating of a fish comparatively slow work, for our rods were light ones. With my favorite bass fly rod of split bamboo it cost me nearly half an hour to get one trout into the boat. Yet our catch was a good one, consisting altogether of 149 trout, weighing over 75lbs. Our catch was principally mountain, speckled and silver trout, but we got two Dolly Vardens, one cutthroat I know of—perhaps more, for the mark don't show very plainly without close examination—and quite a number called locally "half-breeds." Our fish ranged from ½lb. to 2½lbs., and there were twenty above 2lbs., and many between 1 and 2lbs.

There seems to be little difference, except a bit in the coloration, between the mountain, speckled and silver trout. All were strong fighters, leaping as they struck and quite a number of times during the struggle. I won't say how high, for I bear in mind the attacks upon the judgment or veracity which in your columns were made upon a gentleman who gave his figures as to the leap of a bass. I think they jumped higher than I am willing to say.

To wind up, I can only say that we had a most successful and enjoyable trip, and after our return to Port Angeles—and several of the Sound papers devoted much space to the chronicling of our success, remarkable principally on account of the lateness of the season, and the prevalent belief of a large majority that our trip would prove a failure through this cause—I shall devote the rest of this article to a second trip, on which I did Lake Crescent and discovered the big blue-backs.

PISECO.

[TO BE CONCLUDED.]

UNCLE LISHA'S OUTING.—XXIII.

The Caravan.

TOWARD the middle of the afternoon Uncle Lisha and his friends entered the outskirts of the little city, where the unusual appearance of a camping outfit attracted considerable attention and was generally believed to be one of the side shows belonging to the coming caravan.

It presently gathered a following of boys, and when Sam drew rein in front of Cousin Chace's tidy house these were joined by several grown up and no less curious idlers, and all surrounded the wagon in an interested group.

"It's a nigger show, I bet ye," one boy confidently asserted.

"Yah. What you talkin' 'bout?" cried another, contemptuously. "It's the Injin show! Don't you see the canoe? An' that black feller up there's one of 'em; the ol' chief he is."

"My, don't he look ugly, though?" loudly whispered another, staring in fascinated horror at Antoine, who, overhearing these remarks, at once fell into humoring them.

"Yes, sah, Ah'll was big Injin, me! A'n't you see haow Ah'll was sca'p dis hol' mans?" He lifted Uncle Lisha's hat, displaying the shining bald pate, and then after a moment's impressive silence continued, "Wal, seh, boy, Ah was tore off you hairs jes' lak dat 'f you'll a'n't ta' careful. You want for hear me spik Injin more better as Anglesh?"

"Cangra musquash nawah alamose woisoose chunkamug peskegan. Ooop!"

His audience listened with deep admiration to the first specimen of aboriginal eloquence which they had ever heard.

"You want to go on and turn to the left to get to the show ground," said a florid gentleman of leisure, dressed in a drab fur hat, blue coat and tightly strapped trousers, and he pointed up street with his cane, which he then tucked under his arm, while he took a pinch of snuff and meditatively surveyed the occupants of the wagon. "I hope you folks don't have any tight rope dancing and the like," he continued with a deprecatory air. "That's contrary to the laws of the State, you know."

"Wal, naow, that's tew bad," said Uncle Lisha in a grieved voice, and indicating Joseph with a jerk of the thumb, "for this 'ere young man is turrible hefty on the wires."

The florid gentleman thought he recognized the blush of modest merit in Joseph's abashed face, and with a sly wink at Uncle Lisha said in a husky undertone:

"We might fix up a leetle private entertainment—in a barn—you know, to-night. Select and quiet, you know."

"No, sir! We're law-abidin' folks," said Uncle Lisha, with virtuous decision. "Say, can any on ye tell me wheter no Ah'm Chace lives in this 'ere haouse. Good airt'n' seas! If he don't come an' tell us where tu go pooty soon we sh'll hefter hev a show tu git red o' the folks."

"Say, mister," an eager boy whispered, clutching Sam's knee, "if I'd fetch water for your hosses, won't ye let me go in for nothin', me an' my little brother; he ain't bigger 'n nothin'! We hain't got no money. Will ye, mister?"

"Why, bub," said Sam, "we hain't no show. We jest come tu see the show, that's all."

The boy stared incredulously into the honest face till assured there was no guile in it, and then retired in disappointment, leading his little brother.

Now the front door of the house opened and Abram Chace came hurrying out in a state of excitement quite incongruous with his smooth-shaven face and plain, neat attire, when he found his Cousin Jerusha's husband and his friends standing unwe-comed at his threshold and surrounded by a crowd of curious idlers.

"God zounds! Lisher, what be you settin' there for? Why didn't ye come right in? Back up a leetle an' haw right in here an' drive tu the barn. Clear aout, boys. What be you a-hengin' 'raound here for?"

As he opened the great gate and the wagon was driven into the barn the crowd realized its mistake and dispersed, the blue-coated gentleman sauntering up the street in dignified indifference, while the boys made a joke of their disappointment and tried to out-jeer one another.

"Ya-ay, Kelly, how much 's the tickets to your Injin show? Ya-ay!" and Kelly retorted.

"Ya-ay, Smithy, 'baout as much as it 'll be to git int' your nigger show. Ya-ay!" and both factions shouted "Ya-ay!" with a clamor like that of a congregation of crows, and Uncle Lisha was impressed by the depravity of town boys in calling each other by their last names.

"Well, Lisher, haow be you, anyway?" Abram Chace inquired, when, after a bustle of general hospitality, he found time to give attention to individuals. "An' haow be you, Sam-wil? An' hain't this Joseph Hill?"

"Wal, I don't sca'cely seem tu know whether no it's me 'r a Injin 'r a balance master 'r some other sort o' show feller," said Joseph, feeling his head and looking at his short, stumpy legs to assure himself of his identity. "I was beginnin' tu 'xpect Uncle Lisher 'd hev me a-stannin' on my head 'r a-turnin' summersets 'fore I knowed it."

"Bah gosh, Ah'll give more for see dat as all de show dey had to-morry," cried Antoine. With that he departed to his numerous compatriots in the "French village" at the other end of the town, and the others went into the house, where Cousin Chace's good wife was entertaining Jerusha and Huldah.

Henceforth till bedtime these town mice and country mice compared experiences, now to the envy of one, now the other.

When morning came no one thought of anything but the great event of the day already heralded in the gray dawn by the rumble of the heavy baggage vans. Habitual early risers were out betimes full clad, to admire the teams of large, handsome horses and gaily painted wagons, and sluggards came forth half dressed with garments in hand and unshod feet, rubbing sleepy eyes and fumbling at buttons with alternate hands as they blinked at the lumbering procession with a fellow feeling for the drowsy drivers and the weary showmen asleep on the jolting piles of canvas.

The vans rumbled past, transferring the present interest to the show grounds, and the brief excitement of the street subsided temporarily while the citizens breakfasted.

Then the first influx of sightseers came hurrying in, fearful of being late, though they reported the caravan two miles behind, delayed at the last stream by the elephants refusing to cross the bridge. Gradually the incoming tide of sightseers increased, some on foot, whole families in heavy farm wagons, and young fellows with their sweethearts in the cumbersome single pleasure wagons of those days, some of which had boxes shaped like bread trays, others square ones substantially framed and paneled, with high-backed seats cushioned with russet-colored leather and perched at such a lofty height that ascent and descent were not to be lightly undertaken.

At last the grand triumphal chariot appeared, blazing and glittering with scarlet and gold and drawn by four white horses driven by a liveried driver, behind whom the band was enthroned, blowing lustily on brazen bugles, French horns, trombones and ophcleides, all in time to the thunderous beating of a bigger drum than had ever been heard at a general muster. Then came two elephants, one of whom bore a howdah in which the lion tamer sat dressed like a Roman gladiator and quietly smoking an incongruous pipe. These were followed by four camels ridden by Arabs, whose genuineness became doubtful when one was heard to address his beast with "Git on wid yez, ye spalpeen." Then came the train of closed mysterious cages, some silent, others giving forth growls and screams of strange beasts and birds.

Close upon these came a crowd, hurrying for fear of being late, though it was two hours before the advertised opening of the show. Uncle Lisha and his party, reinforced by Mr. and Mrs. Purington, Sis and her nephew Bub, were early upon the ground eagerly enjoying all the novel sights and sounds of the busy scene.

Here was an excited group of Canadians, interspersed with a sprinkling of cool-headed Yankee jockeys, gathered around three or four sorry nags that looked as if the impending changes of ownership could make little difference to them or any one else.

"Wal, Joe," drawled a solemn-visaged man, after an examination of one of these animals from all points of view, "it kinder looks tu me 's if your hoss hed got the heaves tucked ontu him consid'able bad."

"Yas, Harrum, 'e got some o' dem," the owner, a jolly little pock-marked Frenchman, frankly admitted in a husky voice, "mais, dey a'n't hurt him mite. You 'oss 'e hol', hol', every tam 'e hol', Harrum, and 'e gat splayin lak goose egg."

"Sho! That hain't nothin'," said the other, "I c'n blister that off in a week, smooth as the palm o' my hand. If you want my hoss bad 'nough tu gi' me a dollar we'll call it a trade."

"Oh, Harrum! Swappy de 'oss pour de 'oss," the little man plead.

"No, I got tu hev a dollar tu boot."

"Ow Ah goin' give you more as Ah gat?" Joe asked piteously. "Ah geeve you half dollar, dat all Ah gat, me."

He held up the coin before the other, who took it with a sigh of resignation, saying, "Wal, seein' it's you, Joe, but I'm jest the same as givin' away my hoss," and each began unharnessing his horse amid the congratulations of friends.

The little group of Danvis people passed on to where a peddler mounted on a cart was auctioneering his wares.

"O, just look what I've found tucked away in a corner an' I thought the last blessed pair was sold yesterday," he cried, stretching to arms' length a pair of pucky rubber suspenders that smelled infernally of sulphur. "Just look. Stretch like a deacon's conscience. Long enough for any man. Short enough for any boy. Oak-tanned luther ends an' gold buckles, I guess, but mebbey they're brass. Don't let your women folks wear their fingers aout knittin' galluses for you, but walk right up an' buy

a pair of these beautiful e-lastic sus-penders, worth \$1 tu any man, but I sell 'em for half that money, an' tu-day, seein' you all want tu save a quarter to go int' the show, I'll let you have 'em for quart' of a dollar a pair, an' I'll say no more an' take no less."

Such a generous offer was not to be withstood and the new-fangled suspenders were passed out to the crowding purchasers till it seemed as if the red cart could have been laden with nothing else, yet the enterprising proprietor was continually discovering some new article, and each more tempting than the last. Now it was a ring or brooch, now some cheap and tuneless instrument, now pocket combs, side combs and back combs, jack-knives, distorting hand glasses, song books, lives and confessions of criminals and so on, changing as often as interest flagged.

There were numerous booths where refreshments of mead, spruce, beer and great cards of good old-fashioned yellow gingerbread were temptingly displayed, and the familiar obese and blue-frocked figure of Old Beedle was present, dispensing foaming glasses of innocuous beer from a cask in the tail of his wagon, and with them such kindly words and genial smiles that it seemed to his juvenile customers as if they were receiving a great deal for a cent.

There were peripatetic venders of apples in baskets and home-made molasses candy on boards, both wares cried by the youthful Canadian dealers at the usual price of "Two of it, 1 cen' 'piece."

Noisiest of all were the tooters, vociferously proclaiming the wonders of the side shows, the fat woman and the strong man, the albino negroes and the man without arms, and the waxworks of Monsieur Jonsin from Paris, all of which were now on exhibition and each to be seen for the small sum of 12 $\frac{1}{2}$ cents.

The twanging of the banjo, the thumping of the tambourine, the voices of the performers and the laughter of the audience sounded smothered and echoless as they beat against the canvas walls, yet were most attractive to the outsiders who crowded about the narrow entrances.

As Joseph Hill stood in wrapt admiration of the colossal portrait of the fat woman, counting the coins in his pocket with his fingers, he was startled by hearing his name called in a familiarly imperative tone, and looking in the direction from whence it came saw the gaunt form of his father standing upright in a lumber wagon, brandishing his cane toward him with one hand and with the other restraining young Josiah from leaping to the ground. Maria, who with her daughter Ruby occupied a portion of the seat from which the patriarch had risen, was frantically shaking a handkerchief toward her husband, and Pelatiah, who as driver sat in front with two of the smaller children, had his breath indrawn and his mouth made up, to add his voice to the family call.

"Wal, if this don't pooty nigh beat Sam Hill," Joseph exclaimed, as he hastened over to them. "Seem's 'ough I thought o' most ev'b'dy a-comin', but I swaow, I never thought o' you a-comin', father."

"You didn't, hey? An' you couldn't hear me when I did come, a-gawpin' at that 'ere pictur'," Gran'ther Hill scolded in a cracked catarrhal voice. "What is't a pictur' on, anyway? A elephant dressed up in women's clo's? I'll bate they hain't got no sech a critter."

"It's the fat lady, father," Joseph explained, "an' the white niggers. Haow come ye tu come, father?"

"Fat lady and white niggers," the old man repeated, scornfully. "By the Lord Harry, what is this cussed world a-comin' tu when *shes* 'at goes 'raound showin' their carkisses like hawgs tu a cattle show calls thei'selves ladies, an' niggers calls thei'selves white! I come 'cause I was a mine tu! Didn't you? Did you s'pose the' wa'n't nob'dy but you a-comin'? Don't ye s'pose Josier wanted tu come, an' Ruby an' t'other young uns, an' du you s'pose I was goin' tu let 'em come daown here along wi' M'rier an' Peltier and git lost an' eat up? That would be smart!"

"Why, I'm glad you came if you can stan' it," Joseph declared. "Be you middlin' well? An' you, M'ri' an' Ruby, an' 'mongst ye an' you tew, Peltier? Oh, M'ri', if I hain't got the almightedest snarl o' feathers! Wal, not sech a terrible sight on 'em, but sech neat ones you never did see a'most."

"Yonder comes Lisher an' Jerushy an' Lovel an' his wife an' young un, all comin' tu ask what I come for, I'll lay a guinea," said Gran'ther, testily, "an' if there hain't that 'ere cussed Pur'n't'n woman an' her man. I hain't nothin' ag'in' the beasts, but I swear I wish't they'd eat her. Young Gove, drive your hosses up tu the fence an' hitch 'em! Sed daown, Josier, 'fore I knock ye daown. G'long!"

The horses were driven to the nearest hitching place and given a bundle of hay from the hinder end of the wagon, whose occupants were by this time overtaken by their townsfolk in spite of Gran'ther Hill's attempts to elude Mrs. Purington.

"Wal, I should think you'd 'a' hed more regard for your health, Capting Hill," the tired dame panted, fanning her hot face with a folded handkerchief, "an' I don't see what you let him come for, Marier. It's jest flyin' in the face o' Providence."

"Damn my health, marm, it's ol' 'nough tu ta' keer of itself," the veteran declared, standing very erect and looking fierce. "Haow d' ye s'pose M'rier was goin' tu help herself? The' hain't nob'dy flew yit; but I wish't the Lord Harry they would, higher'n Gilderoy's kite, an' never light this side o' glory halleuyer."

"I'm dreatful glad you come, Cap'n Hill," said Sam, shifting Bub to his left arm that he might shake hands with the old man. "They say the 's a bustin' old painter an' some wolves."

"Yis," said Uncle Lisha, "an' some Injins; but they won't let ye kill 'em, 'cause they hain't got but a few."

"Hev they got all them?" the veteran asked, eagerly. "Come, le's git aour keards an' g'w'int' the carryvan afore the young uns dies o' waitin'. Take a holt o' my hand, Bub. For'a'd, march."

As they approached the thronged precincts of the ticket wagon and Sam detached himself from his party to enter into the struggle for tickets, he was accosted by his impetuous youthful acquaintance of yesterday, who was now standing forlornly apart from the crowd with his little brother, looking with longing eyes at the blue and yellow cards as they were passed to the outstretched hands by the imperturbable ticket seller.

"You wa'n't one of 'em, was ye?" said the boy, with a melancholy smile of recognition.

"Hello!" Sam responded, cheerily, "Hain't you shavers goin' in?"

The boy shook his head in sorrowful resignation.

"The big fellers got all the jobs, an' I hain't got no money."

"You wait here till I come back," said Sam, after a moment's hesitation, and then shouldered his way into the crowd, through which his tall, strong figure enabled him soon to reach the w gon. Presently emerging from the press somewhat flushed and rumpled, but smiling, he returned to the boys and handed the elder a couple of half tickets, "There, bub, you an' the little chap go in an' see the hull caboodle on't," and Sam rejoined his friends before the boy could give audible expression to his thanks and astonishment.

Joining the drifting tide of mixed humanity, our Danvis friends were carried with it inside the great tent into a world of strange new sights, sounds and atmosphere. If this was not the perfumed breath of Araby, these were the beasts and birds and reptiles of the tropics and far countries of the earth, this medley of discordant sounds that frightened children and startled their elders, the natural every-day voices that had shaken the torpid air of Indian and African jungles.

The keepers, who walked unconcernedly in front of the cages and were the familiars of the uncouth elephants and camels, bore such impress of strange experience and wide travel as made them quite different from ordinary mortals and speech with them an overwhelming honor.

"Yes, that 'ere is a boar constrictor or animal conlor," Solon Briggs explained to his neighbors, whom, with his wife, he had joined near the front of a cage in which a great serpent was coiled. "I s'pect that was the specie that onderminded the humern race of mankind by temptin' of Eve, 'cause you see he's call'ated by the dimensions of his len'th for reachin' arter apples. An' that 'ere is the rile tiger, so called on account of his allus bein' riled, an' that critter that's got stripes jus' like him is called zebra on account o' his reseemblin' a jackass. An' anybody 'ould know them was liurns, only the female specie hain't got no mane. An' hain't them elephants the curisest freak o' humern natur? It does appear 'at if they was pervided with another pair of visible organs in the behind of 'em they might perceed back'ards jest as well as for'ards, hevin' a tail on each end of 'em. That 'ere is called the backteryan camel on account o' his hump."

"Poor creetur's," said Aunt Jerusha, "I should think they'd git dre'f'l tired o' goin' humped up so all the time."

"Them is what they kerry water in when they cross the de-sart of Sary—she 't was Abram's wife," said Solon.

"Briggs must ha' made mos o' these 'ere animals hisself, I consait, he 'pears tu know so much about 'em," Gran'ther Hill growled sarcastically. "Come, Josier, le's go an' look o' the painter an' them wolves; I want tu see suthin' 'at I know suthin' about myself. There!" he continued, as, leading his grandson and followed by Sam and Pelatiah, he halted in front of the cages of these animals. "That's the sort o' pussycat an' dogs 'at used for tu be a-yaowlin' an' a-yollopin' 'raound yer gran'ser's camp-fire when he was on airth the fust time. Ah, ye ol' yaller cat! You sneakin' whelps! Yer gre't gran'marms knowed me."

He shook his cane at them and the panther spat at him and the wolves slunk into a corner as if each recognized in him an ancient enemy of its kind.

Presently the attention of all was drawn to the performance of the elephants, when one huge beast made its majestic progress around the ring with a howdah full of delightedly frightened children, and the other walked with slow and ponderously careful steps over the prostrate form of the keeper.

Then a pony ridden by a monkey ran in the ring, at which time Antoine made his appearance. Having been entertained by many friends, he had arrived at a condition to fully enjoy the show. Now he was in a bellicose humor, thirsting for a hand-to-hand encounter with the bear, now he was affectionate, d siring to embrace everyone, including the equestrian monkey.

"Say, Sam, Ah wan' kees dat leetly nigger. Ah luv heem more as Ah luv mah fam'ly, bah gosh! Ah'll was nabolition mans, me, an' Ah'll wan' stole dat leetly nigger, Sam, a'n't you wan' help me stole dat leetly nigger?" and so maundered on till, to Sam's great relief, his attention was directed to the band and he began to dance in front of it, dividing the attention of the audience with the clown, who, with the ring master, made the nearest approach to a circus that was then permitted in our virtuous commonwealth.

The humor displayed by the clown in his ancient jokes and repartees was irresistible, and when after turning a succession of somersaults he ran his painted nose against a center post of the tent Aunt Jerusha declared:

"He's the quickest witted man I ever see; but the clumsiest creetur' for one 'at's so spry by spells. Eunice Pur'n't'n, if you've got your camphire bottle, you le' me hev it an' I'll go an' rub some on his nose, for its painin' on him turribly; I know it is."

Mrs. Purington never ventured far from home without her bottle of camphor and smelling salts, and possessing herself of the first Aunt Jerusha hast'ened forth to offer a balm for the supposedly injured member, while audience and actors looked on in silent wonder.

"Here, you poor distressed wretch, le' me put some o' this sperits o' camphire ont' your n'se. It'll take the soreness aout if it does make it smart some," she said, approaching the clown, who left off his lamentations to stare at her in dumb surprise. "Le' ne rub some on 't right on," she urged, "or put it on yourself if you'd druther."

"Thank you," he said politely, "if you'd be so good, just a drop," and he soberly submitted to the operation while the paint came off his nose on t' the tips of her fingers. "Thank you, dear old lady," he said in a low voice, "and bless your kind heart. It's done me ever so much good."

He returned her to her place as politely as if she had been the finest and fairest lady in the land, and then tripping back to the center of the ring he repounded an' other conundrum.

"Why is the old lady's heart like my nose?"

"Wal, sir, why is it?" the ring master demanded.

"Because it's tender, of course," was the answer, and there was tremendous applause.

"Oh, dear, it's tew bad, it's tew bad!" Aunt Jerusha sobbed, almost in dismay at having attracted such general attention, "but if it done him a wite o' good, I hain't gorry."

Now the performers retired from the ring the lively

measure of the gallop changed to a solemn andante and the audience breathlessly awaited the grand event of the day.

There was a clang of bars and an opening door, and the lion tamer entered the den, driving the snarling beasts to one end of it, from whence they came one by one at his command and sullenly performed their parts.

"Oh, dear suz!" Mrs. Purington wailed in a tearfully restrained voice, "they're a-goin' to eat him, I know they be, an' the show folks expex it. That's what makes 'em play so solemn on the music, jus' for all the world like a fun'al hyme tune. Say, mister," she piteously appealed to a showman who stood near, "won't you go an' tell him to go right aout o' there? It don't seem as if I could stan' it to stan' here an' see him eat up right afore my face an' eyes."

"Don't be alarmed, ma'am," said the showman, "there's no danger. The last man they heat was so tough and disagreed with 'em so bad, they ain't 'anker'd harter human flesh sence. More 'n hall that, 'Err Driesbach is a Dutchman, han' the beastises can't habide the smell o' saurkraut."

She only half believed this and kept her smelling bottle in hand till, greatly to her relief, and that of most of the audience, the brave lion-tamer backed out from the royal presence, and the band burst forth in a jubilant strain so loud that it set the elephants to trumpeting and all the carnivora to roaring and howling.

Everyone was glad that this part of the show was over, but alas, it was all over, and even now the shutters of the cages were going up and the canvas walls were going down, and the crowd dispersed except the few who lingered for a last look at the camels and elephants, and such as were fooled into parting with their money to see the hurried, final exhibitions of the side shows.

Before the afternoon was much further spent the Danvis people were on their homeward way, and a little after nightfall their own mountains closed around them and again shut them in from the busy world of which they had had such a brief but memorable glimpse.

ROWLAND E. ROBINSON.

Natural History.

SOME TEXAS MAMMALS.—I.

THE fifth article of Volume VIII. of the Bulletin of the American Museum of Natural History contains an interesting paper on Texas mammals by Dr. J. A. Allen. The collection on which the article is based consists of about 400 specimens, collected by Mr. H. P. Attwater, of San Antonio, Texas, for the most part in the vicinity of San Antonio, in Bexar county, but including also a number from Kerr county. These 400 specimens represent thirty-seven species, concerning which Mr. Attwater contributes valuable field notes, and he has also given important and interesting information concerning ten other species now, or formerly, found in the vicinity of San Antonio. These are, for the most part, the larger game animals and beasts of prey, all of which are rapidly being destroyed throughout Texas. Such material as that furnished by Mr. Attwater is of great interest and well deserves a place on the record. The paper is introduced by a sketch of the topography of the region, and by some notes on the effect upon animal and plant life of the severe and protracted droughts which so frequently afflict this portion of Texas.

Bexar county is cut by the line where two areas of different topographic character meet, and is thus an interesting region for the collector because it forms about the eastern limit of several western species and the western limit of several eastern species. The country is watered by the San Antonio, Medina and Leon rivers, and its surface is more or less rough and broken.

Old settlers tell Mr. Attwater that formerly the country around San Antonio away from the streams was open prairie, but now, wherever it is not in cultivation, it is covered with a thick growth of mesquite and with thickets of thorny bushes and cactus. Besides this, on the upland grow oaks and hackberry trees, while in the stream bottom are found pecan, cottonwood, sycamore and other water-loving trees.

The specimens of mammals secured from Kerr county were chiefly taken on the ranch of Mr. Howard Lacy, on Turtle Creek, and that gentleman has given Mr. Attwater much interesting and reliable information.

Mr. Attwater believes that the periodical droughts to which southwestern Texas is subject, and which render agricultural pursuits so uncertain, have a great influence on the lives of animals there, especially on the mice and rats which live above ground and have their nests and hiding places close to the surface. Several wet and rainy seasons are usually followed by several dry ones, and in dry seasons the cattle eat off the weeds and grasses, leaving the country bare. Thus both food and shelter are taken away from such species as mice, rabbits and rats. With the advent of heavy rains, the country soon becomes covered with a dense growth of vegetation, which affords to the small animals hiding places, protection from their enemies and an extra supply of food. These conditions do not affect the pocket gopher, moles and pocket mice so much as they do mice, rats and rabbits.

Although no specimens of the nine banded armadillo (*Tatusia novem cincta*) were sent with this collection, Mr. Attwater says, "I have records of the capture of the armadillo from many points north, south and west of San Antonio. Mr. Lacey reports it from Burnet county, 150 miles north of San Antonio, and one was killed this summer (1895) on his ranch in Kerr county. They are occasionally sent to the Zoological Garden alive, but do not live long in confinement." As the armadillo is likely soon to be exterminated in the more settled parts of Texas, these notes are interesting.

The common deer (*Dorcelaphus virginianus*) is still abundant in Bexar county, and not likely to be exterminated here at once. They live within the immense pastures inclosed by barbed wire fences, which prevent hunting parties from leaving the traveled road. A change in the habits of the deer is reported by old settlers, who say that before the country was thickly settled and market hunters had come in such numbers, the deer used to feed by day. At present they begin to feed about half an hour before sunset and lie down soon after sunrise.

Mr. Attwater gives the extreme limit of the range of the mule deer (*Dorcelaphus hemionus*) as west of Edwards

county. He has heard of their being killed in Val Verde county, but they are rare east of the Pecos River.

The antelope (*Antilocapra americana*) formerly ranged eastward in Texas to within 100 miles of San Antonio and southward along the Rio Grande, but they are not now found so far south within the State. Dr. J. B. Taylor has about 100 on his ranch in the northwest corner of Sutton county, which he thinks is now about the southeastern limit of their range. A few scattered bunches may still be found eastward to Menard county. Dr. Taylor believes that a straight line running west from Sutton county will form the limit of their present southern range. Another line, drawn from Sutton county slightly west of north to Amarillo, in Potter county, will, he believes, mark the present eastern limit in Texas.

In his note on the American bison (*Bison bison*) in Texas, Mr. Attwater seems to pretty effectually dispose of the so-called Val Verde buffalo herd, of which we heard so much a year or two ago. This herd, which at first was said to contain from forty to fifty head and was afterward increased to sixty, was said to be in Val Verde county, 150 miles west of San Antonio, between Devil's River and the Rio Grande. A number of hunters have looked for this band, but no one has found it. Mr. Attwater says, "Reliable persons tell me that 1886 was the last year for wild buffalo in western Texas, and I think it is safe to say that there are none in Texas to-day in a wild state." Mr. Attwater sends to Dr. Allen a dorsal vertebra and rib from a mounted buffalo now in his collection, and the history of this specimen is interesting. "It was caught when a little calf in a wild state in 1883 in Borden county, at the head of the Colorado River. It was raised by a common cow and castrated when 2 years old. It grew to a large size and was exhibited at the State fair two years ago. It weighed 3,506 lbs., stood 6 ft. 4 in. high and was 10 ft. long. It died in 1893 and then came into my possession."

The peccary (*Dicotyles angulatus*) is not often met with at present near San Antonio, but is still common in the chaparral region south of that city. They were formerly abundant in Kerr county, but now are seldom seen there. Ten years ago there was a great trade in hides and skins of wild animals in San Antonio, and the hides of the peccary, here called by its Spanish name *Javalina*, were in demand. It is said that in a single season one firm

NEST OF HOODED WARBLER.
Photo by Mr. James Savage.

handled over 30,000 of these hides, which sometimes brought 80 cents each. They were shipped east and thence to Europe, where the skins were used for gloves and the hair for brushes. In Zavalla county these hides were currency about ten years ago and were traded at the store for merchandise, sometimes being returned by way of change. The peccary thrives in captivity, and a pair in the Zoological Garden in San Antonio have bred there for the last six years, bringing forth their young at any season of the year, and from one to three at a birth. The settlement of the country seems to have had on the peccary the effect of toning down its old-time ferocity. It is said that formerly these animals were absolutely fearless, but those met with by Mr. Attwater were always ready to seek safety in flight.

The Mexican wood rat (*Neotoma mexicana*), a genus which in one form or another is found over almost the whole United States, except the northeastern portion, is found near San Antonio, though this is about the eastern limit of its range. In Kerr county they were quite abundant and a number of their nests were discovered on high land, one on an oak ridge and four in a cedar brake. The character of these nests is interesting in view of what has recently been said on this subject in the columns of FOREST AND STREAM.

"All the nests were in heaps of rubbish piled up by the rats. Those in the cedar brake were heaped around cedar trees, and the nests were made in the hollows among the roots of the trees. These nests were composed of fine strips of cedar bark; the nest in the creek bottom was made of grasses, leaves and cedar bark. Only one rat was discovered in each nest, but several nests were found in some of the heaps. The 'rat heaps,' or mounds of material which the rats pile up over their nests and retreats, average 2 ft. high, and are composed of any kind of rubbish that comes handy, chiefly sticks, stones, and dry horse and cow manure. Like *N. micropus*, they also go into houses and barns on the ranches and build their homes. A favorite place is the corner of some old shed or tumble-down shanty. One we found on Mr. Lacey's ranch was constructed chiefly of stones and old pieces of board, with sticks and other rubbish, including shingles that had fallen from the roof. Some of the stones and pieces of lumber on the pile were quite heavy, and it seemed almost incredible that a rat could have carried them on to the pile. One of the heaviest things, on the top of this particular pile, was a piece of board 14 in. x 10 in. and weighing 2 1/2 lbs. These rats, if permitted, will make their abodes under houses occupied by people, and, in the absence of cats and dogs, enter the house and become quite friendly, helping themselves to small articles

to add to their pile. In one instance a tobacco pipe was one of the articles taken.

"We found in some of the heaps large quantities of small green cedar boughs. These boughs are cut off the trees by fox squirrels, for the purpose of obtaining the cedar berries, which are more easily taken from the branches after they have fallen to the ground. In one of the underground passages at the nest on the oak ridge were found, stored away, about three dozen bunches of wild grapes; also many acorns and black haws. In another nest in the cedar brake were about two dozen small mushrooms, partly dry and shrivelled. All the heaps in the cedar brakes contained large stores of cedar berries, most of them with the outside pulp eaten off and the seeds eaten out. When the very small size of the seed is taken into consideration, it is surprising what an immense amount of work is necessary before enough can be obtained for a meal, as probably a thousand would be required. One nest contained shells of nuts of the Mexican buckeye (*Ungnadia speciosa*), although these nuts are reputed to be poisonous."

[TO BE CONCLUDED.]

NEW YORK ZOÖLOGICAL SOCIETY.

WHILE not very much has appeared in the press about the New York Zoological Society, incorporated by the Legislature in 1895, the project has not been allowed to languish, and a great deal of intelligent work has been done by the board of managers, whose names are given below:

Class of 1897—John L. Cadwalader, Madison Grant, Andrew D. Parker, John S. Barnes, C. Grant La Farge, Winthrop Chanler, Philip Schuyler, Edward H. Litchfield, Eugene Schieffelin, Robert L. Niles, Fred. W. Devoe, William A. Stiles.

Class of 1898—Thomas H. Barber, J. Seaver Page, Chas. A. Peabody, Jr., Percy R. Pyne, J. Hampden Robb, Geo. G. Haven, Austin Corbin, John H. Starin, Charles A. Dana, Charles E. Whitehead, Charles R. Flint, George Bird Grinnell.

Class of 1899—Andrew H. Green, Wager Swayne, Royal Phelps Carroll, Charles T. Barney, Charles R. Miller, Oswald Ottendorfer, Henry F. Osborn, William H. Webb, Henry H. Cook, L. V. F. Randolph, William C. Church, Frank M. Chapman.

Matters have moved along so far that steps are being taken to obtain the site where the collections of the Society may before long be shown.

Among the provisions of the charter granted to this body is the following:

"Said corporation shall have power to establish and maintain in said city a zoological garden for the purpose of encouraging and advancing the study of zoology, original researches in the same and kindred subjects, and of furnishing instruction and recreation to the people, and may purchase and hold animals, plants and specimens appropriate to the objects for which said corporation is created."

When this charter was granted and the board of managers organized, the first work before it was to consider methods for carrying out the work defined in the paragraph just quoted. Obviously a city like New York, possessing great wealth and extensive public parks, ought to have a finely arranged exhibition of animals from all parts of the world, which should occupy a garden of considerable extent. The largest zoological gardens abroad are those in Berlin, which cover sixty-three acres, and the largest in this country is the National Zoological Park in Washington, which includes 166 acres. Here in New York a site might be chosen in one of the larger parks which should be several times larger than the Berlin gardens, and perhaps twice as large as the park in Washington. There is thus an opportunity to set before the people of this city such a series of wild creatures of the world, in surroundings closely modeled after their natural ones, as has never before been seen. Of course, such a collection must consist of two parts: an open air collection, which shall include the animals of temperate climes, living out of doors, and an indoor collection of animals of the tropics, which, except in the warmest months, must be protected from cold and rough weather.

The first question which came up before the managers of the Zoological Society was as to the location of its grounds, and the choice evidently lay between one of the four larger parks lying north of the Harlem River, namely: Crotona, Van Cortlandt, Pelham and Bronx. In November of last year the sub-committee on plan, consisting of Prof. Henry F. Osborn, Hon. Andrew H. Green and Mr. C. Grant La Farge, presented a report in which they summarized their recommendations as follows:

"1. That we shall have a large area of land, not less than 300 acres, accessible by rail and water transportation.

"2. That we make the feature of our exhibit to reproduce natural conditions.

"a. The larger Northern animals to be shown in free range.

"b. The tropical animals in suitable buildings and inclosures.

"c. The marine animals on the shore line by means of tidal ponds.

"3. That our relations to the Park Board be defined by a special committee, immediately appointed for the purpose.

"4. That the Legislature authorize the immediate beginning of the development of the park site chosen for the Society.

"5. That the Legislature authorize the appropriation of \$250,000 for the use of the Society as soon as the Society raises \$125,000 by subscription.

"6. That the executive committee present to the Board of Managers at the January meeting a printed report for publication, including the recommendation of site and general prospectus of the work of the Society."

Continuing its work, the committee invited the cooperation of three expert naturalists, Dr. D. G. Elliott, of the Field Columbian Museum, Chicago; Mr. Arthur Erwin Brown, well known as the Director of the Philadelphia Zoological Gardens, and Dr. Frank Baker, Superintendent of the National Zoological Park at Washington. These gentlemen visited New York and inspected Crotona, Pelham and Van Cortlandt parks. Crotona was almost at once thrown out of consideration on account of its small size. Subsequently Pelham was discarded on account of its bleak exposure, its lack of fresh water, and the probable abundance of mosquitoes there. There remained Van Cortlandt Park, which two out of the three exper

recommended as being a highly desirable site. For some reason none of these experts appear to have visited Bronx Park.

Not long after the reception of the report of these experts the executive committee of the Zoölogical Society invited Mr. Wm. T. Hornaday, of Buffalo, to come to New York and take the position of director of its proposed zoölogical park. Mr. Hornaday accepted, and on reaching New York began, with his usual energy an exhaustive examination of the different tracts available for the park. After much study and a careful balancing of the advantages and disadvantages of each locality the executive committee of the Society chose the southern portion of Bronx Park, as is shown in the following application made May 21 to the Commissioners of the Sinking Fund of New York city:

NEW YORK ZOÖLOGICAL SOCIETY, 69 WALL STREET. }
NEW YORK, May 21, 1896. }

To the Honorable Commissioners of the Sinking Fund, City of New York:

GENTLEMEN—The executive committee of the New York Zoölogical Society has the honor to inform you that a corporate body has been formed under the above designation (Laws of New York, chapter 435) for the purposes: (1) of establishing and maintaining in this city a zoölogical park, (2) for the preservation of the North American native animals' and (3) the encouragement and advancement of zoölogy.

In the furtherance of the Society's principal object—viz., the establishment of the zoölogical garden or park—it is necessary to acquire the use of a suitable area in one of the unoccupied and unimproved parks of this city, north of the Harlem River. If the allotment of a satisfactory site can be obtained, the Zoölogical Society will immediately thereafter prepare a general plan and seek to obtain the funds necessary to initiate the scheme of improvements that may be agreed upon.

By the terms of the act of incorporation of this Society, the Commissioners of the Sinking Fund are empowered in the following language to make to the New York Zoölogical Society an allotment of land:

SECTION 7. "The Commissioners of the Sinking Fund of the said city are authorized in their discretion to allot, set apart and appropriate for the use of said corporation any of the land belonging to said city north of 155th street, but not in the Central Park, and such appropriation may be revoked if after the expiration of five years from the passage of the act a zoölogical garden is not established thereon; said grounds thus set apart and appropriated shall be used for no purpose whatsoever except those aforesaid. As soon as any lands are set apart, the mayor of said city of New York and the president of the department of parks of said city shall become and be ex-officio members of the board of managers of said corporation."

Free Admission.—The law requires the free admission of the public on four days in each week, one of which shall be Sunday. It is the present intention of the executive committee to recommend that the Zoölogical Park shall be open to free admission for six days in each week, and that one day only shall be set apart for the benefit of members of the Society, students and artists, and for repairs. The field exhibits, the river and the woods will be open to the public at all times.

During the past five months the officers of the Zoölogical Society have made a thorough and exhaustive study of all the unoccupied and unimproved parks north of the Harlem River, in order to determine what location would be best adapted to the requirements of a zoölogical park founded on an ample scale, and would also meet the requirements of the public in regard to accessibility. In these investigations the Society has availed itself of the advice of the best zoölogical garden experts in the country. As the result of all studies and investigations, this committee has now reached the unanimous conclusion that in all the various parks north of the Harlem River there is one location which may be regarded as a truly ideal site for a zoölogical park, such as this city should have, and such as this city desires to establish.

We therefore apply to you to allot, set apart and appropriate to the New York Zoölogical Society, according to law, all that portion of Bronx Park which lies south of Pelham avenue, of about 261 acres in extent, to be used by this organization only under the terms of its charter, as a public zoölogical park, and to be laid out for improvement and use upon a general plan which shall be approved by the Board of Park Commissioners before any actual work is begun.

One important reason for our choice of South Bronx Park is that it contains several open areas in which all the large buildings could be erected without the cutting of any trees or shrubs whatever. The Society desires to place itself on record as being opposed to the cutting of living trees or shrubbery in a public park, and to all plans involving any defacement or diminution of natural beauties. South Bronx Park is now asked for because it is eminently the place wherein a semblance of the natural haunts of wild animals can be secured by the adaptation of nature's handiwork rather than by the slow, costly and not always satisfactory processes of artificial creation. It is also asked for because it is possible to develop upon it a zoölogical park of the most spacious and attractive character.

At present the area in question is merely a tract of rough, unimproved land, part meadow and partly timbered, through which flows the Bronx River. Other parks in the annexed district possess greater landscape possibilities, but the site chosen is particularly well adapted for the purposes of a zoölogical garden founded on a large scale. It is, or soon will be, easily accessible to the people of New York and Brooklyn by payment of a single five-cent fare; its water supply is the best to be found in any of the northern parks; its contour is not so precipitous or so rough as to destroy its full availability to visitors on foot; its natural drainage is perfect; its shade is abundant and of the peculiar open kind so extremely desirable in a zoölogical park. It possesses four natural basins, in which ponds of great value to the collections, as well as to landscape effects, can easily be constructed. Its situation, contour and forestry all combine to give this spot an evenness of temperature not possessed by any other site of those available. South Bronx Park can be made a great popular resort for the people, wherein the benefits of zoölogical study can be more happily combined with the enjoyment of natural forest, field and stream than could possibly be provided elsewhere.

Zoölogical Gardens of Other Cities.

In America.—Philadelphia, 33 acres; Washington, 166 acres; Cincinnati, 36 acres. The Chicago, St. Louis, Pittsburg, Buffalo and San Francisco are in public parks.

In Europe.—London, 36 acres; Dublin, 15 acres; Paris, 10 acres; Paris, Amsterdam, 25 acres; Hague, 20 acres; Antwerp, 20 acres; Berlin, 63 acres; Cologne, Dresden; Hanover, 10 acres; Frankfurt, 25 acres; Breslau, 30 acres; St. Petersburg.

In the East Indies.—Bombay, Madras, Singapore, Hong Kong.

Most of the large cities of Europe maintain zoölogical gardens, many of which are magnificent in appointment and rich in collections, but all, without exception, are confined to small areas, and some are grievously cramped for room. It is not sought to establish a mere menagerie, even on a large scale. A zoölogical park in which the larger and more important native animals have free range in large inclosures, where a satisfactory attempt can be made to copy or suggest natural haunts, and where visitors can find enjoyment in the con-

templation of fine, healthy animals, amid beautiful natural surroundings, is quite different from even the best fifty-acre menagerie. In obtaining a grant of land the Zoölogical Society deems it both expedient and necessary to secure an area large enough, that a portion of it can be held in reserve as breeding grounds for large species to meet the demands of the future.

In conclusion, we beg to recur with emphasis to the very important fact that in no sense whatever is the land now applied for to be sequestered from the public.

Very respectfully submitted,
NEW YORK ZOÖLOGICAL SOCIETY,
(Signed) ANDREW H. GREEN, President.
MADISON GRANT, Rec. Secretary.

(Signed) Henry F. Osborn, Chairman; John L. Cadwalader, Philip Schuyler, Charles E. Whitehead, Andrew D. Parker, Thomas H. Barber, C. Grant La Farge, Executive Committee.

This application was referred to a special committee of three, consisting of Gen. A. G. McCook, Alderman W. M. K. Olcott and Comptroller Fitch, who were instructed to report on it at an early day.

It is understood that as soon as the question of site shall have been settled, the Zoölogical Society will take steps to raise funds looking toward the immediate equipment of its park and the getting together a collection of animals. The raising of funds and the preparation of plans for the park will probably occupy the remainder of the year 1896, and actual work on the grounds will be begun, it is hoped, next spring.

The managers of the Society contemplate the appointment of a number of New York naturalists, who, under the title of the Scientific Council, shall assist the director in deciding on questions which have to do with the general management of the collections.

The Buffalo Paddock at Van Cortlandt.

We are indebted to M. A. Kellogg, engineer of construction of the Department of Public Parks, for the diagram showing the location of the buffalo inclosure which will shortly be completed at Van Cortlandt Park.

This inclosure is situated between the main line of the New York & Putnam R. R. and the Yonkers Branch Railroad, about a quarter of a mile north of Van Cortlandt station. At the northwest corner is Mosholu, a flag station on the Yonkers Branch Railroad.

The tract embraces an area of seventy-six acres, of which six are water or swamp. The low land lies on the eastern edge, along Tibbitts Brook and the head of Van Cortlandt Lake. West of this is a belt of pasture land, which comprises possibly a third of the tract. This land is light and sandy, and will furnish but little food for the buffalo.

The western third of the tract is wooded, includes a hill 140ft. in height, which breaks away sharply toward the Yonkers Branch Railroad. The soil near the summit of this hill is very shallow, and the underlying rock crops out in frequent ledges. Owing to the absence of good natural pasturage the buffalo will undoubtedly have to be fed much of the time on imported provender.

The fence is already well under way and the buffalo will probably be brought on from Blue Mountain Park early in June. The first shipment will include thirty animals, but it is said to be within the realms of possibility that the remainder of Mr. Corbin's herd may eventually be brought over to Van Cortlandt, in which case 140 acres more, lying immediately north of the present tract, will be fenced in and the two inclosures connected by a passway under Mosholu avenue.

The present inclosure requires about one and three-quarter miles of fencing.

Cat and Partridge.

HUDSON, N. Y., May 18.—*Editor Forest and Stream:* A great many articles have been published in your paper on destruction of birds by cats. I have read many of them and on several occasions have noticed cats catching small birds, but did not give it much attention. On Saturday last I went in the country, and tramped over some of my favorite shooting covers, where I spend my October vacation, and the prospect is good for an abundant supply of partridge (ruffed grouse).

This morning, just as I was ready to get into the wagon to go to the train, the young man with whom I was staying came to the house with a full-grown hen partridge that he had just taken away from the cat. He told me that he had noticed the partridge near the house several times within the last six weeks, and had also noticed the cat stealing cautiously through a rye field near by, but hadn't the remotest idea that she was hunting partridge, but here was the bird stone dead. I think this bird was hatching in this field very near the house.

I did not have time to hunt up the nest or the chicks if they were hatched, and don't know that I could have helped matters if I had found either. One thing I did do,

and that was to swear everlasting vengeance on all cats found prowling away from home and their own fireside. I had never given this much consideration, but when they struck the game birds then I am ready to fight and my mad is way up.

I have found a partridge nest and expect to go this afternoon and try and get a photograph of her. I shall try this afternoon and from past experiences of the last two years think I shall have to try several other afternoons and then not succeed in getting a picture. If I succeed, will let you know.

H.

Largest Trout Caught in English Waters.

THE late Greville Fennell, in the *Field* of May 23, 1868, page 400, says: "I have looked through my note books and printed collections for the weights of trout, and I find that Stephen Oliver, the younger, mentions one taken near Great Driffeld, in September, 1832, which measured 33in. in length, 21in. in girth, and weighed 17lbs. A notice was sent to the Linnean Society of a trout that was caught on Jan. 11, 1822, in a little stream 10ft. wide, branching from the Avon, at the back of Castle street, Salisbury. On being taken out of the water its weight was found to be 25lbs. Mrs. Powell, at the bottom of whose garden the fish was first discovered, placed it in a pond, where it was fed, and lived four months, but had decreased in weight at the time of its death to 21½lbs. In the neighborhood of Downton, on Wiltshire Avon, a trout was caught with the fly by a Mr. Bailey which weighed 14lbs.; and in a small tributary of the Trent, at Drayton Manor, a fish was taken exceeding in weight 21lbs. (*vide Zoölogist*, 1848)."

In the *Angler's Journal* of Dec. 20, 1884, the editor remarks: "The largest English trout on record is believed to be that from Drayton Park, which weighed 22½lbs., the skeleton of which was presented to the College of Surgeons"—this fish probably being the same as that last referred to.—*Correspondence Fishing Gazette*.

The Audubon Society.

Editor Forest and Stream:

Referring to your editorial of May 2, under the above heading, I would say that I was somewhat surprised to learn that our society, "having for its special purpose the discouragement of the wearing of bird plumes as elements of woman's dress," should ask the aid of FOREST AND STREAM after all it had done in that direction, and having failed to receive the support that it was entitled to in supplying so good a medium for that purpose as the *Audubon Magazine*, which you published for two years at a price that should have placed it in nearly every family. Of the "800 local secretaries of the Audubon Society" barely a score gave it the support they should. Had each secretary sent in ten subscriptions the circulation would have been ample to warrant its publication, and from the lack of interest of those that should have given it support it was discontinued.

J. L. DAVISON,

LOCKPORT, N. Y., May 8.

The Strength of the Swan's Wing.

A CORRESPONDENT of *The National Druggist* states that the first surgical case that he had in the State of Arkansas was setting an arm that had been fractured by a blow from a swan's wing. The accident occurred on Swan Lake, near Shawnee Village plantation, in Mississippi county, in the winter of 1870. The patient, a hunter for the Memphis market, was "fire-hunting" at night, and a band of swans flew at the light. The man was in a little pirogue, and instinctively threw his arms up to protect his head. The left arm was struck by the wing of one of the birds, and sustained a compound fracture of the forearm, both bones being broken.

Michigan Birds.

WHITE LAKE, Montague, Mich.—Have only seen two bluebirds this spring. Wrens are also very scarce. Robins, scarlet tanagers, catbirds, phoebe birds and brown thrush are here in their usual numbers. Baltimore orioles are more numerous than they have been before in years. Ruffed grouse seem to be doing well; I know where there are three nests.

The spring here has been warm and unusually favorable for the nesting of the birds. Squirrel shooting promises to be good this fall; saw a number of black and gray squirrels to-day.

E. S. D.

Nest of Hooded Warbler.

THE beautiful photograph of a nest of the hooded warbler, reproduced here, was sent to us by Mr. J. L. Davison, of Lockport. The photograph was taken by Mr. James Savage, of Buffalo, at West Falls, Erie county, July 11, 1895.

BUFFALO INCLOSURE IN VAN COURTLANDT PARK, NEW YORK.

Game Bag and Gun.

TROUT AND DUCKS AT ROUND LAKE.

ST. PAUL, Minn.—On Aug. 31, the day before the opening of the shooting season, our party of six, after much planning, started for Round Lake. A drive of twenty-eight miles through a charmingly picturesque country brought us to our destination, which is rarely visited by sportsmen, principally on account of the long drive and lack of accommodations, but with us it is a favorite resort, its seclusion making it doubly attractive. The lake itself is not very large, having about five miles of shore line, fringed with heavy rushes, but very deep and clear as crystal.

On our arrival we were saluted by the baying of hounds and yelping of pups, five of the latter keeping us busy driving them away from our eatables while we were unpacking. After half an hour's work we had attended to our horses and stowed everything away safely from the dogs, and while a few of us prepared our evening meal Ed and Charley rowed out on the lake for bass. Cooking supper is a very pleasant occupation for a hungry man, that is when it cooks, which by the way ours did not do.

Al's charcoal stove, on which he has not yet got out a patent, is an invention of his own for which he claims innumerable advantages over any other make of stove, but in this case it proved itself sadly deficient, although Al blamed the charcoal, which was as dry as a chip and would burn like tinder if given a chance; but "all things come to those who wait," and our supper was done at last; Charley and Ed were called and we sat down to a meal fit for a king.

After our supper was over, and dishes washed and put away, C., the farmer taking care of the boats, invited us to go coon hunting, assuring us coon were plentiful in the neighborhood. We accepted his invitation and he disappeared for a few moments in the house; when he returned he had with him two hounds (?) and an old, rusty, breech-loading gun, which was entirely in keeping with the balance of his belongings. It was bright moonlight, though somewhat cool; a heavy dew had fallen, and after walking through meadows, cornfields and woods for something like two hours we gave up and returned home wet and bedraggled. C. kindly offered us his front room to sleep in, which three of us decided to take advantage of; so Harvey, Charley and myself wrapped ourselves in our blankets and kept awake; it was too cold to sleep. Charley counted stars through the chinks in the walls and I shivered in my blanket until about 3 o'clock A. M., when I could stand it no longer, but got up and built a roaring fire with Al's assistance and started the coffee boiling, the odor of which soon reached the nostrils of the others and we were soon all collected around the fire, excepting Harvey, who gathered up all the blankets and went to sleep for spite. Daylight was not far off and our breakfast was quickly gotten ready and eaten, and we loaded our guns, filled our pockets with shells and paddled away across the lake. At the first streak of dawn the ducks were up and we could see their dark bodies for a moment across the eastern sky as they passed us back and forth, suspecting no danger. Very soon the light grew brighter, and bang! bang! awoke the echoes as some unwise ducks came too close to our blind. After those first shots we had plenty of work to keep us warm; Harry, who was in the same boat with me, making a beautiful double as two ducks rose scarcely 20 ft. away, one taking to his right and the other to his left. About 9 o'clock the sport was exhausted and we determined to look for some ducks that had lit in the weeds off on our right. It was impossible to get the boat through the dense tangle of wild rice fully 6 ft. in height and we rowed over to shore. Leaving Harry with the boat, I made a wide detour through the woods, expecting to get near enough for a shot when they rose, but the woods ended abruptly and I was forced to make my way through very dry brush, which cracked under my feet at every step. I had not proceeded far in this manner when the ducks became alarmed and rose. I made an awful run and fired both barrels right into the middle of the flock, but not a duck, not even a feather, dropped. The distance was too great, and I returned to the boat vowing I would have something larger than No. 6 shot next time I went duck hunting.

Al, Ed and Charley, who had been fishing along one side of the lake, had also managed to pick up a few stray ducks as they passed. In addition to this they had a nice string of bass to show for their morning's work. In the afternoon we rested our weary bodies beneath some spreading oaks on the hillside, preparing ourselves for another attack upon the enemy in the evening. It had grown very warm during the day and when evening came the ducks were not flying.

That night we slept in the barn on the hay and voted it a good deal better than the floor of the house.

Next day was unbearably hot, and we decided not to stay longer. A few ducks were shot in the early morning by Al, Charley acting as retriever, and at 9 o'clock we started for home, traveling by easy stages, arriving in town about 4 o'clock that afternoon very tired and sleepy, but all voting that the best and only place for fishing or hunting and general recreation was Round Lake. O.

A RAID ON COOTERS.

NEW BEDFORD, Mass., May 18.—*Editor Forest and Stream:* George B. Little, Charles S. Corey and Abram Gifford, of New Bedford; Asa S. Jones, Philip E. Macomber, Isaac Petty, Thomas B. Gifford, John T. Brownell, Geo. McGaw, Frank and Edward S. Whalen, and David Lake, of Westport; Frank H. Chase, of Swansea, and Albert Wardell, of North Dartmouth, were arraigned before Judge Borden in the District Court to-day (May 18) at the instigation of the State police for shooting coot or "May white wings" out of season.

The raid was made as a result of the numerous complaints which have recently been made to the State police headquarters at Boston that the law in relation to the shooting of these birds is being violated.

The shooting occurred on Horseneck Beach, and is the favorite ground along this part of the coast for gunners. The police planned an early visit to this stamping ground. Saturday night the police boat Ocean Gem was placed in commission for the season and early Sunday morning the craft was got under way. On board were officers W. H. Proctor, Thomas A. Dexter and Frederick A. Rhoades.

Officer A. B. Hodges, S. F. Lettenz and Deputy Fish Commissioners Rich and Delano formed the remainder of the party, and these officials were driven over by land at an early hour Sunday morning, arriving at about the same time as the Ocean Gem.

As was expected, the shore was lined with gunners, and the work of gathering them in soon commenced.

A number along the beach saw the officers coming, or were very poor shots, for only a few were found with any birds in their possession, so the officers awaited the coming of the gunners off shore in boats. As each boat load landed on the hard white beach they were questioned severely, and in most of the boats coots were found, and the gunners unsuspectingly admitted they shot them. They were placed under arrest, and when all the offenders were secured they were taken aboard the steamer and the voyage to New Bedford was commenced. On the arrival of the Ocean Gem at the dock all the offenders were secured, and under the escort of the police were marched to the central police station. All respondents acknowledged they were guilty of the offense charged. State agent Proctor stated that although many of the defendants shot four or five birds it would satisfy the Commonwealth if each was fined for one bird. For the benefit of those concerned Judge Borden read the law covering the case and a fine of \$20 was then imposed in each case.

The cases against John A. Sherman and Allen F. Wardell for shooting coot were tried separately, due to the fact that Wardell pleaded not guilty. He was defended by Lawyer Milliken.

Sherman stated he went out to Wardell's residence Thursday to spend a few days, and Sunday went out gunning with Wardell and shot one bird. When they landed they were arrested.

The State officer said that there were two guns in the boat, but only one bird. The State agent thought that one was to blame as the other. Lawyer Milliken remarked that if such was the case the one bird was worth \$40.

"That is the common-sense view of it," remarked the Judge, and he imposed the \$20 fine, as in the other cases.

Gunners in this part of the country do not observe the law in regard to the close seasons. This affair will have a tendency to awaken them.

D. W.

Sea and River Fishing.

FLY-FISHING

On the North Shore of Lake Superior.

[Continued from page 417.]

WHEN I awoke at dawn and gazed out upon a dull gray sky, with a cool breeze bending the shrubbery and the grasses in tiny drops of frosty dew, I was satisfied that a northwester had stolen upon us during the early hours of the morning and thus brought deep disappointment. So eager was I that morning to cast my first fly of the season that, despite the adverse state of the elements, I arose with a determination to try for a trout even if I had to return dripping wet from the spraying waves or with another wound or a broken limb. A few minutes was sufficient for my morning toilet, and then hurriedly putting my rod together and affixing reel and lures, I started off over the slippery rocks, which were still very moist from the late rain, with a request to the boys to call me when the breakfast was ready. Ned not being just then piscatorially inclined, remained in his blanket to further court the somnolent Morpheus.

As I reached the rocky shore line of the island I commenced the angle almost in the teeth of the wind and on a sea that was tossing its snowy plumes quite generously.

As I continued my earnest casting not a trout seemed desirous of toying with my artful deceits, and I began to think that after all I would have to return without a single fin to my credit. I had covered nearly every inch of ground, and as I was tramping toward my last position and making my last efforts Jo put in an appearance and informed me that breakfast was about ready.

"Wait a bit till I try yon rock, for I may want your services with the landing net," I spoke up.

"That's where father caught his trout."

Thus encouraged I eagerly clambered to the top of the desired cliff, which was ragged with a sharp and splintered surface, and which had a very steep inclination to the roughened waters below. Arriving at a small shelving ledge on its bold front I sent the flies whizzing through the air, and was delighted with the lightness with which they kissed the crest of an approaching wave, and still more delighted when I saw the gleam and splash of a trout as he greedily sought to snatch up my Lord-Baltimore. I quickly struck, as I thought in time, and was much disappointed when I found I had no battling trout.

"Draw a wee bit slower," advised the young half-breed when he saw my lamentable failure.

Again goes my Lord-B. and his companion, a Parmachenee-belle, and this time I heed the advice given, and as the pursuing trout attempts another effort to steal the stretcher fly, the L.-B., he feels the prick of the sharpened steel and races away to rid himself of the adhering feathers. It is a decided failure with him, for after a severe struggle in the turbulent waters he is drawn to the rough-edged rocks of the cliff, which Jo had adroitly managed to descend, and there duly netted. He was only a two-pounder, but I was only too glad to secure even one of that weight on such an adverse morning and in such a tumbling sea.

With the lovely captive the sport ceased, and a hurried tramp was made for the morning meal, which I found on reaching camp was just ready for serving.

Ned was surprised at my success, for he did not think that any trout would be tempted to the surface in such a tempestuous sea. It was simply the ravenous greed of the gamy fish that brought him so close to the surf-beaten shore and to his untimely fate.

It was evident that wind and wave were both on the increase, and that casting with any hopes of success was not to be thought of, and moreover to cross Goulais Bay, which intervened between us and Grindstone Point, presented itself as another and a decided adverse object. The day was therefore before us to wear away, while the wind made the sea dance to its music.

Ned was never an idler in camp, for he always found

something to do when cards and literature grew tiresome. He was either devising some new creation in feather fancy, making a leader, or repairing some weak point in rod or reel, and after breakfast he at once had the entire tent turned into a workshop. I never took to this creative part unless a matter of necessity, for I had started on the trip with an amplitude of tackle and that in first-class condition. If, perchance, I needed any jobbing in that line, Ned was only too glad to secure the work, for he was a master hand at it and always averred that I would botch it with undue haste.

I was delighted for a while in watching the development of his crafty work, and occasionally made a prompting suggestion, which, however, was seldom considered for he always looked upon me as lacking in those qualities that make the skillful figure in construction.

He advised me after one of my recommendations to take Jo and try and coax another trout to the top of an advancing wave where I had deceived the last. There was evidently some significance in his enkindling suggestion. It was an absence of leave he undoubtedly desired on my part that he might work unadvised and undisturbed, and probably achieve the creation of some *chef d'œuvre* in the feathery art during my non-presence. I kindly took the hint, and calling the young half-breed we started off around the rough and wave-washed shore in search of a golden fin. Jo said it was too stormy for fishing and so it was, but we ventured forth all the same and soon had the flies dancing amid the snowy foam. I industriously tried to lure some scarlet-hued beauty, but nothing came to the dropping flies. Finally becoming tired, I relinquished the rod to the intrepid semi-savage, who went bounding over the rocks with the activity of a cat. He slid down to the very water's edge and took the wash of the waves very good-naturedly and as a matter of course. I would shout to him when a big comber came rolling in so that he could retreat higher up the rock, but he heeded it not and let the waters wash him at will. After making the entire circuit of the island we returned without the record of a single rise. Thrice more during the day we repeated the tour with the same result.

After supper the wind fell and with it the sea, and then it was to boat and to the adjacent shore, where we made the dainty flies fall with earnest industry. Soon the clouds began to break asunder and disclose little shining rifts of pale blue and bright gold, the sea to shimmer with opaline tints and the roar of the waves to drop to a delicious rhythm.

"The trout will begin to snap now," says Ned, and hardly had he finished the remark before he had a magnificent rise, but the angler was off his guard and the hungry beauty sculled back to his watery lair. Again went Ned's flies and no response, and once more he made them fall and dance in the water, and this time a savage dash came that made the bubbles fly and the music of the reeling the recital of the angler's joy. Some hacked and lichen rocks that told the fierce storms and desolation of centuries became the object of the stricken trout, for there, doubtless, down in some crevice deep were his palace walls and his throne, and maybe his brocaded queen of loveliness. Ah! but he will never again roam through those adamant halls, for he is held with too tight a rein by his fortunate captor. It now assumes a battle royal, for the impaled will never submissively yield while an atom of vigor remains. It is a beautiful sight to the interested looker-on as the willowy rod bends to the frantic rushes of the bewildered captive, and then loses its arching grace as it recovers itself on the ebbing strength of the fighting *fontinalis*. Victory is now in the air, and with a superhuman leap, a desperate dash or two, the dotted darling comes to the surface and casts an appealing look to the skies above, as if expecting relief from that mysterious world. The sportsman's blood is fully up with his game in hand, and the transports of a heaven are his alone. No sentiment of pity enters into his exciting pastime, and as we look upon the dying beauty in its rich garment of silver and scarlet the smile of triumph broadens o'er his face and his heart is full of thrilling joy.

Ambitious to emulate the fortunate piscator, I let no place that looked like the home of a trout go unwhipped of my flies, a brown hackle and a red ibis. Slowly and silently we glide along a rocky shoreland in such strange derangement of cliff and crag that you might read the history of an entire century on its dismembered face and realize the most incongruous forms on every hand. The infinite variety of such views is not to be imagined unless it has been witnessed; and besides in the magic wrought by mere change of position there is also a constant transformation of tone and color from hour to hour, as the lights and shadows vary, and from day to day with the unsettled weather. Yet who could convey to one this sense of beauty, which is the crown of admiration to every lover of nature, which every disciple of rod and reel is supposed to be. We must not, however, forget our mission in rhapsody of these ragged faced shores. Here we reach a little rivulet that winds and wanders its way through rough and riven ridges and over terraces that are beautified with dark pines and spruces and charmingly enriched with many a lovely wild flower. I at once recognized the place where in seasons past I had lured many an unsuspecting trout to an untimely fate, and eagerly cast my artistic flies. A gleam as of a silvery arrow happily greets my vision, and then a sudden tumult in the water takes place, and a revolving reel tells the tale of deceit and another battle in progress that to the foe of the upper element is one of pure and unadulterated felicity. The fight was on a fair field, prolonged and stubborn, but the spotted Apollo of the waters surrendered after a gallant struggle, and then only with the departure of his fast expiring breath.

With this triumph Ned insisted upon returning to camp, as the afternoon was fast fading into night. Evidence of this was rapidly accumulating and imprinting itself on all around. A primrose tint from a dying sunset was tingling the rocky cliffs, while shadows were creeping out from the dark forests and growing on the lapping waters that gently beat against the serrated shores. The eastern horizon was already spreading her mantle of night, and the crimson glow from the declining orb was about ready to kiss the shimmering waters a fervent good night.

It was more than a mile to our quarters and I was satisfied the stars would be twinkling long ere we reached it, for Ned, as usual, was sure to try the inviting waters we would have to pass. The boys who were anxious to reach camp pulled a hard and steady stroke, and when they had reached a spot where the sea had beaten an ground the rocks into a little beach, Ned called a sudden halt and

there tried to coax a ruby-gemmed trout to a white miller or a knight errant. I watched his untiring efforts for quite a while, and being satisfied that he was whipping the waters in vain, gave word to push ahead without further delay and without consulting the industrious angler relative thereto. He, however, was amiable and heeded not my commands, but if a trout had disturbed the ruffled surface he would then surely have disputed my despotism. He was never obstinately ugly, but always had a politic and urbane way with him in such cases that completely won me over.

"We will get no rises here," he remarked after the oars were taken up, but when the speeding boat had reached another tempting lair, that he would thrash I well knew and with unremitting zeal. Sure enough, when we had come to a bold bluff that had several crumbling spurs running into the lake, disclosing a disrupted and disorganized bottom that was spacious enough to people a colony of the claret and silver-coated beauties, he again had the boat checked and again he thrashed the rippling waters, but no hungry trout could be lure. He at last declared it was too dark for fly-fishing, and then gave the word for a lively stroke home, and without further prompting the bronze-hued boatmen made the white water tumble to the rhythm of their dipping blades.

On reaching camp we felt that a fire would be a comfortable adjunct, as the night air was exceedingly chilly. A roaring fire was therefore built, and around it we all gathered, and there Ned and I recited many a thrilling narrative that made the half-breeds open their eyes with wonder.

Above us the magnificent arch of heaven was ablaze with myriads of stars—jewel-like worlds throbbing in their strange, silent glow through all the wide realms of space. The fire, as if in accord with the celestial, sparkled and sent its ruby gleams upon the pulsing waters; an occasional clapping of wings was heard, while the dark forest rustled to the cool night air which came from it, with fragrance and with health on its wings.

"The watchdog's voice that bade the whispering wind,
And the loud laugh that spoke the vacant mind,
These all in sweet confusion sought the shade,
And filled each pause the nightingale had made."

We retired late that night, but we slept all the sounder for it, and rose in the morning greatly refreshed and with a longing to carry war into the realms of troutland. We, however, made but a slight reduction among the finny population that day, for we only caught three, one in the morning and two during the afternoon. We were fully satisfied that it was no place for generous catches, and so determined to leave the next morning at an early hour for Grindstone Point, some twenty-five miles distant. That evening, immediately after supper, a young and agreeable-looking farmer from Bachewawaung Bay sailed into our harbor with his Mackinac for the purpose of making a cup of tea; but he was not put to that trouble, for, having enough of that exhilarating beverage left from our supper, we supplied him with all he desired. While partaking of the fragrant cup he informed us in a somewhat nervous manner that a young white girl, a neighbor of his, had that morning run away with an Indian, and a bad one too, for whom she had formed a fancy, with the intention of marrying him. The relator was so much excited in giving us the information that we were positive that he was the discarded lover and was in hot haste after the eloping couple.

As he pushed out from the shore, and he was in a great hurry about it too, he remarked with a tiger-like rage, "I'd be willing to forfeit my life to come up with that cursed Indian."

He had a double-barreled shotgun in the boat, and we were positive it was loaded for Indian. It was almost dark when he left us, and he said as he was spreading his red sails that he would make the "Soo" that night despite any angry storm that might arise. The entire affair smacked of a North Shore romance with a blood-curdling tragedy as its closing act.

Ned said he knew the parents of the girl and thought the dusky son of the pathless forest had hypnotized her, for he was unable to realize how the fair-faced girl would marry such a repulsive brute in preference to the really good-looking pale-face. We heard no more of the runaway couple, but were fully satisfied the Indian population of that neighborhood would be minus one if the pursuer in his then revengeful mood should overtake the flying lovers.

The dawn of another day at last came pouring with a generous hand its golden glory on earth and air. A soft breeze blew in from the lake, the sky was pearl-like and pure as an opal, yet bright with delicate, shifting clouds of crimson and pale mauve—small, fleecy flecks of radiance that looked like a shower of blossoms fallen from some far invisible flower land. The waters were slightly ruffled by the wind and curled into the tender little dark-green waves tipped with light fringes of foam. Tennyson must have had just such a morn disclosed to him when he wrote,

"Morn in the white wake of the morning star
Came furrowing all the orient into gold."

It was hurrying to and fro that delicious morning to break camp and be off on the shimmering and singing waters. Breakfast was quickly served and about as quickly dispatched, and then came the dismantling of camp, the loading of boat and the embarking. Never did we sail under more favorable auspices, never under more gorgeous skies, never over such seas of silver that seemed to tremble and sparkle with loving ecstasy.

Ned could hardly contain himself in such golden and glowing radiance, and was therefore decidedly eloquent on the beaming beauties all around and about him. The half-breeds were in the same inspiring humor, and after the parental Kenosh had spread the white sails to catch the tranquil breezes he gave expression to his inward fervor by exclaiming with much warmth:

"Fine sky, fine sea, everything fine, and the wind he a little lazy."

From the island to Goulais Bay was about four miles, but four miles of very fascinating and impressive ranges of rocky shore land.

As we glide along in the bright sunshine the rocky ramparts that confront us are picturesquely diversified with butting cliffs, craggy bluffs, projecting ledges and crumbling walls that make you wonder what mighty forces were gathered here in the age of the world's infancy! What terrific convulsions and frenzied spasms that rent in twain the earth's envelope and left mountains

where once were lake and plain. If one likes a feast of impressive grandeur as some do, nature here furnishes it in the fullest measure. It is constantly in view; it cannot be concealed; even the fog which arises conceals it only for a moment, and then its savage and stern majesty reappear in all the stronger contrast with the softness of the passing clouds. It is the story of "Paradise Lost" re-enacted in the pantomime of nature, and on a scale of magnificence which Milton's imagination did not surpass. The grand and serrated mass which composes this bold shore line of the great lake representing defeat, "not as man feels it when he crouches under it and abandons the contest, but as nature feels it when the contest is a drawn victory and only the confusion and unrest indicate the point of stop." Think of the mad upheavals of boiling rock, to cool and harden in the air; think of the centuries of channeling by torrents and frost to give the nervous edge to the distant ridges and crests and cliffs; think what patient opulence of creative power wrapped their sides and tops with spruces and pines and balsam, and spotted these walls with weather stains in which the tempests of thousands of years took part. No one who voyages along the North Shore can abstain from fervent admiration of this wild and rugged pageantry which no artist can produce on canvas, no poet describe in musical verse.

It is an angler's world for admiration and fit home for the loveliest game fish that cleaves the water.

The wind increases as the day develops, but a purple haze hangs over lovely Bachewawaung Bay that is indicative of an approaching fog. On reaching Goulais Bay, Kenosh takes in the foreboding situation with a critical eye, and despite the adverse character of it, determines to cross over, though he is fully satisfied the misty clouds which are silently approaching will enshroud us about the time we reach the middle of the bay.

The wind was just stiff enough to straighten the sails, while hardly a bubble broke from the bow, so slowly were we moving. Ahead we could see the great breadth of the foggy bank advancing quietly from the distant shores and fast shutting out the soft canopy of the drifting clouds. The bold headlands of the rocky coast disappeared in the misty vapor as if they had been completely swallowed up, while the few small islands that were blazing in silvery frost work lost their sparkle, and soon after they went into the moving maw of mistiness until finally every glittering line of the indented shore was completely wiped out and nothing left but cloudy vapor, the herald that told the story of the misty veil, awful as a shroud-enfolded ghost, that would leave us nothing but our compass for a guide. About four miles had we made when the damp folds fell upon and around us and uncomfortably chilled us, shutting out the glorious flood of rosy light, while the earth and sky were breathless, the water only emitting a wearied moan.

Kenosh, who always dreaded a fog, declared in a solemn tone:

"Me no like 'em."

We were all in accord with him, but we felt if we deviated a trifle from the compass we would be wandering over the melancholy waste of waters until the fog lifted and developed the samphired and pinnacled crags of the ragged shore.

"Keep her straight to the line of the compass, nor nor'west, and all will be well," said Ned, instructively.

"I hold her all right."

"You thought that way once before, and took us a mile out of the way."

"Yes, I know, but we come out all right this time sure."

"If we don't run to the bottom of the bay or wander out into the lake,"

"I keep her all right, you see."

To the credit of the half-breed be it said, that this time he had his nautical head in good trim, and after an hour's sailing the fog lifted and showed the prow of the boat correctly on her course and about two miles from the shore.

The oppression we had all labored under—for a surrounding fog will produce it at all times—instantly disappeared with the sight of land. The sun, as if delighted with her regions regained, shone out with a radiance on all sides that gave us a landscape of surpassing beauty. Soon we were over the bay, and then with an increasing breeze we went racing along another lovely bit of shore land which nature had invaded as her right of conquest, making it rich and fanciful with foliage, crowning the forehead of the rugged rocks with flowers and ferns and mosses, planting the grasses that spring in green and red tufts from all the fissures and that wave in the wind like light plumes, scattering their little seeds like showers of pearl.

"Just as summer gathers up her robes of glory,
And like a dream of beauty glides away."

A four-mile sail brings us to Maple Bay, and after a run of about five more we are snug in harbor at Grindstone Point, and soon the white folds of our tents, which are in strange contrast with the green woods, undulating to the gentle breeze.

No time was lost in the preparation of a meal, for we were all in a hungry mood and still hungrier for the trout, which we well knew were now lurking in their watery lairs, so very abundant here.

In the meantime we opened our cases of rods and prepared for the delightful pastime, the contemplative man's recreation, as Sir Izaak pronounces it. I selected a tinsel-wrapped silver-doctor for my dropper and a Claret-Montreal for my stretcher. Ned chose a very bushy brown hackle (his own make and a killer too) and a Seth-Green which I advised him to try.

About the time we were ready for the onslaught the boys announced a dinner, for which we showed a very high appreciation by making sad inroads upon the contents of the steaming platters and the delicious tea, the aroma of which was a pure delight. We hastily made the meal, and then after the half-breeds held the table till their rapacious maws were fully satisfied we hurriedly took to the boat, and before we had gone 100 yds. our flies were reaching out for the *S. fontinalis* of either sex.

Just after we had passed a large boulder that was glittering like a huge nugget of silver in the bright sunlight, Ned had a most savage strike and nothing at all a moment after to show for it.

"Served me right," says Ned, "for I had my eyes where my lures were not."

"You evidently can't catch trout by having your flies one place and your eyes another," I critically remarked.

"I've just had that practically demonstrated, but now

for both in the same locality," and then his tempting deceptions went silently sailing through the air and dropping within a fraction of the place where the rose-colored idol of the lake had so magnificently and suddenly disturbed the water. Another rapacious snap and another splash and then an amazed trout and delighted angler were united, and immediately after one was for liberation and the other for fettering, one for sorrow, the other for joy. The battle now raged fiercely and with many sudden surprises. Once the angler thought his prize had escaped, but it was only a "doubling" by the frenzied and maddened trout. "Ah, he is there again," cries the overjoyed angler when he once more felt the braided thread making music as it rolled from the silvery reel. Anon he halts and then the line slackens once more, and up into the glaring sunlight vaults the red-spotted and radiant Adonis of the shadowy pool, showering the pearly drops from his flame-tinted raiment and then dropping back, fully satisfied that his mortal foe is formidable enough to wage a war of extermination. The ripples he left racing sang his lament and the angler was then assured that he would soon have the requiem to chant.

Time is wasted in detailing the grand and thrilling battle; suffice it to say that the angler won not only the prize, but a rapture of joy which alone comes to the victorious knight of the rod. He himself wonders at the world of happiness he harvests in the capture of such a peerless beauty.

"He did not dream, he could not know
That life contained such bliss,
That from a tinted trout could grow
Such happiness as this."

I was constantly whipping the waters during the struggle, but not a red coat could I coax to my flies. The boat is at last ordered slowly ahead, and after advancing about 100 yds. I had a glorious rise, which I squarely missed.

"Keep your eye on your flies," said Ned through retorting pleasantry when he saw my dismal failure.

"They were there, but I think the trout missed the fly."

"Or you missed the trout."

"One or the other assuredly."

"He was a big broad-tailed *fontinalis*, and came at the lure with the spring of a leopard."

"There was grand music in him, but he may yet have to sing for me."

My flies during the suggestive chat were steadily rising and falling, and when I had dropped them over the trout lair for about the third time there came a rainbow gleam with a splash and a snap, and the music I had so dearly longed for. Whiz, whiz, whiz, sang the reel, while the line hummed in delicious falsetto notes that were sweeter than the warble of a honey-throated thrush.

"He's a whopper," excitedly exclaimed Kenosh.

"And I hope into the boat he will soon be a flopper," chimed in Ned.

He made a most gallant fight, battling like a Greek hero, and thrice during the struggle did the tip of my wizzard wand, a Chubb, come on a line with the sturdy butt.

I was giving the rod a thorough test, for it was a new one I had secured for this trip, and I was therefore anxious to know its reliable qualities. Ned was sure it would break, and cautioned against such dangerous usage, but it nobly stood the strain, and being satisfied of its wonderful strength I made the vitality depart from that battling trout in a very rapid manner. He was, to use sporting parlance, knocked out early in the fight, and came to the nest so completely exhausted that he had no breath for a protest.

With the capture of this proud beauty, a 3-pounder, we went quietly and slowly along, dropping our lures in all the inviting places as we progressed.

It was not long before we realized that a storm cloud was fast approaching from the west that bade fair to soon give us a downpour, if not a very fierce wind.

Despite the unfavorable indication we kept on the advance, but when a lurid flash photographed itself on a black cloud and a moan of thunder came rolling along we retreated in great haste and reached our quarters just as the rain began to fall. That ended the fishing for the noon, but we had secured two noble trophies that would suffice for both supper and breakfast.

ALEX. STARBUCK.
[TO BE CONTINUED.]

Bangor and Aroostook Resorts.

LITTLETON, Me., May 22.—Fishing in Schoodic Lake, fifty-six miles north of Bangor, has been exceptionally good during the past week. I learn of a number of large trout being taken there with live bait. Fly-fishing is, or rather will be, the proper caper in about a week.

General Manager F. W. Cram, of the B. & A. R. R., has been indulging a weakness for big trout on the new Ashland branch of his road, and I understand has met with considerable success.

A party of gentlemen recently took from Square Lake, near Caribou, a string of ten trout with an aggregate weight of 61 lbs. A small Skinner spoon was the bait used.

Salmon trout are plentiful in Ross and Tracey lakes, near Littleton, and the several small streams adjacent are yielding good catches to the crude methods pursued by the small boy.

Rumor has it that a gang of Italian laborers near Griswold have threatened a strike on account of the seemingly limitless supply of trout furnished them for food.

A colony of beavers have commenced operations on Wiley Brook, near here, and should pot-hunters keep hands off the family will undoubtedly thrive well in this locality.

L. F. Hall, Esq., is to stock his private pond with German carp.

Dr. Carey, of Houlton, has a private pond here that is well stocked with landlocked salmon and square-tailed trout. The doctor, however, will allow neither friend nor foe to fish there, and I am told by a person qualified to know that the fish are so abundant as to almost crowd each other out of the water whenever a morsel of food is thrown to them.

MISS ISQUIR.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

A PERE MARQUETTE RAINBOW TROUT.

SAGINAW, Mich., May 19.—*Editor Forest and Stream:* The East Saginaw Club last night was thronged with anglers. The reason was that Dr. O. P. Barber and Ed McCarty had just come down from a two days' fishing expedition on the Pere Marquette River from Baldwin and brought with them a rainbow trout taken last Saturday afternoon by Jerome Van Valkenburg, a custodian of the Greenwood Club at Baldwin. It weighed 8lbs. 4oz. and was 26in. in length and girthed 15in. The weight and measurements were made six or eight hours after the fish was captured. It was indeed a beauty. The head and mouth are small, more like a salmon than a trout.

A great many rainbow trout are taken from the Pere Marquette River. The planting there done by the State seems to have been extremely successful. The mode of fishing and the way this one was caught is, I understand, to get far above the large holes in which these rainbows lie, gradually let out a line to which is attached a live minnow and let it gradually float down into the pool. I understand that Van Valkenburg, who is conceded to be the king bee on catching these big rainbows, frequently lets out from 150 to 175ft. of line in one of those angling maneuvers; at any rate he can well rest on his laurels, for this is undoubtedly the largest rainbow trout taken in the southern peninsula of Michigan yet. He was twenty minutes killing him, and even then would not have been successful had he not been rendered assistance by Mr. Waddell, of Grand Rapids, who heroically took a stand near some flood wood and prevented the trout from running underneath it.

The fame of the monster had spread to such an extent that at every station on the F. & P. M. R. R. crowds were awaiting yesterday's train to see the big fish. While this is indeed a fish story, there is positively no doubt about the measurement and weight.

The Lower Michigan trout streams have never been in better condition than for the May fishing this year. Remarkable catches seem to have been made by everyone, and every stream has been in prime condition. The continual stocking for years and the better observance of the game and fish laws have a good deal to do with it; then again May has been an extremely hot month, and the flies that ordinarily are not here until June have been on the water for some days. The catches at the Pere Marquette Club waters have been most satisfactory. I was up a week ago and in one day put seventy-nine brook trout in my basket, besides two grayling. These were all over 7in. long, and of course taken with a fly. I stopped then simply because I was ashamed of myself, not because the trout were not still rising. The stream is literally alive with fish, many of them old whoppers. Baldwin Creek, the Little Manistee River and the Pere Marquette River, all streams easy of access from Baldwin, Mich., are full of trout this year, and what is better, they will take the fly. Baldwin is distinctly an angling town; strangers are welcomed there and every attention will be accorded visiting anglers. New York anglers can reach Baldwin by taking New York Central train 6 P. M., leave Detroit via F. & P. M. R. R. 1:20 P. M., arrive Saginaw 4:35 and at Baldwin about 8 P. M. So you see it's only twenty-six hours from New York.

Watts S. Humphrey and G. B. Morley, of this city, returned yesterday from a few days' outing at the waters of the Fontinalis Club. This club owns six or eight miles of as fine trout water as there is in Michigan. It is reached by a good woods road running six miles from Vanderbilt, Mich., a point on the Mackinaw division of the M. C. R. R. The club is composed mainly of Detroit gentlemen, and I am told that the club house is a dream. Messrs. Humphrey and Morley brought down over 100 trout, forty of them being over 12in. long—at least that is the Judge's version of it, and who ever heard of one of the Saginaw crowd being untruthful?

W. B. MERSHON.

A Lake Trout Situation.

CARMEL, N. Y., May 6.—*Editor Forest and Stream:* Will FOREST AND STREAM or some of its numerous correspondents please explain the following and also give some pointers and instructions about lake trout fishing:

There is a lake within fifty miles of New York city, about one mile long, three-quarters of a mile wide and very deep, in some places from 75 to 125ft., and with not much shallow water except in one or two coves, covering perhaps five or ten acres, where the water is from 2 to 15ft. deep, with some parts rocky bottom and others covered with eel grass. There are no streams running into the lake, which is entirely fed by springs in the bottom and a small rain water-shed, and it has only a very small outlet. The temperature of water in midsummer in deep water about 47°.

The lake is pretty well supplied with black bass, white and yellow perch, pickerel, sunfish, etc.

About thirty years ago it was stocked with 70,000 lake trout fry, ten years ago 80,000 more were put in. Since then (within thirty years) there have been but four of these fish ever known to be taken from this lake; two years ago two about 20in. long were captured while the fisherman was trolling for pickerel, and last year two more about 18in. in length. They have been trolled for and places have been baited for a week or two at a time, but all to no purpose.

Is it not reasonable to assume that there must be plenty in there, for otherwise where would these four young fish have come from, and if so then why are not more of them caught occasionally, and what is the best way to tackle them?

WILLIAM GRAY.

[The lake trout in nature is an inhabitant of large, deep, cold lakes, and is to be found in the deepest waters, except in its spawning season, October to November, when it comes upon rocky shoals and reefs, in depths varying from 7 to 90ft. In Maine and New Brunswick, according to Hamlin, it steals forth in quiet at the approach of twilight or at early morn to the shoals and the shores in quest of its prey. It is well known that fish which live habitually in deep water in temperate latitudes come into comparatively shoal water in Arctic or sub-Arctic regions. If the lake trout exist in the New York lake referred to, they are now probably in the deepest water and should be fished for on or near the bottom. There should be no difficulty about the choice of bait, for the fish is a voracious feeder, and has been known to take almost any kind of fish, raw potato, liver and green corn cobs. The trolling season is short and begins soon after the ice is out. Bottom fishing lasts much longer, and is

more certain. The lake trout is a sluggish fish and lacks the dash and vigor of the brook trout. Sometimes the ground intended to be fished for lake trout is baited beforehand and the fish are then caught with a bottom line. Again a bright-colored fly, a minnow bait or a spoon will prove killing. In some localities the fish give about as little play as a cod. The lake trout of Maine and New Brunswick, called togue or lunge, when young rise freely to trout flies in rapid water, and the adults can be readily taken in May and June near the surface. It should not be surprising if 150,000 fry have made little impression in a lake known to be well stocked with black bass, white and yellow perch, pickerel and sunfish. Trout fry are nuts and raisins to all of these voracious fishes. Again, the lake is not large enough to promise success with a species which loves elbow room, abundant food and great depth of water.]

CHICAGO AND THE WEST.

The Merry Month of May.

CHICAGO, Ill., May 23.—The anglers of Chicago and vicinity are now enjoying the pleasures of the fishing season almost without let or hindrance, the only State offering restriction being Wisconsin, whose season does not open for a week yet. The month of May is the best one for trout and grayling fishing, though perhaps not so many anglers are out then as later in the summer. After warm weather sets in the trout begin their mysteries, the latter of a sort no man can fathom. They disappear from the waters where they were abundant a little earlier, and can be found nowhere within mortal ken. Someday they pass far up the heads of the streams and go into the lakes or deep upper springs to live, but a far more rational explanation seems to be that they leave the water entirely and go out into the woods and take to the trees. Anyhow, the closest search will not reveal them in the waters of the rivers, or their tributaries or their sources. The merry month of May comes early enough to see the trout in their first activity after the long, dull winter times. They are enjoying a spring appetite and have a candor and frankness about them which they are soon to lose as the days of heat and flies approach.

Chicago has many trout anglers who are even now in the woods, but as I have stated earlier in these columns, we have here no great rounding-up place of the anglers, such as the Rangeleys and other famous localities in the East. We read so much of the cut-and-dried fishing of the Rangeleys out here that it seems to us we know every corner of the Maine woods and waters as well as though we had all been there ourselves and gone through the system of check, ticket and tab which seems to be kept on the anglers there. We have no such eminent waters to focus our fishermen here—though we wish we did have—and the anglers of Chicago scatter very much when they go out after trout. I presume that the Nipigon and the Superior fishings represent as nearly as anything the Rangeleys of this region. Below that are many ignoble and unknown streams in the Michigan peninsulas, in Wisconsin and in Minnesota. I believe that Minnesota is going to be the next great playground of the Chicago anglers. For years the lake region of upper Wisconsin has offered as prodigious fishing as any country that ever lay out of doors, not so much for trout as for muscullonge and bass. Thousands of anglers have there fairly glutted their thirst to kill, and the world of sport has never seen such slaughter as been carried on there since the 'lunge lakes opened. To-day there are not many new or unknown waters in that region, and many of the old reliable waters show the effects of constant and immoderate fishing. Complaints of poor luck have one natural sequence—a search for a place where the luck will be better. It is only a night further by rail to many waters in Minnesota where the rod has not been so common for the past ten years, and I am disposed to believe that that will be the next great angling region for the men who believe that all of fishing is to catch fish, and catch them first, last and all the time. Then Minnesota will fail in turn, and in the meantime Wisconsin will have profited by the rest, and her waters will have picked up again. By that time, let us hope, the fishing public will have learned the fact, which it seems so reluctant to believe, that no waters on this verdant earth of ours can stand perpetual and unregulated fishing by all those persons who are willing to take not only their share of the goods of the gods, but also the other fellows' share along with it.

Indiana Waters.

Something of the force of the above remarks comes to one in reviewing the angling situation in Indiana. At one time the series of high lakes in upper Indiana offered as fine bass fishing as any waters of the country. Then they were fished out. Then they were forgotten. Then they stocked themselves up again. Now there is good fishing in many and many a one of these little lakes, and it will stay good until gradually the angling public will take advantage of the spreading news and have some sport again of the old-time sort. Yet the new history, let us hope, will not be the same as that of the past. The lakes and rivers of Indiana were not depleted so much by the sportsmen as the natives of the State, who carried on the most destructive and illegal war against the fish that could well be imagined, and which has perhaps had infrequent parallel in any other State of the Union. Netting and spearing and all sorts of foul methods were common for years and still exist in spite of all, while probably nowhere has more dynamiting been done. The river bottoms of Indiana had a class of population who came down from free-born outdoor men, the sort who made their living from the woods and streams and marshes, and it has always seemed hard for them to learn the painful lesson of restraint. It would be very glorious if neither they nor any of the rest of us need ever learn it, but the finger of fact is relentless in its pointing. The later times must bring later customs, and we have all reason to believe that the second crop of game fish in Indiana, as in Wisconsin, if we may so speak of it, will be far longer in the harvesting, thanks to the efforts of the State wardens, and of the good anglers, and of those whose vision is capable of penetration between the rungs of a wide-gated ladder. At least, be all this as it may, there is good bass fishing now in northern Indiana, for several of my friends have been out and have told me so. The lakes of the south peninsula of Michigan, beyond St. Jo, have also been prolific. It is nearly time we began to hear reports from the Kalamazoo and

Grand rivers of Michigan also, where sometimes the small-mouths afford magnificent sport.

Decoration Day.

Decoration Day, May 30, is a sort of opening day for Chicago bass fishermen, and they do not recognize as authoritative the chance days of sport offered before that date. The weather is nearly always warm and pleasant then, and on that day of vacation I presume five times as many anglers start out on camping and fishing trips as have done so on any one day of the season up to that time. A week from to-day there will be many merry parties leaving this city, some for the trout and grayling streams of Michigan, some for the bass waters of this State and of Indiana, and many for the lovely country of Wisconsin, where on the day following Decoration Day it will be lawful to cast a line. I know of several parties who will go to Waukesha county, in Wisconsin, next Saturday. Indeed, for a radius of sixty miles about this city the country will be filled with Chicago anglers, and a very jolly as well as a very proficient lot they are.

In Divers Spots.

The bass are biting along the Kankakee, and several of the members of the Maksawba Club are at this writing down there after them. W. S. Phillips (El Comanche) is back from a little lake he has discovered in Indiana, where the bass take the fly. He insists we must go there soon and see about it some more. J. M. Clark, of the Wilkinson Co., goes to the Little Manistee in Michigan after grayling on May 30. H. L. Stanton and family, and F. E. Willard and family, go to Eagle Lake, Wis., on the same day. The price of the striped meadow frog is to-day very firm at 30 cents, with a bullish tendency of the market.

Bound North.

A party of anglers will start North from this city tomorrow, bound North for Big Sand Lake, Wis., to make arrangements for a muscullonge trip as soon as the season opens. The party will consist of Messrs. C. D. Gammon, Will Cribben and L. M. Hamline, of Chicago; R. R. Street, of New York; George Holland, of St. Louis, and Elmer Werk, of Cincinnati. There is to be a cottage built on the lake, and Col. Alberger, one of the San Lake Club, will next week put in a little steamer on the lake. Other gentlemen will go up to this famous sporting ground later in the month of June. About thirty muscullonge were taken in Big Sand Lake last season, and almost without exception the fish were very large, a great many going over 30lbs. Commissioner Gunderson, of this city, took one that weighed over 40lbs., and on the same trip killed a black bass that weighed 6½lbs.

Messrs. Higgins, Leonard and Gasfield, members of a certain angling coterie of this city, start in about ten days for the muscullonge waters of Wisconsin.

A New Club for the St. Francis.

The Forrest City Gun and Rod Club, of Forrest City, Ark., was last week formed, being an association of anglers for the purpose of preserving and enjoying the fishing of that famous stream, the St. Francis River, once as fine a bass water as any of the land, but of late years much fished for the market. It is believed that this club will take the most energetic steps to break up illegal fishing and to restore the stream in its depleted portions as rapidly as possible. The gentlemen making up the membership are of the proper sort, and the organization of the body is a fact upon which the anglers of that region may congratulate themselves. It seems that there has been a sad state of affairs in that section of the river, and a correspondent to the *Memphis Commercial Appeal* states it as follows:

"In the river from Marked Tree all up through the sunk lands, where the bass run to spawn, are placed hundreds of nets, covering almost every runway of the game fish. These are shipped from Marked Tree, Oak Donic and Hatchie Coon stations to the Memphis and St. Louis markets. Last year there was a small steamer run in the river from Marked Tree up, in the interest of St. Louis fish dealers, so I was informed, which gathered fish from the different netters along the river and lake. For a long time after the non-netting laws were passed they were pretty well observed, but within the last two years the fishing has been about ruined by the netters who have swarmed into the sunk lands. The great damage is done in Poinsett county, from Marked Tree up to the Craighead line."

Rods and Bicycles.

Since last December the Western railroads have been under agreement to charge a fee for carrying any bicycle or baby carriage under check, an arrangement which caused a great deal of financial discomfort to many earnest young sportsmen who had become enthusiastic over one or both of those vehicles. The pool held together, however, until the present week, when the Wisconsin Central line signified its intention of withdrawing from it and hereafter devoting itself to the free carriage of bicycles and baby carriages accompanied by the owner of same. This step will meet with great popular approbation among the thousands of summer folk who each season go up into the beautiful lake region of Wisconsin along that road. These go fishing, but many wish also to take along their wheels or baby carriages, and the numbers of those so wishing are so great that this road decided to accommodate them. If it breaks the deadly combine the others must follow its lead, and it is likely that after June 1 there will be no more class legislation of this sort, and one may feel safe in taking his bicycle or his baby carriage with him on his fishing trips. This is a boon. Railroads do not always confer boons.

Personal.

Mr. Rollo O. Heikes, the celebrated trap-shooter, is a very ardent angler, though perhaps not everyone knows of this so well as of his skill in shooting. Mr. Heikes will spend a month or two this summer doing some good hard resting with his wife and family at one of the lower Wisconsin lakes, probably at Eagle Lake, in Waukesha county. He states that he will then devote himself to the fishing rod exclusively, and flee from anyone who mentions to him the name of gun.

Mr. Thomas H. Keller, of the U. S. Cartridge Co., was in Chicago this week, on his return East from a successful business trip in the Pacific Coast country. Mr. Keller is enjoying his usual robust health and good spirits.

Mr. Chase S. Osborn, State Game and Fish Warden of

Michigan, continues the good work of protection with accustomed vigor. During the month of April his department brought 105 cases and secured the unusual number of ninety-three convictions, probably the largest number of cases and the greatest percentage of convictions ever had by a game warden in one month in any State in the Union. During that month illegal nets to the value of \$40,000 were seized, and twenty commercial fishermen were convicted. It would appear that Mr. Osborn was having a busy day, yet he finds time meanwhile to run a daily newspaper and conduct an active canvass as a candidate for Congress. It is the busiest men who always have time to do something.

Mr. W. D. Boyce, a prominent yachtsman and sportsman of Chicago, is lying at home this week in a darkened room, threatened with loss of his eyesight, in consequence of an attack of some obscure but dangerous disease of the eye, which once or twice before has come upon him. His friends hope for his safe and speedy recovery.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

THE AMERICAN FISHERIES SOCIETY.

THE twenty-fifth annual meeting of the American Fisheries Society was held in the Aquarium at Battery Park, New York city, on Wednesday last and continued on a steamboat to Cold Spring Harbor, Long Island, on Thursday. The following members were present: J. E. Gunckel, Toledo, O.; F. J. Amsden and C. H. Babcock, Rochester, N. Y.; B. L. Dournedoure and Dr. B. W. James, Philadelphia; T. E. Crossman, H. B. Mansfield, U.S.N., and Fred Mather, Brooklyn; G. E. Jennings, E. P. Doyle and T. H. Bean, New York city; J. A. Dole and Louis Struber, York, Pa.; E. Thompson, Northport, N. Y.; F. B. Dickerson and Herschel Whitaker, Detroit, Mich.; A. N. Cheney, Glens Falls, N. Y.; B. H. Davis, Palmyra, N. Y.; J. W. Titcomb, St. Johnsbury, Vt.; L. D. Huntington, New Rochelle, N. Y.; James Annin, Caledonia, N. Y.; D. G. Hackney, Fort Plain, N. Y.; H. P. Frothingham, Mt. Arlington, N. J.

The meeting was called to order at 11 A. M., and after a brief address by the president the following new members were elected: Hendrick S. Holden, Syracuse, N. Y.; C. H. Walters, Cold Spring Harbor, N. Y.; H. F. Emrick and Wm. Murdock, San Francisco; F. B. Dickerson, Detroit, Mich., and Bryant Walker, New York city. The treasurer reported that after all expenses of last meeting there was a balance of \$141.32 in the treasury. The committees for auditing accounts and nomination of officers were appointed and the reading of papers and their discussion was begun.

Mr. J. E. Gunckel read a paper on the life and services of the late Emory D. Potter, recounting his experiences in the then far West when he settled at Toledo, O., in 1834, and five years later was elected Judge of the Court of Common Pleas for a district covering a large portion of the State, and often had to make long journeys on horseback and swim streams in order to attend sessions in backwoods places. He was a member of Congress in 1843 and induced that body to reduce the postage on letters from 10 to 3 cents and to coin the 3-cent piece. About that time he became interested in the culture of trout through the experiments of Dr. Garlick and Prof. Ackley, and Mr. Gunckel said that he worked with them, a statement not borne out by Judge Potter himself. In later years he was an active member of the Ohio Fish Commission, and went afield with rod and gun when past 90 years of age. At the conclusion of the paper a committee was appointed to draft resolutions of respect for Judge Potter, and it was voted to insert a picture of him in the next report.

Mr. Fred Mather read a paper on "Natural Food for Trout Fry," in which he detailed his experiments in trying to breed entomostraca for this purpose after the scheme of a fishculturist in Europe who has a secret plan which he has wished to sell and which attracted attention in this country some years ago. Mr. Mather thinks the scheme impracticable and a long discussion followed. Mr. Whitaker pronounced the experiments to be of great importance and moved a vote of thanks to Mr. Mather. The plan was one, Mr. Whitaker thought, that the Government should experiment with, and that it should also try to show if trout may be reared for market with profit. The old question of liver-fed trout for the table was argued at length, some contending that they are unfit for the table, and others that this is mere prejudice. The question of feeding meal to trout was brought up and the weight of evidence was that it was good for them, although the trials by Mr. Page failed with all species except the rainbow. Mr. Whitaker said that a man in Indiana had reared whitefish on mush.

In the afternoon session the following officers were elected for the coming year: President, Herschel Whitaker; Vice-President, B. W. James; Recording Secretary, A. N. Cheney; Corresponding Secretary, H. B. Mansfield; Treasurer, L. D. Huntington; Executive Committee: H. C. Ford, W. L. May, J. W. Titcomb, T. H. Bean, F. B. Dickerson and J. E. Gunckel. It was voted that the next meeting be held at Detroit on June 17 and 18, 1897.

Dr. T. H. Bean then read a paper which he had translated from the French, entitled, "Pond Culture of California Salmon in France," written by Dr. Jousset de Bellesme, Peche et Pisciculture, Brussels. This gave an account of how salmon had not only been reared in fresh-water ponds, but had spawned at three years old, and was a curiously interesting paper.

Mr. Whitaker spoke of carp and of the eulogy on them in the paper just read, and said that he thought them the most desirable of all foreign fish introduced here; the farmer made what he called a pond which the first freshet washed away and swept the carp into the Great Lakes, and now that the fishermen have robbed the lakes the carp are supplying their place, and hundreds of tons of them are sold and they are food for poor people; thus the carp are solving the problem of cheap food.

Mr. A. N. Cheney read a paper giving statistics of the work of the New York Fish, Game and Forest Commission. Dr. James followed with a paper on "Interstate Protection of Food Fish," and this was discussed at length. Mr. Whitaker declared that fish in the Great Lakes were being exterminated and that he knew of thousands of whitefish being sold which did not weigh a ½ lb. each, the size of the mesh being the only law. Mr. Amsden doubted if the United States had the power to interfere with the control of State waters.

Mr. L. D. Huntington read a paper on the "Destruction

of Food Fish in Salt Water," and scored the pound nets and menhaden factories which turn good edible fish into oil and guano. Mr. Fred Mather announced that he had been experimenting with the breeding of scallops, but the lateness of the hour prevented going into the subject, which he had fully written up for the August number of the *Popular Science Monthly*, but as time was short he merely gave this reference to it.

Resolutions were adopted providing for a committee to be appointed by the president, to consist of one member from each of the Seaboard States, and another committee, made up of members from the States bordering on the Great Lakes, to whom should be referred with power the subject of Mr. Huntington's address. A third resolution was worded as follows:

Resolved, That it is the sense of this Society that each Stateshould provide in its constitution for a fish and game commission, and should also provide that no law should be passed prohibiting, permitting or regulating the catching or possession of fish or game without the approval of such game and fish commission.

A proposed visit to the Cold Spring Harbor hatching station on Thursday was prevented by the stormy weather.

BOSTON ANGLERS.

BOSTON, May 22.—Mr. N. Manson Jones is off for Camp Leatherstocking, Richardson Lake. He is accompanied by his friend R. H. Gilmore, of Cambridge. This is the first trip of the young men to the Rangeleys, though Mr. Jones has lived many trips in imagination from listening to his uncle, N. Manson, owner of Camp Leatherstocking. They will try fishing and camping for a couple of weeks, the sport being new to both.

Mr. E. H. Wakefield, Jr., and Mr. John E. Devlin are back from Dan Hole Pond, Ossipee, N. H. They got no salmon, nor has any one else taken any number this season up to this writing. Fishermen are at a loss to account for their non-appearance this year. Mr. Devlin got a handsome silver trout, weighing 4 lbs., however. Mr. John Campbell has a cottage at Newfound Lake, N. H. He is just back from a fishing trip there with a friend. They brought back a large trout weighing 14½ lbs., which was shown in a window on State street for a day or two. Mr. D. H. Blanchard starts on a fishing trip to Lake Winnipiseogee on the 26th with his daughter. He is the guest of Mr. E. Rolin Jones and his family, at Camp Millstone. Mr. Jones has a private steamer also.

There are numerous reports of good fishing at Moosehead, with a number of big lakers taken by Boston parties. Mr. L. H. Johnson sends in a report of a 14 lb. laker taken there on Wednesday. He also remarked that a good many brook trout or square tails are being taken, but the fly-fishing at that lake cannot be said to have begun at this writing. Several parties will be off about the 28th and June 1 for this sport. These parties are glad when the trollers, as they are pleased to call them, are through. The claim set up by the fly fishermen is that trolling destroys a good deal of real sport that might better be had with the fly rod.

It takes courage to tell the whole truth about a fishing trip, especially if one is badly defeated; but sometimes the truth will out, though the successes are told of with embellishment, while the defeats are never mentioned. Mr. Irving Powers and Eugene McDonald, of the Chamber of Commerce, have lately returned from a fishing trip to Lake Winnipiseogee. At about 3 o'clock in the morning they were up and off for the lake, and were trolling by daylight. They fished all day long with not a bite. Another and a larger party has just returned from a rather unsuccessful fishing trip to New Hampshire. This party went into camp at Great East Pond, but had no particular success in fishing. Mr. Harry Powers, with his wife, was in the party, and about a dozen other gentlemen and ladies. Tired of pond fishing, Mr. Powers with some of the others made a trip up over the Mountain Division of the Maine Central Railway, but found the brook fishing exceedingly poor. Mr. Powers had visited a distant pond in that part of the country several years ago called Bean Pond. The fishing was excellent and the trout particularly fine. Anxiously he made a trip to the same pond the other day. Very few trout were taken. It seems that some one has been fishing in the winter there, and not only have the trout been badly fished out, but piles of live bait have been thrown into the pond till it is full of shiners.

Mr. John G. Wright, with a couple of friends, has started for Weld Pond, in Maine, for another try at the landlocked salmon. Mr. C. Z. Basset, of Appleton & Basset, and his fishing friend, Mr. G. N. Smalley, left Boston for Richardson Lake Thursday. They will go first to the Middle Dam, and will also try the early fly-fishing at B. Pond. These gentlemen have fished the Rangeleys together for a good many seasons, and their success has generally been remarkably good. The largest fishing party of the season left Boston for Moosehead Friday evening. It is termed the Produce Party, for the reason that it includes so many men prominent in the produce and provision trades. The list includes L. E. Pierce, who is the principal factor of the company; Geo. A. Fales, James H. Davis, M. J. Conant, S. R. Ellis, F. H. Bowles, S. R. Beardsley, New York; W. F. Perkins, Boston; Thos. M. Deal, St. Albans, Vt., and C. W. Cheeney, of Boston. The party might seem too large, but it has a steamer engaged that is capable of carrying twice as many, and since all the fishing is done from canoes and boats taken out by the steamer, with guides and lunches, there is no crowding. Many of the gentlemen have annually fished Moosehead for several years. A party of prominent Boston merchants and professional men that has always heretofore visited Moosehead on a spring fishing trip will this year try the Rangeleys, starting about the 30th. The Camp Stewart Party, for Richardson Lake, is off, starting Thursday evening. This year the company includes Mr. and Mrs. Charles A. Stearns, Mr. Geo. T. Freeman, Mr. H. S. Kempton and Mr. and Mrs. W. K. Moody. All of the above-named have fished that part of the Rangeleys for many seasons. It is about the twentieth annual trip of Mr. Moody, with two-thirds as many trips for Mrs. Moody, fully twenty trips for Mr. Freeman and at least a dozen to the credit of Mr. Kempton. Mr. and Mrs. Stearns have also fished the same grounds a number of seasons. "Fish enough for the table" is the rule. But others fish there for count and to take back to city admiring friends. The mouth of Mill Brook was fished by a couple of men old enough to know better last year for several days and everything wen into the creel. Such conduct is discouraging to those

who for years have practiced returning every trout to the water of less than half a pound.

The Boston & Maine Railroad is checking sportsmen's trout as baggage, the same as ever. The impression that this road was not doing so comes from the fact that the Union Station at Portland is partly controlled by the Maine Central as to baggage arrangements. On the contrary, the Boston & Maine has issued special instructions to baggage masters to check sportsmen's effects up to 150 lbs., though plainly not wearing apparel or baggage in the real sense of the term. I am authorized to state, direct from the management, that it has no intention of issuing orders for discrimination against fish and game as baggage.

SPECIAL.

BOSTON, May 24.—Mr. and Mrs. J. C. Caswell, of Boston, have just returned from a week's fishing trip at Moosehead Lake. It was Mrs. Caswell's initial experience with rod and reel, and yet in this short period of seven days she has accomplished more than many veteran anglers succeed in doing. To land in eleven minutes a 7 lb. 6 oz. lake trout on a 4½ oz. neverbreak rod shows distinct ability as an angler, and it is an accomplishment that this lady may well be proud of. Mr. Caswell is an adept at fishing, and of course did well on this trip. A 4½ lb. brook trout on the fly was one of his catches, and altogether they landed 140 lbs. of trout (nearly all lakers) during their short outing. They were also treated to an unusual sight in seeing a bull and cow moose swimming close to the shore. Mr. Caswell says he approached them near enough to cast a fly on their backs had he wished to.

L. D. Chapman and Horace S. Dame, of Dame, Stoddard & Kendall's, and W. A. McLeod, of Boston, left on Wednesday evening for a ten days' trip over the Megantic preserve. They will go in at the club house, thence down over the preserve to the different camps, coming out at Rangeley. While fishing is the main object of the trip, a general inspection of the camps, etc., preparatory to the opening of the season will be made by Mr. Chapman in his official capacity as secretary and treasurer of the club.

P. B. Mansfield and J. M. Hoyt, of Lynn, and William Beggs, of Woburn, have just returned from a very successful trip to Grand Lake and stream. They have visited these waters each spring for five years, and with the exception of the first year's trip pronounce the one just completed the best they have made as to results. The fishing was exceptionally good. Mr. Mansfield, who delights in lake trout fishing, landed one of 11½ lbs. and another of 10½ lbs. A number of salmon and brook trout were also taken by the party. They report that fly fishing was just beginning as they left.

Not many New England anglers who live west or south of Boston fail to stop in that city on their way to Maine, to add something to their equipment for the trip. A New Haven party, consisting of Geo. N. Bulley, Jas. C. Kerrigan and C. H. Conway, followed the usual plan the other day and stopped over long enough to tell me that they were bound for a three weeks' trip into the Rangeley region. They expect to go up Kennebec stream and over into the Dead River country, and have promised to tell me of their luck when on their homeward journey.

F. J. Baker, J. Guild and Maj. Greenough, of Boston, leave next Wednesday for their camp near Moosehead. They have been going to one place up there for years but I have never learned its exact location. It is sufficient to know that they always express themselves as well satisfied on their return, and depart each succeeding year with renewed enthusiasm. It is not a bad idea to play solitaire with a good location in these modern days, when the ever increasing crowd of anglers are peering into every brook and pond, ready to drop a line at the least indication of fish life.

That misfortunes never come singly is once more proven by the experiences of the Inglewood Fishing Club during the last two or three months. Within that time the club house has been destroyed by fire, the vice-president has died, and now to crown it all word has just been received that the club superintendent and game warden, George Teare, and one of their best guides were drowned a few days ago. The particulars of the sad event are given in a letter just received by a club member. It seems that the two men had gone down to the foot of the lake, intending to return in the evening by canoe. It is a long paddle of five miles to the club house, and when darkness settled down they made preparations for the return trip. A strong gale was blowing at the time and they were advised not to venture out, but would not listen, and started away, little thinking of the terrible fate so soon to overtake them. Worried about their non-arrival at the club house, the guests started out in the morning, and in a short time found the overturned canoe, which established beyond doubt the story of their fate. The guide's body was first recovered, but it took a long time to find that of Mr. Teare. Both men were good swimmers, but encumbered as they were with heavy clothing could do nothing in the rough water to save their lives. It is only two more names to add to the long list of those who have met the same fate on our inland lakes through an overconfidence in their ability to ride out any storm in the little cockle shells so much used on all these bodies of water. A large party of Inglewood members will leave for the preserve next week and this unfortunate event will cast a gloom over their pleasure. The party will leave on Wednesday morning, the 27th inst., on the St. John steamer, and those who will go are Samuel Shaw, Henry B. Pierce, A. W. Strauss, John F. Blinn, Charles Brigham, S. Fred. Hicks, Herbert Sparrow, Albion Brown, Harry B. Moore, John Evans and E. Noyes Whitcomb, all of Boston, and George Moore, of Chelmsford, Mass. They will be away two weeks, and in that time hope to fish all the best waters on the preserve.

A strong party of Brockton people, in which are an unusual number of ladies, leave Boston on May 27 for a fishing trip into Maine. Among them are Mr. and Mrs. W. F. Field, Mr. and Mrs. B. O. Caldwell, Mr. and Mrs. C. F. Porter and daughter, Mr. and Mrs. A. C. Thompson, and Mr. and Mrs. H. F. Crawford and daughter. They will go first to the Kineo House at Moosehead, then to the north carry and to the Katahdin region, and will be away three or four weeks. Last year this same party visited Moosehead, and on the first day's fishing landed 102 lbs. of square-tail trout. It speaks well for the endurance and pluck of the Brockton ladies that so many will undertake such a hard trip. It would be well if there were more of the gentler sex given to recreation in the woods.

On May 30 Mr. H. M. Pierce, of the King and Bartlett preserve in Maine, will come out to Eustis and meet a party who will deliver to him 100,000 young trout to place in Big King Lake. This is only one of several lots of trout which have been put in this lake, and it is creditable to Mr. Pierce that he has the wisdom to provide for the future and insure a continuation of the present good fishing on his property.

A few weeks ago I gave an account of the reorganization of the Magaguadavic Fish and Game Club, who have a fine preserve in New Brunswick. Now that the club has entered upon a new era of prosperity, the members both old and new have been anxious to visit their property and test its waters, about which they have heard so many good reports of the fishing. It was therefore with great impatience that they looked forward to the evening of May 20, when the first party were to leave. G. D. Loud, of Boston, might be called the pioneer of the party, as he has been over the preserve time and again, and most of the others pinned their faith on his knowledge and experience. Those who left with Mr. Loud are M. D. W. Green, F. H. Babcock, R. R. Gilman (the inventor of the Gilman Fly), H. F. Hanson, J. A. Ordway, Jr., and L. H. Myrick, all of Boston; O. B. Graves, Cambridge, Mass.; M. A. Gilman, Westfield, Mass., and W. H. Fox, of New York city. Three weeks of solid fun is their anticipation. May it be realized to the full.

Geo. P. Thomas, one of the most popular of Rangeley guides, came to Boston a few days ago with a party of returning sportsmen. It was the Ackerman party of Brooklyn, N. Y., and they have had a record-breaking trip. B. G. and C. C. Ackerman and E. E. Suffern were the gentlemen, and the weight of their five best fish (all square-tails) were respectively 7½, 6½, 5½, 5½, 4½ lbs. B. G. Ackerman made one day's catch of 39½ lbs. All this good luck was had in the vicinity of the Upper Dam, where they stayed for ten days. Who says the Rangeley fishing is getting poor?

John G. Wright, W. V. Kellen and C. H. Souther, of Boston, have gone to Weld Pond, Me., for ten days' fishing. Mr. Souther has been there before, and Mr. Wright is one of Boston's oldest and most expert anglers; therefore the Weld Pond trout and salmon are bound to suffer the loss of some of their members while these gentlemen are there.

Camp Bemis and the Birches at the Rangeleys have a great attraction for a party which will leave on May 25. C. S. Grover, W. S. Hixon and Willis W. George and wife, of Lynn; Frank T. Arnold and wife, of Peabody, Mass., and a Mr. Frost, of Boston, compose the party, and they will stay two weeks. Mr. Hixon made his first trip last year, and was only induced to go after great persuasion. It took no urging to get him started this year, and he now regrets that he did not take up the recreation of fishing long ago, in this respect reminding me of a friend with whom I made a trip a few years ago, who, while we were tramping through the woods, used to bemoan his bad taste of the past in spending his summers at seaside resorts instead of giving the time to the woods and streams with rod and gun.

Judge Stone, J. C. Brown, F. W. Lee and Dr. G. B. Elliott, all of Lawrence, Mass., left on Saturday to spend three weeks with the big trout at Wilson's, Moosehead Station, near Greenville, Me. HACKLE.

Forest and Stream Fishing Postals.

Drop us a line about the trout or bass, and where to take them.

CHICAGO, May 16.—The following extract from a letter dated State Line, Wis., May 11, concerning catches of lake trout in Black Oak Lake, may be of interest to your readers: "Last week George F. Bidwell and party in one day caught forty trout, and Messrs. Owen and Geltmaker in five days caught forty-five trout, the largest weighing 9 lbs." W. B. K.

Mr. W. R. Bishop, of the Cranberry Lake Hotel, Cranberry Lake, N. Y., sends us the outline of a brook trout caught by Donald Stewart at the Cranberry Lake outlet on May 15. It measured 20 in. in length and the weight was 4 lbs. These waters are maintaining their old reputation.

MINERVA, Adirondacks, May 16.—Fishing very fair, weather delightful. Had a fine rain yesterday, which was very much needed, as the country was exceedingly dry, and quite a number of small forest fires had developed during the past week. F. W. K.

JOHNSTOWN, N. Y., fishermen have a good story to tell of Alderman James H. Coughnet, who went fishing on Peck's Pond last week. Mrs. Coughnet went along, and this is what happened: During the forenoon the fish that frequent the upper portion of the pond were extremely wary and rather avoided any encounter with the glittering spoon or tempting morsels that were occasionally thrown out. Just after the little rain shower the party started to row to the eastern shore, and as they rowed along, the alderman—jokingly, of course—offered his wife \$10 if she would catch a 2-pounder. She released her spoon, which sank nicely about 1 ft. deep, and in the twinkling of an eye was gobbled up by a monster of the mighty deep. With a tremendous effort, and without any assistance from her liege lord, she played out and hauled in, and at length landed safely at her feet an 8 lb. muskalonge, said to be one of the largest and handsomest fish caught in those waters for many years. Of course the alderman forked over the \$10.

Rare Chance for Salmon Fisherman.

We have just learned of a fishing privilege for sale for one rod on the Grand Cascapedia, the most easily accessible and renowned salmon river in all Canada. Price moderate. Address CASCAPEDIA, this office.—Adv.

Salmon Fishing for Sale.

FREERHOLD, on the best fishing waters of the southwest Mirimichi River (Burat Hill). For terms and particulars apply to Thomas J. Conroy, 310 Broadway, New York city.—Adv.

Game Laws in Brief.

THE Game Laws in Brief, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

The Lost Man Identified.

NEW CUMBERLAND, O., May 5.—Editor Forest and Stream: Yesterday we received a copy of your paper dated Jan. 4, 1896. It contains a picture of a pitiable man and an article entitled "The Lost Man Found Again."

That is the picture of my brother. He has been away nearly three years. He was a doctor, refined, intelligent and a gentleman; is 50 years old and a bachelor; very bald, with fine dark hair sprinkled with gray; light blue eyes, medium height, rather slender build, and was somewhat fleshy before he went away, weighing about 170.

He got an idea that some one might injure him. His mind is somewhat unbalanced. We hunted for him, but never were able to reach him. We have found where he has been and he has written home a number of times. He does not stay long in any one place. A few times we

THE LOST MAN.

Printed in our issue of Jan. 4. Now identified as Gilmer Carns, New Cumberland, O.

have known of him going to a place where he had been before. We last heard from him in the Province of Quebec, Canada.

If any of those gentlemen out hunting come across him again we wish they would keep him securely, be kind to him, feed him well and telegraph us at once. He is a Christian and is harmless. There are none of his people in the old home now but his widowed mother and one sister (myself). We would like to get him home.

I have given you the particulars and would be glad if you would write an article and put it in your newspaper that the sporting gentlemen may see it. The picture and the two articles that have already been in the paper will help to identify him. His name is Gilmer Carns.

DOG AND PICTURE.

Editor Forest and Stream:

It has always been a mooted question in comparative psychology whether a lower animal has the power to perceive a portrait. Mark the word which I use—portrait. That a lower animal can perceive a reflection there is no doubt. Upon this recognized fact the advertiser played in the picture which, a good many years ago, appeared on the box-lid of a certain shoe-blackening, which picture represented an interesting terrier barking at his reflection in a highly polished, great pair of top boots, which polish could not have been attained by the most accomplished boots had not the blackening within been discovered and compounded.

To a dog lover there is nothing much more amusing than a frouzy cur's violently barking at his own reflection in a mirror. He evidently thinks the reflection a dog. He tries to get at it. He fails. He tries again with somewhat of uncertainty. A question has arisen in his mind. He draws back. He fears. There is something uncanny in the situation. What has every appearance of being a dog is not a dog. With his tail between his legs and maybe a yelp, he slinks away, glancing furtively back over his shoulder. Now take the frouzy cur, wash him, pet him, allow him to see his reflection time and again,

and he will come to know it to be a reflection as well as you do.

I have a very amusing series of pictures (true to the life) of a young and inexperienced fox terrier first seeing a bone on the bank of a stream across the water from him, then the reflection, which he takes for another bone, then in the midst of a great splash nothing visible but his hindlegs. That dog perceived a reflection and recognized in it the outlines and colors of a toothsome bone. Presuming the series to be the record of an actual series of events, that dog was probably never again enticed to a ducking by a reflection of a bone.

A reflection is essentially a likeness. It is a reproduction of the form and colors of an object. What more does the sensitive plate do than reproduce the form of what it is exposed to—tree, man or star? What more than this does the simply mechanical artist who uses pencil and crayon? The artist who is only a mechanic, who uses brush and pigments, does nothing more than add color to form. The one who produces a portrait with pencil, crayon or brush does more. He reproduces not simply form and color, the person, the external man, or woman, or animal; he reveals somewhat of the internal of the individuality which vitalizes the personality—manifests itself through the personality. In a full-sized likeness of Cæsar, for instance, we would see the lithe limbs, the broad chest, the splendid head, the overhanging brow, the Roman nose, the eagle eyes. In a portrait of Cæsar these limbs would appear as if they were about to act; the broad chest as if about to expand, taking in breath for the carrying out of a great purpose; the head would seem on the point of nodding imperial assent, or rising in imperial command; the brows on the eve of quivering; the nose would express disdain or repose; the eyes would smoulder, or gleam, or flash. The veiled bust representing Julius Cæsar as Pontifex Maximus has always appeared to me a likeness, while the statue of the capitol has seemed a portrait.

That the lower animal has the essential power by which a likeness as well as a reflection is cognized is made plain by what I have witnessed the dog (not a show dog), Dodgerfield by name, of my friend the actor, Mr. W. E. Dalton, do. Pedestaled pieces of tin are placed in disorder on the floor, on which are painted the Arabic figures 1, 2, 3, 4. Name any one of these figures and Dodgerfield will bring to you the piece of tin on which it is painted. This proves beyond question, if it needs any proof—and I find that everything in animal psychology has to be proven—that Dodgerfield has one of the faculties essential to the perception of a likeness, the faculty of form. Without it, it would be utterly impossible for him to distinguish one figure from another by sight, and I have taken pains to prove that he does not distinguish the tins upon which they are painted by scent. The other faculty necessary to distinguish a colored likeness is of course that of color. That Dodgerfield has that is proven in this way: four handkerchiefs—one white, one red, one orange and one green—are laid in disorder on the floor; you ask for the one you want, naming the color, and Dodgerfield will bring it to you. Here again I can assure the reader the distinction is not through scent. Now you have a beefsteak painted by a competent, realistic artist. Show it to your dog. See how quickly his attention is attracted. He may not sink his teeth into the picture, but this will not be because he does not perceive its form and colors, but because the mistake made by his eyes is corrected by his nose. If you could make the picture smell precisely as a beefsteak you would thoroughly fool the dog, as thoroughly as I have seen men fooled by a painted green-back.

But admitting—and I think that most of my readers will be with me up to this point—that the lower animal has the power of perceiving reflections and likenesses, are they capable of recognizing the likeness of a particular thing, of a particular beefsteak or of a specific man? When I was a boy, I remember a great joke that we had at the expense of an aunt whose name was Jane. My mother's name was Sarah. Walking through a great dry goods store the aunt came to a large mirror. Her hands and eyebrows went up in surprise and she exclaimed, "Why, Sarah, when did you come to town?" Her companion and the clerks who were about laughed—to the disadvantage of the firm, I might as well add, for the aunt at once walked from the store with a flushed face without making a purchase. Now the question is, could a lower animal have made such a mistake, and having made it, would its mind have corrected it?

The portrait has to do with the individual as well as with the person, with the subjective as well as with the objective, and is not of the genus nor of the species, but of the unit; is not of bone, beefsteak, man or dog, but a particular bone, beefsteak, man or dog. With this definition before us, can a lower animal perceive or know a portrait?

Reasoning *a priori*, I have always thought it possible that the lower animal might know a portrait. As I have shown, it has the faculties of form and color with which to recognize, or, to speak more properly, to perceive or know the likeness—which is, so to speak, the personality of the portrait; as the body and members are the personality of the man. Then it may, and often, as in the case of the dog, does know the temper and moods of the individuality within the personality. The dog knows, by the change of his tone and expression the state of the master's mind as well as that master's wife and children do. Again, there is no essential difference in man's power of knowing and that of the lower animal. Of this I am profoundly convinced.

The circumference of man's knowledge is greater than that of the lower animals, but it is described from the same center. Edison knows more than the average man; but the average man has the same faculties that Edison has. The average man knows more than the most highly developed lower animal; but the lower animal has the same faculties that the average man has. This is true up to the point of knowing relations between things through other relations. Singularly enough, a letter has come to me since I sat down to write this paper which proves this to be true—a letter from Mr. Dalton with relation to the dog Dodgerfield, whom I mentioned a few sentences back.

Under date of March 27 Mr. Dalton says:

"Dodgerfield has developed a fondness for sleeping on our bed in preference to his own. His bed is a small cotton pad in a basket. He has settled himself upon our bed every night after the performance of late, and it has required quite a commanding tone to induce him to go to

his own when the time comes for us to go to ours.

"Last Thursday the climax came, and we surmise that he filled some of his dozing moments through the day in devising some way of attaining the desired bed; for almost immediately upon our returning from the theater he, of his own free will and direction, dragged his pad from his basket, which was in a closet, then across a lift, room to our bed, and jumped upon it, tugging the pad after him. Then spreading it out the best he could, he lay down upon it and went to sleep."

That Dodgerfield reasoned in this action, there can be no doubt. I have already shown that he has two other faculties necessary to the perception of a portrait—that of form and that of color. That he has the fourth—that of the power of the perception of the individual within the person—is so apparent that Mr. Dalton thinks him capable of receiving impressions, even thoughts, through telepathy.

Now, were Mr. Dalton or anyone else to tell me that Dodgerfield had known a portrait I would not think the statement wild. But such a thing neither Mr. Dalton nor anybody else has told me with relation to Dodgerfield. It has been told me, however, with relation to another dog—Tiger by name—owned by the Rev. Peter Claude Creveling, of Cornwall, N. Y. Mr. Creveling writes me under date of Jan. 20:

"My wife does crayon work. Last week she had on her board two portraits, each a striking likeness of its subject—the one of myself, the other of a friend unknown to Tiger. When Mrs. Creveling had about finished her work, and after my portrait had been placed in a frame and stood on an easel—the other being very near it—Tiger was admitted to the room. (You will please remember that some precaution must be taken before admitting him to a studio, as his tail is not conducive to the good order of such a place.) Immediately upon seeing his master in crayon, he walked over to the easel and endeavored to kiss the face. It was covered by glass. A second attempt was made to show his recognition of and love for his master. He could only touch the glass. This trial was enough to convince him that any further attempts to kiss the object of his love would be vain; so he lay down in front of the easel, his eyes riveted on the covered face thereon, and over his face passed an expression of combined disappointment and love that was truly pathetic. He would fain have kissed my cheek to tell me of his love. After a few moments of mental anxiety, he rose, came over to where I was sitting, got on my lap (he weighs 105lbs.), kissed the living face, expressed his love, and fully showed his great delight that his master still existed in tangible form. The subject of the pencil, it is quite useless to tell you, was as much pleased as Tiger."

I am sorry that this paper has grown so long that I cannot give some account of Tiger. When a man does a great thing, consciously or unconsciously—most great things are done unconsciously—much is written about him, the poet sings him, the orator eulogizes him. Tiger has done a great thing. He has shown that a dog can cognize a portrait. He has settled a mooted question in comparative psychology. I am proud to be his reporter. He has known a portrait. He has had a glimpse of the Unseen. May it not be that he may leap upon the master whom he loves, and subjectively lick his face in Eternity? Tiger and his master and all of us are in the hands of the Unknowable, yet the Real.

CHARLES JOSIAH ADAMS.

29 LAFAYETTE PLACE, New York.

NORWEGIAN AND SWEDISH BEAR-HOUNDS.

I HAVE lately read Mr. Alston's interesting article on Norwegian elk-hounds, and having myself followed the chase of bears and elk with considerable success during twenty years in Scandinavia, I am able to indorse the bulk of his remarks.

At the close of his article Mr. Alston says, "This dog can be instructed to hunt for bears, reindeer," etc. Now, this is precisely where, as an old bear hunter, I differ with him, for, as regards bear dogs, the experience of a very few years sufficed to impress on my mind the undeniable and certain fact that, for all practical purposes of the sport of bear hunting, as pursued in Norway and Sweden with loose and leash hounds, you cannot make a bearhound out of that special variety of dog; nor would you, by any insinuating instructions or lessons whatsoever, be able to coax, force or teach any individual of this class of dog to follow a bear or take his spoor unless he pleases. Whenever a young dog develops bear hunting propensities you may then proceed to train him in harness as soon as you choose, and as soon as you can find a bear for him to hunt. But it is an almost absolute impossibility, with any degree of certainty, to pick out, say, three, two, or even one out of a lot of pups, and decide beforehand that you will make a bearhound out of them or him. The *Ursus canis* of Scandinavia, *nascitur non fit*, that is my experience, at any rate, and I have killed many bears in that country and hunted a vast amount more which I was not lucky enough to get shots at.

This uncertainty about the breeding and subsequent training of a reliable bearhound is precisely where the difficulty comes in, and is the reason of the survival, relatively speaking, of such a number of bears in the Scandinavian forests and fields, and, I take it, explains the fact that so very few Englishmen pursue the sport of bear hunting in those countries. I, of course, refer to still-hunting only, with one or perhaps two followers, and one dog in harness, or at times two. I myself rarely took more than one follower and one of my dogs, except in the snow season, when the bear happened to be in a hie, when I have taken another companion, I always slipped my dogs at a wounded animal. I have traveled many hundreds of miles both in Norway and Sweden on the search for good bearhounds.

Out of between forty and fifty elk and bearhounds I have possessed or tried at various times, and many more I have seen and hunted with during twenty years, I have myself only possessed four which I could in any way call really first-rate and reliable bearhounds—that is to say, which you might use both loose and in leash—and I may say I have known about half a dozen others which did not belong to me, and I may also state that I have hunted the country far and wide many times, and have corresponded with many people about them, and did not stick at any price in reason for a perfectly reliable and well-guaranteed animal. I was once asked by a Swedish hunter for a pair of Jemtland elk-hounds 650kr.; this was

at the end of the season too. One was a good and reliable Björnhound as well, for which he asked 400kr.; for the other one, almost the image of him, but a year and a half older, he asked 250kr., as he would not take Björn spoor, but only elk. I have paid various prices, ranging from 120kr. to 350kr., which latter was the price I paid for my largest and best bearhound. I went some 270 miles out of my way to get him, and it took two days' bargaining before I could call him mine. This dog came from northern Dalecarlia or Vestra Dal. He was a half Finhound with half erect ears. I used him for six years for bears, elk and reindeer, and you could not have found a better. His great failing was his uncertain temper, as he bit me badly on two occasions. It is absolutely a *sine qua non* that you possess a bearhound if you wish for any length of time to follow the sport of bear hunting successfully in Norway, so that is the reason I was at such trouble to procure good bearhounds.

On another occasion I traveled from a district to the N.E. of Sölbo Vand in South Trondhjems Amt., where I was then bear hunting all through Jemtland, nearly as far as Stor Sjöen, a distance of some 390 miles there and back (this was before the present railway was made), for the express purpose of inspecting some bearhounds I had heard about. I inquired all along the road, and saw some very fine, handsome-looking animals, but I could get no reliable or satisfactory character with any one of those I saw. I can speak both Swedish and Norsk, from a long residence in both countries, so I had that advantage to aid me, and I intended to go as high as 500kr. for a first-rate dog, but I did not meet with one there, for sale at any rate; and I may state that I had recently paid 200kr. for a reputed good bear dog, which would not follow bear tracks by any persuasion whatever, and he lost me a splendid, fine bear, which I saw and had the chance of following, if he would have taken the spoor. My other dog, which was a really good bear dog, had run a pine splinter into one of his forefeet, so he was laid up for that time. I have also driven into Sweden from Råraas down to Ljusnedal, and along that road which skirts the Ljusna Elv, for many miles, to places I do not remember the names of, and I bought one in that district for 250kr.; and another, a first-rater, of a man who lived on the east side of Lake Femmund, in Norway; he was just starting for America or would not have sold his dog for any money. I gave 150kr. for him, he was 4 years old; his master had killed some fifteen or twenty elk to him and five bears. I used him constantly for seven years and I killed something like thirty-six or thirty-seven elk to him, and six bears. He was a perfectly pure-bred Finhound, a beauty to look at, with fine erect ears, a powerful chest, strong loins, and with a bushy tail curling on the left side, which is the proper place for a bear dog's tail to curl; he was of a dark brownish-gray color, and stood high on his legs and looked just like a wolf. He was of the sweetest disposition I ever saw in any dog of my acquaintance, and he knew no fear; he always looked you in the face with his intelligent, honest-looking eyes. You could take him away from the carcass of an elk or bear just killed, and he would never attempt to bite you. I have often taken bits of the entrails away from his mouth when we were grallocking or cutting up the animal, so that he should not gorge himself, and he never offered to growl, show his teeth, or even look the least savage, but would wag his splendid curly tail when I put on his harness to lead him away to tie him up, and be quite contented. On one occasion this dog found me two bears, a full-grown and a half-grown one. We had been on the scent for exactly three hours and one-quarter, over hill and dale, across swamps and bogs, and up and down steep and rocky gorges, without seeing fresh tracks of any kind or description, either of elk or bear; but without a single mistake he brought me as straight as a line to a place where these two bears were feeding on berries on a hill slope; this was at the end of October, and there was only a little snow in places; he took me up within 80yds. before I saw them, as there was plenty of cover, so they could not discover me. I looked gently and cautiously over a large heap of moss-covered rocks, and saw them both before me, the nearest about 80yds., the other 90 or thereabouts. I immediately gave the dog's strap to my man to hold (as I always hunted my dogs myself, and never at any time allowed any stranger to hunt them). The dog grasped the situation instantly, and, though he was quivering with excitement, and evidently realized that the *denouement* was rapidly and surely approaching, made no sign and uttered not the ghost of a whine, though he knew as well as if he saw them that the bears were only just the other side of the rocks; and, as my companions told me afterward, he had his eyes fixed steadily on my movements and on the rifle, and his nose pointed in the direction of the puffs of wind which were coming over the rocks straight from the bears. I then raised my rifle (both bears had their left sides turned toward me) and fired behind the left shoulder of the biggest. She sprang up for an instant, rolled over backward with a ghastly groan and lay kicking, whereupon the smaller one—a 3-year-old bear—stood up for a second on its hindlegs. In one instant I gave it the contents of my second barrel, just as it started to bolt off. My man then handed me the two cartridges to load, and I gave the big bear a finishing shot. In the meantime the dog was frantic with excitement, and sprang up on the rocks with the man, and we saw the smaller bear kicking about and rolling away down the hilly slope. I slipped the dog, who soon caught up with the bear, rushed into him and seized him by the throat and literally froze to him. I thought the bear would certainly have killed him, but he never once let go, and they both rolled over and over together down that steep slope, some 200ft., to the bottom. When at last I got to them I found him bathed in the blood of the bear, they were rolling and struggling and fighting, and altogether made such a fiendish noise that I think I never heard the like of it before. I could not get a sure shot at the bear, as I was afraid of hitting the dog. So my man cut a thick club, while I rammed my rifle barrels right into the bear's mouth and down his throat, so that he could not get at the dog to bite him, for he never let go once, and there was a hole on the left side of the bear's throat big enough to put a dumpling inside, at least a small dumpling, which was the effect of a .500 bullet from my Express. It just missed the vertebrae of the neck, in which case he would have been a dead bear. Well, the man soon got the club ready, and banged on to the back of the bear's head and stunned him, whereupon I gave him another shot and killed him. I never saw

such a sight as the dog was; he was covered with blood from head to tail, but he was not bitten or hurt in the least, and had not so much as a scratch on his skin, though the bear had hugged him pretty tight all the way down the hill slope. Probably, if I had not been there in time, he would have squeezed the breath out of the dog before he himself gave up the ghost, though he must soon have caved in from loss of blood, owing to the fearful wound in his neck.

When I stood and watched the two rolling over and over together and bounding down that hill slope on their mad career, I thought the bear would have torn my dog into strips, but he was a very powerful dog of the kind, and the bear was only a young one after all. Now that is the kind of dog I call a good bearhound, and one that is worth any money for bear hunting; but I assert that you could no more pick out a young pup and train or instruct him to turn out like that than you could teach a pig to speak Arabic. He was in every way one of the pluckiest, best tempered, most intelligent, keenest, best-nosed dogs of the kind I ever came across in all my experience, and was as good a loose and leash hound for elk as he was for bears.

There is no particular breed from which to train a bearhound, for it all rests with the dog himself whether he possesses the courage, energy and peculiar instinct required to develop him into a bearhound. Now and then it happens that a common mongrel cattle dog, or gaardhund, as they are called, will develop into an excellent bearhound and put to shame some of those fine, showy-looking so-called elk-hounds you meet with in Jemtland. I possessed such a one some years ago, he was half Finhound and half mongrel cattle dog. I bought him of a hunter who lived on the upper waters of Namsen, somewhere near Nams Vand. He was a good-sized dog, black and tan, with a thick furry coat and large bushy tail, curling on the left side. He was a first-rate dog for bears, elk, reindeer and red-deer, for I used him for all these, and killed four bears and several elk, reindeer and red-deer to him. I paid 130kr. for him, but he was 7 years old when I bought him, and I only got four years', or I may say nearly five seasons' work out of him, for he got too old at the end of his last season. This dog was decidedly keener on bear than any other spoor, and he never showed the least fear of bears at any time. On one occasion he found me a bear in a hie some time at the end of November. There was some difficulty in getting about, owing to a foot or more of snow in the woods. He scratched away the snow from the mouth of the hie and woke up the sleeping beauty inside, which, however, never attempted to hurt him, but kept up a continuous growling and snarling, whereupon the dog quickly backed out and stood on the snow at the outside, barking furiously and lashing his tail from side to side. He showed no more fear of him than if he had been a pig in a sty. I could not get the dog to come away, anyhow, so crept cautiously up, holding my rifle at full cock in my left hand, while with my right I reached round and grabbed hold of the dog's tail and swung him down a steep slope into the snow below. Then the bear sprang out, and his funeral was held shortly afterward. This was a rare all-round dog, as good as they are born, for you cannot make them. It is a curious fact connected with good bearhounds that they almost invariably curl their tails on the left side. I have repeatedly noticed this fact, which is probably only a coincidence, but I can truly assert that every good bearhound I possessed or used during a twenty years' hunting experience in Norway and Sweden curled his tail on that side, and, moreover, I never happened to hunt with any dog of the kind which curled his tail on the right side that was any good for bears, though at the same time they were excellent elk and reindeer dogs. I find it impossible in any way to account for such a singular fact, but it is well known to all bear hunters, and my attention was drawn to it when I bought my first bearhound.

I always hunted my own dogs myself, after studying the ways of hunting and the peculiarities of that class of dog, which I learned after a three years' apprenticeship with professional hunters who well understood these dogs and their business. After which I felt competent to hunt my dogs myself, and find my way about any forest without guidance from any other. I could give many examples of the extraordinary long distances some of my dogs have winded elk or bears. One cold and snowy day in mid October my dog took me for more than three and a half hours, straight up wind as near as possible, over and down a high hill, and up and across a considerable extent of high field. There were about 6 or 8 in. of snow on the ground, and I knew the sport was not there, though at times he burrowed his nose in the snow to see if the scent which puzzled him lay there underneath the snow. But he still kept on and never hesitated or halted except to spring on a rock to obtain a better wind, after which he would dash forward, pulling me along with him, then proceed as hard as I could let him go, with his head and nose high up in the air.

My man and I were both first-rate walkers, and never once stopped to rest, so I may say without exaggeration we covered at least two and a half miles of actual distance in each hour; this would give seven and a half miles for the entire distance in a straight line from the place where the dog first got the scent to the spot where we came on the elk. There were five of them, and they were browsing on mountain ash bark, in a deep valley below us, when we first caught sight of them at 800yds. off. How the dog could get the wind from them over that distance, and with so many obstacles between, I know not and cannot explain, though I calculate I have been running and walking on the spoor of some 700 or 800 elk with my dogs at various times. We never came across the ghost of a track of bear or elk until we came direct on those five elk. Most of the snow had fallen the day before, so there was certainly no fresh spoor under the snow, which sometimes a good dog will take as well as if there was no snow at all. Some people may disbelieve all this and say it is impossible or think I am romancing, but nevertheless it happened as narrated, and I could mention many more instances even more marvelous of the scent-following qualities of a first-class hound of this species. The animal just referred to would scent bears at equally long distances on certain occasions and under certain conditions of atmosphere.

It is absolutely necessary to understand your dog and have full confidence in him before you allow him to lead you such a long distance, or you might find yourself on a fruitless chase. I think it is desirable to mention all this

for the purpose of warning amateur English bear hunters in Norway and Sweden against purchasing, often at an absurdly high price, young and untried animals of this species, with a view of training them into bearhounds, no matter how good a pedigree they may have or however handsome and well-bred an appearance. As I have previously stated, that idea is a delusion and a snare, and not with any degree of certainty to be attained.—*An Old Bear Hunter in Field, (London).*

THE A. K. C. MEETING.

THE regular quarterly meeting of the American Kennel Club was held in its offices, 55 Liberty street, on May 21. The president and vice-president being absent, Dr. H. T. Foote was elected chairman. There were present: Associate members: Dr. H. T. Foote, A. C. Wilmerding and W. Whitney; American Fox Terrier Club (H. H. Hunnewell, Jr.); American Pet Dog Club (T. F. Wickham); American Spaniel Club (E. M. Oldham); Boston Terrier Club (L. A. Burritt); Bull Dog Club of America (E. Willard Robey); St. Bernard Club of California (George Bargate); Gordon Setter Club (James B. Blossom); Great Dane Club (C. Wood); National Beagle Club (H. F. Schellhass); N. J. K. L. (F. Linck); National Beagle Club (F. S. Webster); Pacific F. T. C. (Capt. C. B. Knecker); Pointer Club of America (George Jarvis); Collie Club of America (James Watson); Southern California K. C. (C. D. Bernheimer); St. Bernard Club of America (R. H. Burrows); W. K. C. (Elliott Smith); C. of S. K. C. (A. H. Heppner). The credentials of L. A. Klein, American Dachshund Club, and F. L. Perkins, R. I. S. F. Association, were read and the delegates were elected, as were Messrs. Bargate and Heppner. The secretary's report was accepted.

The treasurer's report showed a balance on hand of \$2,622.38. In the matter of the disqualification of Mr. George Bell the action of the advisory committee, after a lengthy debate, was affirmed by a vote of ten to five. The main point in the argument hinged on whether a man who was disqualified when the entry was made to a show had a right to exhibit at such show after the entries closed, his disqualification then having expired. It seemed to be the sense of the meeting that the entry was inseparably linked with the exhibition, and was but a part of the homogeneous whole. The advisory committee's report was then accepted by a vote of nine to six. The City of the Straits Kennel Club, for accepting Mr. Bell's entries, was suspended for sixty days. The stud book committee reported two cases under investigation. In that of W. J. Burkart, he was suspended for six months for matters relating to a pedigree. The secretary was instructed to prefer charges against H. M. Griffin for casting reflections on the integrity of the stud book committee. Resolutions were passed on the death of Dr. Rowe and H. B. Cromwell. The M. A. A. C. Rod and Gun Club, of Portland, Ore., was elected to membership. Mr. A. P. Vredenburg was unanimously elected as secretary-treasurer. The application on behalf of the National Greyhound Club to transfer the membership of a former club of that name and to use the name "The National Greyhound Club" was granted. Mr. H. Nelson was elected as a delegate from the National Greyhound Club.

A communication from the New England Beagle Club, in respect to wins of all dogs, won before the club was a member of the A. K. C., being recognized by the A. K. C., our motion was referred to the committee on field trials and coursing meetings.

A lengthy communication from the Pacific advisory committee, submitting certain rules and regulations to the A. K. C., was referred to the committee on rules and constitution. All associate members in arrears, whose dues are not paid within thirty days, will be dropped from the roll. The following rule was rescinded:

"Resolved, That no member of a club shall officiate at a show as a judge of which he is a member."

A vote of thanks was tendered the Metropolitan Kennel Club for the use of its rooms during the W. K. C. show. On motion of Mr. Hunnewell the committee on rules was directed to submit amendments of Rules 9 and 24 so as to cover the rights to make entries by persons not in good standing. The secretary was instructed to keep a list of champions for reference, not to go back further than January, 1889. The case of the City of the Straits Kennel Club was reopened, as its delegate, Mr. Heppner, was not present when the case was first considered. On his representation that the club apologized for its error, which was an error only, as the club had not acted in bad faith, the disqualification was removed and a fine of \$25 imposed, as the club expressed its willingness to pay a fine. The matter of Mr. E. H. Morris's appeal was next considered, on motion of Mr. Oldham. Mr. Morris submitted two communications, which he declared to be in the nature of new and additional evidence to that submitted to the advisory committee, and made explanations concerning his transactions in showing a bitch at Newburgh. Mr. Burritt advised that the matter should be referred back to the advisory committee, and made a motion to that effect. Mr. Morris gave notice that he would decline to again appear before that committee. Mr. Linck moved that the suspension of Mr. Morris be removed on the statement and explanation made by him. Motion lost. Mr. Blossom moved that Mr. Morris's suspension be removed and that he be censured for his action in the premises carried. Adjourned.

Dogs for the Zoo.

WASHINGTON, D. C., May 23.—*Editor Forest and Stream:* We have received gratifying responses to our circular letter re dogs for the Zoo, and are sure of the success of the scheme. Among those who have promised assistance are:

Mrs. Williams, Bon Air Kennels, Charlottesville, Va., Skyes and Scotch deerhounds.

Mere Kennels, Tarrytown, N. Y., fox terrier (smooth-coated).

Dr. H. T. Foote, Rochelle Kennels, New York, fox terrier (wire-haired) and black and tan terrier.

Dr. H. T. Thurber, Providence, R. I., American foxhound.

J. H. H. Maenner, West Arlington, Md., Great Dane.

Mr. Winchell, Fair Haven, Vt., has written to his English partner, Mr. Brough, of Scarborough, to see what they can do for us in bloodhounds.

We shall not be prepared to receive stock until the kennels are completed, about Aug. 1.

CECIL FRENCH, D.V.S.

The Continental Field Trials Club.

THE Continental Field Trials Club, with most commendable enterprise, has opened a stake which will appeal directly to the masses of shooters who are enthusiastic in matters of the dog and gun, yet who have not the time to make a specialty of preparing and training their dogs for public competition. In the chicken country there are hundreds of owners who should be interested in a stake which gives them full opportunity to compete, yet guards them from the competition of the expert handler. It will be noted, too, that the fee for qualifying as a competitor is within the means of all. This stake is called the Northwestern stake and will be run in connection with the forthcoming chicken trials at Kennedy, Minn., commencing on Sept. 7.

The conditions are as follows: Open to owners who are not professional trainers or handlers, dogs to be owned at least sixty days before starting the stake. Dogs to be handled by owners. This stake will be run after the regular stakes are concluded. Entries close Aug. 1. Entrance fee, \$5 to nominate, \$5 additional to start. The club will donate a handsome piece of silver, of not less than \$50 in value, to which will be added 25 per cent. of entrance fees, after 20 per cent. for expenses has been deducted; 50 per cent. of remainder will go to second dog, and the rest to third. It is well known that there are many excellent chicken dogs owned in every section of the Northwest, and this stake is opened with a special view to offer them a favorable opportunity to compete. The stake is deserving of their earnest support and appreciation. The honor of owning a dog which has vanquished his fellows in such a competition and under such auspices is worth striving for, as is also the cup which will commemorate the event. It further should bring about a broader acquaintance among the local sportsmen and promote a greater good-fellowship from such greater acquaintance. The sportsmen of the great States of Minnesota, the Dakotas, Iowa, etc., should make this stake a credit to their region and their sport. The president of the club has some novel and interesting features as an adjunct to the trials. He has in hand a number of valuable gifts which will be applied to a prize list which will be devoted to competitive amusements in the evening, such as progressive euchre and similar diverting competitions.

For rules, blanks and further particulars, apply to the secretary, Mr. P. T. Madison, Indianapolis, Ind.

POINTS AND FLUSHES.

Any enterprise which legitimately promotes dog interests is worthy of countenance and support by the public in general and fanciers in particular. The kennel enterprise at the National Zoological Park, mention of which was made in our columns last week, is most commendable in itself and worthy of the consideration of others in charge of similar interests. In years past objection was raised in some quarters against such enterprises, on the ground that the breeds in parks became mongrelized in time; but this objection was only pertinent against the manner of management and not against the enterprise itself. Of course to keep the breeds pure and at their best it is necessary that some one be in charge who has the necessary technical knowledge and enthusiasm. We learn that already the enterprise is assured of much material support, and that it will be managed with every care.

The early muffs were small and made of satin or velvet, lined with fur; the leopard skin came in with good Queen Anne. There is a print of an Elizabethan lady with a small muff hanging from her girdle; before this date it was probably looked upon as an eccentric novelty, at least in England. A full century before, a Venetian *grande dame* had carried her lapdog in her muff—a fashion that continued for a long season, and found its way into France. In Paris muffs for this express purpose, *chiens manchons*, as they were styled, could be bought in 1692 at the establishment of the Demoiselles Guerin, Rue de Bac. French sumptuary laws condescended to notice such minor details as the color of a muff. The bourgeois was obliged to restrict himself to somber black; the noble might please himself. Under Louis XIV., therefore, the *manchon* of the courtier was brilliant with gold lace and embroidered ribbons.—*Good Words.*

The entries of the Derby of the International Field Trials Club close on July 1. W. B. Wells, Secretary, Chatham, Ont.

We are informed by the secretary of the National Beagle Club, Mr. George W. Rogers, that the Field Trials Committee will hold a meeting in the rooms of the American Kennel Club, 55 Liberty street, on June 5.

The *Seattle Post-Intelligencer* remarks on the dog show held in Seattle, beginning on May 13: "Naturally the biggest attraction proved to be the rat killing contest, which took place amid great excitement at 8:30. Rat killing contests will take place to-day at 4:30 and 8 P. M." And now which was it, a dog show or a rat killing?

The California brethren, judging from the complaints and squabbles following the recent shows, are in the infantile stages of the fancy, much as it was in the East fifteen years ago.

Mr. W. W. Titus is in New York this week visiting old friends. He will spend some days here and in Brooklyn, thence he goes to Massachusetts and Rhode Island.

Mr. H. H. Hunnewell's trip abroad seems to have agreed with him thoroughly. At the recent A. K. C. meeting he seemed to be in the perfection of health, good spirits and alertness. Mr. Hunnewell says that our best shows are not excelled in management by the English shows.

Owing to ill health, Mr. James Taylor has resigned his position as reporter-in-chief of the *Stock-Keeper* (England). Mr. Taylor has been in ill health many weeks. Our readers will remember that Mr. Taylor officiated as judge at the New York show last year. We sincerely hope that good health will speedily return to him.

The Irish terrier champion Pagan II. died recently in

England. He was born on July 3, 1881, thus he was about 15 years old at the time of his death.

We are informed that Mr. John White has added a boarding kennel to his training kennel at Mt. Vernon, N. Y., under the title of the Chester Hill Kennels.

The Poodle Club of America.

NEW YORK, May 19.—A meeting of the Poodle Club of America was held at the Hotel Majestic, New York city, May 14. The following members were elected as an executive committee to serve until May 1, 1898: Messrs. H. G. Trevor, C. D. Bernheimer, H. H. Hunnewell, F. S. Witherbee and Z. T. Baker. A constitution was adopted. At a meeting of the executive committee held the same day the following officers were elected to serve until May 1, 1898: President, H. G. Trevor; Vice-President, C. D. Bernheimer; Hon. Secretary-Treasurer, Z. T. Baker. Among the members are Mrs. William C. Gulliver, Mrs. William Bloodgood, Messrs. John M. Bowers, F. S. Witherbee, E. W. Barker and A. O. von Kilch. Applications for membership must be made to the executive committee.

Z. T. BAKER, Sec'y.

A Good Litter.

FITCHBURG, May 16.—*Editor Forest and Stream:* I inclose you a record of a rather remarkable litter of puppies whelped by Esta Morse (36,673), Feb. 3, 1896.

It was remarkable in the large number of male puppies (six) and the fine and healthy character of the lot. They are doing finely and bid fair to be heard from favorably later. Wanoosnac Prince (36,585), who was troubled with a sore left eye at the Boston show, has entirely recovered and now has as bright and good a pair of eyes as you ever saw on any dog.

WANOOSNAC GORDON KENNELS.

THE FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Yachting.

In addition to the vast amount of work already done by the Y. R. U. in the systematization of racing management there is still a small detail that suggests itself. At present there is no uniformity whatever about the size or arrangement of the regatta programmes of the different clubs; they may be too large or too small, on thin paper or thick card board, and no regular scheme is followed in arranging the information as to courses, classes, etc. It would be a decided improvement if one size and general style of circular were adopted by all the clubs, with the same arrangement of matter; each of course retaining its distinctive color of paper or ink where such is now used. The printer too might be judiciously restrained from using an abundance of display type. The main thing is to set forth certain important facts so plainly that they may be located on the instant and read without danger of a misunderstanding.

The following wail of woe is from the *American Shipbuilder*. Undeterred by the failure of its contemporary, the *Marine Journal*, to offer any proof that American steam yachts are not as inferior to the British in speed, quality and durability as in cost, it rushes heedlessly into the breach in defense of them. There is nothing more utterly worthless than a large steam yacht that through defects in design or construction cannot fulfill the one purpose for which she was built, as there is no other future open to her; if her owner cannot use her through these defects, he certainly cannot sell her, and she is likely to spend the greater part of her life made fast to a dock. There are already too many yachts of this class, and most expensive ones at that, in the fleet:

Another bee in England's bonnet. It is the Payne bill now that pains John Bull's subjects. It checks the un-American yachtsman from patronizing foreign shipyards, and it is right that it should. If such millionaires as Rutherford Stuyvesant, Ogden Golet and the Vanderbilts prefer cheapness to quality, durability and speed, they are welcome to buy foreign-built yachts, but let them be compelled to pay for playing them in American waters. England can have a breathing spell, for Senator Frye, chairman of the Senate committee on commerce, does not intend to call the bill up until the next session of Congress.

The following, from the *Marine Journal* of May 23, shows a very decided change from the bold assertions of American superiority made a couple of weeks back; instead of the whole ship, it is now claimed that at least Americans can build better capstans:

We are very well satisfied that the statisticians of the *Boston Herald* and similar papers are not conspicuously accurate as to details when editorializing in regard to the respective growth and comparative merits of British and American shipping. When these papers talk, for instance, of the "undisputed primacy of Great Britain in the ship-building industry," they ignore such facts as that American capstan makers are regularly exporting their products to England to fill orders for the equipment of British vessels. This is due, in the matter of capstans, to the facts that they are superior articles to those of British manufacture and that they can be produced here in quantities by means of improved machinery quite cheaply enough to compete with cheaper British labor.

But even where labor is the principal factor in the production of such machinery, it has been demonstrated that American products outrank British where excellence is desired, for one of the eminent windlass manufacturing concerns of this country is now sending to England windlasses also for the equipment of some of the higher classed and better equipped vessels in course of construction there. These windlasses are notably the product of skilled hand labor, each one having to be made separately, so that both British and American manufacturers stand upon an equal ground, and the American is acknowledged the palm for superiority. The same would be true of ships under similar circumstances.

We have no fault to find with the above statements, which, we believe, are correct, the American capstans and windlasses being widely used abroad through their superiority. Accepting them as true, they prove two things: First, that improvement is the result not necessarily of a protective tariff, but of demand and competition; and secondly, that in America the progress in mechanical work has been far greater than in the designing of hulls.

The evolution of the American yacht capstan and windlass is in itself interesting. There was a time when any collection of old junk was considered good enough to span the heel of the clumsy balk of square timber that served as the bowsprit of a yacht. With the introduction of the cutters and the lessons taught by them in neat and shipshape fittings and iron work came a demand for a strong, compact and shipshape capstan, which was met by the importation of some excellent makes of English and Scotch capstans. The secondary result of this demand for a superior article was the production of the American yacht capstan, still better than the pattern from which the idea was taken. The protective duty really does not figure in the case; it has remained at the same figure for years; of itself it failed to produce any improvement; even now it increases the cost of the imported but little or nothing over that of the home article, but the latter holds the field simply through its merits.

That it is but a small step from the sublime to the ridiculous is well shown by the following extract from the *Marine Journal* of May 23, following so closely on its panegyrics over protection to American interests and American labor:

Those of us who have an interest in the passage of the Payne yacht bill, which will exclude foreign-built yachts owned by Americans from coming here free of port charges, can point with pride to the Sovereign when complete as an American production, equal if not superior to anything afloat that bears a foreign stamp. Our contemporary, the *FOREST AND STREAM*, will of course add, "very true, but the Sovereign was designed by a foreigner." True, he was foreign born; but this gentleman has taken out his naturalization papers, sworn his allegiance to the Stars and Stripes, married an American girl, acquired an American home, and we do not know of a better American in principle and all else but birth than J. Beaver Webb, the designer of the Sovereign. Foreigners of this stripe always have been and always will be welcome in the United States.

In complete harmony with the views we have always held, we consider that this country is fortunate in having one man who knows how to design a steam yacht, no matter what his nationality may be. It was so in 1860, when the famous Monitor, in which Americans take such pride, was designed after his own original ideas, condemned as they were by the naval experts of the day, by John Ericsson, a Swede; it was so as long ago as 1812, when the Scotch shipbuilder, Henry Eckford, went from New York to the lakes and hurried together a fleet of gunboats for defense against Great Britain. We welcome all talent and believe that the country is the richer for it; but we cannot see how such ideas are otherwise than at variance with the protective theories so fully set forth by the *Marine Journal*. We were present at the launch of the Sovereign, and among the large crowd of shipwrights, general mechanics and men intimately connected with shipbuilding and shipping, one could not have swung a cat by the tail without hitting half a dozen subjects or ex-subjects of Her Majesty, the Queen of England and Empress of India. Whether they had been in the country ten days or ten years, whether they had, if naturalized, taken out their papers regularly and lawfully or merely been rushed through the political naturalization machine, does not concern us from a technical standpoint. The great fact is that they were doing good work, as evidenced in the fine vessel then set afloat. How they managed, however, to turn out a thoroughly American production is something that we cannot understand. Mr. Webb received his training as a designer abroad, where he practiced his profession for years; a very large number of the others concerned with the production of the yacht learned to handle a pencil, a drawing pen, a "shifting spanner," a spud wrench or a caulking chisel, as the case may be, in Scotch and Irish shipyards. What progress has been made thus far in shipbuilding in America is largely through this skill, acquired abroad and imported here. Without it, in the present state of the shipbuilding industry, the point now reached would be still a dozen years distant. No one is more thoroughly cognizant of this fact than the employer who advocates such measures as the Payne bill to restrict competition, but at the same time welcomes the skilled European mechanic and aids him to get safely into the American shipyard in spite of the contract labor law.

The whole business is a mass of inconsistencies, absurdities and grave wrongs; some of the staunchest advocates of the Payne bill are subjects of Queen Victoria who have been in this country one, five or even a dozen years, but are in no sense Americans. The Payne bill itself is absurd, unfair and one-sided to a degree. If the theories of protection to American interests, and especially to the American workman, are right and fair, then the whole system of laws relating to foreign vessels and materials and to foreign skilled labor, professional or otherwise, is in need of reconstruction.

"SEE do move," now it is the pilots of New York, men who have been devoted to one ancient type of vessel, faulty in the extreme and showing a total lack of those qualities that once made the American pilot boat famous in foreign waters. Having at last decided to replace the old sailing craft by a steam vessel, they have shown a spirit of enterprise that might well be emulated by the prospective owners of very much larger craft. Instead of going to some out-of-the-way place for a wooden box designed by local talent, they have placed an order with Mr. A. Cary Smith for a steel vessel of 140ft. l.w.l., 23ft. beam and 14ft. draft. That the result will be a success can hardly be doubted from Mr. Smith's work of late in other similar lines outside his original work of yacht designing.

The bill introduced by Senator Hill, to regulate the attendant fleet at yacht and boat races and similar gatherings by conferring special powers on the U. S. Revenue cutters, has received the signature of the President and become a law. That it is a necessary and useful

measure is beyond question, but we doubt very much whether it will serve to prevent such interference as has been seen at the important races of the last few years.

The *Yachtsman* welcomes the Payne bill as designed to prevent the collection of duties on foreign yachts in such cases as that of Spruce last year. There is nothing whatever of this nature about the bill, its object is to keep out all foreign yachts, if possible.

YACHT DESIGNING.—IX.

BY W. P. STEPHENS.

(Continued from page 424.)

In actual practice the term metacenter is employed somewhat loosely, and the leading authorities are by no means as exact and definite in regard to it as is desirable. The "metacenter" obtained by the ordinary calculation, from the breadths of the waterline, is the *shifting metacenter* for a very small angle of heel; and in the average vessel the various verticals through the C. B. for all inclinations from the upright position to an angle of 10 or even 15° fall practically in one point. Speaking with strict accuracy, according to Bouguer's original definition, this point is really a number of shifting metacenters, and not necessarily the limiting point of the C. G.; but it is the more convenient and useful in the calculation of stability. The term *metacentric height* or *height of metacenter* is also used both to express the height of the metacenter above the C. G., the distance M. G. in Fig. 8, and the height above the C. B., or the distance M. B. This distance, which is one of the elements obtained by calculation from the lines of the yacht through the displacement sheet or other means, is related solely to the *form* of the vessel, without regard to position of the C. G. as

FIG. 8.

A C—Vertical axis, normal position. A' C'—Vertical axis, inclined position, 15°. W L—Waterline, normal position. W' L'—Waterline, inclined position. B—Center of buoyancy, normal position. B'—Center of buoyancy, inclined position. G—Center of gravity. M—Metacenter. G Z—Righting lever.

determined by the nature, quantity and location of the ballast, and is of comparatively little value. The height of the metacenter with relation to the center of gravity of the vessel under certain given conditions is a different thing, and of vastly greater importance. In the case of a yacht it is only necessary to know that she will not capsize under a certain limited range of conditions, but in the case of a merchant steamer or war ship the range of possible conditions is increased infinitely. The merchant steamer may be in launching trim, without her engines and boilers; she may be in sailing trim, with masts, rigging and sails, but with a clean hold and empty bunkers; she may be in ballast and with bunkers on one side partly filled, with more or less water in her ballast tanks, or she may be carrying a heavy cargo, with bunkers either full or nearly empty. The war ship, in the same manner, is subject to great variations in amount of coal and stores carried; there is a great weight of ammunition, which may vary from time to time, and changes of armament are also made. All of these alterations of weight act to lower or raise the C. G., possibly to a dangerous degree, and a full knowledge of the stability of the vessel under all possible conditions and

FIG. 9. CURVES OF STABILITY.

S—Sloop. C—Cutter.

contingencies is essential to her safety. This knowledge is obtained from the various calculations in which the metacenter figures. The value of these calculations begins not with the ship ready for launching or in actual service, but with the inception of the design, as it is of the utmost importance that there shall be no possible doubt as to the safety of the proposed vessel under all conditions likely to occur in the service for which she is designed. The amateur or novice in yacht designing has much to learn before he need concern himself with metacentric height or curves of stability; but as he is certain to meet with mention of them in the course of his reading, it is just as well that he should have at least a general idea of them.

It has been shown in Fig. 8 how the righting power of a vessel is dependent on the length of the lever G Z, the horizontal distance between the two verticals through the C. G. and C. B. As the yacht first heels, this distance increases; after a time it reaches its maximum, and then begins to decrease. What is called a *curve of stability* is constructed from these different levers for successive intervals of heel. The lengths of the arm G Z for angles of 10, 20, etc., up to 90°, or even further, are calculated, and a horizontal line is drawn and divided to any convenient scale to represent the degrees of inclination as in Fig. 9. On the left end of this line a vertical is drawn and divided to some scale, other verticals being drawn

through each point of the horizontal line. The length of the arm corresponding to an inclination of 10° is now laid off on the first vertical from the end, that for 20° on the second, etc. A curve is then drawn through the spots as plotted. The scale on the vertical line is usually made to represent *foot tons*, or the *righting moment*, the length of the lever in feet multiplied by the force, the buoyancy, in tons. Fig. 9 shows approximately the curves of stability for two very different types of yachts, the wide and shoal sloop and the narrow and deep cutter. In the former the C. B. shifts rapidly with a small angle of heel, making a long righting lever at a very small angle, but the maximum is soon reached at 30° inclination or even less. Any further heeling tends to bring the C. G. more nearly over the C. B., and when it is directly over, the *righting lever* becomes a *heeling lever* and the yacht capsizes. This point at which the righting lever becomes 0 and capsizing begins marks the *range of stability*, mentioned in a previous chapter.

The curve of stability of the cutter, C, has a very different character; at the outset the arm is very short, and it increases slowly as the yacht heels. Instead of a hard hump at about 30° and a quick inclination to the vanishing point, as the yacht reaches an angle of about 40° the C. B. moves out faster and faster, and the curve becomes quite flat; the maximum length of lever is reached somewhere about 50°, and after that, as the yacht approaches her beam ends and the full effect of the heavy lead keel is felt, the lever shortens very slowly, there may be no vanishing point at all, the heavy keel still tending to right the yacht when the mast is pointing downward, the angle now being 180°, and the range of stability is infinite.

The methods of constructing a curve of stability vary according to the type of vessel and the special purpose in view; in a sailing yacht the ballast and C. G. are assumed to be fixed at all times, but in steam craft, especially cargo and war ships, the curves are constructed to accord with varying positions of the C. G., depending on the loading.

FIG. 10.

M—Longitudinal metacenter.

Not only are they of value to the naval architect in securing certain qualities in the vessel, but they now serve a direct and equally useful end in the hands of the captain as showing the stability of the vessel under the varying conditions of actual service.

Thus far we have dealt only with the *transverse metacenter*, the more important, owing to its intimate relation to the stability; but there is also the *longitudinal metacenter*, the initial point of longitudinal motion, Fig. 10. The various points and their relations, the C. G., C. B. and the metacenter, correspond to those of the transverse inclination, but in this case the vessel is inclined through a much smaller range, the bow being depressed and the stern elevated, or the reverse. The height of the longitudinal metacenter is very much greater than that of the transverse. The position of the longitudinal metacenter exercises a strong influence on the motion of the yacht in disturbed water. It is also of material use in calculations of changes of fore and aft trim. When the word metacenter is used alone, it invariably refers to the transverse metacenter; the longitudinal metacenter is always spoken of as such in full.

The position of the C. G., one of the essential elements of stability calculations, may be ascertained in two ways: first, by calculation, the moment of every part of the vessel (that is, its weight multiplied by the distance of its center of gravity from some assumed point) being calculated, and the sum of these moments being divided by the displacement. Considering the almost innumerable details that make up a vessel, such a task would seem very difficult; but in the hands of skilled men, two working to check each other or to compare their independent labors, quite accurate results are possible. Such calculations are the only ones possible in the case of a new design. After a vessel is completed, the position of her C. G. may be found by experiment, a known weight being placed on one gunwale and the inclination measured, the weight then being shifted to the other gunwale. By suitable calculations from the measurements thus obtained, the position of the C. G. may be readily obtained.

Dorchester Y. C. Open Sweepstakes.

DORCHESTER—BOSTON HARBOR.

Saturday, May 16.

The first race of the Dorchester Y. C. an open sweepstakes, was sailed on May 16 over a 7-mile course, the times being:

	Length.	Elapsed.	Corrected.
Penguin, J. E. Robinson.....	14.06	1 19 14	0 46 21
Elsa, H. M. Crane.....	14.11	1 24 35	0 51 20
Tantrum, F. D. Perkins.....	14.11	1 25 06	0 51 51
Princess, Gay & Ware.....	14.06	1 26 55	0 53 02
Velma, Dr. T. Hallett.....	14.05	1 35 25	1 01 21
Katydid.....	Disabled		
Transit.....	Withdrew.		

The club celebrated the opening of the season at its house during the day and evening.

The Chicago-Toronto Races.

The final arrangements for the series of races between the fin-keel yacht Vencedor, owned by Berriman Bros., of the Lincoln Park Y. C., of Chicago, and the new Fife yacht now building in Canada for members of the Royal Canadian Y. C., were completed at a meeting in Detroit on May 9, at which were present four of the special committee appointed by the two clubs: Messrs. E. P. Warner and Dwight Lawrence, of Chicago, and Emilius Jarvis and Vice-Com. C. A. Brown, of the Royal Canadian Y. C. The question of the location of the races was fully discussed, various competing cities submitting sealed offers; that of Toledo, which was finally accepted, being a purse of \$1,500 in addition to the expenses of tugs, stakeboats, etc. In addition a perpetual challenge cup costing \$500 will be paid for by the loser. A special challenge cup of value is offered in addition by a Toledo yachtsman. The following conditions were drawn up to govern the races:

1. L. P. Y. C.'s Representative—The Vencedor, representing the Lincoln Park Y. C., is to be the boat spoken of in the negotiations for the race, and referred to in the recital of conditions as to the size in the letter from the R. C. Y. C. to the L. P. Y. C., dated Feb. 23, 1896.

2. R. C. Y. C.'s Representative—The boat which shall be chosen to represent the Royal Canadian Y. C. shall be either the yacht Zelma, of Hamilton, or a boat of a similar size now under construction, but not yet named, the name of the yacht selected to be communicated to the L. P. Y. C. at least one week before the race.

3. Size of Vencedor—The Vencedor's length on l.w.l. shall not be less than 43ft., and her connected length—to be ascertained as herein-after mentioned—shall not exceed 45ft., but should it be ascertained on measurement that this length is exceeded, double time allowance shall be given on such excess, but in no event shall such excess exceed ½ft.

4. Size of R. C. Y. C. Representative—The boat which shall be selected by the R. C. Y. C. and its representative shall if possible not exceed 42ft. c. 1, but in no event shall it exceed 42½ft. c. 1.

5. Sailing Rules—The sailing rules and table of time allowance shall be those of the New York Y. C., 1895, except where herein otherwise specified.

6. Place and Date—The races shall be sailed on Lake Erie, off Toledo, O., the first race to be sailed on Monday, Aug. 24, 1896.

7. Number of Races—The match shall be decided by the winning of two out of three, or three out of five, races, as may be agreed upon, the number of races to be determined before June 1 next.

8. The races shall take place on succeeding days—Sundays excepted.

9. Courses—First and third races, equilateral triangle. Second, to windward or leeward and return. Third, to be either triangular or windward, or leeward and return, as shall be determined by the toss of a coin, and in the event of only three races being sailed the course for the third race shall be determined in the same way, the length of the course to be logged in the presence of the scrutineers.

10. Length of Course—The triangular races shall be twice round a 12-knot course, making 24 knots, and the windward or leeward races shall be 5 knots to windward or leeward and return, twice round, making 20 knots. The boats shall be sent round the triangular course in such a way as to give one leg to windward. All buoys to be left to starboard in the windward and leeward races.

11. Mode of Starting—All races shall be started at 11 A. M., and the start shall be a flying one. At 10:30 A. M. a time gun shall be fired and an American ensign hoisted on the committee boat, which shall display no other flags than signals to the yachts. At 10:50 A. M. a preparatory gun shall be fired and the American ensign lowered. At this gun a blue Canadian ensign shall be hoisted in the triangular races if all buoys—including the starting buoy—are to be kept on the starboard hand, and a red Canadian ensign hoisted if all buoys are to be kept to port. In the windward or leeward races the blue Canadian ensign shall be hoisted if the first course is to windward, and the red Canadian ensign if the first course is to leeward. At the expiration of ten minutes exactly the Canadian ensign shall be hauled down and a third gun fired as a signal to start, from which gun the time of both yachts shall be taken. No time to be allowed for crossing the line. Should the gun miss fire the lowering of the flag and one lone blow of the whistle shall be the signal to start.

12. Recall—A yacht crossing the line before the starting signal is made will be recalled by five short blasts of the whistle and the hoisting of her national flag.

13. Time Limits—Any race not sailed in five and one-half hours by the winning yacht shall be resailed.

14. Racing Committee—A racing committee of three—none of whom shall be interested in either yacht—shall be appointed on or before July 10 next, and they shall act as judges and timekeepers and settle all disputes.

15. Protests—Protests shall be made to the racing committee in writing within six hours after the finish of the race.

16. Postponements—The racing committee shall have power to postpone any race and may do so whenever in their judgment the demands of fair play shall make it seem right and proper.

17. In case of an accident to either vessel prior to the preparatory signal she shall immediately signal to the racing committee, who shall have the power to postpone the race if the accident is in their opinion sufficiently serious to warrant such a course, or if an accident occurs during a race she shall have sufficient time to make repairs before being required to start in the next race.

18. Scrutineers—A scrutineer shall sail on board each yacht representing the other competing yacht, and said scrutineers must be members in good standing of some recognized great lake yacht club and must not exceed in weight 175lbs.

Each scrutineer shall make a declaration of the sailing of the yacht upon which he is placed within twenty-four hours of the termination of a race, which report shall be rendered to the racing committee. Scrutineers shall be chosen by the three members of the joint committee acting for each of the clubs represented.

19. Crews—This clause to be completed not later than July 10, 1896.

20. Measurement—The measurement of the rules for racing length to be made in the manner set forth in the rules of the Lake Yacht Racing Association for 1895-1896, these measurements to be made not more than two days before the race by the scrutineers representing the competing yachts, who shall jointly certify to the measurement of each yacht. A report of the measurement of each yacht shall be made to the racing committee at least twelve hours prior to the sailing of the first race.

21. Measurement Protest—If through protest the measurement of any yacht be called in question the racing committee shall remeasure such yacht and the result as ascertained by it shall be final.

22. Charts of Course—Charts of the course and instructions shall be given to the competitors not later than 7 o'clock on the morning of the race.

23. Sails—The rule of the New York Y. C. as to sails shall not be taken to exclude cluptionsails.

24. Boats—No boat need be carried on decks.

25. Alteration to Measurements—If any yacht by alteration of trim or immersion by dead weight increase her load waterline length or in any way increase her spar measurements as they were taken she must obtain a remeasurement before starting in the next race.

26. Mutual Agreement—These conditions may be altered or amended by mutual agreement at any time.

Clause 19 is not yet settled, the proposal being to limit the crews to ten each, of whom eight shall be Corinthians.

The Chicago yacht Vencedor was designed by Theodore Poeckel, superintendent of the Racine Hardware Co., and will be an extreme bulb-fin of the same type and construction as the Gould 20-rater Niagara. The Toronto yacht, as yet unnamed, will be owned by a syndicate of Toronto yachtsmen, members of the Royal Canadian Y. C.; Emilius Jarvis, stock broker, of Toronto; George Gooderham, president of the Bank of Toronto, and head of the firm of Gooderham & Worts; George H. Gooderham, son of George Gooderham, a member of the firm of Gooderham & Worts; J. H. Plummer, general manager of the Bank of Commerce; James Ross, of Montreal; F. J. Phillips, of the Canadian Manufacturing Co. and the Consolidated Plate Glass Co.; S. F. McKinnon, wholesale merchant, and an ex-president of the Toronto Board of Trade.

She was designed by Will Fife, Jr., and the frame was got out and set up in the Fife yard at Fairlie and then shipped to Canada by way of New York, where it arrived on May 13. The construction will be in the hands of Andrews, of Oakville, a small place on Lake Ontario, about 20 miles from Toronto. The lead keel was cast some time since, as soon as the plans were received from Mr. Fife; the planking, decking, spars, etc., have been prepared in advance, and the yacht will be completed in a short time. Her sails are by Laphorne & Ratsey. She will sail in the regular races on the Lake by way of trial.

Harlem Y. C.

The thirteenth annual regatta of the Harlem Y. C. will be sailed on May 30 over the club courses, starting and finishing off Belden's Dock, near the new station on City Island. The regatta will be under the rules of the Yacht Racing Union of Long Island Sound, and open to all clubs in the Union, the following clubs being also invited: New York, Larchmont, Brooklyn, Williamsburgh, Pavia, Yonkers, Corinthian and Jersey City. The steamer Cygnus will follow the race. Full details of courses, signals, etc., are given in the race circular, which may be had of the secretary of the regatta committee. The committee includes Messrs. F. A. Wendel, W. A. Townner, T. C. Allen, R. H. Wylie and F. W. Creegan, Secretary, 519 East 121st street, New York.

Seawanhaka-Corinthian Y. C.

The last mess dinner in town of the Seawanhaka Corinthian Y. C. took place at the Arena on May 20, about forty members being present. In the absence of the flag officers, Fleet Captain Satterlee presided; during the evening a telegram was received from Com. Rouse, from Fort Smith, Arkansas. After dinner Mr. Walter C. Kerr, of the race committee, was called on for some remarks on "Tides," and he responded with a very interesting talk on the theory of tidal evolution, or tides astronomically considered; afterward devoting a little time to the special subject of New York Bay and its tides. Mr. Zerega was called on for an account of the winter cruise of the Yampa, which also proved very interesting. After remarks by other members and a few good stories, the meeting broke up about 11 o'clock. In the course of his remarks, Mr. Zerega, who will have charge of the transportation between Seawanhaka Harbor and Oyster Bay, reported that the new canal and basin is now complete and ready for service, thus removing one serious difficulty that has existed since the establishment of the station on Center Island. The canal ends beside the railway track at Oyster Bay, directly opposite the railway station, and the club steamer Dunderberg as well as other launches and boats will be able to land there at all stages of the tide. The house and grounds have been put in order and all will be in readiness for the opening on Saturday next. Trains leave foot of Thirty-fourth street, New York, at 8:50 and 10:50 A. M., leaving Oyster Bay to return at 3:50, 6:10 and 10:03 P. M. Lunch will be served at 1 P. M. The principal event of the day will be the race of the 15ft. class. The race committee has issued the following complete programme for the season:

May 30—Race for special classes. June 22, 23 and 24—Trials races to select the defender of the international challenge cup for small yachts. June 27—Annual race. July 15 and succeeding days until decided—International challenge cup races. July 18—Race for the Alfred Roosevelt memorial cup. Aug. 29—Race for special classes. Beginning May 30—Saturday races.

Decoration Day Special Race, Saturday, May 30—In addition to the usual opening (Decoration) day race for the club catboats, the race committee announces a special race on that day in the most popular racing of the season, viz.: the 15ft. class of sloops (half-raters). The race for 15-footers is open to entries from the Atlantic, Beverly, Brooklyn, Corinthian of Marblehead, Corinthian of New York, Corinthian Mosquito Fleet, Eastern, Harlem, Knickerbocker, Larchmont, Massachusetts, Marine and Field, New Haven, New York, New York Athletic, Pavia and Shelter Island yacht clubs, the yacht clubs of the Yacht Racing Union of Long Island Sound and the New York and Brooklyn canoe clubs. A prize in silver will be awarded to the winning yacht in the 15ft. class, and a prize will be awarded to the helmsman of the winning club catboat.

A special prize of the value of \$50 is offered by a member of the club to the helmsman (who must be a member of the club) who shall sail in at least three of the regular Saturday races for the club catboats beginning May 30, and who shall obtain the highest percentage of wins during the season of 1896. The course for both classes will be inside the bay and in view from the club house.

For Class I.—Starting from west to east across a line between the club float and a stake boat anchored southeast of the float, thence to and around a mark bearing a red flag or ball, anchored northeast of Plumb Point and distant therefrom about one mile, leaving it on the starboard hand, thence to and around a mark bearing a red flag or ball, anchored southeast of Moses Point buoy, leaving it on the starboard hand, thence to and across the starting line, twice around, thence, after finishing the second round, to and around Black Channel buoy off Plumb Point, leaving it on the starboard hand, thence to and around the mark off Moses Point buoy, leaving it on the starboard hand, thence to a finish across the starting line. In the first two rounds yachts will pass on the channel side of the Black Channel buoy.

For Class II.—Three times around the short triangle.

The start will be a one-gun start with a preparatory signal, and will be made at 12:30 P. M. First Signal—Preparatory: A gun will be fired and the blue peter hoisted at the yard-arm of the club flagstaff. (There will be an interval of five minutes between each signal and the succeeding signal.) Second Signal—Start for Class I: A gun will be fired, the blue peter lowered, and a red ball hoisted. Third Signal—Start for Class II: A gun will be fired, the red ball lowered, and a white ball hoisted. Fourth Signal—Will denote conclusion of the race, which may be terminated in the direction of the race committee at the conclusion of any round. A gun will be fired and the club burgee lowered from the head of the flagstaff.

The race will be governed by the racing rules of the Yacht Racing Union of Long Island Sound, and will be under the direction of the race committee of the S. C. Y. C. Copies of the racing rules and entry blanks will be furnished upon application to the secretary of the race committee.

In the 15ft. class the helmsman must be an amateur, but the forward hand may be a paid hand.

Entries must be made in writing and filed with the secretary of the race committee by 12 o'clock noon on May 28, accompanied by the Y. R. U. measurement of the yacht certified to by her owner or by the measurer of the club from which she is entered.

Race Committee: Oliver E. Cromwell, chairman; Charles W. Wetmore, Walter C. Kerr, D. Le Roy Dresser; Charles A. Sherman, secretary, 64 Leonard street, New York.

Model Yachting.

The first challenge race for the *Outing* trophy was sailed on May 17 over the course of the Wave Crest M. Y. C., off Fifty-sixth street, Bay Ridge. The trophy was given into the care of the American M. Y. C. last fall, to be sailed for in a race open to all model yachts, the winner to be the first holder and defender. Dolphin, of the A. M. Y. C., was the winner out of 10 starters; since then her owner has left the club. She was the defender of the trophy, the challenger being Wave, of the Wave Crest M. Y. C. Dolphin is 40.3 l.w.l. and 15in. beam, while Wave is 43in. l.w.l. and 14in. beam. The beam of Dolphin should have been under the conditions of the trophy, but as she was allowed to sail in the first race last year no objection was made by Wave in the present case. The course was one-quarter of a mile to windward and return, the winner of two heats to take the trophy. The wind was very light from the south. In the first heat Wave crossed outside of the flag marking the finish line, and in the second Dolphin did the same. In the third a boat collided with the skiff of Wave's owner, and the boat was beaten by Dolphin, a protest being made and the heat resailed. This time Wave fouled Dolphin, and the latter was interfered with by an outside rowboat, so the heat was called off, to be sailed on May 24. The times were:

FIRST HEAT.				
	Start.	Finish.	Elapsed.	Corrected.
Wave.....	3 16 30	Finished outside flag.		
Dolphin.....	3 16 32	3 26 20	0 09 48	0 10 01
SECOND HEAT.				
Wave.....	3 34 50	0 03 45	0 10 10	0 10 10
Dolphin.....	3 33 10	Finished outside.		
THIRD HEAT.				
Wave.....	3 50 11	Not timed.		
Dolphin.....	3 51 00	0 04 25	0 34 00	0 34 23
FOURTH HEAT.				
Wave.....	5 24 00	0 05 37	0 13 00	0 13 00
Dolphin.....	5 23 10	5 37 02	0 13 52	0 14 45
Dolphin protested last heat.				

The Summer Carnival at Halifax.

HALIFONIANS are leaving no stone unturned to make the grand summer carnival at Halifax, July 23-31, a gigantic success. There has been some talk of the British flying squadron visiting Halifax this year, and in case that should become a fact the committee is making every effort to have them in Halifax by the Carnival meet. It is also expected that some American war ships will be present, and as the British North American squadron is certain to be there, the cutter races between the crews will become of an international character. A feature of the Carnival is to be the harbor illumination, when the war ships will be electrically illuminated, and there will also be a grand search-light display from the ships and forts along the water front. There are to be yacht races for 22 and 30-footers, and the Wenonah's cup, worth \$1,000, open to all yachts, will be sailed for. The four-oreed professional race between representative crews of the United States, England, Canada and the maritime provinces promise to be the greatest event of the kind which has taken place since the regatta at Philadelphia in 1876. R. T. MacLennan, Secretary, P. O. box 303 Halifax, U. S., will cheerfully supply any information.

A Race for 15-Footers.

The Ogdensburg Y. C., Ogdensburg, St. Lawrence county, N. Y., has arranged to hold a regatta on the St. Lawrence River for 15-footers on July 28. The Seawanhaka Corinthian Y. C. rules will govern. It is expected that many of the best boats from New York, Montreal, Toronto and Boston will be present. A valuable silver presentation cup of special design will be given as first prize. The Ogdensburg Y. C. will spare no pains nor expense to make this one of the principal events of the season. Arrangements will be made with the railroad and express companies whereby owners of 15-footers can obtain specially low transportation rates for themselves and boats from New York and return. Full particulars can be obtained from Sec'y A. R. Porte, Ogdensburg Y. C., Ogdensburg, N. Y.

The New Linear Rating Rule.

The *Field* of May 9 comments on the new linear rating rule as follows:

The fees for measuring under the new rating rule are pretty stiff, and many owners who do not already belong to the Y. R. A. are coming up for election, as members get let off with much lighter fees. Thus a non-member has to pay £5 ss. for measuring a yacht exceeding 53ft. rating, while a member's fee only amounts to £3. 13s. 6d., and there may be traveling expenses to pay as well. The subscription to the Y. R. A. is £2. 2s., which could be paid out of one measurement. The lowest fee is £2. 8s. 6d. for non-members for yachts of 24ft. rating and under, while for members it is £1. 16s. only. These fees appear to be very high, but we suppose they are consequent upon the measurer's requiring larger fees for measuring girth and beam, and because they will almost invariably have to pay two visits to a yacht to complete the measurements—one when she is ashore and another when afloat. The yacht designers in their report recommended that this certificate of girth should be taken the same as sailmakers' diagrams are. But the latter are always checked by spar measurements, and sometimes by measuring the sails. Ultimately, to avoid any mistakes, it was resolved that the girth, trouble some as it is, should be measured the same as the length, beam and spars. After all, the measuring fee forms a very infinitesimal portion of the expenses of yacht racing.

The older boats appear to work into the new rating rule very well indeed; in fact, some of them, such as Thalia, Creole, Dragon, etc., came out considerably under their class rating. Isolde, on the other hand, exceeds it, but will, under the rule, be allowed to compete in her class by allowing time. The difficulty of obtaining the girth is not so great as was at first expected, and after a while no doubt the working of the new rating rule will be regarded as quite a simple matter. A good way of trying the girth is with a thin elm batten about the width of the steel tape and about ¾ in. thick. Of course this batten cannot be got round a "bulb," for which purpose a length of copper wire is used. In some cases the batten referred to is laid on over the tape, but it is better for the tape to mark the batten and measure it afterward.

The measurements of some of the new yachts by the rule are also given, as follows: Kismet is the very successful new 18-footer designed and built by Linton Hope. She and the other new boats of the 18ft. l.r. class, Virus and Brunette, are about 15ft. 6in. l.w.l., 5ft. 8in. beam and the square root of the sail area is from 15 to 16½, so that they would be rather large for the Seawanhaka 15ft. class. It is unfortunate that in adopting the new rule and arranging the new classes, the limits of the two smallest, 24 and 18ft. linear rating, were not made still smaller so as to conform more closely to the old 1 and 0.5-rating classes. Under the old rule a ½-rater, such as Spruce, on coming out to this country, was able to increase her sail plan and yet be within the American class, 15ft. racing length—exactly what the difference of weather required. Now the 18-footer will be compelled to reduce her sail in order to get into the 15ft. racing length class.

Y. R. A. CERTIFICATES OF RATING, 1896.

Huguenot Y. C. Open Race.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, May 16.

OWING to the lack of a steamer and the difficulty of obtaining any information, but little was known of the race of May 16 up to the time we went to press. The course was not visible from the shore and there was no means of going afloat. The course was a triangular, sailed twice, making 6½ miles. The wind was fresh and puffy, but falling very light at times. It was a "soldier's wind" over the whole course, the first leg free, the second a close reach and the third a broad reach. In the 15ft. class there were eight entries, the old Herreshoff boat Olita, with a new one, Gnome, very similar in model, all the overhang forward and cut off short aft, but rigged with a canoe sail, a hoisting yard with two battens, mast well forward and a small jib. Besides the old Question, Mr. Huntington had two new boats, to all appearances of the same model—Hope, owned by Adrian Iselin, Jr., and Willada, owned by W. G. Newman. Hope was painted a dingy black and Willada a drab. Both had the same small openings as Question, about big enough to put one's feet in. They were rigged with boom and gaff mainsail and jib. Mr. Thomas Clapham had a new aspirant for the class, a big boat of the Bouncer type, long over all and quite wide, with a great deal of fore overhang, the bow running out long and low over the water, the after end having a rather short but good-looking counter. The sail plan was not only high but big, to the eye decidedly larger than the other boats, in fact the whole boat looked very large. Imp, as she is named, is owned by J. M. Hamilton, of the Red Dragon C. C. One of the new Rigby boats, the New York C. C. special class, Guilla, was present, a very nice looking skipjack, with both ends well carried out and showing up very well for a low-priced boat of simple construction. Two Step, the duplicate of Ethelwynn shown at the Sportsmen's Exhibition, was also entered, her finish and model showing well among the fleet, but with a particularly bad mainsail, too small for the spars and fitting badly in addition. The start was made at 1:30:00, the official times being as given last week:

	Start.	Finish.	Elapsed.
Imp.....	1 33 00	2 50 11	1 18 11
Olita.....	1 33 00	2 50 49	1 18 49
Hope.....	1 32 00	2 51 00	1 19 00
Two Step.....	1 32 00	2 51 12	1 19 12
Gnome.....	1 32 00	2 54 39	1 22 39
Willada.....	1 32 00	2 56 40	1 24 40
Guilla.....	1 32 00	Did not finish.	

After the finish both Imp and Hope were disqualified, their helmsmen, Thomas Clapham and L. B. Huntington, being barred under the new rule of the Y. R. U. as professionals, both being actively engaged in boat building. In addition to this, Imp was protested on measurement, and a measurement was made on the spot, the result being at once announced as 14.94ft. In correcting the figures later and plotting the sail plan the measurer discovered an error in these figures, the true measurement being 15.39ft., or 0.88 over the class. The waterline is 14.3 and sail area 270sq. ft., or some 20ft. more than allowed for the waterline. The official order is Olita first, Two Step second, Gnome third, and Willada fourth. Guilla was disabled and withdrew. The race amounted to nothing as a test of the boats. Imp sailed very fast, but with so much more sail it would be unfair to compare her with the others.

The 30ft. Class Opening Race.

ONE of the interesting events of next Saturday will be the first race of the new 30ft. class, a special race arranged by the Indian Harbor Y. C. under the following conditions:

To be sailed on Saturday, May 30. Open to yachts enrolled in any recognized club, the committee reserving the right to reject any entry. Classes—Special 30ft. class for cabin sloops built to the rules restricting this class. Starting signals—First, preparatory. A blue peter hoisted on the forward flagstaff of the regatta committee's steamer. Second, start. One-gun start five minutes later. A red ball substituted for the blue peter. This time will be taken as the starting time of all contestants. The start will be at 11 A. M. or as soon after as practicable. Attention will be called to the signals by whistle or gun from the committee's boat.

Course—Club course No. 4 will be sailed, viz.: Starting across a line between a station markboat and black spar buoy off the eastern end of Little Captain's Island to the black spar buoy (S. 17) off Matinecock Point, L. I., 5½ nautical miles S.S.W. ¼ W., turning same on port hand; thence to the black spar buoy (S. 15) off Centre Island Point, L. I., 4½ nautical miles E. ¼ N., turning same on port hand; thence across starting line 4½ nautical miles N.N.W. ¼ W. Length of course, 15 nautical miles.

Rules.—The race will be sailed under the rules of the Yacht Racing Union of Long Island Sound as adopted March 9, 1896. Tide—High tide at Greenwich day of race, 1:38 P. M. Prizes—Com. Charles T. Willa has offered a cup to the winner, and, provided three yachts complete the course, the club will give a prize to second boat. Entries will close with chairman on Thursday, May 23, at 12 o'clock midnight. George E. Gartland, chairman, 11 Wall street, New York; D. W. Merritt, Charles E. McManus, regatta committee.

New Rochelle Y. C. Opening Race.

NEW ROCHELLE—LONG ISLAND SOUND.
Saturday, May 23.

The New Rochelle Y. C. did all in its power to open the season with a successful race; and but for the calm weather the day would have been a most enjoyable one for the many members and guests at the new station. The club house (removed last year from Echo Island) has been enlarged and improved, and quite a fleet of yachts were anchored off it or fast to the floats. Among the former was the new Herreshoff 30-footer owned by Ralph N. Ellis, the first of the class seen about New York. The model is, from a passing view, better than the general appearance; the lines in the body of the boat are good, the after end shows up well, with better quarters than the older Herreshoff boats and more shape to the transom, but the bow has an ugly elbow that might just as well have been avoided by allowing a little more length on deck and getting rid of the short bowsprit, in knockabout fashion. The cabin house is particularly ugly and unshipshape, with its very high camber to the roof and its short sides. The rig is quite lofty as compared with the 21-footers.

The fleet of 15-footers included Question, Gnome, Hope, Willada, Two Step, Olita and Paprika, a new Huntington boat just completed for C. Sherman Hoyt, of the Seawanhaka C. Y. C. With the same full deckline forward and nearly parallel sides, she differs from Question and Hope in having a round bilge and a slight tumble home to the topsides. The transom is not rectangular, as in the others, but a sector of a circle, more like Olita. In appearance she is inferior to Question and Hope. She has a large rig, boom and gaff mainsail, and an oval cockpit of moderate size. She was sailed by her owner, with Mr. Huntington as crew. Imp was present, Mr. Clapham sailing her single-handed, but she made no preparation to start, the conditions calling for Corinthian helmsmen. Question met with an accident to her centerboard pendant, which her crew, after working industriously, one under water, was unable to repair; she did not cross the line, but sailed over the course. Two Step had the same poor mainsail, while Gnome had a handsome new sail of Union silk made by Wilson & Griffin, of the same shape as her Herreshoff sail.

Prizes were offered for larger classes, but the only entries were the cats Addie, Niamuck, Gracie and Twilight, the latter really a sloop. Owing to the very light wind at 2 P. M. from S.W., all were ordered over the course set by the 15-footers, from off Echo Bay, around the red buoy on Hen and Chickens, around the Middle Ground Buoy on Execution, and home, two rounds making 8½ miles. Before the race was started the club went into commission for the season, the signals being fired and colors set on the flagship Sasqua, Com. Henry Andrus. The Daimler launch Irma was on hand to carry the committee and others over the course.

The start was made according to the rules of the Y. R. U., the larger boats first:

Twilight.....	3 02 19	Niamuck.....	3 03 02
Addie.....	3 05 50		

The 15-footers went away from a single gun at 3:05:05, Two Step having a good place in the middle of the line, a little to leeward, but clear of all the others, and being first over, setting her balloon jib. Olita was second, then Paprika, Willada, Gnome and Hope. There was a mere breath of air in under Premium Point, though a breeze could be seen under Long Island shore and up Hempstead Bay. The fleet drifted very slowly, first one and then another forging ahead for the moment. At the end of the first hour the boats had not covered a mile; they rolled about in the light lop, their sails slatting, and in the quiet afternoon there was a continual and monotonous "slosh" from under the bows of most of them, echoed by a similar sound from Imp, following some distance in their wake.

Gnome finally turned the Hen and Chickens buoy at 4:14:02, and with balloon jib set started on a reach for the second mark. Hope was second, Olita third, Paprika fourth and Willada last, Two Step hauling down her jib and taking a line from her launch just before the buoy was reached. The wind headed and made a beat to Execution, but at a very slow rate, over an hour being wasted in sailing the ½ miles. Paprika took the lead in the windward work, and when near the buoy caught a light breeze from the south shore which sent her around and off for home at a good pace on a free reach. She was timed at 5:24:35, with Hope second, Olita, Gnome and Willada. All finished under spinakers after a good run home, the wind freshening. The roll was called at the end of the first round, 4¼ miles. The times were:

	Start.	Finish.	Elapsed.
Paprika.....	3 05 05	5 49 10	2 44 05
Hope.....	3 05 05	5 51 40	2 46 35
Olita.....	3 05 05	5 52 15	2 47 10
Gnome.....	3 05 05	5 52 54	2 47 49
Willada.....	3 05 05	5 54 20	2 49 15
Two Step.....	3 05 05	Withdraw.	
Question.....	Did not start.		
Addie.....	3 05 50	5 50 29	2 44 39
Twilight.....	3 02 19	5 50 08	2 47 49
Niamuck.....	3 03 02	5 54 33	2 51 31

Paprika wins a silver loving cup and Hope a pair of marine glasses. Addie wins in the larger class. The race was excellently managed by the regatta committee, Messrs. C. P. Tower, W. N. Bavier, P. A. Mey-rowlitz, J. R. Thomas and A. P. Weston.

Ingomar.

It is always a pleasure to mention good work on the part of a builder, and such has been put into the new steel schooner Ingomar by the Lawley Co., of South Boston. The contract called for the completion of the yacht on May 15, and on the morning of the next day the owner, Mr. John D. Barrett, of New York, with his wife and two daughters, and the designer, Mr. H. C. Wintringham, boarded the yacht at Lawley's yard for the trial trip. This proved a complete success, the yacht working most satisfactorily in every respect; and after the sail party decided to spend the night on board instead of returning to their hotel. With the exception of some small changes in the joiner work the yacht was completed and ready for commission, except that her flags were not on board. The work throughout is of the best, and the yacht is an example of what may be accomplished by careful and systematic planning on the part of both designer and builder. When she was launched the mainmast was hanging at the sheerlegs, ready for stepping. It is also interesting to note that the leads of all sheets were laid down on the plans by Mr. Wintringham on the basis of similar work on Emerald and Shamrock, and on trial no alteration was required.

YACHTING NEWS NOTES.

The handsome new house of the Milwaukee Y. C. was formally opened on May 16.

Mayita, steam yacht, designed and built by C. L. Seabury & Co. at Nyack, was launched on May 18 at 3 P. M. The yacht, which was built to the order of Louis Bossert, is 85ft. over all, 72ft. l.w.l., 12ft. beam and 5ft. draft. She has a composite hull, double planked above the water and twin screws.

Avalon, schooner, built by Ambrose Martin for Herbert Foster Otis, of Nahant, was launched at East Boston on May 15. The yacht is a duplicate of the pilot boat Minerva, previously built by Martin; but the interior is arranged more in accordance with that of a yacht. She is 79ft. over all, 66ft. l.w.l., 20ft. beam, 9ft. hold and 10ft. 6in. draft.

The May meeting of the New York Y. C. was held on May 21, Com. Brown presiding. The following amendment to the classification in uniformity with that of the other large clubs was adopted: Amended rule 1, section 3, as follows: Class IV.—Not over 60 and over 51ft. racing length. Class V.—Not over 51 and over 43ft. racing length. Class VI.—Not over 43 and over 36ft. racing length. Class VII.—Not over 36ft. racing length. Another important amendment was laid over, that giving the right of representation to yachts of 10 tons and over, the present limit being 15 tons. The resignation of H. Maitland Kersey was read and accepted. The following members were elected: George Chesterman, Maximilian Agassiz, F. A. Watson, H. R. C. Watson, Henry Walters, Lieut. A. G. Winterhalter, U. S. N., F. A. Plummer, C. M. Pratt, Pembroke Jones, Nicholas Fish, W. L. Elkins, A. A. Low, Surgeon Philip Leach, U. S. N.; H. W. Cannon, Gerard Beekman, C. H. Dodge, F. T. Holder, C. W. Bailey, J. A. Stillman, R. F. Ballantine, John O. H. Pitney, John G. Heckscher, Miss S. D. F. Day (flag member), Alex. Herman, C. S. Braisted, W. N. Murray, J. W. Fellows and E. M. Lockwood. Rear-Admiral Erben has presented to the club a model of the old Frigate Potomac. The annual cruise will begin with a rendezvous on Aug. 3 at Glen Cove.

The first race of the season in British waters was that of the New Thames Y. C. on May 21, from the Lower Hope around the Mouse and return to Gravesend, 50 miles. Ailsa carried a single reef, while Satanita and Britannia carried full mainsails; all carrying jibheaders. The course was a reach in a fresh north wind, and Satanita, with the advantage of 10ft. more waterline, beat Ailsa and Britannia badly. In the 54ft. class Saint won, with Niagara second and Penitent third.

Alda, schr., F. Marion Crawford, sailed from New York on May 23 for the Mediterranean. This vessel is one of the wooden pilot boats, Ezra Nye, and was recently purchased by Mr. Crawford. No changes whatever have been made in her save the changing of the name to Alda. She has been painted and refitted and will be used as a yacht.

Actæa, schr., formerly a yacht, but for several years in the pilot service about New York, has been purchased through Capt. Howard Patterson by J. J. Phelps, who will use her for a yacht. She will be remodeled in the ends and completely refitted.

Valiant, centerboard cutter, formerly owned by Berriman Bros., of Chicago, has been sold to M. H. Rundell and S. B. Ford, of that city. Her mast will be moved aft and her mainsail slightly reduced.

Messrs. Tams & Lemoine have chartered the steam yacht Eleanor for W. E. Slater to R. F. Ballantine, and the sloop Perl to Theodore C. Zerega.

Puritan, centerboard cutter, is now being altered to a schooner at Lawley's yard, South Boston. She is still the property of J. Malcolm Forbes, who also owns Volunteer. It seems never to have occurred to anyone that Puritan could be converted into a most excellent cruiser by making her into a yawl by a comparatively small modification of her present cutter rig. She is still on the sale list.

A correspondent asks for the address of builders of the Delaware River ducker or ducking skiff; possibly some of our readers from about Philadelphia may be able to furnish the information.

We call attention to the advertisement on another page of the Thames Yacht Building Co., of which Mr. Linton Hope is managing director and designer. Mr. Hope has already sent out to this country several designs from which fast boats have been built. The presence of these boats with their fashions of American design adds materially to the excitement and interest of the races. The company is prepared to furnish the yachts complete, hull and rig, or the designs alone.

One of the most valuable additions to the materials for yachts is the wire rope manufactured by the Phosphor Bronze Smelting Co., of Philadelphia, whose advertisement appears elsewhere. This rope is as soft and flexible as manilla. It is used in the sizes from ¾in. to 1½in., on the 15 and 20-footers, for both standing and running rigging. It is suitable for all sizes of yachts and is particularly valuable for centerboard pendants, bobstays, etc., in places where the best galvanized steel wire soon perishes from corrosion or galvanic action.

The new steam yacht Maria, built to the order of Mr. N. B. Stewart, of Torquay and Wemyss Bay, from designs of Mr. G. L. Watson, was launched a few days ago by Messrs. Napier, Shanks & Bell, Glasgow. She has been built to replace the former Maria (now Rhouma), sold by Mr. Stewart to Mr. Bullough, of Accrington. The following are the dimensions of the new vessel: Length, 228ft.; breadth, 27ft. 8in.; depth, 19ft. 3in., and about 860 tons O. M. The internal arrangements of saloons and cabins are similar to those in the Rhouma and in her predecessor, May. She is schooner-rigged, with fore and aft sails, and square sails on the fore mast. The owner's suite of rooms is at the fore end of the dining saloon, each of the rooms being framed in light oak and paneled in bird's-eye maple, while the furniture is walnut. Aft are the drawing-room and staterooms, and they are fitted and furnished in similar style. The machinery is being supplied by Messrs. D. Rowan & Sons, and is of power to maintain a high rate of speed. The yacht was named by Mr. N. B. Stewart, Jr., in the presence of a large company.—*The Field*, May 9.

Steam Yachts and Marine Machinery.
Complete machinery "outfits" for boat builders, made by Marine Iron Works, Chicago. Light draft work a specialty. Catalogue free.

Rifle Range and Gallery.

SOME ELEMENTS OF REVOLVER SHOOTING.

Editor Forest and Stream:

Having noticed in FOREST AND STREAM several queries relative to sights and ammunition for target revolvers, I take the liberty of giving some information on the points in question.

While all revolvers and cartridges are used more or less for target shooting, we generally understand the term target revolver to apply in particular to the S. & W. and

HOLDING.

Colt's, single action .44 frames, adapted to the .44 Russian model, .38-44 and .32-44 shells, using the various loads from gallery to full charges.

The Russian model cartridge, full charge, contains 23grs. of powder and a 256gr. bullet. It is capable of shooting series of ten consecutive shots into circles of 1¼ to 3¼in. in diameter at 50yds., 5 to 8in. in diameter at 100yds., 12 to 18in. in diameter at 200yds., when shot care-

SIGHTS AND SECTION OF LUBRICATING STICK.

fully from rest from S. & W. and Colt's revolvers having 6¼in. barrels.

The loads may be varied at pleasure for short ranges and light shooting.

The factory gallery loads are 7grs. of powder and 120gr. round and 110gr. conical bullets.

When fresh this ammunition will generally make the following ten-shot groups: From 1¼ to 1½in. circle at 20yds., from 1 to 2in. circle at 30yds.

The shooting of the 110gr. conical bullet is a little more regular of the two and gives fewer unaccountables.

Other excellent shoot range loads can be made up by using the Ideal shoot range bullets of 160 and 175grs. and from 10 to 15grs. of powder. With the lighter load of powder I prefer the 160gr. bullet, as it has a hollow base and "upsets" more easily than the flat base of 175grs. Using 10grs. of rifle cartridge powder No. 2 and the

160gr. bullet groups of twelve shots are usually gotten in circles from 1¼ to 1½in. in diameter at 30yds., from 2¼ to 3¼in. in diameter at 50yds.

In stating the sizes of these groups I use as data the best and poorest groups obtained in a very long series of experiments.

The .38-44 full charge contains 20 to 23grs. of powder and a bullet of 146grs.

It is not so regular a shooter by any means as the .44 or .32-44, principally, I think, because the charge fouls the barrel a good deal after the first six shots, and one or two of the remaining four are usually the cause of considerably enlarging the groups. I have always found the ten-shot groups much improved by cleaning the barrel after six shots, if the rules permit of so doing. It usually shoots into circles of six-shot groups from 1¼ to 2¼in. at 50yds., ten-shot groups from 2¼ to 4in. at 50yds., 6¼ to 12in. at 100yds., 16¼ to 25in. at 200yds.

A very good short-range charge is made up by using the 146gr. bullet and 15grs. of powder. This is cleaner than the preceding, and generally shoots into circles of 1¼ to 3in. at 50yds.

The .38-44 factory gallery cartridge contains 6grs. of powder and a round bullet of 70grs. It shoots groups of ten shots into circles of 1¼ to 1½in. at 20yds., groups of six shots into 1¼ to 1½in. at 20yds., groups of ten shots into 1¼ to 2in. at 30yds.

A very nice short-range charge can be made up by using from 9 to 12grs. of powder and the Ideal bullets of 100 to 110grs.

The .32 44 target cartridge contains 11grs. of powder and a bullet of 83grs. It is perhaps as popular as any target revolver, the recoil is light, accuracy good, and it does not foul the barrel badly.

It will usually shoot strings of ten shots into circles of 1¼ to 2in. at 30yds., 1¼ to 4in. at 50yds., 5 to 8in. at 100yds.

The gallery charge contains 4grs. of powder and a round bullet of 40grs. It shoots series of ten shots into circles of 1¼ to 1½in. at 20yds., 1 to 2in. at 30yds., 2¼ to 3in. at 50yds.

Sights.

The target sights on the .44 Russian model S. & W., as issued from the factory, are known as the Paine sights, and consist of a bead front sight and a rear, elevating, wind gauge sight, with semi-circular notch. The height of these sights as ordinarily issued is the correct elevation for gallery ammunition up to 30yds. or so.

The heavier the charge, the more the barrel is rotated upward, and consequently the full charge will be found to shoot much too high. When used with gallery sights one must have either a higher front sight or a lower rear sight.

The plain rear sight that comes on the barrel catch, and is lower than the target sight, will give the proper elevation to the full charge when used in conjunction with the regular gallery front sight. A better plan, however, is to have the revolver correctly sighted for the full charge at the factory—that is, have a high front sight put on, and then elevate the rear sight the necessary amount for the lighter charges, marking the elevations on the rear sight once for all.

The same revolver will not be sighted correctly for everyone, for the upward motion of the muzzle is due to the point of resistance, the hand, being below the application of the force of recoil; and since the resistance varies as one grips the revolver loosely or tightly, each shooter must arrange his sights to suit his style of holding or gripping the revolver.

The same remarks concerning the elevation of sights apply to the Colt revolvers. No elevating rear sight is furnished on the Colt, so you must have various heights of front sights which are easily interchanged. Mr. Lyman has recently brought out a very good elevating front sight for the Colt. Some years ago I designed an elevating front sight, and found it all that one could desire for a target revolver. It is shown in the cut. The screw hole in the sight slot is cut into a horizontal slit, D; into this is fitted the milled wheel B, which has threads cut on the inside; the sight A is then fitted to the slot, and screwed up and down at pleasure. I arranged mine so that the lowest elevation was suited to the lightest charge, the sight being elevated as the charges were increased—a scale being cut on front of sight, as shown in C.

The .38-44 S. & W. is usually issued sighted correctly for the full charge, and one must elevate the rear sight for the lighter charges.

The .32-44 revolver being heavy and the charges light, the regular target sights answer pretty well for both target and gallery charges.

Some Hints on Holding, etc.

The usual method of grasping the revolver is shown in the cut. Nearly all revolver shooters place the thumb in the position indicated when using light loads, but some prefer to drop the thumb a little lower, so it just touches the second finger when firing full charges, believing that they have a firmer grip and more control over the recoil.

The revolver should be held firmly, but not gripped so hard as to cause the muscles of wrist or forearm to tremble.

It is better to lower the pistol arm slowly than to raise it, as it produces less strain on the muscles. While aiming, the lungs should be filled with a moderately deep breath.

The hardest thing to learn in pistol shooting is to pull the trigger smoothly and evenly and have the hammer fall without any jerk. This can be acquired only by persistent practice.

If possible, get some old revolver and practice pulling and snapping it at a mark in your room for twenty minutes or so every day. You will find it a wonderful help in learning to pull quickly and evenly.

The pressure of the trigger should be perfectly steady and should be applied directly backward, being very careful that when the hammer falls the suddenly released pressure of the trigger finger is not transferred to the revolver, causing a movement at the instant of firing. This can be best averted by pulling the trigger with the forefinger alone, and not by a squeeze from the whole hand.

The trigger should pull off at a pressure of 2¼ or 3lbs., and the pull off must be perfectly smooth—nothing is so detrimental to good shooting as a "catchy" pull off. Stand firmly on both feet, with the feet slightly apart. One's position should be upright, but unconstrained and

comfortable; do not stand stiffly, so as to strain any particular muscles. No rule can be laid down as to position; some prefer to bend the arm slightly at the elbow, some to fully extend it; some face the target squarely, others stand with the right side toward the target, the majority adopting an intermediate position.

The left arm is let hang loosely by the side, or is placed behind the back or on the hip, as you prefer. Try all the positions and adopt the one you find easiest and least fatiguing. I am of the opinion that many beginners commence practice at too small a bullseye, which invariably tends to make one a slow shot. I should begin at nothing smaller than a 2in. bullseye at 12yds.

Some sight at 6 o'clock, or just under the bull, and others place the sight on the bull. I prefer the former, but it is a matter of individual taste. Do not practice too much with gallery loads. They are very pleasant to shoot and teach one to hold and pull off well, but too much indulgence in them certainly unfits one for the use of full charges and their heavier recoils. You will find a slightly checked wood stock better to hold than any smooth substance, such as rubber, ivory or pearl.

Reloading Gallery Ammunition.

As soon as possible after using a shell decap it, wash in very hot water and suds, rinse and dry by gentle heat, and recap.

Either the Smith & Wesson or Ideal tools with adjustable chambers may be used for reloading. For all gallery ammunition using round bullets I prefer Du Pont's special pistol powder FFF.B in charges before mentioned.

For the Ideal bullets (short range) I prefer Am. Powder Mills No. 2.

The bullets are usually cast of pure lead. The round bullet is set firmly on the powder and well lubricated. To lubricate use pure tallow, either cold or hot. To use cold, place a piece the size of a large kernel of corn in the mouth of the shell and with a stick, concave at end (as in cut), or the S. & W. bullet seater, spread it evenly around the bullet.

To use hot, melt the tallow in an oiling can, then taking the can (with a heavy leather or buckskin glove on the hand) drop the lubricant into the mouth of the shell until just the end of the bullet shows above the tallow. You will be able to shoot long strings of shots without cleaning with ammunition loaded and lubricated in this manner, as it will leave the barrel greasy instead of caking, like old factory ammunition.

Do not carry gallery ammunition loose in the pocket, where dirt and grit can get into the shell and afterward scratch your barrel inside when fired.

CHELAN.

Cincinnati Rifle Association.

CINCINNATI, O., May 17.—The following scores were made by members of the Cincinnati Rifle Association to-day. Conditions: 200yds., off-hand, at the standard target, 7-ring black. Our "veteran" Mr. Hasenzahl distinguished himself to-day by making a clean score of 94. In the team shoot to-day Capt. Gindele's team scored 2,072, Lieut. Payne's 2,141, the latter leading by 69 points.

* Military.

Hartford Rifle Club.

THE Hartford Rifle Club will hold a prize shoot on Decoration Day, May 30. The shoot will take place rain or shine. Shooting will be at the Columbia target, 200yds. range, open to all, any rifle.

Rifle Club Constitutions.

We would be obliged if secretaries of rifle clubs would favor us with copies of constitutions and shooting rules, that we may send them to other clubs seeking such information.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 28-30.—MILWAUKEE, Wis.—Twelfth annual tournament of the South Side Gun Club, on the club grounds, Lake Station; Adolph Gropper, Sec'y.

May 30.—CANAJOHARIE, N. Y.—Tournament of the Canajoharie Rod and Gun Club; targets. Chas. Weeks, Sec'y.

May 30.—BRANCHVILLE, N. J.—All-day shoot of the Branchville Gun Club. Henry R. Cahrs, Sec'y.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

May 30.—OGDEN, Utah.—First annual tournament of the Ogden Gun Club; \$300 in cash and prizes added. Open to the world. No handicap.

May 30.—MAPLEWOOD, N. J.—New Jersey Trap-Shooters' League tournament, under the auspices of the Maplewood Gun Club.

May 30.—WHEELING, W. Va.—Tournament of the Wheeling Gun Club. Targets. J. A. Penn, Sec'y.

June 2-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 3-4.—NATCHEZ, Miss.—Interstate Association's tournament, under the auspices of the Gaillard Sporting Club.

June 8-13.—BUFFALO, N. Y.—New York State shoot, under the auspices of the Buffalo Audubon Club; \$3,000 in merchandise prizes in State and open events; \$1,100 of cash added to purses. Experts eligible to first and second moneys only. C. S. Burkhardt, President.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 9-11.—URBANA, Ill.—Annual tournament of the Crystal Lake Gun Club, for amateurs only. Targets. Frank L. Bills, Manager.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburgh Gun Club; targets; \$500 added money.

June 30-July 2.—WORMSNOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

July 22-23.—PORTLAND, Me.—Interstate Association's tournament, under the auspices of the Portland Gun Club.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Aug. 4-6.—CHICAGO, Ill.—Tournament of the Du Pont Smokeless Powder Company. E. S. Rice, Mgr.

Aug. 26-27.—BURLINGTON, Vt.—Tournament of the Interstate Association, under the auspices of the Lake Side Rod and Gun Club.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. H. B. Shoop, Sec'y.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

October (second week).—BALTIMORE, Md.—Baltimore claims this week for her tournament. Dr. Samuel J. Fort, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 345 Broadway, New York.

During the tournament of the Hazard Powder Company, at Cincinnati, O., last week, the local papers had a good deal to say about Heikes challenging Gilbert for the target championship. As a matter of fact, Heikes has not challenged Gilbert and will not do so until the summer is well over. It is perfectly possible, however, that Gilbert may receive a challenge from another shooter very shortly, in which case there should be a good match at Watson's Park, as Gilbert's probable opponent is a rattling good shot, and particularly good in individual matches.

Six of the members of the Green Ridge Gun Club challenge any six members of the Wilkesbarre (Pa.) Gun Club to shoot three matches at 50 yard pigeons per man, from known traps and unknown angles, in this city, at dates to be agreed upon, for a championship gold trophy worth \$100. The trophy will be presented to the winning club by Scranton business men. Either club must win two matches out of three to become the owner of the trophy.

New York's State shoot, at Buffalo, June 8-13, will be a big affair. In the open sweeps the club sets the expert a big task to perform: in order to get in for any part of the purse, he will have to shoot into first or second place, or be out of it altogether. The merchandise events, open to residents of the State only, will certainly have a large entry list, as the prizes are many and of considerable value.

The New Jersey League contest for the month of May will be held at Maplewood on Saturday, May 30 (Decoration Day). The Maplewood Gun Club announces that hacks will meet trains on that day as follows: Leave New York at 8:30, 10:10 and 11:10 A. M., and 1:30 P. M.; leave Newark at 9:05, 10:43 and 11:43 A. M., and 2:03 P. M. A programme of events for all day has been arranged.

The programme for the Interstate Association's tournament at Natchez, Miss., on June 3-4, has come to hand a trifle late for an extended notice. Briefly summarized, we can say that the programme for each day consists of eight 15-target events, \$2 entrance, and two 20-target events, \$2 50 entrance. The club adds \$5 to each purse in the 15-target events, \$7.50 to the purses in the 20-target events. The tournament is open to all and the Gaillard Sporting Club extends a cordial invitation to shooters to visit Natchez and enjoy a pleasant shoot.

In Paul Litke's account of the Joplin, Mo., shoot, he mentioned the fact that Milt Lindsley and Wanda had their guns stolen from the private car at Kansas City. The following is a description of the guns: Lefever ejector, fluid steel barrels, No. 23,389; L. C. Smith ejector, A1, No. 649. Wanda is much grieved over the loss of her pet gun.

Grand prize shoot! There will be a tournament held on the grounds of the Stonington, Conn., Gun Club, Saturday, May 30. Among the events will be one for a fine double-barrel breechloading shotgun, 10 targets, help mate, entrance 50 cents. Under the management of James T. Ames, New London, Conn.

Secretary Bills, of the Urbana, Ill., Gun Club, writes: We have changed dates on account of the number of our local shooters who want to attend the Republican National Convention. The new dates are June 9, 10 and 11.

Eddie Earl announces that he will hold a live-bird shoot at his grounds, Rahway avenue, Elizabeth, N. J., on Decoration Day.

The Hobart, Ind., Gun Club is making preparations for holding its tenth annual tournament.

EDWARD BANKS.

Boston Gun Club.

BOSTON, Mass., May 20.—The weekly prize shoot occurred as usual at the Boston Gun Club grounds at Wellington this afternoon. Like the poor, the wind seems to be always with us, and this was no exception to the rule, the burnt grains of nitro flying back into the shooter's eyes with exasperating regularity. However, three fair scores were entered for the prizes, and the different events were watched with as much interest and concern as if weather conditions had allowed of better percentages. Scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	10	10	4	10	10	15	10	10	5	10	10	15	10	10
Gordon	6	6	6	7	1	6	5	10	8	5	7	4	6	8
Miskay	8	5	9	7	3	9	9	8	8	3	6	4	7	5	12	6
Brown	7	6	7	7	1	8	8	5	3	5	8	3	5	4	9	6

Burnside Gun Club.

BURNSIDE, La., May 18. Following are the scores made by the members of the Burnside Gun Club at their regular weekly shoot. The wind which haunts our grounds so regularly was, as usual, ready for the boys, and the way the targets dipped and curved rather bothered the shooters:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

Lake Side Scores.

BURLINGTON, Vt., May 21.—Practice shoot of the Lake Side Rod and Gun Club, held at their grounds May 20. We had two members from the Cambridge (Vt.) Gun Club, and were very much pleased with our grounds. We think we have in our grounds one of the fastest in the country. The scores made were not large and were quite a disappointment to the shooters, but hope to do better when they get acquainted with the grounds.

No. 1, 20 singles, rapid fire: D Dupont, 0010000111011000110—9 Blue Rival, 10110111111111111110—17
E Lefever, 01101011100110011111—13 W Stone, 001100101110111000—10
Blue Rival, 10001010110010101010—10 *Beckom, 1000001100000111010—8
W S Phelps, 0100001110100100011—9

No. 2, 20 singles, unknown traps: Blue Ribbon, W. D. Dupont 6, W. S. Phelps 9, E. C. Lefever 8, Mr. Ellsworth, W. L. Stone 9, Blue Rival 6.
No. 3, 25 singles, rapid fire: E. C. Lefever 16, Blue Ribbon 13, D. Dupont 9, Blue Rival 9, W. S. Phelps 12, W. L. Stone 9.

No. 4, 10 pairs doubles: D. Dupont 10, Blue Ribbon 11, E. C. Lefever 14, Blue Rival 12, W. S. Phelps 9.

No. 5, 20 singles, rapid fire: Blue Ribbon 17, E. C. Lefever 7.

No. 6, 30 singles, rapid fire: L. Harding 16, Blue Ribbon 18, E. C. Lefever 17.

J. S. DENNING, Sec'y.

Emerald Gun Club's Regular.

DEXTER PARK, May 19.—The day was a good one for shooting except for a heavy thunderstorm, which delayed the club shoot for a short time. The birds were fairly good

The Hazard Tournament.

WHAT WILL THE CROAKERS SAY NOW?

In the early summer of 1894 we were told that trap-shooting had reached its zenith so far as large tournaments were concerned. When 1895 came, and with it the highly successful circuit of Knoxville, Memphis, Cincinnati, Cleveland, etc., we were also told that the end of all things trap-shooting was right at hand, and that never again would we witness such gatherings in front of traps, whether bluerock or empire. We must confess that we too had our misgivings. We feared that the matter of tournament giving was being overdone, and it is not quite clear yet whether we were right or wrong. However that may be, we can now state positively that never before in the history of trap-shooting has there been such a three weeks as that which commenced on Monday, May 4, at Guttenberg, N. J., and ended at Cincinnati, O., on Friday evening, May 22.

The E. C. Powder Co.'s tournament at Guttenberg race track, inaugurating as it did the championship of the United States at inanimate targets, was an immense gathering of the pick of the target shooters of this country with but one or two exceptions; among the latter of course being Harvey McMurchy, who is just about "as good as they're made." The entry list, under the exceptional conditions of the programme laid down for that tournament, was extremely large and was most certainly a record in its way.

The Memphis (Tenn.) Gun Club's tournament, which opened on May 11 and closed at 6 P. M. on May 16, was a worthy successor to the E. C. tournament. For a solid week of shooting it's hard to say when or where it has ever previously been beaten. It was a rattling big shoot.

Then came the Hazard Powder Co.'s tournament at Cincinnati, O., May 19-22, Tuesday to Friday of last week, an event which has cast into the shade all gatherings of a like character where the conditions were in the slightest degree similar or on an equal footing. In comparing this tournament with others it must most surely be borne in mind that amateurs or novices were specially catered to; it was not merely a crackerjack's tournament. The management had carefully thought out the situation; it sprung a surprise on us all, and it proved to us most satisfactorily that it was entirely right in its premises.

THE MANAGEMENT.

In referring to the management as a body we may probably be misleading. As a matter of fact, the head, front, middle, in fact the management as a whole, was R. S. Waddell, the Hazard Powder Co.'s agent in Cincinnati, a man who in his own particular line is just as deserving of the title of Napoleon as was *le petit caporal* in his line. As promoter and manager of the Du Pont Powder Co.'s tournament last year, Bob Waddell earned a wreath of laurels that would perhaps have rested more comfortably on a head built like Tom Reed's or Cleveland's. With the new laurel boughs added to that wreath by reason of the recent Hazard tournament at Cincinnati, Mr. Waddell will learn that greatness even as a tournament organizer has its drawbacks.

The most beautiful thing about this tournament was the manner in which every point and every detail had been covered. Mr. Waddell had carefully thought out everything; his experience of one year ago stood him in good stead and he actually left nothing undone to perfect his arrangements. This is extremely high praise, and we are well aware that in making this statement we run the risk of being accused of "laying it on thick," to use an expressive phrase. But we are willing to take that risk, resting our case on the evidence of those shooters who attended last week's shoot at Cincinnati.

THE CASHIER'S OFFICE AND ITS STAFF.

In preparing for a shoot the most important positions to be filled are those that go to make up the staff of the cashier's department. If the cashier and his assistants get "balled up" (we beg pardon again, but a slang phrase just hits the mark) the whole shoot first languishes and then dies an early and unsavory death. All such danger was guarded against by Mr. Waddell, who appointed as cashier, or paymaster, E. C. McMurchy, and as assistant cashiers, or receiving tellers, L. J. Squier and A. O. Dick. In addition to the three gentlemen above named, G. Y. Foreman, cashier for Fred Waddell, the company's Southern agent at Chattanooga, Tenn., was appointed average clerk, press agent, etc., a post that we can vouch for he filled ably. With such a four-in-hand, and with plenty of elbow room for his team to work in, Manager Waddell had no reason to anticipate trouble in the cashier's office. The fact that the office was ready to pay on each event within a few minutes after the last squad in that event had finished its score is proof that the force was not only well organized, but capable.

Fred Waddell and Fisher (everybody called him Fisher, everybody knew him, and we did not like to expose our ignorance by asking his given name) were squad hustlers who would scarcely take time to eat. And squad hustling in the sultry atmosphere that occasionally made life at the shooting grounds scarcely worth having was no sinecure. By the way, one of the few pleasures that fall to a squad hustler's lot is to walk up and down the line of (say) three sets of traps, calling out some shooter's name; pass within a yard or two of him, and then, after the squad has been kept waiting for him, to have the culprit rise up and say, "Do you want me?"

ARRANGEMENT OF THE GROUNDS.

Three sets of bluerock traps were used. Paul North and Jack Parker being on hand to see that the traps kept the bluerocks flying. Both North and Parker had a snap, the traps and trappers conspiring to make the shoot a success as far as they were concerned.

The men at the score shot from under cover, while ample tents provided grateful shade for the waiting squads. The sheds that sheltered the shooters at the score were roofed with corrugated iron and were substantially built. The pulling apparatus at each set of traps was North's electric pulling apparatus, and it must be added that even this portion of the work of a tournament was as good as we ever saw it. Was it luck or was it simply the result of forethought? The referee's task was lightened by doing away with the necessity of his having to use his voice. At his right hand was a box with seven electric buttons; two of these buttons connected with a buzzer and a bell at the scorer's table; a buzz represented a break; a ring signified a loss. While the buzz was not always audible to the shooter, the ring seldom failed to catch his ear. The other five buttons connected the referee with the five trappers respectively. When No. 1 failed to go, or when a target broke on leaving the trap, the referee pushed No. 1's button and aroused him to a sense of his wrongdoing. When No. 1 was ready again, he (No. 1) pressed a button beside his trap and signified by a ring at the referee's box that all was ready again. Thus trappers and referees could communicate without a lot of unnecessary shouting. How great a comfort this system was to all concerned can only be understood and appreciated by actual experience.

THE CHECKROOM SYSTEM.

One of the greatest comforts to shooters was the checkroom for coats, hats, etc. The proprietor of the Hotel Emery sent his own man and his own checks down to the grounds and one portion of the club house was set aside as a checkroom. Guns could be left there over night, checked and safe, with watchmen in charge to see that thieves did not get in their fine work. It was a great scheme and one that should be made a note of. The creature comforts department was also all that could be desired.

WEATHER CONDITIONS.

It can scarcely be said that the weather was perfect. It was hot enough, but the humidity in the air made it very oppressive, while thunderstorms at times rendered it decidedly pleasant to be under cover. The dull sky that very generally prevailed during the shoot made it hard to see the targets at times and the scores in consequence took a tumble. At other times the deep blue of the sky and surrounding hills, with a bright sun at the shooter's back, made the yellow rings on the targets show up in the very best of shapes.

PREPARATION DAY, MAY 19.

The programme announced that on May 19, Preparation Day, as it was called, two sets of traps would be ready for use at 9 A. M. On the A set sweeps at 15 targets, unknown angles, \$1 entrance, targets included at 2 cents, were to be shot. At the B traps anybody could shoot on paying the price of the targets; at this set it was known traps and angles. That the shooters showed up in force is evidenced by the following table, which gives the total scores and averages of all taking part in the A trap events:

Shot at.	Broke.	Av.	Shot at.	Broke.	Av.

In addition to the above 56 shooters, 11 others shot in a single event, making scores as follows: Critzer 14, Taylor 10, Hartsfield 6, Foy 10, Wanda 4, Slow 10, Stone 10, Willie 7, Robbins 14, Beck 8 and Peters 13. This makes a total of 67 shooters on the grounds for practice work; there may also have been a few other shooters present who did not take part in the sweeps, but who may have shot practice birds at the B traps, where no record was kept of the scores made. Altogether it was a most auspicious preliminary day's work. Sim Glover's work is well worth noting, and it may be added that he made two straight scores of 15 each and four scores of 14.

FIRST DAY, MAY 20.

The programme for to-day, as on each of the two succeeding days, was composed as follows: Nos. 1, 4, 6 and 8, 15 targets, \$2, \$30 added; Nos. 2, 7 and 9, 20 targets, \$2.50, \$40 added; Nos. 3 and 5, 25 targets, \$3, \$55 added. Nos. 3 and 5 were the Hazard prize events referred to later on.

A perusal of the accompanying table of scores tells the tale of to-day's work. Class A men shooting at known traps, but unknown angles; Class B at known traps and angles. The number of entries will be touched upon later; it is sufficient to state that No. 1 had 134 entries, No. 2 193, and No. 4 128. Owing to the number of entries No. 9 was not shot off to-day. Below are the

SCORES OF MAY 20.

The above tables show that 73 shooters took part in two or more events on the last day of the tournament. Of that number 51 shot throughout in class A; of the remaining 22 some shot an event or so at the A traps, but made the majority of their scores at the B traps. Seven other shooters took part in a single event, but in only one instance did any of them "shoot in" for money: North and Dean shot in No. 1; Stipp in No. 3; Volland and Du Bray in No. 6; A. M. Field (who took part of third money) in No. 8, and J. B. in No. 9.

A REMARKABLE LIST OF ENTRIES.

It has become so common a thing for records in sporting events in this country to be smashed that the phrase "record-breaking" has become almost wearisome. Hackneyed as the phrase may be, we will have to use it when noting the list of entries in each day's events at the Hazard tournament. It might be better, perhaps, to say that the list of entries establishes a new record for tournaments conducted on the plan fathered, we believe, by R. S. Waddell, the company's able representative on the banks of the Ohio. Amateurs, as told elsewhere, did not meet the experts on equal terms, but were in receipt of a handicap that gave them at least a run for their money. That they appreciated this fact is proved by the way the entries kept up during the shoot. Event No. 8 in the first day's programme was held over until the morning of the second day on account of darkness, while there were several withdrawals from No. 8 on the same day for like cause. An almost exactly similar state of affairs existed at sundown on the second day, the dropping off in the entry lists in both Nos. 8 and 9 being distinctly traceable to these causes, and not to any failure on the part of shooters to enter in either event. As it was the following figures speak very forcibly:

First day: No. 1, 134 entries; No. 2, 183; No. 3, 117; No. 4, 128; No. 5, 102; No. 6, 108; No. 7, 93; No. 8, 81; No. 9, 73. Total, 969—average for the 9 events of 107.6.
Second day: No. 1, 105; No. 2, 100; No. 3, 80; No. 4, 106; No. 5, 89; No. 6, 86; No. 7, 86; No. 8, 67; No. 9, 62. Total, 783—average of 86.8 for the 9 events.
Third day: No. 1, 68; No. 2, 66; No. 3, 62; No. 4, 64; No. 5, 59; No. 6, 69; No. 7, 64; No. 8, 64; No. 9, 61. Total, 577—average of 64.1 for the 9 events.

The above figures give a general average for the entire three days of 86.2 in each of the 27 programme events.

PAUL NORTH WAS SATISFIED.

For once Paul North was satisfied; he had no kick coming, he said, and didn't want the boots offered by the management "for the most accomplished kicker." (N. B.—The management had no chance to donate the aforesaid boots—there were no kickers, so far as could be ascertained.)

POLICE REVOLVER PRACTICE.

In view of an approaching parade of the police department of New York city, the Board of Police Commissioners about two months ago ordered the discontinuance of pistol practice by the force. This practice, which had been taken up some months before in response to a suggestion by the FOREST AND STREAM, had been carried on far enough to permit each man on the force to shoot the fifteen shots of a first series at the target, and a second series had been begun and carried on through one-third of the force. The results of this pistol practice were published in FOREST AND STREAM and were very interesting. They showed very clearly that when the practice began the New York police force knew little or nothing about shooting the revolver. But during the progress of the practice it was made very evident that the men of the force could readily learn how to use the arm, for the platoons which shot last in the public practice all did vastly better work than those which had shot first, and some of them showed a degree of improvement approximating 100 per cent., a result due, no doubt, to private practice as well as to the efficient coaching they had received.

Now that the parade is over it is greatly to be desired that the pistol practice should be resumed without loss of time. We understand that there is more or less opposition to this among the uniformed force, and especially by some of the sergeants, who take the ground that the men will soon be away on their vacations, and thus in part be absent when the practice is being carried on, while at the same time the force will be weakened by such absences. These reasons are not valid ones for the postponing of the revolver practice. The men who will be absent will never be more than two or three to a platoon, and they can be assigned to shoot with some other platoon before or after their vacations.

If pistol practice be postponed until the autumn, another cause will come up to put it off still further. The elections which will come in November will be preceded by several weeks during which the police force will be busily employed in overseeing the proper registration of voters in this city, and at that time pistol practice will be impossible. If, therefore, the months of June, July, August and September are not utilized for a continuance of this instruction, it must go over to the winter, and that means that nearly a year will have intervened between the effort to find out what the men can do and the commencement of their practical instruction in the use of their firearms. In the months that will have elapsed all the good done by the preliminary practice will have been lost, and much of the interest now felt by the men in revolver shooting will have died away. The work will have to be begun anew from the foundation.

The New York police force has for many years been called the "finest," and this term has sometimes been used in jest, but as a matter of fact it is the finest force of police in the world. Its members are intelligent and quick to take instruction, and there is no reason why, if this matter of pistol practice be properly followed up, they should not become a body of picked marksmen, who will far excel any like force of men anywhere. It is greatly to be hoped that the Police Commissioners will follow this matter up. Few things that they can do will have a greater tendency to foster that *esprit de corps* which is so important a factor in the improvement of the uniformed force.

INDIAN HUNTING RIGHTS.

SOUTH of the Yellowstone Park, near the border line between Wyoming and Idaho, lies the valley which is known as Jackson's Hole. It is a valley walled in on the east by hills rising to high mountains, which separate the waters flowing into Snake River from those flowing into Wind River and so into the Missouri. At the head of the Hole is Jackson's Lake, a broad and beautiful sheet of water, surrounded by wide hay meadows, and shadowed on the west by the towering summits of the Teton Range. From here southward the Snake River flows down the valley between the sage brush covered flood plains, above which rise the rolling pine-clad foothills toward the towering peaks above. A few miles below the lake the Gros Ventre fork flows into Snake River, which soon after turns west, and flowing through the mountains that have shut it in leaves the Hole.

Twenty years ago Jackson's Hole was a mysterious hunting ground, where game and fur were reputed to be more abundant than anywhere else on this continent. On three sides walled in by stupendous mountains and on the fourth protected by a country that had then been visited by very few people, there was about this valley that flavor of fable and romance which always attaches to regions distant, difficult of access, little known. And indeed the Hole deserved its reputation. There, when first we saw it, roamed deer, elk, antelope and moose, if not in countless herds, at least in such numbers that a very ordinary hunter might kill all he wished to; in the hills were found buffalo, and not far off sheep, while dams of the beaver blocked every stream.

All this was long ago, but there are still elk and deer in these hills, and they are the attraction which each year call to Jackson's Hole and the mountains about it people from far and from near, men with red skins and white.

In Idaho, southwest of Jackson's Hole, lies the Fort Hall Indian Reservation, where the Bannocks, a tribe of Indians belonging to the Shoshone family, have their reservation. When in 1868 these Indians made a treaty with the United States Government ceding the territory which they had always claimed and retaining only the small reservations at Fort Hall and at Lemhi, it was solemnly covenanted and agreed between the Bannocks and the Government that the Indians should have the right to hunt upon the ceded territory so long as these remained unoccupied lands of the United States, and there was peace between the tribe and the Government. This right the Indians have enjoyed for nearly thirty years. Gradually, however, settlers began to come into the country, and as it was still a good game country they hunted there, killing the elk and deer for their hides, running down elk in the winter snows, and capturing them alive to sell to owners of preserves, and above all, getting parties of Eastern tourists to come out and hunt them. All this was more or less profitable, and to these settlers it seemed a very bitter thing that the Indians should visit this country in accordance with their claimed treaty rights and butcher—as they did—this game. So the settlers were oppressed with a great fear lest our noble big game should be destroyed, and the Indian became an abomination in their eyes; and the State of Wyoming having enacted game laws, which the Indians did not know, and regarded no more than the white settlers, these settlers last summer set upon a hunting party of Bannocks and first captured it, and then killed a woman and two or three babies and wounded an old blind man.

Subsequently the authorities of the State prepared a case for testing in the courts the question of Indian hunting rights. This was taken to the Supreme Court of the United States, where the whole subject has been reviewed and a decision has just been returned, written by Justice White, denying the claims of the Bannocks under their treaty to the possession of hunting privileges in contravention of State statutes.

This finding is of such importance that through our special representative in Washington we have secured an advance copy of the full text, which here follows:

SUPREME COURT OF THE UNITED STATES.

John H. Ward, Sheriff of the }
County of Uinta, in the State }
of Wyoming, Appellant, }
vs. }
Race Horse. }

Appeal from the Circuit Court of
the United States for the Dis-
trict of Wyoming.

[May 25, 1896.]

This appeal was taken from an order of the court below, rendered in a *habeas corpus* proceeding, discharging the appellee from custody. (70 Fed. Rep. 598.) The petition for the writ based the right to the relief, which it prayed and which the court below granted, on the ground that the detention complained of was in violation of the Constitution and laws of the United States, and in disregard of a right arising from and guaranteed by a treaty made by the United States with the Bannock Indians. Because of these grounds the jurisdiction below existed, and the right to review here obtains. (Revised Statutes, § 753; Act of March 3, 1891, 36 Stat. 826.) The record shows the following material facts: The appellee, the plaintiff below, was a member of the Bannock tribe of Indians, retaining his tribal relations and residing with it in the Fort Hall Indian reservation. This reservation was created by the United States in compliance with a treaty entered into between the United States and the Eastern band of Shoshonees and the Bannock tribe of Indians,

which took effect Feb. 24, 1869. (15 Stat. 673.) Article 2 of this treaty, besides setting apart a reservation for the use of the Shoshonees, provided:

"It is agreed that whenever the Bannocks desire a reservation to be set apart for their use, or whenever the President of the United States shall deem it advisable for them to be put upon a reservation, he shall cause a suitable one to be selected for them in their present country, which shall embrace reasonable portions of the 'Port Neuf' and 'Kansas Prairie' countries."

In pursuance of the foregoing stipulation, the Fort Hall Indian reservation was set apart for the use of the Bannock tribe. Article 4 of the treaty provides as follows:

"The Indians herein named agree, when the agency house and other buildings shall be constructed on their reservations named, they will make said reservations their permanent home, and they will make no permanent settlement elsewhere; but they shall have the right to hunt upon the unoccupied lands of the United States so long as game may be found thereon, and so long as peace subsists among the whites and Indians on the borders of the hunting districts."

In July, 1868, an act had been passed erecting a temporary government for the Territory of Wyoming (15 Stat. 178), and in this act it was provided as follows:

"That nothing in this act shall be construed to impair the rights of persons or property now pertaining to the Indians in said Territory, so long as such rights shall remain unextinguished by treaty between the United States and such Indians."

Wyoming was admitted into the Union on July 10, 1890. (26 Stat. 222.) Section 1 of that act provides as follows:

"That the State of Wyoming is hereby declared to be a State of the United States of America, and is hereby declared admitted into the Union on an equal footing with the original States in all respects whatever; and that the constitution which the people of Wyoming have formed for themselves be, and the same is hereby, accepted, ratified and confirmed."

The act contains no exception or reservation in favor of or for the benefit of Indians.

The Legislature of Wyoming on July 20, 1895 (Laws of Wyoming, 1895, c. 98, p. 225), passed an act regulating the killing of game within the State. In October, 1895, the district attorney of Uinta county, State of Wyoming, filed an information against the appellee (Race Horse) for having killed in that county seven elk in violation of the law of the State. He was taken into custody by the sheriff, and it was to obtain a release from imprisonment authorized by a commitment issued under these proceedings that the writ of *habeas corpus* was sued out. The following facts are unquestioned: 1st. That the elk were killed in Uinta county, Wyoming, at a point about 100 miles from the Fort Hall Indian Reservation, which is situated in the State of Idaho; 2d, that the killing was in violation of the laws of the State of Wyoming; 3d, that the place where the killing took place was unoccupied public land of the United States, in the sense that the United States was the owner in fee of the land; 4th, that the place where the elk were killed was in a mountainous region some distance removed from settlements, but was used by the settlers as a range for cattle, and was within election and school districts of the State of Wyoming.

Mr. Justice White, after stating the case, delivered the opinion of the Court.

It is wholly immaterial, for the purpose of the legal issue here presented, to consider whether the place where the elk was killed is in the vicinage of white settlements. It is also equally irrelevant to ascertain how far the land was used for a cattle range, since the sole question which the case presents is whether the treaty made by the United States with the Bannock Indians gave them the right to exercise the hunting privilege therein referred to, within the limits of the State of Wyoming, in violation of its laws. If it gave such right, the mere fact that the State had created school districts, or election districts, and had provided for pasturage on the lands, could no more efficaciously operate to destroy the right of the Indian to hunt on the lands than could the passage of the game law. If, on the other hand, the terms of the treaty did not refer to lands within a State which were subject to the legislative power of the State, then it is equally clear that, although the lands were not in school or election districts and were not near settlements, the right conferred on the Indians by the treaty would be of no avail to justify a violation of the State law.

The power of a State to control and regulate the taking of game cannot be questioned. (Geer vs. Connecticut, 161 U. S. 519.) The text of article 4 of the treaty, relied on as giving the right to kill game within the State of Wyoming, in violation of its laws, is as follows:

"But they shall have the right to hunt on the unoccupied lands of the United States so long as game may be found thereon, and so long

as peace subsists among the whites and Indians on the borders of the hunting districts."

It may at once be conceded that the words "unoccupied lands of the United States," if they stood alone, and were detached from the other provisions of the treaty on the same subject, would convey the meaning of lands owned by the United States, and the title to or occupancy of which had not been disposed of. But in interpreting these words in the treaty they cannot be considered alone, but must be construed with reference to the context in which they are found. Adopting this elementary method, it becomes at once clear that the unoccupied lands contemplated were not all such lands of the United States wherever situated, but were only lands of that character embraced within what the treaty denominates as hunting districts. This view follows as a necessary result from the provision which says that the right to hunt on the unoccupied lands shall only be availed of as long as peace

and came within the authority and jurisdiction of a State. The right to hunt given by the treaty clearly contemplated the disappearance of the conditions therein specified. Indeed, it made the right depend on whether the land in the hunting districts was unoccupied public land of the United States. This, as we have said, left the whole question subject entirely to the will of the United States, since it provided, in effect, that the right to hunt should cease the moment the United States parted with the title to its land in the hunting districts. No restraint was imposed by the treaty on the power of the United States to sell, although such sale, under the settled policy of the Government, was a result naturally to come from the advance of the white settlements in the hunting districts to which the treaty referred. And this view of the temporary and precarious nature of the right reserved in the hunting districts is manifest by the act of Congress creating the Yellowstone Park Reservation, for it was sub-

rule undoubtedly is that repeals by implication are not favored, and will not be held to exist if there be any other reasonable construction. (*Cope v. Cope*, 137 U. S. 682, and authorities there cited.) But in ascertaining whether both statutes can be maintained it is not to be considered that any possible theory, by which both can be enforced, must be adopted, but only that repeal by implication must be held not to have taken place if there be a reasonable construction by which both laws can coexist consistently with the intention of Congress. (*United States v. Sixty-seven Packages Dry Goods*, 17 How. 87; *District of Columbia v. Hutten*, 143 U. S. 18; *Frost v. Wenie*, 157 U. S. 46.) The act which admitted Wyoming into the Union, as we have said, expressly declared that that State should have all the powers of the other States of the Union, and made no reservation whatever in favor of the Indians. These provisions alone considered would be in conflict with the treaty if it was so construed as to allow the Indians to seek out every unoccupied piece of Government land and thereon disregard and violate the State law, passed in the undoubted exercise of its municipal authority. But the language of the act admitting Wyoming into the Union, which recognized her coequal rights, was merely declaratory of the general rule.

In *Pollard v. Hagan*, 3 How. 212 (1845), the controversy was as to the validity of a patent from the United States to lands situate in Alabama, which at the date of the formation of that State were part of the shore of the Mobile River between high and low water mark. It was held that the shores of navigable waters and the soil under them were not granted by the Constitution to the United States, and hence the jurisdiction exercised thereover by the Federal Government, before the formation of the new State, was held temporarily and in trust for the new State to be thereafter created, and that such State when created, by virtue of its being, possessed the same rights and jurisdiction as had the original States. And, replying to an argument based upon the assumption that the United States had acquired the whole of Alabama from Spain, the court observed that the United States would then have held it subject to the Constitution and laws of its own Government. The court declared, p. 229, that to refuse to concede to Alabama sovereignty and jurisdiction over all the territory within her limits would be to "deny that Alabama has been admitted into the Union on an equal footing with the original States." The same principles were applied in *Louisiana v. First Municipality* (3 How. 589).

In *Withers v. Buckley*, 20 How. 84 (1857), it was held that a statute of Mississippi creating commissioners for a river within the State, and prescribing their powers and duties, was within the legitimate and essential powers of the State. In answer to the contention that the statute conflicted with the act of Congress which authorized the

subsists on the borders of the hunting districts. Unless the districts thus referred to be taken as controlling the words unoccupied lands, then the reference to the hunting districts would become wholly meaningless, and the cardinal rule of interpretation would be violated, which ordains that such construction be adopted as gives effect to all the language of the statute. Nor can this consequence be avoided by saying that the words "hunting districts" simply signified places where game was to be found, for this would read out of the treaty the provision as "to peace on the borders" of such districts, which clearly pointed to the fact that the territory referred to was one beyond the borders of the white settlements. The unoccupied lands referred to, being therefore contained within the hunting districts, by the ascertainment of the latter the former will be necessarily determined, as the less is contained in the greater. The elucidation of this issue will be made plain by an appreciation of the situation existing at the time of the adoption of the treaty, of the necessities which brought it into being and of the purposes intended to be by it accomplished.

When in 1868 the treaty was framed the progress of the white settlements westward had hardly, except in a very scattered way, reached the confines of the place selected for the Indian reservation. While this was true, the march of advancing civilization foreshadowed the fact that the wilderness, which lay on all sides of the point selected for the reservation, was destined to be occupied and settled by the white man, hence interfering with the hitherto untrammelled right of occupancy of the Indian. For this reason, to protect his rights and to preserve for him a home where his tribal relations might be enjoyed under the shelter of the authority of the United States, the reservation was created. While confining him to the reservation, and in order to give him the privilege of hunting in the designated districts, so long as the necessities of civilization did not require otherwise, the provision in question was doubtless adopted, care being, however, taken to make the whole enjoyment in this regard dependent absolutely upon the will of Congress. To prevent this privilege from becoming dangerous to the peace of the new settlements as they advanced, the provision allowing the Indian to avail himself of it only while peace reigned on the borders was inserted. To suppose that the words of the treaty intended to give to the Indian the right to enter into already established States and seek out every portion of unoccupied Government land and there exercise the right of hunting, in violation of the municipal law, would be to presume that the treaty was so drawn as to frustrate the very object it had in view. It would also render necessary the assumption that Congress, while preparing the way, by the treaty, for new settlements and new States, yet created a provision not only detrimental to their future well-being, but also irreconcilably in conflict with the powers of the States already existing. It is undoubted that the place in the State of Wyoming where the game in question was killed was at the time of the treaty, in 1868, embraced within the hunting districts therein referred to. But this fact does not justify the implication that the treaty authorized the continued enjoyment of the right of killing game therein, when the territory ceased to be a part of the hunting districts

sequently carved out of what constituted the hunting districts at the time of the adoption of the treaty, and is a clear indication of the sense of Congress on the subject. (17 Stat. 32; 28 Stat. 73.) The construction which would affix to the language of the treaty any other meaning than that which we have above indicated would necessarily imply that Congress had violated the faith of the Government and defrauded the Indians by proceeding immediately to forbid hunting in a large portion of the Territory where it is now asserted there was a contract right, to kill game, created by the treaty in favor of the Indians.

The argument, now advanced, in favor of the continued existence of the right to hunt over the land mentioned in the treaty, after it had become subject to State authority,

ELK ON THEIR WINTER RANGE IN JACKSON'S HOLE.

From photo, Jan. 9, 1896, by S. N. Leek.

admits that the privilege would cease by the mere fact that the United States disposed of its title to any of the land, although such disposition, when made to an individual, would give him no authority over game, and yet that the privilege continued when the United States had called into being a sovereign State, a necessary incident of whose authority was the complete power to regulate the killing of game within its borders. This argument indicates at once the conflict between the right to hunt in the unoccupied lands within the hunting districts and the assertion of the power to continue the exercise of the privilege in question in the State of Wyoming in defiance of its laws. That "a treaty may supersede a prior act of Congress, and an act of Congress supersede a prior treaty," is elementary. (*Tong Yue Ting v. United States*, 149 U. S. 698; *The Cherokee Tobacco*, 11 Wall. 621.) In the last case it was held that a law of Congress imposing a tax on tobacco, if in conflict with a prior treaty with the Cherokees, was paramount to the treaty. Of course the settled

people of Mississippi Territory to form a constitution, in that it was inconsistent with the provision in the act that "the navigable rivers and waters leading into the same shall be common highways, and forever free, as well to the inhabitants of the State of Mississippi as to other citizens of the United States," the court said (p. 92):

"In considering this act of Congress of March 1, 1817, it is unnecessary to institute any examination or criticism as to its legitimate meaning, or operation, or binding authority, further than to affirm that it could have no effect to restrict the new State in any of its necessary attributes as an independent sovereign government, nor to inhibit or diminish its perfect equality with the other members of the confederacy with which it was to have been associated. These conclusions follow from the very nature and objects of the confederacy, from the language of the constitution adopted by the States, and from the rule of interpretation pronounced by this court in the case of *Pollard's Lessee v. Hagan* (3 How. 223)."

A like ruling was made in *Escanaba Co. v. Chicago*, 107 U. S. 678 (1882), where provisions of the ordinance of 1787 were claimed to operate to deprive the State of Illinois of the power to authorize the construction of bridges

over navigable rivers within the State. The court, through Mr. Justice Field, said (p. 683):

"But the States have full power to regulate within their limits matters of internal police, including in that general designation whatever will promote the peace, comfort, convenience and prosperity of their people."

And it was further added (p. 688):

"Whatever the limitation upon her powers as a government while in a territorial condition, whether from the ordinance of 1787 or the legislation of Congress, it ceased to have any operative force, except as voluntarily adopted by her, after she became a State of the Union. On her admission she at once became entitled to and possessed of all the rights of dominion and sovereignty which belonged to the original States. She was admitted and could be admitted only on the same footing with them. * * * Equality of the constitutional right and power is the condition of all the States of the Union, old and new."

In *Cardwell v. American Bridge Co.*, 113 U. S. 205 (1884), *Escanaba Co. v. Chicago*, *supra*, was followed, and it was held that a clause in the act admitting California into the Union, which provided that the navigable waters

fact that Congress in creating the Territory expressly reserved such rights. Nor would this case be affected by conceding that Congress, during the existence of the Territory, had full authority in the exercise of its treaty-making power to charge the Territory, or the land therein, with such contractual burdens as were deemed best, and that when they were imposed on a Territory it would be also within the power of Congress to continue them in the State, on its admission into the Union. Here the enabling act not only contains no expression of the intention of Congress to continue the burdens in question in the State, but, on the contrary, its intention not to do so is conveyed by the express terms of the act of admission. Indeed, it may be further, for the sake of argument, conceded that where there are rights created by Congress, during the existence of a Territory which are of such a nature as to imply their perpetuity, and the consequent purpose of Congress to continue them

ELK ON THEIR WINTER RANGE IN JACKSON'S HOLE.

From photo, Jan. 9, 1896, by S. N. Leek.

within the State shall be free to citizens of the United States, in no way impaired the power which the State could exercise over the subject if the clause in question had no existence. Mr. Justice Field concluded the opinion of the court as follows (p. 212):

"The act admitting California declares that she is 'admitted into the Union on an equal footing with the original States in all respects whatever.' She was not, therefore, shorn by the clause as to navigable water within her limits of any of the powers which the original States possessed over such waters within their limits."

A like conclusion was applied in the case of *Willamette Iron Bridge Co. v. Hatch* (125 U. S. 1), where the act admitting the State of Oregon into the Union was construed.

Determining, by the light of these principles, the question whether the provision of the treaty giving the right to hunt on unoccupied lands of the United States in the hunting districts is repealed, in so far as the lands in such districts are now embraced within the limits of the State of Wyoming, it becomes plain that the repeal results from the conflict between the treaty and the act admitting that State into the Union. The two facts, the privilege conferred and the act of admission, are irreconcilable in the sense that the two under no reasonable hypothesis can be construed as coexisting.

The power of all the States to regulate the killing of game within their border will not be gainsaid, yet, if the treaty applies to the unoccupied land of the United States in the State of Wyoming, that State would be bereft of such power, since every isolated piece of land belonging to the United States as a private owner, so long as it continued to be unoccupied land, would be exempt in this regard from the authority of the State. Wyoming, then, will have been admitted into the Union, not as an equal member, but as one shorn of a legislative power vested in all the other States of the Union, a power resulting from the fact of statehood and incident to its plenary existence. Nor need we stop to consider the argument advanced at bar, that as the United States, under the authority delegated to it by the Constitution in relation to Indian tribes, has a right to deal with that subject, therefore it has the power to exempt from the operation of State game laws each particular piece of land owned by it in private ownership within a State, for nothing in this case shows that this power has been exerted by Congress. The enabling act declares that the State of Wyoming is admitted on equal terms with the other States, and this declaration, which is simply an expression of the general rule, which presupposes that States, when admitted into the Union, are endowed with powers and attributes equal in scope to those enjoyed by the States already admitted, repels any presumption that in this particular case Congress intended to admit the State of Wyoming with diminished governmental authority. The silence of the act admitting Wyoming into the Union as to the reservation of rights in favor of the Indians is given increased significance by the

in the State, after its admission, such continuation will, as a matter of construction, be upheld, although the enabling act does not expressly so direct. Here the nature of the right created gives rise to no such implication of continuance, since, by its terms, it shows that the burden imposed on the Territory was essentially perishable and intended to be of a limited duration. Indeed, the whole argument of the defendant in error rests on the assumption that there was a perpetual right conveyed by the treaty, when in fact the privilege given was temporary and precarious. But the argument goes further than this, since it insists that, although by the treaty the hunting privilege was to cease whenever the United States parted merely with the title to any of its lands, yet that privilege was to continue, although the United States parted with its entire authority over the capture and killing of game. Nor is there force in the suggestion that the cases of the Kansas Indians (5 Wall. 737) and the New York Indians (5 Wall. 761) are in conflict with these views. The first case (that of the Kansas Indians) involved the right of the State to tax the land of Indians owned under patents issued to them in consequence of treaties made with their respective tribes. The court held that the power of the State to tax was expressly excluded by the enabling act. The second case (that of the New York Indians) involved the right of the State to tax land embraced in an Indian reservation which existed prior to the adoption of the Constitution of the United States. Thus these two cases involved the authority of the State to exert its taxing power on lands embraced within an Indian reservation, that is to say, the authority of the State to extend its powers to lands not within the scope of its jurisdiction, while this case involves a question of whether where no reservation exists a State can be stripped by implication and deduction of an essential attribute of its governmental existence. Doubtless the rule that treaties should be so construed as to uphold the sanctity of the public faith ought not to be departed from. But that salutary rule should not be made an instrument for violating the public faith by distorting the words of a treaty in order to imply that it conveyed rights wholly inconsistent with its language and in conflict with an act of Congress, and also destructive of the rights of one of the States. To refer to the limitation contained in the territorial act and disregard the terms of the enabling act would be to destroy and obliterate the express will of Congress.

For these reasons the judgment below was erroneous and must therefore be reversed, and the case must be remanded to the court below, with directions to discharge the writ and remand the prisoner to the custody of the sheriff.

And it is so ordered.

Mr. Justice Brewer, not having heard the argument, takes no part in this decision.

The Sportsman Tourist.

THE PASSING OF PETER.

PETER was a bull pup. This would exhaust the biography of Peter were it not for one very queer event that occurred in his career.

Like all bull pups since the world began, Peter wore an aspect far from frivolous. He was very much alive all the time, and even to the wayfaring man it was plain that he possessed the courage of his convictions.

Our party numbered three, on piscatorial pleasures bent, and it was in the sunny month of June that we launched our log canoe at the Meadows, near the head of Cain's River, with intent to make the journey of eighty odd miles to the mouth of the stream. We took Peter with us for the sake of his society. We relied on him to give us timely notice of the presence of large and ravenous animals that prowled around our tent by night.

There is no river in New Brunswick quite equal to Cain's River for the wildness and weirdness of its scenic features. For a distance of fifty miles or so after you leave the Meadows there is not a trace of human presence, save as you may chance upon the charred and cheerless relics of some ancient camping place, or the barely discernable break in the foliage that marks the trail of the trapper or timber cruiser.

Along the upper courses of the stream, where the current flowing slowly through the black marsh mould hardly exceeds the volume of a fair-sized brook, the alder thickets on either side in a tangle of riotous vegetation form a thick leafy arch above the stream, through which upon a windy noon the sunshine shifts in fluttering, flickering opalescent flakes of green and gold. After that the river flattens out into sandy shallows, where the bubbles seek the shore, and where somber masses of spruce and fir, flanked by ridges of tawny beech and gleaming birch, cast their shadows on the tide. There is weary work upon the towline and the setting pole until these shoals are passed. Then comes a long succession of rapids, where the tortured water flecked with foam pours over ledges of rocks brown and bare, and on either hand high cliffs arise, scourged by forest fires and seamed and scarred with the warfare of the ages. At last the river, reinforced by other streams, assumes the shape of a series of ponds or dead waters, deep and motionless, where the eternal stillness is broken only by the rattle of the kingfisher, the whistle of the snipe, the leap of the salmon or the splashing flight of ducks.

The sportsman who seeks this solitude is as far removed from the outer world, its joys, its woes, its multiform activities, as though he were translated to the planet Mars. It seemed that way to us and perhaps it seemed so to Peter.

From the very inception of our wanderings Peter exhibited a laudable but excessive sense of duty. He appeared to think the safety of the expedition rested solely on his vigilance. Day after day as we plied our setting poles he stood upright in the bow of the canoe, a monument of conscientious solicitude. He whined uneasily as we wound our sinuous way through the alder tunnels, he growled and barked as we tossed about in the rapids, and at times he became suddenly aware of the presence of unseen enemies and dashed overboard and into the woods that lined the shore. It was at night though that Peter's vagaries became chronic. He always took up his position at the door of the tent, with his cold muzzle resting on his paws, and seldom failed before morning to startle us from our slumbers by his loud barking and savage sorties into the surrounding gloom.

We never could discover that Peter had any just grounds, such as would commend themselves to a jury of reasonable dogs, for these apprehensions. We never observed that he shed any blood of bird or beast, or put anything to flight except our peace and patience. He simply shattered the silence and left us to pick up the pieces. We came to the unanimous conclusion that Peter was a nuisance of the first magnitude and should have been left at home.

Still the rackets he kicked up in the dead cold hours of the night amid these wild, primeval solitudes were so appalling that we had not the nerve to treat them with contempt. The mystery of the wilderness hangs heavily on the minds of men, and especially at night, when it is reinforced by the kindred mysteries of silence and darkness. When these alarms occurred we usually sprang to our feet, seized our weapons, fell over ourselves more or less in our haste to reach the flap of the tent, and then after vainly peering into the shadows where Peter was fiercely barking we stirred up the sunken fire with divers innocuous epithets and sadly sought our couches, perhaps to sleep no more that night. Peter was becoming exceedingly unpopular.

On the fifth day of the trip we poled about twenty-five miles and landed hungry, wet and weary at the foot of a high bluff, the summit of which offered as fine a camping site as any one could wish. A party of caribou hunters had evidently tarried there a year or two before. The ridge pole of their tent still rested in the forks, the fire hole inclosed on three sides with stones gathered from the beach was just as the builders had left it, and even the *chiploquoggan* or pole from which the inevitable kettle of tea is hung was in its proper place. We recognized ourselves as the rightful heirs of this abandoned property, took possession of the premises, threw our tent over the old ridge pole, and kindled our fire within the inclosure of stones. The only unfavorable feature of the site was its height above the level of the landing, which caused us to be hungry for breath by the time we had "portashed" all our camping furniture up the steep incline. When supper was disposed of and all made snug alow and aloft, with pipes lighted and feet to the fire, we lay upon our soft and fragrant beds of balsam, and watched in drowsy silence the hosts of darkness as they chased the retreating light over the western hills. Our situation was one of ideal comfort and repose of mind and body. The weather was clear and cold, the flies had vanished like a dream, and every star in the sky seemed to shine its brightest.

I never heard such a chorus of whippoorwills as we listened to that evening. The woods were full of them, and the echoes of their mystic music in the gorge below us and from the opposite bank of the stream, mingled with the river's brawling monotone, resulted in a medley of sounds the memory of which is with me yet. There

was not a moment's pause in the battle of the echoes. An owl, too, was hooting over on the distant ridge, and from a pond up the stream, borne on the pulseless pinions of the evening air, came the wailing, tremulous note of the loon, the most mournful of all the voices of the wilderness.

Uncle John had enhanced his reputation as a cook by fabricating a stew of a fearful and wonderful kind. There was strong circumstantial evidence to the effect that it comprised a sample of every edible our larder contained, including such harmonious ingredients as ham, potatoes, codfish, carrots, boned duck, beans, pilot bread, onions, tomatoes, raisins, maple sugar, etc. It looked suspicious, but it went all right. What is there that doesn't go all right with hungry men in the woods?

In front of the camp and a rod or so beyond the fire hole stood a small ash tree. To one of its lower branches was suspended the remains of our goodly ham. The last man's pipe went out about 9 o'clock, and as it was fair to assume that he was more awake than the others, the moral onus was imposed on him of fixing the fire for the night. We watched for a little while the sparks playing around like fireflies among the trees, bestowed a pensive moment on the absent ones over the horizon's rim, then crawled beneath our blankets and were soon fast asleep; all at least except the faithful Peter, who lay prone in the door of the tent facing the fire, with his muzzle resting on his paws and his yellow eyes agleam.

The very next thing I was aware of, though several hours must have passed, was that Peter had dashed out of the tent, cleared the smouldering embers at a bound and was barking for all, or even more than, he was worth, somewhere in the shadows near the brow of the bluff. It was plain that he meant business this time. His bark was so loud, so belligerent and aggressive that I rose to my feet at once and rushed to the opening of the tent. It was clear that this was not another canine comedy, but that something really serious was going on beneath or behind the little ash tree aforesaid. In the dim uncertain glow of the fading fire, which only served to make the darkness visible, a huge black animal rose upon its haunches, and then, as though they were the creatures of a dream, another shadowy form was revealed standing beyond the tree on the outer extremity of the bluff. Peter was barking incessantly, but could not be seen. I at once selected the nearest of the two black masses for a target and emptied the whole six chambers of my ancient cavalry revolver as fast as I could pull the trigger. Uncle John reached the scene almost as soon as myself and opened up with his Bullard repeater, and in less time than it takes to say so Harry was pumping lead from his Winchester.

Never to be forgotten was the din our firearms made in the narrow river valley and among the wooded hills and hollows that night. The echoes multiplied the fusillade a hundredfold, until one could have sworn that an army of men were hotly engaged in battle. After the first few shots were fired the smoke, the river fog and the natural darkness of the night entirely hid the bears from our sight (for we knew at once that they were bears), and we simply raked the top of the bluff at random. We could not form the slightest idea of what was going on in the enemy's camp.

We were soon enlightened. One of the bears, finding that his retreat on the left was barred by a fallen ram-pike, afraid to descend the bluff, and harassed by Peter on the right, opened his throttle valve and came charging straight for the tent, scattering like chaff the stones and smoking brands of the fire hole. There was a shout of warning, a shower of ashes and embers, a fleeting vision of Peter glued to the rear tire of the bear, and then the avalanche of hair and horror passed us by. When we regained the use of our faculties the tent was down and somewhere within its complicated folds a terrific row was raging. The canvas was convulsed in the likeness of a storm at sea upon the scenic stage—a confused chorus of grunts, growls and roars arose from within—then in a jiffy the canvas was rent in twain at the furtherside, and the avalanche passed through the hole and disappeared in the outer gloom. We had a transient view of Peter clinging to the bear, we heard them stumbling and falling, crashing and snarling away through the brush and then all was still as though a million feather beds had fallen from the sky.

By the light of a birch bark torch we surveyed the scene of battle. Within a rod of the ash tree lay one of the ham thieves, as dead as a last year's almanac. There were, as near as we could ascertain, five bullet holes in various parts of his anatomy. He measured from tip to tip 6 ft. 10 in., and we estimated his weight to be at least 400 lbs.

We did not go through the formality of trying to sleep any more on that particular night. We built a rousing fire, cut a new ridge pole, raised the tent, and sewed up the rent in the canvas that marked the track of the passing storm.

With the first gray streaks of morning light we took the trail through the scrub and searched for the missing ones long and earnestly, but all in vain.

Ten years have passed since then and unto this day no word of weal or woe has ever come to us from the faithful Peter.

Whether he is still careering over the face of nature glued to the avalanche, or whether in a happier hunting ground than this, with his muzzle resting on his paws and his yellow eyes agleam, he watches and waits for us, where the pine trees whisper, and the stars shine bright, and the river goes singing to the sea, who can tell?

FRANK H. RISTEEN.

FREDERICTON, N. B., May 25.

Massachusetts Shore Birds.

BOSTON, Mass.—It is beyond the recollection of the oldest sportsman along our Massachusetts coast when so many yellow-legs and plover have visited the marshes along the shore as this year. Reports from the Cape state that there are simply thousands, and the same is true regarding the marshes along the north shore. I have yet to hear of a good reason for their great numbers this year. Can anybody give one? HACKLE.

THE TROUT OF LAKE CRESCENT.—II.

AT the end of another week, on Oct. 27 I found or made opportunity again to visit the Lakes, and that I might have chance to verify the stories told me by Ben Lewis and others that in the big lake there were some big trout, seldom caught; that they were neither rainbows nor, as some claimed, salmon, but of such style and appearance that their local name "blue-backs" was appropriate. Lake Crescent, the "big lake," was my objective point. I was determined that if such trout were there I would find them.

Early in the forenoon, this time in the company of and the guest of Mr. M. J. Carrigan, I started for the lake in a comfortable buggy drawn by his own horse. We were in all respects well outfitted.

For the first sixteen miles the route was identical with that to Lake Sutherland, that is, generally, but on this occasion it differed in a most annoying manner, so much so that it became an all-day journey.

Ordinarily the country road is to a great extent a fair trotting road, but very little trotting came to us. First, the horse was out of condition. While galloping the day before with a man on his back he had tripped on a root, had a heavy fall, and all the trot was out of him. Hardly had we entered the forest when we were brought up by a tree 2 ft. in diameter, which, smoking and smouldering from the dying out fire which had downed it, stretched across the road about 1 ft. from the ground. There was no chance to turn out; burning brush and unconsumed logs prevented, and there was no axe in the wagon nor within some miles. We had but one resource, "We seen our duty and we done it."

Carrigan, with whom the horse was on familiar terms, jumped him over (after unhitching) and hitched him on the other side. Then we two had a lively tug for half an hour at the buggy. We could almost do it, but not quite, and never was a tramp more welcome than a big one who came sauntering along. We soon made him our tramp, for we had with us the necessary inducements, and his weight turned the scale; over came the buggy unharmed. Then for the benefit of others we spent an hour building and burning bonfires under the log, and when, sweat soaked and smoke blackened, we restarted, that log was doomed. In about half an hour our horse developed a colic, so that our continued journey to Clarke's ranch, two or three miles further on, became a very uncertain one, stops and a slow walk alternating.

We found Clarke to be a very obliging man, and he offered to us his only resource, for his carriage was out—one of a team of logging mules, and after an hour or so more devoted to first catching the mule, which was out in the pasture, we restarted, leaving the horse in the pasture.

Carrigan, who most thoroughly understands horses, did not seem very enthusiastic about driving the mule, so he accepted Mr. Clarke's offer to drive for a mile or so to "get him used to it." Confidence in the mule's docility was small on the start and diminished rapidly, as the beast made several efforts to get into the buggy stern first, at least we so interpreted the action of his hindlegs. Clarke said he was "playful," but we didn't want to play; so when, Carrigan and I walking, Clarke driving, we reached another ranch, Frank's, a Portuguese-American citizen, and a most hospitable man, at about 1 P. M., we gladly accepted his invitation and that of his wife, the most intelligent, womanly and best educated descendant from Indians I ever met, to stop and lunch. We did so and enjoyed a couple of hours of rest.

Frank loaned us his horse, a very good one, accustomed to woods travel, but with one uncomfortable habit. It

had been the off horse in a stage team and persisted in keeping on its own side of the road or turning for it at most unexpected times, very inconvenient times, sometimes, when that side of the road was very close to the edges of sundry cañons which the road skirted, or to the perpendicular edge of the cut in the side of the hill. We had to steer that horse with a very small helm.

About sunset we reached the brow of the hill leading down to Lake Sutherland, and soon after brought up at Wilson's Tavern and concluded to postpone Crescent until the morrow. Wilson took good care of us, gave us a good supper and a pair of comfortable rooms, in one of which a good wood fire was burning, and we had a most enjoyable evening talking with Wilson and Ben Lewis, who had come to meet us, and who became our guide and boatman for the trip. Both are very intelligent men, well up in woodcraft, experienced hunters and, until we took the lead, the most successful fishermen on the lake. Note, I say fishermen; there is a lady, Mrs. Michell, whose record is equal to if not superior to them.

After a good night's sleep and a good breakfast we started early across the divide, and at about two miles came to the wharf at the eastern end of the lake, where a comfortable steam launch met us, and in an hour took us around the point of Pyramid Mountain and up a long narrow bay. Mr. Carrigan, near the point, has a cosy summer cabin home by the side of a very pretty mountain brook, "Idlewild" he calls it, where he is hoping to establish an anglers' and hunters' club, for which it is wonderfully adapted on both sides of Pyramid Mountain, and on the south side of the bay the land is mostly precipitous, with here and there a mountain stream, whose valley makes gentle slopes, where sites for "proving-up cabins" and clearings are utilized by the pioneers, who have mines of future wealth in the magnificent timber with which the hills are covered.

Of these cabins, the best that I saw were those of Mr. Sanborn, a pensioned soldier, Mr. Cross, Ben Lewis, and of Mr. George Michell, at the head of the bay, where is the site of the present very small but hoped to grow village of Fairholm, where there are a good wharf, several buildings, including a store, and a post office, to and from which three times a week a rowboat transports the mail. Mr. Michell is postmaster, justice and principal landowner. He with his wife are living at their cabin undergoing the proving-up process. Mrs. Michell, a most charming, educated and refined lady, has bravely given up life in the outer world to keep her husband company in the task, and enjoys the life, being herself an expert with gun and rod, and beloved by all of the pioneers. Mr. and Mrs. Michell were away at Port Angeles, but they had left in charge their nearest neighbor, Mr. Cross, and following their instructions he placed at our disposition the house and all therein contained, the boats and fishing gear, if we needed, which we did not.

The clearing embraces the head of the bay, and from it leads the trail to the westward as far as the coast, over which, *en route* to sundry hunting and fishing grounds, many pass annually, especially in the springtime, when the great size and abundance of trout in the Solduck River attract many fishermen from Victoria and other cities of the Sound.

It is common talk that in this Solduck it must be a very expert fisherman, or one as ignorant, who dares risk more than one big fly on his leader; the former may succeed in handling the one, two, three or more pounder two or three at a time, who is apt at once to begin a fight for his tackle—one to each fly, backed by strong rifle and swift current. The ignorant man simply gets out his knife and cuts a pole to replace his smashed rod.

Mrs. Michell is an expert angler, and it is about her

Piseco.

TWO HOURS ON LAKE CRESCENT, WASHINGTON.

M. J. Carrigan.

Blue-backs and mountain trout. Weights in pounds, 3, 6, 11½, 11, 11½, 8, 3.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

only resource for amusement. She has caught several of the blue-back trout, which this paper will describe, and some very large rainbows.

Mr. Cross took good care of us, beginning his mission by a well-cooked dinner; then we lit our pipes and started out to explore the lake.

Following up the points gained on Lake Sutherland, we used three small and one large spoon, the first near the surface, the latter deep. As before, the surface spoon paid good dividends, but it was not until late in the afternoon that we heard from the big one down below, the line of which Carrigan had made fast to his leg. What occurred is described in the *Democratic Leader*, of Port Angeles, thus:

"Fishing was prosecuted in the waters of Lake Crescent, off Eagle Point, all of Monday. Late in the afternoon of that day Mr. Carrigan, in anticipation of a bite from a monster trout, had securely fastened the line around his leg. All at once, when peace and calm reigned supreme in the boat, the Admiral and Ben Lewis saw, almost with the rapidity of lightning, the leg to which Carrigan had fastened his fish line shoot outward, as if in response to some tremendous movement thitherward. This was quickly followed by excited exclamations from Mr. Carrigan, who by this time was an almost indistinguishable mass in the bottom of the boat, entreating Ben Lewis to come at once to his rescue, as he had certainly caught a whale. Lewis quickly responded to the summons, and being an expert fisherman, soon, with the combined efforts of the Admiral and Carrigan, succeeded in landing what proved to be, and what the Admiral pronounced to be, a distinct species of blue-back trout, weighing 10½lbs., measuring 32½in. long and 7½in. through."

This was the only very large trout and the only blue-back caught that day, but we had no end of sport with moderate-sized ones, by which I mean from 1lb. to 3lbs., mountain and speckled. We carried home over fifty, of which not over half were under a pound.

That night early, in consideration of the facts that it was bed time and that the Michell cabin furnished but one such luxury—which had been assigned to me—Messrs. Cross and Carrigan adjourned to a nearby cabin and left me alone. Mr. Cross, in his capacity of assistant to the Postmaster, did his duty faithfully and locked up the post office—my room—and I was solitary in the wilderness. As I lay meditating I could not but wonder at the pluck of Mrs. Michell under the same circumstances, which, when her husband was away, must often have occurred. The place is on the high road for tramps. I concluded that she must employ her wakeful hours planning campaigns against the deer and trout, and I followed her lead, and planned to stay another day and to resort to devices to secure one or more of those big trout.

In the morning the weather was unpropitious; a heavy frost had whitened the ground, the air was full of fog, and there was a nasty east wind—all dampers to an early start; so I waited for a comfortable breakfast. It was not until after 9 o'clock that we started.

As the day was to be devoted to the capture of blue-backs or other large trout, we discarded the rods, the small spoons, and fitting our copper lines with large spoons we gave Ben instructions to row slowly.

[If our judgment as to Lake Crescent were based upon that forenoon's work, this letter would not have been written.

At last, tired of doing nothing but to cover distance and mechanically twitch occasionally on our hand lines, we put out our rods with surface gear and with them caught now and then a mountain or speckled trout. About noon we had enough for our dinner, a dozen perhaps, and Ben rowed us over to his cabin to dine and rest, while he cooked for us a most appetizing meal. Ben's furniture was a little scarce, but he had boxes for himself and Carrigan, giving me the only chair.

Ben is a bachelor and never kept boarders, but he is a good cook and his cabin was as clean and neat as one could wish.

I have put it into Ben's head to keep boarders, that is, to be prepared to care comfortably for the people who I hope will be induced by the tale I have yet to unfold to seek Lake Crescent this coming spring. He promises to be all ready, and I hope I may be one of his first boarders—that is, he will increase the size of his cabin, fit up more bedrooms, buy some furniture and boats—in all of which adventures Mr. Carrigan has promised to help him with capital, and I to do my share; shall leave to him as his professional secrets, his tools of trade, so to speak, the details of the methods by which I conquered the blue-backs. Ben, if you employ him, or Mr. Cross if Ben is engaged, will show you just the localities where the big trout hide, and post you as to my mode of baiting, the proper depth, the proper speed, etc. Of course, if there were no Ben in the case I should take all of my *FOREST AND STREAM* readers into my confidence and post them up.

The weather continued dubious, and we sat by the fire listening to Ben's yarns and looking at his collection of hunting trophies, antlers and skins. The stock was not large; such things are Ben's stock in trade and furnish him with groceries and clothing. He had several sets of deer antlers, but those of the elk killed last winter had been disposed of. Among Ben's hunting stories was one of the adventures of a friend of mine whom he took a winter or two ago to the elk ranges. The latter part of the tramp was hard, up a steep rise and through deep snow, and by the time the bench was reached Ben's companion was about used up; but the sight, only a few yards off, of a band of some thirty elk put new life in him, and he immediately began pumping into them with his Winchester, landing every ball not less than 500yds. beyond them. This and the fatigue made him wild, and Ben had to lash him to a tree for quite a while till he cooled off, otherwise he would have chased the elk, which had made off, and probably would have got lost. After a while Ben let him out, and a half hour after coming again on to the band the hunter proved a good shot and killed three in three shots, which was all Ben would allow, as he can't afford to kill more than he can use and tote. He kills only those with fine antlers. Ben says this was the worst case of buck fever he ever saw.

About 2 P. M. we got under way. The weather had improved, the fog had lifted and what was left was well mixed with smoke, a calm had succeeded the east wind and for an hour or two we had fair fishing, taking several 2 and 3-pounders, not blue backs.

About 4 P. M. a light breeze sprang up from the westward and almost coincident with it something happened, and that something was a strike from a very heavy fish.

At first I thought it a snag, but the rapidity with which my spun line began to travel downward showed me that I had at last what I long had sought, a big trout.

For a while it was give and take. The fish was at first a gamy one, but as I got him nearer to the surface he began suddenly to weaken until as I drew him alongside he was exhausted and made no final rush, lying as quietly as a dazed pickerel, so that I had no difficulty in holding

A SIWASH FAMILY.

the line in one hand while with an extemporized gaff—a halibut hook lashed to a stick—I lifted him on board.

The cause of this lethargy was made manifest as Ben kneeled him down to take out the hook: he was bloated with air, but as this came away he fought hard.

Mr. Carrigan's account of this capture as published in the *Leader* is appended; it is graphic.

"The Admiral then determined to remain another day, if agreeable to Mr. Carrigan, and himself catch and land, if possible, unaided, one of those enormous trout.

"His expectations were by no means doomed to disappointment, as Tuesday afternoon at 4 o'clock an uncommonly vigorous jerk at the line suggested that a trout of unusual size had taken the hook. Then followed a desperate struggle; the trout would be drawn in and plunge down into the depths of the water hundreds of feet in the frantic struggle for life and liberty. Finally a landing was made, and the supreme strength of Lewis was required to overcome the monster. And what a magnificent specimen it was, weighing 11½lbs., the meas-

aggregate 60½lbs., a large quantity of smaller-sized trout were caught.

"The jubilant fishermen returned from the lake Wednesday noon. A photographic view of the larger trout, hanging from a pole, suspended from the shoulders of the Admiral and Mr. Carrigan, was taken."

While admiring this beautiful fish, Carrigan, who was sitting forward, joining in, I was astonished and somewhat alarmed by a fierce and frightened expression which came suddenly upon his usually calm and gentle face, his "child-like and bland smile" became a grim and determined frown, he began to pull for all he was worth, and in less than ten minutes from my first strike I gaffed in for him a worthy mate to mine, and hardly was this accomplished before my line again called on me, and so it went on for about an hour and a half; then came sunset and we concluded that we had enough.

Four of these big fish lay in our box, one hardly up to the mark, for he was only a 6-pounder, but three of them were fair 11-pounders. Besides these there was another of about the same size, which I lost by a bungle with the gaff. So counting in the three, the one taken the day before by Mr. Carrigan and the misgaffed one, our five fish were fully 55lbs.

The photograph shows four of these fish, besides some smaller mountain trout that were in the box we opened. The dimensions and weights, beginning at the left of the big ones, were:

	Length.	Weight.
No. 1.....	22½in.	8lbs.
No. 2.....	30in.	11lbs.
No. 3.....	32½in.	10½lbs.
No. 4.....	30½in.	11lbs.

No. 3 was a male, long and lean, spent, and evidently a fighter, for he was adorned with battle scars. The others were females. Carrigan's 10½-pounder is not in this photo—we ate him.

In regard to this photo I wish to explain a bit. First, in it *FOREST AND STREAM* gets the long-promised picture of Piseco, very appropriately surrounded, in the fat figure on the left. Second, all that is not fat, nor is it to him alone that the responsibility which rests on the trousers buttons is due. It so happened that, going to the lake with a full gripsack, he returned with comparatively an empty one, leaving very early in the morning for an eighteen-mile drive in a very low temperature and surrounded with frost. The gripsack was nearly empty and the fishing suit held its contents in the way of extra underclothing.

The figure on the right is Mr. Carrigan, a good fellow to go fishing with.

Third—When we reached the photographer's on our way in it was a little foggy and the day was waning. We, cold and hungry, did not waste time in trying to arrange the fish to the best advantage.

To return to our subject. When after dark we got that catch back to Michell's, Mr. Cross was simply astonished, and was "free to admit" that such a catch had never before been made. We spent that evening weighing, measuring, note-taking and packing, and the next morning, Oct. 29, returned to Port Angeles, where our fish made a sensation, as they did subsequently throughout the cities of the Sound, as thus shown:

THOSE MONSTER TROUT.

Rear-Admiral Beardslee After Forty Years'

EXPERIENCE TROUT FISHING IS

Treated to an Agreeable Surprise while Fishing on Lake Crescent—He Catches Monster Blue-back Trout that Prove a Revelation.

Now I propose to enter into a bit of description of these fish, first giving all I have learned of their history.

Mrs. Michell told me that she had caught several during her four years at the lake.

POST OFFICE AND HOME OF GEORGE MICHELL, FAIRHAVEN, LAKE CRESCENT.

urements of which were 28½in. long and 8in. through. As the exultant fisherman beheld with conflicting emotions, first of doubt, then of self-satisfaction and pride, words can ne'er express, his achievement, the crowning accomplishment of forty years' pursuit of this, to him, delightful sport must indeed have afforded inexpressible pleasure.

"This exceeding stroke of good fortune was followed with the Admiral catching three other monster blue-backs, the respective weight and size of which were as follows: 11lbs., length 28in., depth 8½in.; 11lbs., length 28½in., depth 8in.; 6lbs., length 22½in., depth 7in.; another monster blue-back was caught by Mr. Carrigan, which weighed 10½lbs. and was 31½in. long and 7in. through.

"Besides these six monster trout, weighing in the

Mr. Sanborn, a pensioned soldier who has taken up a homestead on the lake, has also caught several, one of which weighed, I was told, 13½lbs.

Ben Lewis, who hunts more than he fishes, has caught some, but never any of such size or numbers as came to us, which beyond question broke the record. *PISECO*.

[As recorded in our issue of May 23, the two fish sent to President Jordan were found to be new forms. So one of them, the speckled trout, has been given the name *Salmo beardsleei*, in honor of Admiral Beardslee as the discoverer; and to the blue-back the name *Salmo crescentes*, after the lake. A detailed description of the specimens taken by Piseco will form the concluding paper of the series our next issue.]

Natural History.

SOME TEXAS MAMMALS.—II.

CURIOUS notes are given by Mr. Attwater about the variation of the Texas cotton rat (*Sigmodon hispidus texianus*), which sometimes entirely disappears from the region and again becomes very numerous. In 1889, for example, these rats were extremely abundant, and then gradually disappeared, and were not heard of in Bexar county until the beginning of 1895. Since then they have again become common. They make their nests with the wood rats in bunches of cactus. They seem to get along very well with that species, but the brown rats kill and eat them. As an indication of their abundance at one time, Mr. Attwater says, "Mr. Watson's boys killed over 100 in one afternoon in a brush fence, and for several months their cat would bring in from six to twelve every night." He says "that on one occasion, when the rats were the thickest, they counted thirty-eight, which the cat had piled up in the wood-box during the night for the amusement of her kittens."

The destruction of crops, and especially corn, by these rats was very great, some farmers losing half their corn crop. During the winter following their great abundance, marsh hawks and short-eared owls were very numerous, probably attracted by the rats.

The black variety of the rock spermophile (*Spermophilus grammurus buckleyi*) is very abundant northwest of San Antonio. Of it Mr. Attwater says:

"These black rock squirrels are found in the cañons and ravines around the heads of the Medina and Guadalupe rivers. The nearest point to San Antonio where I have heard of their being seen is on San Geronimo Creek, at Gallagher's ranch, twenty-five miles northwest of San Antonio, where a single one was seen several years ago by Mr. Frank Edwards, an enthusiastic hunter and close observer. This must have been a straggler, as I should not expect to find their regular range nearer than sixty miles northwest of San Antonio, near the northern border of Bandera county, nor to find them common till well in Kerr county. There is a colony at the head of Johnson Creek, a fork of the Guadalupe River, about twenty miles north of Kerrville. On May 9, 1895, I visited this locality with Mr. Lacey to procure specimens. We watched the cliff, where the squirrels live, for more than an hour from the opposite side of the cañon, during which time a dozen or more, of various ages, came out of the holes and crevices in the rocks. We peppered them with small bullets and coarse shot. Two or three were killed outright, and others were wounded, but we were obliged to leave them on the inaccessible ledges, and reluctantly returned without securing a single specimen. Some of the largest appeared very black, but some of the smaller ones were of a grayish color all over. The four specimens sent you are from the head of Turtle Creek in Kerr county, and were kindly obtained and prepared for me by Mr. Lacey.

"These rock squirrels are not generally distributed over the country, like the tree squirrels, but live in colonies, a dozen or more miles apart, and generally in some favorite cliff or cañon near the heads of the creeks that form the sources of the rivers. When occurring near ranches these squirrels do considerable damage to the gardens and corn-fields. They are expert climbers, making their way up the perpendicular faces of cliffs with ease. Unless disturbed or alarmed their progress is slow and their movements are more like those of a creeping reptile than the lively skip of a squirrel. If they bounded swiftly from rock to rock there would be nothing to excite surprise, but when seen slowly crawling along the under side of an overhanging ledge of apparently smooth limestone one's curiosity is excited, and you watch their movements with surprise. On being alarmed, however, they move with great quickness.

"This is the only spermophile I have met with near San Antonio, Bexar county being apparently outside of the range of either *Spermophilus mexicanus* or *S. tridecemlineatus*. The former may occur not far from the southwestern border of this county, or on the other side of the Medina River, twenty-five miles south of San Antonio."

The beaver (*Castor canadensis*) was formerly found northwest of San Antonio, and Mr. Lacey reports it as still found sparingly on the Little Llamo and Perdinales rivers.

A single skull of the black bear accompanied the collection. Of this species Mr. Attwater says:

"Black bears are still found in localities at the head of the Nueces River and in the Devil's River region, where the immense and almost impenetrable cedar brakes afford them protection. Ten years ago they were common in parts of Bandera and Kerr counties. Mr. Lacey informs me that at that time 'bear bacon' was nearly always to be found at any of the ranches on Turtle Creek, and that it was almost impossible to raise hogs on account of bears eating the young pigs.

"A pair of black bears have bred three times in the Zoölogical Gardens at San Antonio, each time bringing forth the young early in spring. There were three or four in each litter, about the size of rats, and they were eaten by the old ones each time."

No specimen of the civet cat (*Bassariscus astuta*) was sent, and they are reported to be more abundant in the rough country north and west of San Antonio than immediately about that city. In captivity they become quite tame and live comfortably; but I have not heard of their breeding in confinement. In a wild state they live principally on birds and mice, and are said to be expert mice catchers.

While the wolf, lobo or loafer is not now found immediately about San Antonio, it used to be, as this note shows:

"Formerly common in Bexar county, but I have not heard of their occurrence here for several years. They are still found in the broken, hilly country northwest of San Antonio, particularly in Edwards county. They are more cautious than the coyotes, and disappear as the country becomes more settled and traversed by railroads. They are much more dreaded by the sheep and goat-men than the coyotes. Mr. Lacey says a coyote kills sheep because he wants something to eat, but that a 'lobo' kills them just for fun, and generally 'lays out' a dozen or two before he quits. The ranchmen always pay a larger reward for a lobo than for a coyote.

"Mr. J. Blackburn Miller, of Newburgh, N. Y., who spends much time hunting in Texas, with headquarters at San Antonio, and a good authority on Texas game, has made some interesting experiments crossing coyotes and lobos with some of his dogs. A setter bitch crossed with a male coyote raised three pups, and a 'Great Dane' or Ulmer bitch crossed with a male lobo had thirteen pups."

Its ravages on stock have led the Texas Live Stock Association to urge the payment of a bounty on wolves.

The red fox is believed by many persons not to have been native of Texas, and Mr. Attwater supplies us with interesting evidence bearing on this point, which is seen in the following letter from the secretary of the Texas Fox hunters' Association, Waco, Texas, which he sent to Dr. Allen:

OFFICE OF T. H. BROWN.
COUNTY CLERK, McLENNAN COUNTY,
WACO, TEXAS, Dec. 9, 1895.

H. P. Attwater, Esq., San Antonio:

MY DEAR SIR—I have just been handed a letter by Mr. Seley from you desiring information in regard to 'red foxes,' and will take pleasure in giving you such information as I have. Yes, sir, there is a Texas Fox Hunters' Association, with Dr. John D. Rogers, of Galveston, as president, and myself as secretary. I was the first to introduce 'red foxes' into this part of the State. We had exchanged our old-time native hounds, or as usually called 'pot lickers,' for the Walker dogs from Kentucky, and the gray foxes proved themselves no match for these dogs, only being able to run from twenty to forty-five minutes ahead of them. Having the dogs, it became necessary to get game that would give them a respectable race. Accordingly in 1891 I imported from Kentucky and Tennessee ten red foxes and placed them among the Bosque Brakes about four miles above where it empties into the Brazos River. They gradually scattered over a large area of country. The next spring (1892) I again brought in twenty-three more reds from the older States, planting thirteen of them again among the Bosque Brakes and ten of them on White Rock Creek, on the east side of the Brazos River. These foxes afforded us some fine sport, but they too gradually scattered, only a few remaining in the neighborhood of their adopted home, some wandering off through Bosque and Erath counties. The next spring I only succeeded in getting two reds from the East and planted these on the Bosque, and they remained and are still affording fine races. In the spring of 1895 I again planted five reds on the river near Lovers' Leap, where the waters of all the Bosques mingle with the waters of the Brazos. Some of the bluffs here are 300ft. high, and have a great many caves in them, and these last foxes seem well satisfied with their new home. Occasionally I hear of a red fox in various parts of this (McLennan) county, and I am satisfied that within a few years they will be as numerous here as in the old States.

I understand that Messrs. Eli and James Rosborough and Capt. T. H. Craig, all of Marshall, Harrison county, some ten or fifteen years since planted quite a number of reds in that, the eastern, part of the State, and occasionally they find them where they have located, off some twenty or thirty miles from where originally turned loose.

Dr. John D. Rogers has, I think, during the spring of 1895 planted some six or eight on his Brazos Bottom farms in Brazos and Washington counties. I would suppose that in all there have been at least 100 red foxes imported and planted in the State.

Hoping this information will assist you in your work, I remain most respectfully,
T. H. BROWN.

The gray fox (*Urocyon cinereo argenteus*) is not very uncommon, though it cannot be called abundant. Mr. Attwater reports the Texas lynx (*Lynx texensis*) as common, though less so than formerly. He says, "Its home is among the ravines and dry gullies which run into the creeks and rivers, where the land is broken and cut into holes and fissures by heavy rains, and the whole covered with a tangled growth of thorny brush, cacti, yuccas and small trees, forming a labyrinth which presents to the intruder a thousand thorns at every step, penetrated only by cattle paths leading to the water, and where a man found traveling on foot would be considered either an escaped lunatic or a fugitive from justice. Here the wildcats used to share the premises with peccaries, but the latter have been killed out in this country, and their only neighbor now is the rattlesnake.

"Wildcats are often seen in the daytime, lying on ledges along the river bluff, and on horizontal limbs of trees sunning themselves. Mr. Watson once saw a wildcat lying in the water on the Medina River, cooling itself after having been run by dogs. Their food consists chiefly of wood rats, rabbits and quail. They steal many turkeys and chickens from the ranches, and kill goats and young pigs. On skinning a wildcat the legs, head, neck, etc., are often found to be covered with cactus thorns, where they have accumulated under the skin in large quantities, the cats no doubt obtaining most of the rats, etc., by pouncing on them in their retreats among the bunches of *Opuntia*.

"I have had the pleasure of hunting wildcats with Mr. Otto Braubach, a neighbor of Mr. Watson, who has a pack of hounds trained to hunt cats, and have obtained some interesting information from him in regard to their habits. Mr. Braubach hunted wildcats for the bounty several years ago, and in less than twelve months, commencing about September, 1892, killed eighty-five of these cats. They were nearly all killed in a cattle 'pasture' formed by the fork of the Medina and Leon rivers, about twelve miles southwest from San Antonio. A number of other wildcats were killed during the same time by other hunters in the same neighborhood. It generally took the hounds about three hours to tire a cat out and 'tree' it or corner it in a cave, and one was once run into the river by the dogs and killed there. The cats would not take to holes or trees on dark nights, but kept dodging around in chaparral thicket till they were run down.

"Mr. Lacey reports them common in Kerr county, and from a high place on the side of a cañon he once saw an old one dodging the dogs by following around after the hounds that were trailing it among the thickets below him. These cats are often taken while young and raised as pets, and become very much attached to their owners. They occasionally breed in confinement.

The panther (*Felis concolor*) is fast being killed out, though it is still found now and then. A pair in the

Zoölogical Gardens at San Antonio bred in 1891 and 1892, producing four young each time. The period of gestation was observed to be ninety-six days.

The jaguar (*F. onca*) is rare east of the Nueces River, but is still occasionally taken in the chaparral thickets along the Rio Grande.

The leopard cat (*F. pardalis*) is still common between San Antonio and the Rio Grande.

A Buck Without Horns.

PENNSYLVANIA.—I have been reading about large horns and small horns and all kinds of horns, but did any of the FOREST AND STREAM deer hunters ever kill a buck without horns? Not one that had shed them, but one that never had had horns. I was still-hunting deer in Wexford county, Michigan, and had started a deer which I thought was a buck, and after trailing him about a mile he went into some brush and I got within 15ft. of him before I saw him. Just as I saw him I suppose he scented me. He made one jump and I took a snap shot at him and shot him through the head. He had no horns; never had had horns. He dressed 150lbs., and was two years old, so the old hunters said. His head looked just like a moolley cow's. If any one ever killed one like it, would like to have them write about it. Some may say it was a fawn, but it was too big for a fawn.

J. B. MCW.

[We imagine that hornless male deer of any species are very rare in America. We do not think that we have ever before heard of one. We believe that the European red deer (*Cervus elaphus*) sometimes lacks horns. These hornless males are in Germany called *hummle*. They are said to be perfectly well able to take care of themselves in disputes with the horned deer.]

Wild Pigeons in the Northwest.

WASHINGTON, May 24.—In your last issue you have an article from Dr. Beebe about the wild pigeons he has killed in western Washington near Tacoma. Having myself been a resident of that part of the country for six years, living on an island in American Lake, I have often killed wild pigeons and have seen great numbers of them in the trees around the lake, and they are identically the same kind of pigeon I had often killed in Missouri and Illinois during the period from 1869 to 1875. They are of a dark slate color and have long tail feathers.

I discovered while living on the island in American Lake great numbers of trout of several varieties. When speaking to the old inhabitants of that section of there being trout in American Lake, they told me they had never seen a trout in the lake, nor had ever caught one, although they had fished in the lake for twenty to thirty years. But I have seen hundreds of them at a time; they would not take a fly or any other kind of bait, although I have tried repeatedly to catch them. I lived on the island with my family for eighteen months and the other members of my family have seen these trout.

WM. E. CLAYTON.

Belated Geese.

ROCK, Mass., May 26.—We were much surprised this morning, during a heavy southeast rain, to see a flock of twenty-five or thirty Canada geese flying eastward toward Cape Cod Bay. They were flying rather low and had evidently passed the night in the great Middleboro Ponds, on the edge of one of which my place is situated.

JOHN MURDOCH.

Game Bag and Gun.

A PARADISE FOR GAME.

I IMAGINE I see an incredulous smile creeping over the faces of the gentle readers—as the novelists put it—of FOREST AND STREAM when the heading of this article meets their eyes. But nevertheless, gentlemen and lady Nimrods also—if any there be who read FOREST AND STREAM—it is a solid, substantial fact. The place exists and I have seen the country and have seen more game in ten days' time than I ever saw in my life altogether, and I am no spring chicken either. Was born at the foot of the Seven Mountains in the old Keystone State, and well do I remember when a boy, 8 years of age, standing in the door of my father's cross-road store and seeing, less than a mile away, five or more deer gracefully clearing the fence at a time. How I longed to be a man and have a gun! But when I arrived at that period of life, Winchester and other repeating rifles, and not less the lumber interests, had made large and small game of all kinds few and those that were left mighty shy, and the weighty question which has troubled the Esaus of the present day and generation arose: "Where can I go and get a reasonable amount of game and fish?" There was Florida, but while fish were in abundance, the country was low and full of bad, very bad snakes and sitch; also, if I may be allowed to use an Irish bull, "big game is small;" the Adirondack charges high and game not too plenty, etc.

But I had read and heard of Montana, Wyoming, Colorado; so last October, when asked to join a party going to the latter State, I joined and had the dream of my life realized. I saw and shot big game until I had to stop or see it go to wilful waste.

I only picked out big bucks too, weighing from 150 to 200lbs., and what meat! So fat that it was stripped off in layers 2in. thick at places, and so tender that one could pull it to pieces with one's fingers. This was on the Rocky Mountains at an altitude of 10,000ft. or snow line, and the home of the elk, black-tail deer, mountain lion, silver tips, bears, eagles, blue grouse, gray squirrel, and last, but not least, is the queer little snowshoe rabbit, called so, as it has webbed feet to enable it to travel over the deep snow in winter, which falls to the depth of 80ft. at times. Here also are the brawling mountain streams fed by the melting snow, and full, yes, swarming with the gamy trout. At the foot of the mountains or on the plains live the graceful antelopes, which are at this time of the year at their best—fat and tender from the early spring grasses—and can be seen from a pair to as high as 75 and 100 in a bunch. Jack rabbits, common rabbits

prairie wolves, bob cats, ducks and geese without number on the streams in season, cranes, sage hens, willow grouse and what that portion of the State always has, prairie dogs.

There is no question but that the game is there, and it is estimated by reliable men who know of what they speak, that the Indians (Utes) of Utah came up into the county (Route) last fall and killed from 7,000 to 10,000 deer. The question will naturally be asked "Where is the finest game preserve?" It is at the headwaters of the White River and Williams Fork country, and can be reached from Rawlins, Wyoming, or Rifle, Colorado, on the Denver & Rio Grande R. R. by stage. The objective point is Craig, Colorado, and equi-distant between the two points named, 100 miles from each place. There is but one other place which has a reputation as high, but of which I know nothing, and that is Jackson's Hole in Wyoming.

Now if any of my brother hunters doubt this tale of mine, I refer him to Mr. W. H. Tucker or Mr. A. S. Robinson, one a capitalist, the other a builder, of Craig, Route county, Colorado.

The big horn or Rocky Mountain sheep also has its home here, but the game law says, "It shall not be killed," nevertheless one sees a head now and then. PENN.

CHICAGO AND THE WEST.

The Newest Big Game Country.

Perhaps the newest big game country available on this continent to-day is to be found in the far Northwest, where the gold miners have dug out some news as well as some gold. There is said to be a new railroad, to run 250 miles north of Victoria, and sixty miles of this is already done. The Mackenzie River country also is open to the hunter. Then, again, one who wishes bears and moose and deer can go to Wrangel, take steamer up the Stickeen River 160 miles to a small place called Glenora, and from there portage seventy-five miles across the divide to Dease Lake. There, I imagine, one can to-day have about as much sport at big game as he could wish. It all sounds very far off and inaccessible to-day, but in a very short time we will all be talking familiarly about this region, and laying out trips to it, and telling about what sort of shooting we had there.

It Hailed a Little.

Friends of Mr. Thomas Johnson, of Winnipeg, will be pained to hear of a goose story which appears to have emanated from him or in his neighborhood. It seems from his story that there was recently a very hard hailstorm near Souris, Man., the hailstones being of a remarkable size and abundance, many reaching a size as large as a man's fist. A hired man working on a farm near Souris was forced to take refuge in the barn, and while therein and looking out through the open door was surprised to see a great many wild geese tumbling down in the barnyard, crippled by the hailstones. On the following morning the hired man and his employer went out with a single-barreled shotgun and a club, and picked up more than 200 fat wild geese, which they had found either dead or crippled in the fields round about the farm. These geese were sold at 40 cents apiece in Winnipeg. Other farmers are thought to have secured at least 500 more geese which were thus killed or crippled by the hail. And yet Mr. Johnson and his friend cry out against us for our spring shooting of wildfowl! We shall be forced to shoot in the spring in self-defense if they continue to wage war on the fowl up there with such destructive means as the above hailstorm. That must indeed be a weird country, and one wherein the settler must with trembling set out hyacinths, young cabbage or goslings, to say nothing of sending the children off to school.

A Trade Trip up the Lake Shore.

The popular impression is that the city of Chicago is built upon a marsh and surrounded by a low or marshy country. This is not correct in all points. A part of the city does indeed lie above an ancient and valuable ducking ground, but this marshy section lay off to the south, chiefly in the Calumet region, where the marshes remain in evidence to-day. Hedging this region from Lake Michigan are the sand hills where the Indians laid for the soldiers in the Fort Dearborn massacre. Upon the contrary, if one travels in the opposite direction, to the north along the lake shore, he will find as lovely a bit of country as he ever saw, lying along high bluffs, which line the lake and which are covered even to-day with a heavy growth of native timber. There are hills and ravines here, and a good many places of the kind that novelists call nooks. A fine bicycle road crosses all this country, skirting the lake for seventy-five miles, and passing through the many little manufacturing towns which have established themselves, one at the mouth of each short river that flows into the lake from the high prairies to the west. Of all these towns, Racine is the largest and prettiest, and it has additional interest from the fact that it is a sort of center for the manufacture of sporting goods, more especially bicycles and boats. Many yachts famous on the great lakes have been built here, to say nothing of the output of smaller craft of all sorts. In a recent visit there I saw on the stocks of the Racine Boat Manufacturing Company the great steel steam yacht now building for Mr. Morgan, of the Morgan & Wright Co., makers of pneumatic tires, Chicago. This magnificent craft is now well under way, and the builders say they expect to launch her by the month of August. She will be a beauty and a credit to both Chicago and Racine. The makers estimate the cost at about \$75,000.

The Racine Yacht and Boat Works is another firm that builds all sorts of boats, big and little. Some genius at Racine has invented a bicycle boat, upon which one can place his bicycle midships of the craft, attach a gearing to the hind wheel, and so paddle off by grace of his own legs across the water. I saw some of the hulls of these boats at the Racine Yacht and Boat Works, as well as many sporting boats of the smaller types—one-raters, knockabouts, etc. The designer here is Mr. Fred W. Martin, and besides his specialty of many designs of small craft and boats for amateurs, there was one of more ambitious and peculiar type—a vapor launch, 38ft. in length and 8ft. beam, which he has designed for Mr. Herman Falk, of Milwaukee. This launch will be in every respect of lines and fitting a miniature steamship, something of a curiosity, and a very tidy craft.

Another one of the Racine firms of interest to sportsmen is the Gold Medal Camp Furniture and Novelty

Mfg. Co. This concern has a long name, but it is portable and can be folded up if you want it that way, just as all its goods can be. The Gold Medal camp cot I know of experience to be a wonder of strength and convenience, and the firm makes also all sorts of chairs, tables, stools and the like, each of which can be pulled out or pushed in like an accordion, so that you can furnish a household out of your vest pocket if you like. I was surprised to learn the extent and scope of the demand for these goods. Mr. Gittings, the manager, told me that one of his best markets was in South Africa. He had sent several lots of goods to Cape Town, Cape Elizabeth, etc. Australia is another field demanding great numbers of these goods. A great many have been sent to Singapore, India, and lately a lot was ordered for Havana, Cuba. A New York exporter had just sent in a letter asking prices on from 5,000 to 20,000 of the camp cots to go to South America, probably for military use. The sportsman who avails himself of these comfortable camp furnishings may at least feel that he is not alone in their use.

The Prodigal Dog.

I recall that last winter I had considerable to say about the valuable Irish setter of Mr. Noel Money, of Oakland, N. J., which was lost, strayed or stolen at Memphis by Mr. T. A. Divine, of that city. This prodigal dog never has returned to Mr. Money, as stated. On the contrary, I saw him a week ago at Memphis, looking very fat and contented, in the door yard of Mr. W. H. Allen, who states that he is eating all the spring chickens of that neighborhood. He adds that if Mr. Money wants his dog he can have him by paying for the expense of this notice and also settling for his board bill, which at this date is \$175. The dog is doing very well.

This further reminds me that Mr. Divine is threatening to come up to Chicago some time in June, an event which we hope can be averted. Mr. R. B. Organ, of this city, has asked him to be his guest for a part of the time, and Mr. Organ has a dog of which he is very fond indeed. He is perfectly clear in his mind that if Mr. Divine comes to the house the dog will disappear when he returns to Memphis. It is really no wonder that Memphis has a national reputation as a center for fine sporting dogs.

Gone into Powder.

Mr. Eddie Bingham, for a long time connected with the gun department of Montgomery Ward & Co., not long ago severed his connection with that house and went into the employ of the Du Pont Powder Co., under the direction of Mr. E. S. Rice, general Western agent. Mr. Bingham has been traveling through Indiana for the past two weeks on business of the Du Pont Co., and will be seen at the large tournaments of the later season, including, of course, the big Du Pont shoot here in August. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

In British Columbia.

HARRISON HOT SPRINGS, B. C.—Were you ever confronted by a huge timber wolf, whose wicked eyes expressed the "come-right-in" invitation which his lolling tongue could not utter? A few days ago I stood facing one of these generally hungry animals. For a moment I mistook him for a very rough collie, but his length of legs and gleam of fangs, cruel in their exposed power, soon undeceived me and proved faithful business cards, stamped with their owner's name and character.

Did I have a shot at it? Did I kill it? Oh, no, kind reader, I am a woman, and not sufficiently renovated to pose as an adept with gun or rifle. I can shoot, but it's on the circular saw movement style. I can hit a tree if the forest is dense enough, but for sweet charity's sake don't ask me beforehand which tree it is to be. And besides, so far as the wolf was concerned I was unarmed. For this reason I felt an overpowering sense of gratitude that his wolfish lordship had been well stuffed before he had the pleasure of meeting me.

But if you care to try your hand at such exciting sport as wolf hunting come to British Columbia, stop at Aggasiz and take a charming five-mile drive over a good road, past farms, through huge timber, to stop by the loveliest lake you can imagine.

If Killarney is "Beauty's home," then we know that she has paid a lengthy and loving visit to our fair province, for the imprint of her kiss is on our mountains, and her reflection sparkles on the surface of our lakes.

Around and above the sheet of blue rippling water rise mountains green, purple and snow-capped. And there is the home of the timber wolf, the mountain goat, the coyote, the bear and the panther.

The lynx and br'er coon also find there a dwelling place. The "poom, poom, po-oom" of the big blue grouse pounds on your ear drums from all directions all day long, while the drum of the willow grouse is here, there and everywhere.

The trouting at Harrison is unexcelled. The hotel is more than comfortable and guides are always on hand. Steam launches and sail boats dot the lake and pleasure is at home in this spot.

Have you rheumatism? Here are hot sulphur baths warranted to cure you. In short, Harrison combines sport with restoration to health in every particular.

Bring your gun and rod and try; fresh fields and pastures new. Bring some pluck and muscle too. Sport in B. C. means sport; no sitting in an easy chair while beaters bring the game around, as I read of in English papers.

How far from Vancouver, British Columbia's meridian? Just four hours by rail. ELLEN R. CARTER.

Bears Galore.

PORT ARTHUR, Canada, May 24.—Mr. Alex. Anderson, of Pearl River, had an experience with a female bear which he does not care about having repeated every day. Mr. Anderson, in company with Mr. Atwell, a young Englishman, were out looking for bear signs. After leaving Ouimet Mr. Anderson took one course and Atwell another. The former's path lay through a ravine with steep hills dotted throughout with trees and shrubs. He carried an axe in his hand, and a pack containing two bear traps, bait, etc., weighing in all between 75 and 100lbs., was slung to his back. He had proceeded down the gully some distance when he saw signs of bears having visited the neighborhood a short time before. He shouted to Atwell and then proceeded to examine the marks left by the bears. While doing so he was startled to hear the angry whough! whough! of a bear close at

hand. Looking up, he saw a big female bear close upon him. Before he could move the animal was standing up in front of him ready to give him a good, tight hug. Alex., unable to use his axe, had recourse to the hypnotic power he possesses over the brute creation. He fastened his eyes upon those of the monster, wishing at the same time that Mrs. Bear was some other place than standing in front of him with mouth wide open and arms extended. The power of man is great. The bear couldn't stand the hypnotic stare Alex. gave her and so she turned and fled. Anderson does not know whether he can hypnotize more than one bear at the same time, but at any rate he had just begun to congratulate himself upon the happy termination of his adventure when he was frightened out of a year's growth by having a 2-year-old bear drop out of the tree under which he was standing and take to its heels after the old one. Then another came tumbling down beside him and away up the hill it went. Mr. Anderson's nerves were somewhat unstrung by this time and he sat down to wipe the perspiration from his brow and wonder if there were any more of the bear family in the neighborhood. Just then Atwell arrived with the gun, but they didn't get the bears. They set their traps and returned home without further adventure that trip. Mr. Anderson is going to carry a camera on his trapping and hunting trips hereafter, and take snap shots at the bears as they come tearing up to him. Then when he tells a bear story he can produce the proof of its truthfulness in the shape of a photo. J. E. NEWSOME.

Minnesota Boomings.

WABASHA, Minn., May 23.—*Editor Forest and Stream:* I have been hunting lately, hunting too entirely in season, but without a gun, hunting the different varieties of beautiful wild flowers that grow in abundance in the coulees and in the sides of our glorious Minnesota bluffs, and listening to the booming of his majesty, the ruffed grouse, on every side, and the whistle of Bob White as an interlude, with a refrain from the multitude of song birds now holding their annual May festival all over our grand old Mississippi Valley. Vegetation was never more luxuriant than this season; there has been no frost to speak of since March, something very unusual for this country, and with plenty of rain and warm sunshine everything is booming, particularly the Mississippi, which has been bank full for several weeks. Quail have been scarce for several years, but they are getting quite plenty again now and we are hoping that with protection and mild winters, as we have been having lately, we will again have some of our old-time shooting in the future. WABASHA.

The Old Windfall.

It was seventy years ago (more or less, but rather more than less) that I lived near an old windfall where the old timber mostly had been laid down and a young growth had sprung up, such as yellow birch, black cherry and other varieties, with a smaller growth of saplings, making some dense thickets. This was the natural home of partridges, raccoons, rabbits, skunks and other small vermin—just the ideal of a boy's game preserve. During the winters the abundance of rabbits and partridges drew in many wildcats and foxes, and it was here that I killed my first wildcat, a little before I was 10 years old; and it proved to be one of the biggest. I had the chief run of that old windfall during three or four years; then more settlers came in and a big fire ran through it, and a little later on it was cleared up with much labor and cost, and when cultivated proved to be very productive; of course this was progressive improvement. All the same I had a sort of boyish feeling that a large portion of my hunting capital had been confiscated. ANTLEK.

GRAND VIEW, Tenn.

Elk in Jackson's Hole.

JACKSON, Wyo., May 19.—*Editor Forest and Stream:* Find inclosed some photos, taken by myself last winter, of elk on their winter range in Jackson's Hole.

The courts have decided that the Indians under their treaty have a right to kill all the game in Wyoming, and as in the face of that decision it is impossible for us to enforce the law against the whites, it seems as if our big game is doomed. Can not the sportsmen of the East with their influence help us, the people of Jackson's Hole, to save these noble animals from all being slaughtered? S. N. LEEK.

[The photographs sent by Mr. Leek furnish very timely illustrations of the particular country affected by the Supreme Court decision reported to-day. Now that the rulings of the lower courts have been reversed, the authorities should not have further trouble with Indian depredations upon the game, but will have opportunity to concentrate protective efforts against the white marauders.]

New York Legislation.

ALBANY, May 29.—The Governor has just finished with all the bills before him. He has signed only two more laws: Chapter 972 (Assembly No. 2431), for the protection of Saranac River in the village of Saranac Lake; and chapter 975 (Assembly No. 2536), for the protection of shell fish in Queens county. He refused to sign these bills: Assembly 1767, for the protection of fur-bearing animals; Assembly 1481, relating to the hounding of deer in the towns of Dresden and Putnam, Washington county; Assembly 746, relative to eel weirs in the Chemung River; Assembly 1497, for the assessment of dogs on the Tonawanda Indian Reservation; Senate 1730, making the close season for web-footed wildfowl from March 1 to Sept. 1; Senate 1196, giving special privileges to owners of private ponds; Senate 1051, relative to fishing through the ice in certain lakes; Senate 1303, allowing fishing other than by angling in the waters of Lake Erie in Chautauqua county. M.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Sea and River Fishing.

FLY-FISHING

On the North Shore of Lake Superior.

[Continued from page 437.]

THE next morning was anything but reassuring, no sparkling sky nor radiant sea greeting us. The west developed huge banks of dark and dingy clouds that were marching along with steady and solemn mien, driving all the blue and beauty out of the celestial archway.

Despite this we crossed the bay, for such it was, and started in to make a record in the angle. I had made a change in my flies, and was using a professor and a jungle-cock, the former for stretcher and the latter for dropper. Ned clung to his bushy brown-hackle as stretcher and for his dropper changed to a gilt-coachman. Thus armed we sent the feathery ambassadors to capture a prince or two of the watery realm. The place we had chosen for our morning diversion was quite an isolated retreat and seldom a disciple of the rod ever ventured there. It was a lovely spot, fit place for a nymph's bath, where the little people of the water might find what Titania and Diana longed for—a place of absolute seclusion, "Where the bright eyes of angels only might behold a paradise so pure and lovely."

With such engaging surroundings, such breadth of rippling waters and of such crystal clearness, evidently abides the jeweled beauty whose every curve and graceful line are symmetry in perfection, while the ravishing hues rival the colors of the blushing pinks and the roses red. Here the livelong day

"The air is fragrant with perfumes,
All flushed with sunny rays."

Our flies sailed out and dropped upon the ripples as if thistle down had there fallen, or a butterfly had merely alighted to sail along like a Nautilus seeking a palace of pearl.

We went onward over many a chasmed lurking place for the brocaded beauty, and not till we reached a stupendous rock that rose from the water in Titanic grandeur did we receive a response. It, however, was a goodly one, and resulted in giving Ned a 2lb. trout, which tried very hard to swallow his gilt-coachman, boots and all.

We pursued the pleasant pastime for fully an hour, and along the waters of a sylvan shore, whose spreading trees and bright flowers greeted us with their beauty and fragrance as if to make amends for the absence of the delicious and graceful trout. At last an undersized trout, but one that had the bravery of his royal race, tampered with my jungle-cock and realized a delusion that made him a tidbit for the table.

This was our last victim that morning, for a sudden blow came sweeping through forest and over lake that sent us sailing back over billowy seas that lashed the ragged shores with wailing moan and flying foam.

On our return we found that a Mr. Clapp and his son, a bright-eyed youth of some 16 years, and their two half-breed boatmen had camped in our immediate vicinity. Of course an acquaintance at once ripened between us and we therefore had an interchange relative to our exploits. He stated that they had been fishing in the Chipewewa River and had caught a large number of small trout.

"What kind of flies did you use?" I inquisitively and immediately inquired.

"We used no flies, but they rather badly used us," the father smilingly replied and then referred us to the exposed parts of his anatomy, which were severely swollen and inflamed.

"Oh," spoke up the youth in answer to our interrogation, "we are simply bait fishermen and used nothing but the despised angle worm."

"Don't you take to fly-fishing?"

"I have never used the fly," he said, "but father declares that if I wish to be a gilt-edged angler I must take my trout only with the fly."

"Have you any?"

"I have neither flies nor leaders, I regret to state."

"I have an abundance of both, and if you desire to make an attempt at casting I will only too gladly supply you."

He accepted the offer with many thanks, but as he had no suitable casting rod I was positive his present attempts at luring would settle his flies on the water with a horrid splash. The lad was so intelligent and so earnest and ambitious that it was evident that at a later date, and when properly equipped, he would soon master the delicate art and finally toss a fly like an expert.

The blow which had driven us so hastily to our quarters turned out to be only a sudden squall and in a short time disappeared, and then the snowy fringes of foam soon vanished and the lake again ran in singing ripples, while crimson and gold burned among the bending branches and set the shadows dancing wherever sunlight peeped. The blue bells and wild violets nodded serenely along the shore and made a purple cloud among the tangled underbrush. Overhead was also grand transformation, for there prevailed fleecy seas so exquisite that we can only liken them to the colors of the purest gems. There were magnificent stretches of aqua-marine and chrysolite, and drifting banks of amethyst and jacinth, and flushings of ruby and gold. It was a gorgeous picture of fascinating frescoes and ravishing tints, "painted by the thought of the Great Artist."

Shortly after dinner we tried along the shore just east of the camp and where Ned had his first rise the day before. Again he was fortunate enough to receive another response, and a savage one that made the water boil around his stretcher fly, but he failed to connect with the fleeing *fontinalis*.

"Say," said Kenosh to Ned, "you pull a little too quick."

"Was I not a bit too slow, and is there such a thing as pulling too quick at these leaping and snapping trout," he answered.

"An authority on fly-fishing says the line must always be kept taught and the strike should come a fraction of a second after the response," I remarked.

"That is right," Kenosh ventured to remark.

"How do you strike?" says Ned to me.

"Just as quick as I can, and I am positive my three score and ten years about fills up the fraction of time desired for the halt."

"I presume, then, if you had ten years more added you would always be behind time in your strikes."

"Even so; but as a taut line, the same authority says, will hang about seven out of every ten responsive trout, I would not be without a goodly share of the quarry."

"That is very consoling to the patriarchs of the rod, but as I am near your age, why did I not lag a little in my strike?"

"It may be that you lagged a little too long and that haste had nothing to do with your failure to connect with the grabbing trout. And then again, there is a strong probability that you might have had a relaxed line."

"You and Kenosh take divergent views on my *fiasco*, and either horn of the dilemma convicts me, but I'll murder this wolfish trout," says Ned, as one rose to him while he was dancing his flies over the water. And murder him he did, for he held him so tight that I was fearful the stricken fish would either escape or the ashen rod break. After he was duly netted, Ned turned to me and inquired:

"Was I too fast or too slow?"

"I think the trout hung himself on a taut line. The strike had nothing to do with it."

"Bah, what kind of a conundrum are you giving me?"

"Taut line, was it not, Kenosh?" and I winked at the cunning half-breed.

"I thought so. He no pull when fish strike," he serenely said.

"Open-eyed conspiracy," solemnly ejaculated Ned, and that ended the all-important subject of the strike.

Anglers must have a little pleasantry during an outing, and I felt just then that I might probably be the next victim before the sun sank in his rosy bed of crimson.

We push along to an irregular shaped rock, the edges of which looked as if they had borne for ages the grinding force of chiseling ice and the heavy batter of terrific storms, so torn and notched and scarified did the flinty mass appear on its exposed side. A solitary tree, a stunted spruce, with a sparse display of green leaves that told of its hard life for sustenance, stood feebly erect in the center of this lone pile, which appeared to sentinel a landscape of wild pageantry exceedingly rich in blazing colors. Here we had in former years stolen many a blushing beauty of the radiant hues from their cosy lurking places, and it was evident that some of the royal race still remained and roamed through the winding passages of the chasmed roadways, and under the broad and overhanging ledges that were in every conceivable form.

Ned was the first to drop his flies among the tempting retreats, but the wary trout had so often noticed the fall of fluttering feathers over their abiding places that they were in no hurry to come out and rise to the dancing lures. It was fully ten minutes before some shapely gladiator in spangled tunic rose to the surface for what he thought a choice morsel, but he found to his sorrow that the dropping and trailing feathers were a mere delusion, and that which appeared animated was a mere device for his capture.

As he struck out for liberty with the adhering Kingfisher, which I had here attached to my leader as stretcher, he hurriedly sought his marble halls from whence he came, there hoping to arouse aid, but he was suddenly enjoined by the foe above him with the wizard wand and singing reel, which brought him to such a sudden halt as to fairly bewilder him. Slightly recovering, he rose to the surface as if for a solution of the perilous situation, and thinking the higher he went the more he would learn; he gathered vigor for the leap into the upper element, and then bravely vaulted into the dazzling rays of the burning sun like a flash of golden fire and there acquired, we thought, some little knowledge of his mysterious entanglement. Dissatisfied and discouraged, he drops back to the surface and then plunged and darted down to the rocky bottom in hopes, doubtless, of finding some cavernous retreat where at will he could sever the fatal thread that was stealing his strength away. In this he is sadly baffled, for the steady strain he realizes will not permit of rest, and so perforce to gain his freedom he must either tear out the cruel hook or break the braided line. With this object in view he darts boldly and angrily away, fleeing o'er his old haunts and his dear home, yet still held from an entrance by his crafty foe, who has had too much experience with other members of his flame-painted family to permit of such foolish familiarity.

He is now becoming frantic, as he feels the current of vitality departing from him and sighs as he thinks of the gushing waterfalls and the rippling rapids where he was wont to sport with his raiment o'erspangled with gold and gems and where he could poise as the monarch of the purling stream. All, all is now lost to him, no fragrance of flowers, no frolicsome waters, no shadowy pools again, and as his subtle foe draws him to his fate he renews his bravery and nobly battles, but he struggles in vain and only surrenders when resistance is useless.

This is my victim who attempted to solve the riddle of the dancing feathers, but it proved a sacrifice to him more fatal than that of Iphigenia. He was a 3-pounder and a painted beauty of exceeding rarity.

At this happy culmination to the victorious angler Mr. Clapp and his son came abreast of us with his mackinac and two half-breeds and stated that they were on their way to some very tempting waters two miles ahead, where he proposed taking trout with the wriggling angle worm. The lad eagerly watched our casting as long as he could see us, doubtless thinking that he could learn something of the fly-caster's art.

"That boy is heart and hand in the angle," said Ned, "and some day, should he pass our way, may show us a thing or two in the gentle art that we know not of."

Ned when he gazed upon my glittering captive renewed his efforts to tempt just such another to his lures, but they failed to attract, and so we pushed along the wood-crowned shore with our flies falling into every shaded line of the most promising waters. At last we reach a place where some gay flowers enamel the shore and the spruce and hemlock spread their o'erhanging branches to the very water's edge. Here must certainly range the bejeweled and bespotted beauties.

"Look down there," said Ned, pointing to a disorganized mass of rock that was as complete a lurking place for trout as I ever saw. Chasms, ledges and fissures ran in all directions. In the center of this deranged pile was a depth of over 20ft., that was as irregularly walled and shelved as if nature had specially contributed it as an appropriate home for the ever radiant beauty of the tinkling brook.

I took a hurried glance at the fortified abode and then

sent my flies as *avant couriers*. Some spangled warrior at this manifestation darted from his rocky lair and made a very sudden and savage attack upon one of our little plumed emissaries, and about as suddenly endeavored to retreat to his massive quarters. It was too late, however; but when he found his escape cut off he turned and made about as bold a fight as did the Spartan at the pass Thermopylae and then went to the same bourne. He was smaller than the first, but equally as magnificent in all that makes this gamy fish the treasured idol of the gentle angler.

We caught one more after much industrious whipping of the waters and then returned to camp. The bait fisherman soon joined us and showed us three good-sized trout that came to the feast of the angle worm. The lad was exceedingly happy over the outing, for he had, I learned, caught two of the radiant victims.

We had been fishing so hard that afternoon that we retired shortly after supper to woo that gentle goddess who soothes the hearts of men wearied with the pleasures and toils of the day.

ALEX. STARBUCK.

[TO BE CONTINUED]

NEW YORK FISH COMMISSION.

Concerning the Work of the Fisheries, Game and Forest Commission of the State of New York.

BY A. N. CHENEY, STATE FISHCULTURIST.

[A paper read before the American Fisheries Society.]

So far as the Fisheries, Game and Forest Commission, of New York, is concerned, the request of Dr. Bean, recording secretary of this society, for a report showing results of work accomplished during the past year, may be summarized as follows:

Applications were received from the people of the State for planting in public waters, for brook trout, 10,864,200; brown trout, 1,380,600; rainbow trout, 155,500; lake trout, 6,110,000; pike perch, 13,143,000; black bass, 1,136,075; whitefish, 30,000,000; ciscoes, 34,000,000; frost fish, 2,000,000; total, 98,789,375.

To fill their applications, the State hatched and had for the spring distribution fry as follows: Brook trout, 4,315,000; brown trout, 900,000; rainbow trout, 100,000; lake trout, 3,255,000; frost fish, 10,000,000; ciscoes, 32,000,000; whitefish, 11,750,000; total, 62,320,000.

In addition, 265,000 brook trout, 81,000 brown trout, 57,000 lake trout, 10,000 rainbow trout, 15,000 landlocked salmon, 3,000 sea trout from Europe, or a total of 431,000 fry, were retained at the hatchery stations to be reared to 8 and 12 months of age before planting in wild waters.

The work of hatching and planting the spring spawning fishes is not yet completed, but it will be observed that of the various species of trout 18,510,000 fry were asked for, and only 8,560,000 were on hand to fill the applications. There was a shortage of 18,250,000 whitefish, 2,000,000 of ciscoes, and a surplus of 8,000,000 of frost fish, which is the round whitefish found in Adirondack waters. Among the fish not enumerated, 76,000,000 of tom cods and 35,000,000 smelts were hatched and planted in Long Island waters; 50,000 eggs of the Atlantic salmon were received from the United States Fish Commission, and the fry hatched and planted in the headwaters of the Hudson River, and 302,000 lobsters in Long Island waters.

One hundred thousand eggs of the steelhead trout were also received from the United States Fish Commission and hatched at the Caledonia and Cold Spring Harbor stations.

It is the policy of the Commission to give its attention chiefly to what are termed commercial fishes, and in furtherance of this policy 90,000,000 pike perch were hatched and planted as against 41,205,000 in 1895.

This work of hatching commercial fishes has its limits, however, like all other fishcultural work, and the boundary point is the number of eggs that can be obtained.

It is the policy of the Commission also to rear as many of the salmon family to 8 and 12 months of age before planting as the facilities of the stations will permit. Heretofore these facilities have been very limited indeed, and in 1895 but 12,750 fingerlings of 8 months and yearlings of 12 months (I say yearlings of 12 months, for fingerlings of 8 months are frequently called "yearlings" by courtesy), including brook, brown, rainbow trout and landlocked salmon, were distributed from the State hatcheries. As I have already shown, 431,000 are now being reared, and arrangements have been made for building rearing ponds and boxes so that the output will be 1,000,000 in the nearby future.

The experiment was made during the spring of changing trout fry and eggs from the water and food of one hatchery to that of another, much as members of the human family are moved from mountain to sea air, or vice versa, as a tonic, and the result, whether owing to the change alone or from other causes, has been the strongest, most vigorous fry turned out in years by the State, if the testimony of the hatchery men and the people who have received the fry is competent. Not a single complaint has been received that the fry were sick or weak or in poor condition.

Yearling trout have been reared the past year that were 9in. long. I moved one lot of yearling trout, receiving them from a hatchery messenger after a journey of 200 miles and taking them seventy-five miles further without the loss of a fish, and there was scarcely one that was under the legal length of 6in. By legal length I mean the length exceeding which trout may be killed by statute when caught. The planting of trout over 6in. in length will tend to render the efforts of the Commission void in stocking streams to make them self-sustaining, as every one of such fish planted in the spring may be legally caught and killed before they have an opportunity to spawn. It is for that and other reasons allied to it that the Commissioners sought to obtain the power possessed by the New Hampshire Commission, and perhaps other State Fish Commissions, to enable them to close planted streams until the fish become established, or until they have had the opportunity to spawn at least once before they can be legally killed. As the law now stands it presents the curious anomaly of practically nullifying the efforts of the Commission to make the planted waters in a measure, at least, self-sustaining, and so far the Legislature has not seen fit to grant to the Commission the power it seeks to close such waters for a time,

The greater number of applications for fish of various kinds are carefully examined by the Commission, and those for private waters are thrown out. If applicants describe waters that are unsuitable for the fish asked for, their applications are also thrown out or filled with fish suitable for the water in question. The Commission has issued a circular, a copy of which is sent to each person applying for fish, describing the proper way to handle and care for fry until they are deposited.

At the time the table from which I have quoted, showing the number of fish applied for, was made up, 1,136,075 black bass were asked for. This is a fish, as every one here knows, that is not yet hatched artificially, and the State can supply them only by netting waters in one part of the State to supply waters in another, or by purchase from waters without the State. Last year with an expenditure of \$500 the Commission purchased and caught for distribution 1,810 adult black bass and 18,300 fingerlings about 2 in. long, a greater number than ever before distributed by the State in one year. The law of the State opens the black bass fishing on May 30; and as black bass spawn all through the month of June and the brood of young bass require the care of the parent fish for some time after they are hatched, it seems like wasting at the bung and filling at the spigot to expect the Commission to keep up the supply of black bass with the few that they can buy. In fact I have suggested to the Commissioners, informally, that until the close time is changed to cover the breeding season it might be wise to distribute no black bass whatever, for no commission can perform the impossible, and 18,000 2 in. bass—less than one 5 lbs. bass would rear if all eggs and fry survived—will go but a very little way toward supplying the waste of a whole month of fishing during the breeding season.

Another law that the Commission has to contend with to keep up the supply of one of the most important of food fishes is the shad law. Before the construction of the Erie Canal in 1825, which necessitated building a dam across the Hudson River at Troy, shad ran up the Hudson to Baker's Falls at Sandy Hill, fifty miles above Troy, and furnished food to a community to which shad is now a comparative rarity. In that day many a farmer came to the river below Baker's Falls and camped until he had secured and salted down a supply of shad for the winter. The Troy dam checked the upward migration of the shad from the time it was built until this day, but good catches of shad were made just below the dam up to within, say, ten or fifteen years ago. Within a few days just passed I have questioned the net fishermen who have applied to the Commission for license to net the river at or near Albany for herring, and they tell me it would not pay them to set a net for shad. The present shad law relating to the Hudson provides an open season between March 14 and June 15 for netting shad, "but said nets shall not be drawn nor fish taken therefrom between sunset on Saturday night and sunrise on Monday morning, unless by reason of the inclemency of the weather said nets cannot be drawn prior to sunset on Saturday night, in which case it shall be lawful to take fish therefrom as soon as the weather will permit." With this law in force the Commission has been unable to secure a sufficient number of ripe shad at Catskill to keep up the supply of this species of fish in the river without assistance from the U. S. Fish Commission. It was thought advisable by the Commission to amend this section of the law at the session of the Legislature during the past winter, and a bill was introduced which required that shad nets be taken up at sunset Friday night and not fished until sunrise Monday, and it also provided that nets should not be operated by boats propelled by steam. This amendment was for the purpose of opening the river a sufficient time each week to enable a sufficient number of breeding shad to reach their spawning grounds and keep up the stock in case aid from outside sources should fail. The steamboat clause was for the purpose of putting all the fishermen on the same footing. This bill passed the Senate, but was defeated in the Assembly.

In 1895 unusual efforts were made by this Commission to obtain shad eggs in the Hudson, and 3,087,000 fry were hatched and planted, and 4,900,000 contributed to the Hudson by the U. S. Fish Commission. From 1883 to 1895, both years inclusive, the State planted in the Hudson 33,522,500 shad fry, and during the same period the U. S. Fish Commission contributed to the Hudson 54,511,000 shad fry from other rivers, or 20,988,500 more than the State was able to supply from the river itself. With these figures, taken from the reports of this Commission and furnished to me by Commissioner Brice from the books of the U. S. Fish Commission, as a basis, one can imagine what the condition of the shad fishing in the Hudson would have become had it not been for contributions of fry from the Delaware and Susquehanna rivers. This year the shad work of this Commission is not completed, but the U. S. Fish Commission has already contributed to the Hudson 3,000,000 shad fry from the Susquehanna and 2,000,000 from the Delaware.

Contributions of shad fry from other rivers doubtless do more than aid to keep up the supply of fish in the Hudson, as the fresh blood must invigorate and improve the stock.

Since 1883 the greatest number of shad fry the State has been able to plant in the river from eggs obtained from the shad of the river was in 1889, when 6,000,000 were planted. The next best seasons were 1887, 1888 and 1895, when something over 3,000,000 were planted each year. In 1891 the United States contributed 9,348,000 fry and six other years from 4,200,000 up to 7,414,000 annually.

As to the importance of the shad fisheries of the Hudson and the value of the product, the Commission caused an investigation to be made last year covering all the fishing stations from Sandy Hook to Castleton, nine miles below Albany. It was found that 3,471 nets were operated, and 1,155,610 shad were taken during the season of 1895. New Jersey is credited with 1,666 nets, operated at eleven stations, and taking 417,829 shad. New York is credited with 1,805 nets, operated at sixty-seven stations, and taking 737,781 fish. The greatest number of nets at a single station is 703, at Alpine, N. J., taking 94,100 shad. Fort Lee, N. J., operates 337 nets, taking 114,300 shad. The greatest number of nets operated from New York stations was 306 at Sing Sing, taking 16,400 shad, and 313 at Nyack, taking 3,853. The nets gradually peter out up stream, until Castleton, with one net, is credited with 500 shad. At Catskill, where the work of this Commission is carried on, six nets were operated, taking 5,000 shad.

To get at the weight and value of the shad catch in the

Hudson, I asked ex-Commissioner Blackford to give me the average figures of fish received at Fulton Market. He wrote me:

"Regarding the Hudson River shad, I would say that 100 buck shad will weigh 308 lbs., and 100 roe shad will weigh 412 lbs. This, you see, will make their average a little over 3½ lbs. The proportion of bucks to roeshad this season has been 60 per cent. roe shad to 40 per cent. buck shad. The average price for the entire season has been 20 cents for roe shad and 10 cents for buck shad. The lowest price they have sold for on any one day was 10 cents for roe shad and 5 cents for bucks. For quality and size, the Hudson River shad has been good—rather better than for the last two or three years."

With these figures as a basis, I find that the catch of shad in the Hudson River in 1895 weighed 4,044,635 lbs., and that 693,366 roe shad brought \$138,673.20, and 462,244 buck shad brought \$46,224.40, or a total for the entire catch of \$184,897.60.

The mascalonge work at Chautauqua Lake is in progress at this time, and probably 3,000,000 fry of this species will be planted by the State. The mascalonge of Chautauqua Lake, while structurally like the St. Lawrence River fish, is differently marked, and wholly lacks the round brown spots of the latter. The Chautauqua fish is blotched or banded on the sides with rich brown on a light ground. I believe that no other commission has attempted to cultivate the mascalonge artificially. A number of experiments were made in this work before the hatching of mascalonge was successful. The eggs were tried in the hatching jar and in shad boxes in running water, but finally the eggs were placed in boxes with double screens top and bottom to prevent the eggs being eaten by minnows and other fish, and the boxes were sunk in the lake in still water.

It is difficult to obtain all the eggs from a fish at one handling, but 265,000 eggs have been taken at one time from a female of 32 lbs. Only one mascalonge was killed last year of all that were handled. After milting the eggs separate in three-quarters of an hour, and about 97 per cent. of impregnated eggs are hatched. With water at 55° Fahr. the fry hatch in about fifteen days, and it requires about the same length of time to absorb the umbilical sac. The fry of the mascalonge when first hatched are very helpless, and apparently a prey to every living thing.

This Commission is giving considerable thought to the question of providing food for fishes in wild waters, as it believes that many failures to stock lakes and streams are directly chargeable to a lack of proper food for the planted fish. This subject is treated at some length in the annual report of the Commission now in the hands of the printer. The steelhead trout mentioned in this paper are the first to be brought to New York, and they will be planted in one of the large lakes in northern New York and in Long Island streams flowing into the sea. The Scotch sea trout are the first to be brought to this country and will not be distributed at present.

The total output of fish of all kinds will be considerably larger this year when all the work is finished than last year, when under the old Fishery Commission and the new Fisheries, Game and Forest Commission combined a grand total of 196,247,840 were planted.

OUANANICHE AND TROUT.

Editor Forest and Stream:

Some splendid specimens of the famous northern game fish that occupies so much space in the June number of *Harper's Magazine* have been brought here by anglers within the last few days and displayed in the windows of the fishing tackle shops. Very beautiful indeed is the sheen of these first bright silvery spring salmon from the fresh water of Lake St. John. Large catches have been made at the mouth of the Metabetchouan for a fortnight past, but mostly with bait. Now, however, the ouananiche is taking the fly freely, both there and in the mouth of the Ouitchouan, and within the last day or two in the body of the lake itself, principally along the Roberval shore. Here the sport is exceedingly good, and likely to remain so for several days, and perhaps a fortnight to come, for not until the waters fall to a certain level—and they are now exceedingly high—will the fish move out into the rapids of La Grande Décharge. Meanwhile during their sojourn in the great lake it is somewhat melancholy to contemplate the numbers of these magnificent specimens of *Salmo ouananiche* that find a sepulcher behind the wolfish jaws of the monster pike of this great inland sea, or within the disgustingly distended paunches of the villainous *Lota americana* or *Lota maculosa*, fresh-water burbot or ling, as he is described in the new work on "The Ouananiche and its Canadian Environment."

Some of the earliest American anglers to visit their Canadian preserves are already commencing to return. Messrs. J. P. Warner and F. N. Benham, of Bridgeport, arrived here last night on their way home from the Metabetchouan Fish and Game Club's preserve, where they enjoyed their usual good sport. They would probably have had better fly-fishing could they have remained a few days later; but as it was necessary for them to leave they will revisit their preserve about the end of August. During the present week there has been a large accession to the number of members and guests at the club house and on the waters of the Metabetchouan Club at Kiskisink. Among others now there are Messrs. Samuel Dodd, Walter Hubbard, Geo. A. Fay, W. B. Hall, W. B. Ives, C. P. Bradley, Frank Stevenson, Jr., Frank S. Fay, Wm. P. Morgan and Geo. H. Wilcox, of Meriden, Conn.; S. A. Burns, A. J. Cable, N. M. Beach and Wm. C. Bryant, of Bridgeport, Conn.; J. E. Palmer, of Middleton, Conn.; C. R. Forrest, of Hartford, and Frank L. Palmer, of New London, Conn. Dr. Heber Bishop, accompanied by Mr. J. Warner and other New England anglers, leave for Kiskisink by this evening's train. Mr. Arthur Beebe, of Syracuse, leaves at the same time for the Triton Tract. Over fifty Syracusians are Tritons, and among those of them who have lately gone up to their preserves, all since the date of my last letter, are Messrs. D. R. McCarthy, C. W. Andrews, W. S. Andrews, D. E. Petit, A. E. Fowler, H. E. Wannamaker, C. H. Mowry, G. F. Gregory, Wm. B. Kirk, M. C. Pierce, W. H. Brown, L. C. Smith, Geo. P. Larrabee, Fred Barnes and Stewart Murray. The other anglers at present upon this tract are C. H. Brandon, of Nashville, Tenn.; E. E. Darling, of Troy, N. Y.; J. R. Judson, of Arlington, Vt., and Henry Schneider and W. M. Peckham, of Troy, N. Y. These Tritons have recently erected a magnificent club house on Lac

la Croix, a lake expansion of the Batiseau River, and close by it a railway station has been established for their exclusive use. Their club house is to cost, when completed, some \$8,000. It has a frontage of 104 ft., an average depth of 35 ft., and no less than thirty bedrooms. The interior is of natural spruce, with oil and varnish finish. There is an angle nook in the building, and several rooms with large, open, ornamental fireplaces for log fires. Some of the members are also erecting private camps on various sites throughout the tract.

Messrs. Geo. E. Hart, of Waterbury, and Wallace Durand, of Newark, have timed themselves to be here (on their way to the Nomantum Club waters) on the 27th, and the Messrs. McCormick, of Florida, passed through Quebec to-day. All these parties have arranged to fish for ouananiche after their spring trout fishing.

Dr. Morris, of New York, will be at Lake St. John in the second week of June, and so will Dr. Webb and party.

Mr. W. K. Vanderbilt and party will spend a few weeks upon the Metapedia after the 1st of June. Their headquarters will be at the Restigouche Salmon Club.

Very large catches of trout—some of them exceeding 5 lbs. in weight—have been made this week in Lake Edward, on the waters of the Tourilli Club, and also in the Laurentide and Stadacona groups of lakes.

E. T. D. CHAMBERS.

QUEBEC, May 23.

FROM far above the Grand Falls of the Hamilton River and from the waters of its Ashuanipi branch, in the interior of Labrador, came the skin of a fish that unfolds a novel and interesting story to anglers and ichthyologists alike. In its adipose fin the fish whose skin this was wore the badge of royalty among fishes—the evidence of kinship to the kingly family of the salmon. In its shapely beauty and brilliancy of coloring, from the deep bluish green of its back, through the various shades of its silvery sides, to the pure white of its under surface, and in the number and disposition of its fin rays, it scarcely differed from a grilse of equal size. But its habitat was above a cataract having a sheer fall of 300 ft., so that this fish could not possibly have been a salmon from the sea. The large number and the distinctness of the xx marks upon its sides, the large size of the eye and of the dark spots upon the gill covers, and the strength and thickness of that portion of the body adjoining the caudal fin, all stamp it a ouananiche, or fresh-water salmon of non-anadromous habits. Prior to the discovery of this fish in several of the large streams of the extreme northern and eastern river basins of Labrador, by Mr. A. P. Low, of the Geological Survey of Canada, who brought this skin back with him to civilization upon his return from his overland trip of 1894-5 to Ungava Bay, the ouananiche was popularly supposed to be peculiar to Lake St. John and its tributary waters. Now its Canadian environment is known to include the whole Labrador peninsula, excepting perhaps that part of its westerly slope drained into Hudson Bay; and the angler who would find it, and fight it under the varying conditions in which it may be found, must traverse a vast region of mountain and lake and forest and stream as practically unknown as the interior of Africa, save to the Montagnais and Mescalpee Indians, whose hunting-ground it is.

The earliest spring fishing for ouananiche is to be had in Lake St. John. The railway ride of 190 miles thither from the city of Quebec carries the tourist through one of the most fascinating regions of Northern sport, and across the entire belt of the Laurentian Mountains, which thousands of years before Noah's ark grounded upon the summit of Mount Ararat, or the fiat had gone forth which first shed created light upon a world of chaos, lifted aloft their hoary heads, white with the snows of a thousand years. Most of the stoppages made along the greater part of this railway line are mainly for the accommodation of fishermen belonging to the different clubs of sportsmen, whose club-houses are sometimes the railway stations and the headquarters of private preserves, of 200 to 400 square miles each in extent. Ouananiche have been planted in some of these preserved waters, and brook trout abound everywhere. Marvelous stories are told of the monster *fontinalis* that inhabit the deep, cold waters of the lakes and streams of the Triton the Lake Edward, the Nomantum, the Metabetchouan and the Batiscan systems. Five and six pound specimens are not rare in either of these, and occasionally eight-pounders are taken. The brilliancy of their coloring has drawn from Kit Clarke the declaration that "God never made a more beautiful object." An English magazine writer has said of the same fish, "Never have we seen such gorgeous and brilliant coloring in any finny creature, except perhaps in some of the quaint, tropical varieties from the Caribbean Sea, which are shown to the traveler by negro fishermen in Jamaica."

In gameness this beautiful trout is excelled in its Canadian home by the ouananiche alone. From its lair beneath some lily pad or under the shadow of an overhanging tree or rock, often within the margin of heavy rapids, where the floods clap their hands in frolicsome glee, the leopard of the brook has had his attention directed by some peculiar motion of a somewhat remarkable fly at or near the surface of the water. At the moment the insect makes a dart, as if to escape alike his observation and his reach, it is seized by him with a rush which in velocity excels the motion of the cast as it is about to be drawn from the water. If essential to success, this mad rush is not unfrequently terminated by a leap into mid-air and on to the apparently vanishing hook. He is a valiant foe, a stand-up fighter, as it were, who takes no surface lure by stealth, not even from below, but flings himself boldly into the contest, generally exposes himself to full view quite early in the fight, and never loses an inch of ground, or water, or line, until compelled by sheer exhaustion, nor is finally conquered until he has employed the thousand and one devices of his plucky persistence, bold, brave, battling and finny *finesse*. Even when apparently quite exhausted, and drawn unresistingly on his side upon the top of the water to the very margin of the angler's canoe, the sight of the landing net inspires him with new life, and he must needs be a deft and experienced guide who is not often overmatched in the wild dash for life and liberty of a large trout's final struggle at the apparition of the net. This is the *fontinalis* of cold Northern waters as I know him and esteem him, and as thousands of Canadian and American anglers know and esteem him too.

Many a time these trout are taken in this Lake St. John country two or three at a cast. I have known of two being taken at a time where only one was hooked.

was in the middle of September, and I had struck what subsequently proved to be a very handsome female fish, in condition the very pink of perfection. As my rod was light, less than 5 oz. in weight, and the fish both heavy and strong, I had rather thoroughly exhausted my trout before attempting to bring it to net. To provide against the success of a possible final plunge, I had gradually conducted my quarry into a narrow opening running some distance between two low ledges of rock, upon one of which stood my guide, net in hand, ready for the closing scene of the struggle. Then for the first time it was seen that there were two trout instead of one in the little creek or bay into which I had towed my fish. But only one was fast to my line. With a dexterous sweep of the net, the guide secured, not in the first instance the fish that had taken the fly, but a handsome red-bellied male, whose persistent accompaniment of the securely hooked female into shallow water had rendered him apparently oblivious of the danger into which he was running. And as I reflected how much like men these fishes are, there came into my mind these capital lines of the late John Boyle O'Reilly:

"'What bait do you use,' said a saint to the devil,
'When you fish where the souls of men abound?'
'Well, for special tastes,' said the king of evil,
'Gold and fame are the best I've found.'
'But for general use?' asked the saint. 'Ah! then,'
Said the demon, 'I angle for man, not men,
And a thing I hate
Is to change my bait,
So I fish with a woman the whole year round.'"

—From "The Ouananiche and its Canadian Environment," by E. T. D. Chambers, in Harper's Magazine for June.

BOSTON FISHING PARTIES.

BOSTON, May 29.—The open season on bass in Massachusetts begins June 1. One of the most reliable places near the city which will be visited by Boston fishermen over the holiday is the Sudbury River. It is only fifteen miles out and even a poor angler can generally find there a few bass or pickerel to bring home. The river has been sadly abused as regards fishing during the last two or three years. The overflowed meadows along the shore make an ideal place for spearing, and I am told that much of this has been done at night in the shallow waters, and that large numbers of fish have been killed in this way. It is an abuse that ought to be stopped, but I believe one of the hardest to correct, since vigilance sufficient to stop it by those appointed for that purpose is indeed a rare virtue. A. N. Walker has fished the Sudbury for years and knows its best points thoroughly. He has taken in one day five bass that weighed 20 lbs., and I have myself seen a bass taken from Fairhaven Bay (a large sheet of water shooting off from one side of the stream) that weighed 6 lbs. Very few of the Maine lakes can show bass of this kind, and here they are at our very doors.

A friend who fished a brook near Canton, but a few miles from the city, captured ten good-sized trout in a few hours, while another party took twelve more from the same little stream, which in many places can be jumped across, but is very hard to fish. It would seem that the home waters are often overlooked while everybody is busily engaged in depleting the streams and lakes of other States.

Caryl D. Haskins and S. B. Paine, of Boston, will spend their holiday in fishing Southend Pond, near Millis, Mass. Mr. Haskins knows the pond and its best fishing points well, and his friend will be under his tuition, which probably means that he will come home with the largest string, something that often happens.

J. K. Souther and S. A. Carlton, of Boston, have gone to Jackson, N. H. Both have lately returned from Florida, and speak enthusiastically of the great fishing they have had during the winter. The next few weeks will be devoted to fishing in the White Mountains near Jackson. By the passage of a new law in New Hampshire the close season in the Wildcat and Ellis rivers will extend to June 1. All the Boston men who have fished these streams for years (and there are many of them) are elated about the new law and expect it to work wonders in replenishing the rivers, particularly as a long close time of two or three years has been placed over the brooks which feed them.

William H. Jackson, the Boston artist, accompanied by his wife, has gone to the Provinces. He will spend the summer and fall in Nova Scotia, New Brunswick and Prince Edward Island, changing from place to place wherever the best shooting, fishing and sketching can be had. Last summer was passed by Mr. and Mrs. Jackson abroad, and during the trip some very fair fishing was enjoyed in Scotland, although the great restrictions placed on the sport there seemed a hardship to one used to the freedom of American waters.

The Passaconaway Fishing Club has been organized in Merrimac, and has leased a small lake (on which they have a camp) known as Veal's Pond, situated about four and one-half miles from Haverhill. The pond has been famous for its pike fishing, contains about thirty acres, and is fed by four nice streams, in two of which there have lately been placed a few trout. The club have leased the fishing privilege for a term of ten years, with the right of renewal for five years longer. They have a large camp, with ample accommodations. During the summer pike fishing will be the feature, and in the autumn it is the intention to draw off the water and exterminate those voracious fellows. In the spring of 1897 the water will be stocked with trout. The officers are: President, Harry Tuttle; Vice-President, E. Byron Sargent; Secretary and Treasurer, Chas. H. Judkins; Board of Managers, A. B. Carter, F. B. Judkins, B. Frank Sargent and the elected officers of the club. The membership is limited to twenty. The name of the club, "Passaconaway," is taken from Whittier's beautiful poem, "The Bridal of Pennacook," and the trout brook of which Whittier wrote is the outlet of this same pond, the poet's birthplace being only one and a half miles from Passaconaway Reservation.

Eugene Atwood, of Stonington, and Gen. E. S. Bass, of Willimantic, left Boston on Saturday for their camp at Kennebago, in the Rangeley region. They will spend some weeks fishing these beautiful waters, of which it is said that trout will take a fly at any time of year except when the lake is solidly covered with ice. Q. A. Atwood, of Boston, will join them in the sport a little later.

Judge Charles Allen, Judge of the Supreme Court of Massachusetts, and his brother, William H. Allen, of Greenfield, left on Friday for Moosehead Lake, where they have fished together for many years. They will make their headquarters at the Kineo House.

Walter B. Farmer, of Arlington, and Fred H. Pearson, of Lowell, have just returned from a two weeks' trip to the Rangeleys. They stopped at the Mooselucmaguntic House, and most of their fishing was done near that resort. The largest fish was a salmon weighing 8 lbs., and in one morning's sport they landed fourteen fish—all trout—the largest 4½ lbs. and the smallest 2½ lbs. Like many others who have been at the Rangeleys this season, Mr. Farmer spoke of the excellent salmon fishing. One big fellow of 10½ lbs. was captured during his stay.

E. T. Burley, of Lawrence, has gone to the Rangeleys, and will stop for some time at a private camp and try the fishing.

Dr. C. E. Prior and Mrs. Prior, of Malden, left on Wednesday for the Rangeleys. The Doctor is a devoted fisherman, and although intending to stay but a few days hopes to bring back one or more of the Rangeley trout or salmon.

R. R. Gilman, of Boston, has reached home from the Maguadavie preserve in New Brunswick. He says the party had good fishing, mostly in trolling. Thirteen of Mr. Gilman's trout weighed 23 lbs., and he lost an old patriarch who simply took out all his line and galloped off without ever stopping to say good-bye. He reports quite extensive forest fires in New Brunswick, and says that many camps have been burned.

The Fuller party, who went into the Aroostook region from Stacyville about two weeks ago, returned last Monday evening. They had good fishing, sixteen of their best trout averaging 3½ lbs. each. While canoeing up the east branch of the Penobscot one of the canoes, containing two sportsmen and a guide, was caught in the swift current and overturned in deep water. The three men reached the shore safely, however, and the canoe was captured after quite a chase down the stream. Our two sportsmen had all the boating they wanted for that day, and were satisfied to tramp the rest of the distance to camp. They were very fortunate in losing only one article of their equipment, a .32 cal. rifle.

A considerable number of Inglewood Club members who did not leave with the main party last week will go down in a few days to join them. They are L. L. Hopkins, Morton E. Cobb, Chas. Hull, Peter Tancred, Chas. Brown, Leroy S. Brown, H. D. Yerxa and W. A. Taft.

HACKLE.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., May 28.—The first striped bass of the season to be taken along this coast was captured this morning by J. D. Woodward from the Asbury Park fishing pier; weight 6½ lbs. This, while not remarkably early, is nine days in the lead of last year, and anglers will be correspondingly happy. The prevailing east winds are very favorable to striped bass and kingfish, as the choppy condition of the surf on the bar washes out the worms and small crustacea upon which these fish feed.

Reports are coming in from Barnegat which are highly gratifying. Already good catches of weakfish have been made. This is something phenomenal for that body of water. While the season was very early last year, still the first weakfish was taken there on June 11, making this two weeks in advance. While reports were current last season of fish being taken in May, a personal investigation failed to verify the same.

I would advise anglers at present to direct their attention to Forked River, Waretown or Cedar Creek Point, rather than at the pier or any of the more northern points.

While shedder crab is usually a very killing bait, still there are times when shrimp alone will suffice, and this is particularly true early in the season.

Weakfishing, if had under proper conditions, is glorious sport. And by all means, never give up a season without having an all-night trip to some favorite locality. The angler who has never tried it may be somewhat skeptical, but to such I would say secure a safe, comfortable boat, and with one companion row quietly to some locality where the weakfish are known to abound, drop anchor 50 to 75 ft. away from main channel (as the weakfish always leaves the channel in the night during the flood tide, seeking food on the flats and shoals). Then, with line without either sinker or float, pay out to the tide until the strike is secured. With line stripped of all impediments, as above described, full play is allowed the quarry, and the fun partakes largely of the nature of fly-fishing, inasmuch as every quiver and turn of the fish is telegraphed instantly to the rod hand. I have taken as high as 125 fine tide-runners at a single tide fishing in the above described manner between midnight and sunrise. "Fish-hog!" I hear somebody say. Well, perhaps so, but what is a fellow to do when bait is plentiful, fish are on the feed and sleep not to be considered? This much, however, in extenuation of the thousands that have fallen to my rod: I remember but two fish wasted. There are always plenty of families to whom they are welcome, and it is ever my pleasure to see that all surplus fish are placed in the homes where they will be appreciated.

May 29.—I am in receipt this A. M. of a letter from Mr. L. P. Streeter, an enthusiastic rod and reel fisherman, who has been spending a few days at Anglesea in quest of the festive drumfish. That he has been thoroughly successful the following record will attest: May 22, four drum of 26, 18, 15½ and 13 lbs. respectively; 23d, two of 34 and 28 lbs.; 25th, five of 21½, 21½, 21½, 18 and 17 lbs.; 26th, three of 28, 20 and 16 lbs.; 27th, four of 51, 20, 16 and 15 lbs. A total of eighteen fish, weight 400 lbs.

A scale taken from the 51 lb. fish measures 14×1¼ in., which of course goes into my cabinet of collections. Where, oh, where is Big Reel? And why is he not there?

LEONARD HULL.

The Rangeleys.

LOON LAKE, Rangeley, Me., May 29.—Fishing is fine. Mr. F. B. Richardson, of Brooklyn, in four days fishing the Loon Lake caught sixty-four trout; the largest weighed 3½ lbs. A. Putman, of Lowell, caught twelve trout and four salmon in two hours.

The game is very plenty here this season; a party while fishing at Loon Lake saw six deer in the water.

R. S. YORK.

ANGLING NOTES.

Clams.

Constant Reader, 1206 Boyce Building, Chicago:

DEAR SIR—I have read your letter addressed to me in FOREST AND STREAM with unfeigned satisfaction; first, because it is always a pleasure to hear from you and Old Subscriber, Pro Bono Publico, Justice, Taxpayer, One of Many, and the rest of the rare band of choice spirits of the vintage of our early days, who were wont on stated occasions to read the riot act to an erring world. Now, full of years and honors, that you emerge from your seclusion and pensioned ease will be hailed with delight by a younger generation. Second, I am relieved to know that you have turned your attention from Western bull-heads to Eastern clams, for there was a time when I feared you would ruin your well-earned reputation if you tarried longer with the horned pout in its plentiousness at Koshkonong. With the clam you are on safe ground, and I can see with my eyes shut that you have made a scientific study of its environment, its ancestry, its pleasures, and its aspirations. As Darwin might have said if he had thought of it, the clam has never had a fair show to prove what it might become under the softening influences of education, and it remains for your Chicago association to give it that showing.

However, at the very outset I am in the dark as to the particular clam you would know about. There is the wild clam and the domesticated clam; salt water, fresh water, hot water and cold water clams; hen clams, cod clams, hard clams and soft clams; long clams, flat clams and painted clams—all belonging to the class of plate-gilled or lamellibranchiate mollusks. I have an idea that it is the soft clam you are after (*Mya arenaria*), sometimes known as the smooth-bore clam because of its flat trajectory. I know perfectly well that you have no use for the reticent clam in Chicago, because its ancestors have been inbred for generations, without a single out-cross, until it has little, if anything, to say for itself, and it is from this particular clam that has arisen the expression to politicians, "Don't be a clam"; and I have omitted from the list the razor clam, as under no circumstances should it be cultivated where it may spread into the black belt.

If you begin with the wild smooth-bore they will have to be halter-broken and gentled as soon as they are weaned, and clams of different temperaments require different handling; and it would be better to begin operation with a flock of domesticated clams; but I must warn you that just now the clam, with other articles of "bigotry and virtue," is much worn on the bonnets of the ladies in the effete East, and you will require a quavelian for each clam in the outfit if the fashion spreads to Chicago.

While I will try and give you some general information about the clam, I see that a few of your questions require specific answers. You should never set a hen on other than the eggs of hen clams, any more than to set cod clams under a bullhead, unless you have a hen of phlegmatic temperament. Hens are quite apt to get gay as clam stepmothers, and seem to think they have filled a bob-tail flush.

Clams will not girdle fruit trees, but maiden clams with a retoused expression will climb a spruce tree to its very top for gum, and in this way it may be the clam has been maligned as a tree girdler.

I fear you are inclined to frivol when you ask if clams are indigent. I never saw a clam that had a cent (except that ancient and fish-like scent which Shakespeare discovered), and why should they have, for they are like the lily in that they toil not, neither do they spin. The clam is cast in a patrician mold and can afford to be indigent. Tennyson understood this when he said:

"From yon blue heaven above us bent,
The grand old gardener and his wife
Smile at the clams of long descent."

In a clam hennery the perches should be some distance above the ground to admit of circulation of air and prevent an incursion of malaria and the pip. In a state of untrammelled nature the clam has no habits, but it acquires them when domesticated. It has a natural affinity for green corn, lobsters, chickens, sea weed and a hot fire, and this inclination should be encouraged in the clam, and the juxtaposition cultivated by man, as it does the man good and does not hurt the morals of the clam.

I have given a few facts in a general way, purely from a scientific standpoint, in regard to the finer instincts of the clam, but before the stuff goes to the printer I will submit it to my friend Ed. Mott, of the New York Sun, who has a clam juice farm in Pike county, Pa., for revision.

I know that Major Mott is generally regarded as a bear expert and hunter, for he usually kills a few in each Sunday issue of his paper, but since he chased a bear through two States and three counties, and had to make a map of the route (he tells me, not for publication, that making the map fatigued him more than the hunt, as it only took him a few hours to chase the bear for seven days, but it required a whole day to make the map), he has retired to his clam farm for recuperation. Really, he is at his best as a clammer, and if not troubled with writer's cramp he can give this Mahatma of the Theosophists cards and spades when it comes to a knowledge of clams, their hereafter and their heretofore, and if I mistake not, his creation, the "Old Settler" of Sugar Swamp, was a nanninose or soft-shelled clam in a previous state of existence, so that he is, *ex officio*, the stepfather of Theosophist clams.

The "Old Settler."

Three days are supposed to have elapsed, and in fact they have elapsed, and another day with them, since the above reply was written to Constant Reader. I sent the MS. to Major Mott, and he has returned it with the appended letter, and if, when my Western friend reads the two replies, he is not filled full of information of a reliable character about the clam, I fear he will have to apply at another shop to slake his thirst for knowledge.

Col. A. N. Cheney, Glens Falls, N. Y.:

MY DEAR COLONEL—I have received and read your replies to Constant Reader's inquiries in FOREST AND STREAM about certain qualities and aspirations of the clam, and am charmed with their simplicity, their technical accuracy, and the wide clutch with which they seem to take hold of knowledge on the subject. I am sorry, though, that you ask me to give my impressions of the clam, because I have made discoveries about him that are not

to his credit, and have disposed of my clam juice farm in consequence. I have discovered that the clam is vindictive and vengeful. Lying plump and sinewy on the half shell, surrounded, so to speak, by the wreck of his dismantled hearth, he is to all appearance as free from malice as a ball of putty. While no one has ever yet detected a look of tenderness about a clam, neither can it be said that, within human ken, were his features ever distorted by look of hate. A few generous investigators have gone so far as to declare that they have discovered a halo of sweet peace hovering about the dome-like brow of even those septuagenarian clams that the hospitable, upright Coney Island caterer most affects in his commerce with a hungry and confiding public; but in their diagnosis these investigators have mistaken the true nature of that India rubber surcingle which encompasses the girth of those hoary martyrs. But, halo or surcingle, no true clam ever, either by look or gesture, betrays a single emotion of his soul, be it of pleasure or be it of pain.

Notwithstanding this sphinxlike deportment of the clam, I have discovered that there is a heap of trouble on his mind. Peace may lie dimpled in his cheek, but vengeance lurks in his soul. His is indeed a mission of vengeance. And still, after all, and thinking it over, I don't see as I can blame him much. He remembers that he was ruthlessly torn away from the scenes he loved most dear, and he doesn't like it. Fond memory recalls to him moist bowers among the shining seaweed and cool spots beneath the surf-kissed sands. He remembers these things, and then remembers that his first resolve, when thrown upon a cold and hungry world, was to be an active agent in the distribution of the greatest bad to the greatest number. Therefore he lives for vengeance, and, so to speak, for vengeance dies. It is to further this vendetta, I have discovered, that he cheerfully becomes a dozen raw on the half shell, for he knows there are but few better or surer ways to set indigestion up in business. It is for vengeance that he submits without a murmur to corporal disintegration superinduced by a chopping knife, and, conspiring with second-hand onion peels, fish tails and dishwater, consents to surrender his self-respect and lend his name to that fond delusion which is hugged to the popular stomach as "free lunch clam chowder." It is for this also that he lurks beneath a gutta-percha covering called crust by courtesy, and thus disguised as clam pie, assails the unsuspecting gastric juices. It is also for this, hot from the coals, he lies in bloated but savory ambush between gaping shells and lures the credulous mortal to satiety and the doctor. I tell you, vengeance is his! He may be slow, but he will get there!

And yet people like this same vindictive clam. In fact, they yearn for him. As you well remark, juxtaposition of clam, green corn, etc., should be encouraged. If it were not for the clam there would be no clam bakes, and when a few score or so of people gather together of a day or of an evening to chew the clam bake, good digestion may not wait on appetite and health on both, but there is bound to be a good time. Note the magnetism of this crafty bivalve. Imagine one's self in a rural district. Nothing can depopulate that district quicker than a clam bake in an adjoining district. Green corn, lobsters, chickens, etc., are prominent at all well-regulated clam bakes, but suppose that any one should advertise a green corn bake, or a lobster bake, or a chicken bake. Who would go? Nobody. But let it be wafted abroad that somebody will bake the clam, and lo! the placid dwellers in the valley advance upon it as an army with banners, and the sturdy denizens of the hills pour down against it with teeth on edge and stomachs like an ostrich! I must admit that, although I have discovered that the clam is crafty, vindictive and alive for vengeance, yet do we all love his sinewy substance, have loved it from all time, and shall love it until time shall be no more. Truly yours,

ED. MOTT.

PIKE COUNTY, Pa., May 16.

RED SALMON.

THE well-known correspondent of FOREST AND STREAM, O. O. S., writes me from Washington State as follows: "In FOREST AND STREAM of Jan. 4 I have an article on red salmon which I hoped would receive some attention from experts, for I should very much like more information on the subject. As the article has not been noticed, may I ask if you will kindly notice it in FOREST AND STREAM, giving your opinion as to the origin and classification of the fish, and any information you may have concerning it."

Now, I am forced to make a humiliating confession and admit what has been locked with a combination lock under my own waistcoat as a secret. I did not read the article of O. O. S. in the January FOREST AND STREAM, chiefly because I have not read a copy of FOREST AND STREAM for more than a year. I have not read my own stuff unless someone has kicked about what I have written, and then I have read it to see if it was actionable. Since the first number of this journal was printed I have read every weekly issue with the same regularity that I wind my watch, but I sometimes forget and let my watch run down. For more than a year I have been able only to glance through the pages of FOREST AND STREAM as it came from the mail and put it one side to be read at a more convenient season. My rule has been to read the fishery department, then the editorial and then the other departments, and lastly, the advertisements; and I hope I may soon be able to return to this routine of reading FOREST AND STREAM.

The chief thing that I know positively about the red salmon (*Oncorhynchus nerka*), if I can believe the evidence of my own senses, is that the authorities are wrong when they say that it does not grow to exceed 20 to 25 lbs. in weight, for my brother sent me one from Vancouver, B. C., taken in Frazer River, that weighed 85 lbs.

Dr. Bean has written more at length from personal observations of the red salmon than any writer I know, and his observations were made in Alaska.

The red salmon is one of the five species of Pacific salmon:

1. Red salmon, *Oncorhynchus nerka*.
2. King salmon, *O. chowicha*.
3. Silver salmon, *O. kisutch*.
4. Hump-back salmon, *O. gorbuscha*.
5. Dog salmon, *O. keta*.

The king salmon is the largest and is the fish also called chinook and quinnat, or Columbia River salmon.

The red salmon is next to the smallest of the group

and is called the blue-back in the lower Columbia, the sawqui or sukkegh in the Frazer River, and it is the redfish of the Russians. Its range is from the Columbia River on the south to the Yukon River on the north. The head of a sea-run red salmon is more nearly like the head of the Atlantic salmon than is the head of any of the other Pacific salmon. In Alaska the fish averages 7 or 8 lbs., and is the most important species for canning and salting. The red salmon is chiefly a lake spawner, while the king salmon prefers the head waters of the rivers, but both go long distances up the rivers to find spawning grounds. It is said that the red salmon will not enter a river to spawn which does not arise from a lake. Bean observed personally that the red salmon spawned in Alaska in August. He says, "extensive changes take place in the color of the red salmon as the spawning season approaches. When it comes in from the sea the skin becomes dark and the beautiful red color of the flesh gives place to a paler tint. * * In the height of the spawning season the sides are suffused with a brilliant vermilion, and the head is a rich olive green, contrasting sharply with the color of the body. The male develops a hump nearly as large as that of the hump-back, and its jaws are greatly enlarged." The red salmon is much given to jumping entirely out of the water, and many may be seen in the air at the same time. They begin to run in from the sea in April, but the principal run is in June. O. O. S. has struck the red salmon right enough, and I have given what I can find about it in Bean's writings.

A. N. CHENEY.

Readers of FOREST AND STREAM who wish to review what the journal has published recently upon the Western salmon will naturally consult the Salmon and Trout Supplement of April 4, 1889. The redfish or red salmon, blueback, *Sawqui*, sockeye, Frazer River salmon and *Krasnaya ryba* are names applied to one and the same fish.

The issues of April 3 and 10, 1890; Oct. 2, 1890; Oct. 16, 1890; Dec. 4, 1890; July 9, 1891; Oct. 27, 1892, and Feb. 16, 1893, should also be consulted for papers on Salmon of Alaska, Idaho Redfish, Little Red Salmon and Kennerly's Salmon. Many details of description and accounts of habits, distribution, etc., as well as illustrations, will thus be seen.

The red salmon, blueback salmon or redfish was described by Walbaum more than a century ago. Those who care to look up the scientific literature of the subject up to 1883 should examine Jordan & Gilbert's Synopsis of the Fishes of North America, pp. 308-309. Later accounts have appeared in the publications, especially the Bulletin, of U. S. Fish Commission and in this journal, as above mentioned.

It is still an open question whether or not the little fish known as Kennerly's salmon in lakes of Idaho, Washington and British Columbia is identical with the red salmon of the Columbia Basin, Frazer River, Alaska and Kamchatka. The article in FOREST AND STREAM July 9, 1891, was written to call attention to important differences which may warrant the use of a distinct name for the small salmon, which appears to be landlocked and which is sexually mature when only 8 or 10 in. long.

The most recent contribution to the subject is to be found in Dr. B. W. Evermann's Preliminary Report upon Salmon Investigations in Idaho in 1894, in Bulletin, U. S. F. C., 1895, pp. 277-282. As few persons have the opportunity to see the salmon upon their spawning beds, it will be interesting to read the following account by Dr. Evermann:

"On Sept. 12 we visited Alturas Lake and examined the inlet for about three miles in the lower part of its course. * * * In this distance I counted 114 small redfish and fourteen large ones. Twelve of the large ones were on a shallow gravel bar near the mouth of the stream, and the other two were about a mile further up and on the same riffle with twenty-nine small ones. Other bunches of small ones of twenty-three, thirteen, nine, six and fewer were seen. These were all on the riffles and engaged in spawning. They were invariably in the current, with head up stream."

"We noticed that they scooped up the gravel into piles or ridges, using the nose, pectoral fins, tail, and sometimes the back. These piles of gravel were not large, however, and could not be noticed at a very great distance. Frequently we noticed the fish in pairs, a male and female, the female being usually a little in advance of the male. We supposed that they were spawning when in such position."

"Sometimes there was considerable fighting among the males. They would catch each other by the pectoral fin or by the nose, and hang on quite tenaciously, meantime floating slowly down stream. Then they would release their hold and return to the shallow water, perhaps to renew the fight in a few moments."

"I have spoken of 'small redfish' and 'large redfish.' The small redfish is what has been known as Kennerly's salmon (*Oncorhynchus kennerlyi*), while others have regarded it as a landlocked variety of the large redfish. The structural differences upon which the separation has been made do not appear upon an examination of a large number of specimens of each size. At present I am inclined to regard them as being specifically identical, though a fuller knowledge of the migrations of each may justify their specific separation."

"In the water both males and females of the large fish were quite red, the males but little more intense than the females. The small males are of a dirty red on the back and much brighter red on middle of sides; on the back are about thirty small, round black spots, not greatly unlike those on the cutthroat (red-throat) trout. The under parts were of a dirty white, dorsal and anal fins pale or dirty red, other fins smoky. The females were darker and less red, the spots were plainer, and the general resemblance to the cutthroat or black-speckled trout was more marked."

My own studies of the red salmon were made chiefly in Alaska, and the specimens of Kennerly's salmon which I have examined came from correspondents in Washington and Canada.

The red salmon is the second in size of the five known species of Pacific salmon. It seldom exceeds 15 lbs. in weight, and the average weight is only about 8 or 10 lbs. In the Salmon River basin, Idaho, the weight is still less.

Spawning occurs in August and September, and the usual habit of nest building is well illustrated by this fish. Recently, as has been announced in FOREST AND STREAM, it has been observed at Karluk, Alaska, that the young

red salmon return with the adults in large numbers in the spring. They do this quite frequently, and the theory that they go to sea when quite small and remain there until sexually mature must, therefore, be abandoned.

The male in the breeding season has a well-developed hump on the nape, and this gives him a very different outline from that of the female; but he is really a brilliant combination of colors, and will attract instant attention. Mr. W. C. Jennings, quoted by Dr. Evermann, says these salmon will not bite at a hook during the spawning season, but at any other time they take the hook readily, and any kind of meat will answer for bait. He writes of the redfish of the Payette lakes.

The passing of the redfish in Idaho is a notorious and lamented fact. Probably a few years later we shall have to enter the same pitiful record for the red salmon of Alaska.

TARLETON H. BEAN.

NEW YORK, May 23.

CHICAGO AND THE WEST.

CHICAGO, Ill., May 29.—The terrible storms which during the past week have made such frightful devastation in the West have caused so great a loss to life and property that it hardly seems fit to consider consequences of any other sort. Since so much unhappiness has been made for many it seems almost unseemly to consider what effect has been had upon the pleasures of a few by these manifestations of the wrath of nature. There is a strange and unsettled feeling over all this portion of the West, and much of the desire for the pleasures of the field natural to this season has been checked in its natural manifestation by the news from St. Louis and many smaller Western cities. I have spoken before of the fact that Decoration Day in Chicago is a great anglers' holiday, but to-day the enthusiasm does not seem of the infectious sort. The weather remains cold and forbidding, not of a sort to invite one out of doors. Unprecedentedly heavy rainfall has swelled the streams and lakes in many parts of this region, with the result that for the time the angling will be impaired. It is notorious that high water means good angling later on, and undoubtedly the abundance of water now will mean better shooting in the fall, but these are consequences not in review to-day, and, as I have said, there exists to-day, for one reason or another, a sort of chill over the sportsmanship of this section. So far as is known at the time of this report, however, none of the better known figures of the sportsman's world have suffered in the disasters of the last few days.

Netting Carp.

Game Warden Blow has secured two convictions for illegal seining in the Calumet River. Abraham Kamerman was fined \$50 and Max Karpec \$5. The men have been seining the German carp out of the Calumet River and peddling them around the country. They had 500 lbs. of carp when captured, though they seem to have been peddlers and not netters themselves. The men with the seine swam the river and got away. It is a bad thing to have the laws broken in any respect, and Warden Blow is to be commended for his activity. But what a blessing it would be if Warden Blow or some other genius could devise some scheme by which every German carp on earth could be jerked into swift and permanent immortality into some other sphere.

Camp Outfits.

This is the season of the year when the man who goes camping is inventing things. Of course it is the aim and idea of all campers to dispense with all unnecessary bulk and weight in their camp outfits, and to reduce everything to a collapsible and condensable form. This laudable desire to save space has probably made more money for the dealers and been the cause of more bulky outfits for the worthy amateur than almost all other causes combined. One tries first one kind of portable outfit and then another, with the result that he has a dozen or so before long, all of which he is bound to take with him when he goes out camping. I myself have a vault and three cabinets full of labor-saving and space-saving contrivances, all of which grew out of a praiseworthy effort to get a light outfit for a simple little fishing trip which occurred some years ago, when I was a youth. When I go fishing now I feel obliged to take all these different outfits along, of course, so that I can tell which is the best one of them; but all this space-saving baggage takes a lot of room. Just now I am experimenting in frying-pans. I bought three the other day, all of aluminum, and I have chartered Mr. Moran, one of the gunsmiths of Montgomery Ward & Co., for the labor of boiling down these frying-pans, so to speak. He has sawed off all their handles, and made a sort of least common denominator handle for the three of them. The handle does not weigh over 3 or 4 lbs., I should think, anyhow, and looks as though it would stand a lot of hard frying. I am also busy constructing a stove, with Mr. Moran's help, out of a gun barrel, but we haven't got it done yet, and I decline to say much about it till after I have taken it out, with some of my other space-saving devices, and found out what it will actually do under fire. It is a Damascus stove, and probably the only one of its sort in existence. We may hear of it in camp FOREST AND STREAM this summer, I hope.

Speaking of outfits, it is odd what sorts of equipment one sometimes sees among those evidently bound for an outing of some sort or other. I recall that a friend of mine once joined me for a fishing trip carrying a large and voluptuous umbrella, which he thought would be a good thing. This filled me with horror, for there is no hoodoo on earth surer than an umbrella on a fishing trip. I made him check the umbrella at the depot, but the gloom of it continued throughout the trip, and we caught no fish at all. Another friend of mine once came with his sole baggage, an extra pair of shoes, wrapped up in a newspaper, and I had to argue a long time with him before I persuaded him that that was not a sportsmanlike way to go fishing. Another friend, one of the "always-travel-light" cranks, came along with no tackle but a hook stuck in his vest and a pair of socks in his pocket. When you travel with anglers of this kind it is advisable to have a large and comprehensive assortment of portable devices.

Looking Eastward.

I am disposed to believe, as stated earlier in these columns, that Chicago anglers this spring might very well turn to the southward and eastward of this city for some of their fishing. The angling is improving in south-

ern Michigan and northern Indiana, and there are many lakes and streams in that section of which we have heard nothing recently, but which are very well worth a visit. Mr. W. H. Comstock, a very able and enthusiastic angler of this city, came to this office the other day to inquire where he could find some good fly-fishing water for bass for a little trip to-morrow. It was too early for Wisconsin, and we were afraid it might be a little early for the Grand River of Michigan, which we feared would be high from the recent rains, so we concluded that probably the Tippicanoe River of Indiana, between Winamac and Monticello, would be about as good a location as offered at this date. Since seeing Mr. Comstock I have been inquiring about some of the lake fishing in Indiana, and I hear that Fish Lake, near the station known as Swift's, on the Chicago & Grand Trunk Railway, is offering remarkably good fishing for bait or fly this spring. Yet a little further along on this same road, at Cassopolis, Mich., 125 miles from Chicago, is Diamond Lake, a body of water which I never have seen, but to which I think a trip might be desirable. This is a deep and clear lake, without much marsh about it, and has both small and large-mouth bass, besides the usual smaller lake fishes. The surroundings are beautiful, and I should not wonder if some of our Chicago bass fishermen, looking for a place to go, would find this a very desirable locality for a little trip. This lake is very highly recommended by Mr. W. E. Davis, who is very much of an angler, and who calls this his favorite lake. I mentioned earlier a little lake near Westville, Ind., not big enough to have a name, but said to be full of bass, which Mr. W. S. Phillips and myself have an idea of trying to-morrow if we have luck. The route there is by rail to Haskell's, thence four miles due north on foot to the village of Westville, then 4° in a northwesterly direction to a farmhouse, which is a mile and a half from the lake. We expect to catch about 450 bass, or somewhere in that neighborhood.

E. HOUGH,
1206 BOYCE BUILDING, Chicago.

Mr. Hawkins Couldn't Stand It.

HENRY B. HAWKINS, deputy United States Revenue Collector, is a true sportsman. Whether with a rod and reel or gun, he is in his element. Even a cross-country run on a wheel after the Long Island "moonshiners" satisfies his sporting appetite at times.

But he was disgusted a few days ago when he saw a fellow who thought he knew something about fishing sitting on the bank of a stream dangling a hook in the water. Here's the way Mr. Hawkins told me the story yesterday:

"I took a run down on Long Island a few days ago and made up my mind to catch a mess of fish. I was sitting in a small boat when a young fellow appeared on the shore. He was dressed in a sporting suit that I knew was never intended to be worn within 90 yds. of a bait basket. The bewitching thing was accompanied by a colored man, who selected a nice, comfortable place for his master, and then carefully brushed the spot before the gentleman fisherman would seat himself. That was but the commencement.

"The colored attendant got out his master's rod and put it together. He fixed the line and then the hook and finally the bait. In the meanwhile my young gentleman gazed at his plaid stockings and at the water. Once he condescended to look at me. The servant when he had everything completed except catching the fish handed the rod and line to the 'sport.'

"You would have thought the attendant was a young society fellow handing a bouquet to his lady love, and then to see that fisherman take the rod between his finger tips—well, however, he really threw the hook into the water without the aid of the attendant.

"Of course there was no reason why he should not have caught a fish, as the stream was a preserve and the fish had been fed carefully all winter, and so the fellow got quite a mess. Every time a fish was hooked the gentleman would pull it out of the water and swing the line inshore, so that the colored man could remove the fish from the hook and replenish the bait.

"The whole proceeding nearly spoiled my sport. I was so disgusted that I pulled my boat out toward the Sound."

—New York Herald.

Seven Tarpon in One Day.

PROBABLY one of the most successful tarpon fishermen in the United States, or in the world, we might say, is Mr. G. R. W. Armes, a well-known New Yorker, who visits Myers annually during the fishing season. Mr. Armes has held the record for tarpon fishing for several years, his record of fifty-three fish for the season of 1894 having never been beaten. Tuesday, however, was the day of all days for record-breaking, Mr. Armes bringing in seven beauties, the largest weighing 165 lbs. These fish were caught from 9 A. M. to 4 P. M., the largest one requiring forty-five minutes to bring him to gaff, and then only succumbing to superior skill and endurance. A less practiced man would have lost him, so desperately did he fight for his freedom. To play a 165 lb. mass of plunging, surging bone and muscle on a line no larger than a No. 20 cotton thread requires a steady nerve, good judgment and long practice, but during all his years of fishing Mr. Armes bears the record of having never lost a single fish when once hooked. At one time the 165-pounder was within a few yards of having all the line run off the reel, but quick work turned him and saved the day. Seven tarpon have never been caught in one day before by any one man, and Mr. Armes is wearing his honor modestly.

He fishes in a 15 ft. boat, and it was a sight to see the boat loaded to the water's edge with its gleaming, burnished mass of silver. Mr. Armes has caught forty-one tarpon here so far this season and will endeavor to break his record of fifty-three tarpon for the season of 1894. The total weight of his catch up to date is 3,931 lbs., which, allowing 1 lb. a meal to a person, would feed a man three years and 220 days, or 3,931 men one meal. Frank Smith has been his guide this season and we all know Frank is a mascot.—Fort Myers (Fla.) Press.

Long Island—On the Trestle.

BROOKLYN, May 17.—Editor Forest and Stream: There are four of us, working people, who would like to hear from fishing clubs having their boat house on the trestle, with a view to join.

C. B. LUTZ.

291 MARION STREET.

Bass in Grand River, Mich.

GRAND HAVEN, Mich., May 25.—State Game and Fish Warden Osborn is waging a vigorous war on the fishermen on the great lakes, who have for years entirely ignored the law governing the size of the meshes to be used. On the 23d inst. Deputy Brewster, acting under instructions from Mr. Osborn, seized nets valued at over \$10,000 from fishermen at Grand Haven, and arrested Adrian O'Beke, Cornelius Van Zanter, Abram Fisher, Johannes Fisher, Peter Van Bendigan and Wm. Van Diun, charging the use of nets of unlawful sized meshes. They were taken before Justice Pagelson and upon their plea of guilty were fined \$10 each and costs, which they paid. The nets were ordered confiscated. This is the second time these fishermen have been arrested and fined within a month.

The bass fishing in the Grand River gives promise of being the best it has been for years. Notwithstanding the cold weather of the past week, several large catches have been made, although mostly with minnows. The local game warden, Mr. Hammond, has kept a close watch on known violators of the fish laws who live near the river, and there has been a less number of violations reported than for years. Some very nice strings of white bass have been taken from the mouth of the river.

ANGLER.

Portage Lake, Wisconsin.

ASHLAND, Wis., May 25.—I inclose a list of some of the catches of trout made at Portage Lake this last week: William Loane, (Ashland), one trout, 4½ lbs. Orcutt & Murphy (Ashland), four trout, 4, 3½, 3 and 2½ lbs.; thirteen trout, ½ lb. up to 2 lbs. W. McKay, five trout, 12½ lbs. total. C. Gregory, five trout, three of 3 lbs. and two smaller. F. A. McNally (Ashland), six large trout, 2½ to 4 lbs. E. Howard, sixteen large trout, 1 lb. to 3½ lbs. One party from Presque Isle, two men, caught in two days 50 lbs., mostly large ones. H. H. Robinson (Presque Isle), seventeen trout, one of 4 lbs., three of 3 lbs., and the rest from 1 to 2½ lbs. Besides what has been done by residents of Portage Lake. The fishing has been the best this spring ever known at that place. There are a few fishermen coming from out the State.

C. G. REED.

McCloud River Fishing.

BAIRD, Shasta County, Cal., May.—The McCloud River is one of the finest trout streams on this coast. The fly-fishing season begins about April and continues until July. Route: By rail to Redding, thence twenty-one miles by carriage to Baird. By corresponding with Mr. J. L. Bass, Baird, arrangements can be made with him to bring a few passengers from Redding. Good accommodations and a fine table will be found at the Fishery mess-house. Those who prefer camping will find good camping grounds on both sides of the river. Fishing tackle and canned goods for camping can be procured at the Fishery store. Mails arrive at Baird daily, except Sunday, at 12 M.—The Salmon Fly.

Budd's Lake, New Jersey.

STANHOPE, N. J., May 17.—Fishing this season has been better than ever. M. J. Churchward and Mr. Percy T. Griffith last Saturday and Sunday caught 115 pickerel.

Lake Hattacawanna (the Indian name for Budd's Lake) has been well stocked with fish of various kinds, principal among which are the black bass and pickerel, and for these no better fishing can be found in any section of the country (fishing restricted to several months).

Budd's Lake is two and one-half miles from Stanhope on the Morris and Essex Division of the Delaware, Lackawanna & Western R. R.; three and one-half miles from Flanders, on the High Bridge branch of the Philadelphia & Reading and Jersey Central railroads. E. DURYEA.

The Record Bass of the Greenbrier.

MR. WM. GARSTANG's party from Indianapolis are now at the Alderson House. They seem to be taking full advantage of everything that is to be enjoyed about Alderson at this season. Fishing in the Greenbrier is the absorbing occupation. Dr. Reginald Garstang, on Tuesday, drew from the rapids at the head of the Gwinn Pool the largest small-mouthed black bass ever caught here. It weighed 5 lbs. 4 oz., measured 21½ in. in length, 6 in. in breadth, 2½ in. in thickness, gape of mouth 3 in. It took twenty-five minutes of royal excitement to land him, and the rest of the day to contemplate his proportions.

ALDERSON, W. Va.

Grand Cascapedia Salmon.

QUEBEC, May 28.—I am here on my way to my pool on the Grand Cascapedia River, and if I have any luck may write you from there. As salmon are now being taken off Maria, P. Q., out in the Bay of Chaleur (in nets), about eight miles from the mouth of the Grand Cascapedia River, we expect them soon to be running in our river, and it is earlier than I have ever known in my ten years' experience there. As there is more snow and ice in the mountains at the headwaters of that river than for many years past, we look for a fine stage of water, and that always gives us a fine run of salmon.

R. C. L.

Texas Perch and Bass.

VICTORIA, Texas, May 18.—We are having fine fishing now in our country in a lake about fourteen miles below our little city. Large perch in abundance and large-mouth bass are the fish caught. One evening last week I caught eight in half an hour between 6 and 7 o'clock P. M., with a phantom minnow. They strike well at spoons also. Cut bait catches them too. We are having sport such as we have not had for three years. I learn that bass of large size are abundant in the lakes around Velasco.

FOXES AND GUNS.

Editor Forest and Stream:

Sunday night after dark a light snow fell—the first for many weeks—so early Monday morning four guns and one hound start out to stir up the foxes.

Four rods from a house just out of the village the hound is let go on a fresh track, and in fifteen minutes has started the fox.

Away they go, out of the pines into the pasture and through the swamp, across the clearing where stands the old hay barn, through Bog Swamp to the edge of the Hunter place, then south up Bog Brook a ways, then east into the open pasture, where sly reynard doubles and slips back into the swamp, and after circling there once or twice comes out and up over the farther side of the high Priest Hill.

Meanwhile the guns have been following slowly on, and two of them are somewhere about the hill, but not in position to see the fox. One finally takes a stand in a fence corner near the top of the hill and waits there about half an hour, while reynard circles a mile or two in the valley below, but thinking he would pass below into the swamp again, that gun left his position, going toward the swamp.

But vain is the calculation of guns and gunners!

Within ten minutes that perverse fox came swinging up the hill with the wind, and stopped with his feet on the fence at that very corner, smiled blandly at the tracks in the snow, turned off to the southwest and went down the hill feeling so good that he concluded to have a little fun with the hound. Slacking his pace, he allowed the dog to run close, and for fifteen minutes they circled about two or three gunshots distant from the fourth gun, in an open field, the dog having no time to give tongue, for he was running only 1 or 2 ft. distant from the tail of that fox and continually making frantic efforts to seize it.

Tiring at last of this amusement, reynard suddenly dropped to the earth, and the dog, not expecting such tactics, went rolling over him, and he bounded away in another direction.

He now took a course due northwest over the mountain out of hearing, and gun No. 4 went home.

About this time the other guns gathered on top of Priest Hill for consultation. It was snowing lightly and no one had yet seen the fox (except No. 4, who had gone home).

Some counseled to wait and this prevailed. Time was passed stamping feet and recounting incidents of the chase, and listening for the dog.

After nearly an hour he was very faintly heard coming over Cross Hill, away to the west some six or eight miles, and after another half-hour's wait he was again heard, nearer and more to the south, but yet far away. Soon he could be heard now and then much clearer and was evidently aiming again for Priest Hill. The three guns at once scattered to fence corners and awaited his coming.

They had not been in position more than ten minutes before gun No. 3 espied the little rascal crossing a field one-fourth of a mile away, going toward gun No. 1. He possessed his soul in patience, however, knowing reynard is an erratic roadmaker, and was soon rewarded by seeing him cross his vision on the other angle about 150 yds. away. Springing into the road, he tacked back again about four rods, then over the wall and up along the fence behind which gun No. 3 was waiting. Now was No. 3's chance. Now, as the fox was just opposite, about 25 yds. away, the old gun spoke and reynard takes a tumble. The second barrel was ready, but was not needed, as with one squeak and two kicks he is dead, and gun No. 3 holds a war dance over his first fox.

The others come up and the dog, Hunter. The fox is skinned, and as it is nearly 11 A. M., all wend their way homeward, planning for another hunt on the morrow, if the conditions are right.

I have spun this out to such length that I will not attempt to describe that hunt, but will simply state results.

Same guns and same hound, Hunter, started in same direction next morning, and after running a fox three-fourths of an hour gun No. 3 shot both barrels and broke reynard's front right leg, when the hound came up with and killed him in about 400 yds. This at 7:30 A. M. The dog was again started, but the guns failed to connect, and after holeing the fox, came home about noon.

Next morning the same guns, with the exception of No. 3, started again and run a fox to earth about 9 A. M. and gun No. 2 came home.

The dog started another, and about 2 P. M. gun No. 1 shot him dead at three or four rods distance.

This dog and some of these guns have been out about eight or nine times before Jan. 1, and have secured four foxes besides these—seven in all.

I have enjoyed so much in the columns of the FOREST AND STREAM that I thought it was time I did something with my pen for the pleasure of others.

POWDER FLASK.

Dog and Car.

Of all the enemies which harass the dog, there is none more merciless and destructive than the street car, whether its motive power be cable, electricity or horses. Forming a most intricate network of transportation through all the thoroughfares and byways where men travel in large numbers in cities and towns, the street car lines are a constant menace to the life and limb of the dog, much more than to man.

That many hundreds of dogs are killed by being run over there is every reason to believe, though from the lack of statistics on the subject the number must remain in the realm of speculation.

Unlike his master, the dog cannot profit by the experience of his fellows. There are no hearsay experiences for him. His knowledge comes from his own direct personal observations. Considering the manner in which the dog learns what is harmful and dangerous and what is not, it is remarkable that so few succumb to the perils which beset them at every turn.

For man the street car has a semblance of consideration; for the dog, none at all. In New York and other large cities, the successful street car traveler must be something of an acrobat. The successful dog must keep entirely out of the way. For the man who is so unfortunate as to be ground under the wheels, the car will stop in a perfunctory way; the policeman will in an equally perfunctory manner arrest the motorman and conductor, the ambulance will follow in due order, and soon all vanish from public gaze into the surrounding swirl; then traffic is resumed as before.

For the dog the car has no heed. If he gets in the way, be he cur or blue blood, his fate is the same. Even if he is so unfortunate as to be caught under the wheels, his misfortune then does not attain the dignity of an incident. The car hurries on its way, a few of the morbidly curious observing how a dog looks when cut up into pieces of different sizes.

The counterpart of "beware of vidders," "put not your trust in princes," etc., so solacing to man afterward, would be to the dog, beware of the cars. They are harmful and deceptive. Of the latter point a gentleman, who loves dogs and constantly observes their wise ways whenever opportunity offers, relates an amusing story of an incident which he observed in Washington recently. The principal actors in the story were a street car and a dog. The car had stopped for a few moments. A wandering dog, lolling and flanks heaving from distress, saw its refreshing shade and quickly composed himself therein with much parade of satisfaction. In a moment the car moved on, taking its shade with it, the sudden transition from shadow to sunshine leaving the dog in momentary bewilderment. Neither the shadow nor the car, from the dog's standpoint, were worthy of his trust. He started off briskly on his way searching for more shadows, a fit subject for the timorous man who cries "mad dog" whenever he sees a dog in distress of any kind novel to his sight.

The Central Beagle Club.

PITTSBURG, Pa., May 23.—The Central Beagle Club met on the 15th instant and all the officers were present. The by-laws were received from the committee and accepted, and ordered to be printed at once.

A committee was appointed to select the most suitable ground to hold the trials on. Several good grounds were offered the club on which to hold their trials. They will settle on the ground at the next meeting, which will be held on July 17, at 8 P. M., at O. D. Levis's office, Pittsburg.

The judges will be selected at the next meeting and also all other matters in regard to the trials. They will be run on Nov. 10, 11, 12.

There were twenty-two applications for membership and the secretary has received several more since the meeting. This is very encouraging to the club. There are more beagle fanciers in and around Pittsburg than any person ever dreamed of. The trials are bound to be a success, as they have the support of the right kind of people. The club will have a class for the dachshund and Basset hound, and it is hoped that the lovers of these hounds will show the people that they can run the cotton tails as well as the beagle.

The secretary was instructed to make application to the A. K. C. for membership. After several short talks from the members, the meeting adjourned at 10:30 P. M.

L. O. SEIDEL, Sec'y.

Coons.

CONNECTICUT.—*Editor Forest and Stream:* My dog Rover has upset many theories advanced to me about coon hunting, and although I am a coon hunter myself but a short time, I have come to stay, and I am taking every opportunity to gain knowledge.

Each coon-hunting section has its dog that it swears by, but in all my talks with hunters I have yet to hear of so good a dog as Rover. Now, good coon dogs are not plenty, like this one, who has located coons in a hollow tree by taking a track I know was at least fourteen hours old (how I know will be explained if you care for such a letter for publication). He has treed coons for me ten minutes after killing a skunk, and also made them go up within 20ft. of a hole in a ledge. He trails so fast they did not have time to get to the ledge.

So great an authority as J. B. Clarke, of Manchester, says that coons do not give any scent in summer; that it is a very good dog that can tree coons in September and a remarkably good one that can do so in August; yet Rover treed an old coon for me July 4 in the afternoon, and since then has treed six more, three being young ones little larger than squirrels. It was 3 P. M. They were asleep in a squirrel's nest and of course had not been on the ground since the night before, thus proving that he has a nose strong enough even to scent young coons in July. I took them alive, and so can tell you that young coons about July 7 weigh less than 2lbs. each.

In answer to letters written by me to Mr. Clarke, I have matter that no doubt would be of interest to you; some of it is printed. One article in particular about scent is very interesting, although he is, I am sure, "off" on some of his assertions.

I had the pleasure of meeting Norman at the Boston dog show, and have an appointment with him to try our dogs in the autumn.

Such articles as he and Tenderfoot write on coon hunting are most enjoyable reading, and Mr. Thompson's diagram is very funny and can be appreciated by all lovers of coon hunting. I doubt if there is any sport where so much fun comes in.

JAMES G. LATHROP.

BLOODHOUNDS AS AIDS TO THE POLICE.

FROM time to time a great deal has been written with regard to the utilization of the modern bloodhound in tracing poachers and criminals. Some few years ago, sundry hounds were brought to the Metropolis with a view of using them as aids to the police in attempting to trace the perpetrators of a diabolical crime who are yet at large, but, as we pointed out at the time would be the case, hounds were quite useless in making out the scent of a man whose footsteps had been repeatedly trodden over, and all odor therefrom either obliterated or so mixed with other scent as to be untrackable. Shortly, bloodhounds, or hounds of any other kind, would be simply of no avail as detectives in thoroughfares and other places where passers-by are frequent; but in country districts it is a different matter altogether. No doubt, too, a bloodhound trained for the purpose might be of considerable use to the rural constabulary in the detection of poachers and criminals, who otherwise might escape justice. Still, the employment of dogs for such a purpose will probably meet with strong opposition until it is satisfactorily understood that when the hound has brought his human quarry "to bay," he will not worry and eat him. As a fact, the bloodhound is not such a cruel and savage beast as his name implies; and when he has found the man whose footsteps he has carefully scented out, he is content to bay or bark at him until assistance comes. The modern hound never attempts to make a meal of his game. So the alleged cruelty of the process of hunting criminals with hounds is quite fallacious. We have been hunted by bloodhounds ourselves, have seen youths act as their quarry, and in no case was there the slightest danger of being bitten or attacked. We imagine those hounds which were used in the Southern States of America in connection with the slave plantations to have been different creatures altogether from our modern animals—unless the stories of the ferocity of the so-called Spanish dogs of Virginia, the Carolinas, and other States, were greatly exaggerated. Even if a hound has a tendency to be savage, he could be trained to run in a leash, as is the case with the elk hounds of Norway.

We have been led to return to the subject by the copy of some correspondence which has recently been forwarded to us, where a constable in a country district was enabled, with the aid of a young bloodhound bitch, to apprehend certain poachers who otherwise would have escaped. For obvious reasons there is a desire to omit the name of the locality where this took place; but the truth of the narrative is vouched for by the superintendent of the police of the district, by his constable who used the hound, and by the breeder of the hound.

The story is as follows: Some time this year a constable was out in the early morning, when about 6:30 A. M. he came across a couple of notorious poachers who were walking along a footpath through some fields. They, seeing the constable, called out in alarm as a signal to their companions, who were no doubt coming behind. Owing to the darkness, the latter escaped; but the constable took some rabbits and nets from the men he had met, for being in the possession of which under such circumstances they were later on duly punished. At daybreak the constable, accompanied by a young bloodhound bitch, returned to the place, and was able to distinguish the footsteps of a number of men who had come out of the turnip field. They had separated, some going in one direction, others in another. The hound was put upon the tracks, and with her nose to the ground she hunted them across two fields, going straight to the sundry bags of game which had been hidden in a hedgerow. So far so good; but the constable was not yet satisfied, and he took his hound back to where she had originally been laid on the line. This time she went off in another direction, and soon left the policeman far behind. He following up, however, ultimately found her standing at another hedgerow, where more bags of game were found concealed. These were secretly watched all day, but the poachers must have "smelled a rat," for none of themselves or their families came near. This is rather to be wondered at, for the bags were numerous and their contents valuable. At night the constable and the lessee of the shooting concealed themselves near the place where the first lot of game was discovered. Now they had not long to wait, for in about half an hour there came a sound of approaching footsteps, and two men appeared, who immediately appropriated the bags and their contents, which included nets and the usual poachers' paraphernalia. They were at once recognized, and, the spoil taken from them, were allowed to go. Summonses followed in due course, and when the case was heard a plea was set up that they had not taken the game themselves, but had been sent for it by their mates. Fines of 40s. and costs were imposed, or, failing the payment, a month's imprisonment.

Now, in the above case a comparatively untrained puppy was found to be of great use; and had it not been for her the two men would never have been caught. There is no doubt they were members of the original gang, and had taken part in the capture of the game for which they were convicted.

The hound in question is one of our ordinary bloodhounds, such as win prizes on the show bench.

A rather funny episode comes to us from the recent New York dog show, and it bears on the same subject. A Yorkshire terrier was stolen, a man was suspected, traced to the railway, where it was found he had taken a ticket for Baltimore. A telegram beat the train, and the fellow was arrested with the dog in his possession. However, in the meantime, a happy idea struck the lady superintendent of the show (this is an innovation which has not reached us yet), who put a bloodhound, called Queen of the West, on what were supposed to be the tracks of the thief. The hound made the line out right gallantly, and ultimately "ran her man to bay." Fortunately he was able to prove his innocence, but we are not quite sure whether the matter is yet satisfactorily ended; for it is a serious thing to put a bloodhound on the track of a wrong man.—*The Field (England).*

POINTS AND FLUSHES.

We understand that the entire kennel of greyhounds—with the exception of Fullerton—belonging to the late Colonel North will be sold by auction in July, without reserve. There are about sixty-eight sapplings, puppies, all-age dogs and breeding stock, including the stud dogs Young Fullerton, Simonian and Neston, in addition to which fifty whelps and three Barzois will be offered for disposal.—*The Stock-Keeper (England).*

Mr. John Wootton, secretary of the Manitoba Field Trials Club, informs us that the famous breeder and field trial expert, Mr. P. H. Bryson, will judge the club's trials, beginning on Tuesday, September 1.

The value of the cup to be given by the Continental Club for competition in the Northwestern stake will be \$60 or more instead of \$50, as erroneously mentioned.

Yachting.

OCTOBER.

3. Cor. Atlantic City, mosquito class, Atlantic City.

The Yacht Racing Association of Massachusetts.

As a result of two years of careful experimental work in the direction of permanent union under the name of the Congress of Regatta Committees, the yacht clubs of Massachusetts Bay are once more united in an association for the management of races. That the attempt has failed more than once in the past is no reason for the belief that the present organization will not prove permanent and prosperous, advancing the interests of yachting and yacht racing and itself attaining a higher standard. The conditions existing to-day are very different from those under which the last unsuccessful attempt was made; the many clubs are more closely in union, there is comparatively little difference in racing rules and methods, and the whole tendency of the times in yachting is toward harmonious and concerted action, uniform regulations and open races. The new association starts off with a membership of twenty-seven clubs, by no means all within its territory (though we know of no reason why such an association should not appeal to all), but still a representative number, and covering thoroughly the entire waters of Massachusetts Bay, in fact extending from Newburyport on the north down to Cape Cod on the south. The clubs are the American, of Newburyport; Atlantic, of Boston; Boston, Cape Cod, Chelsea, Cohasset, Commonwealth, Columbia, Dorchester, Duxbury, Hull, Jeffries, Kingston, Lynn, Manchester, Massachusetts, Mosquito Fleet, Old Colony, Plymouth, Quincy, Revere, Savin Hill, South Boston, Squantum, West Lynn, Wellfleet and Winthrop.

The Association was organized on March 19, 1896, with the following officers: Pres., Louis M. Clark, Mass. Y. C.; Vice-Pres., A. H. Higginson, Manchester Y. C.; Sec'y, A. T. Bliss, Winthrop Y. C.; 111 Milk street, Boston; Asst. Sec'y, J. E. Robinson, Savin Hill Y. C.; Treas., Walter Burgess, Boston Y. C., 15 State street; Executive Committee, H. M. Faxon, Quincy Y. C.; N. B. Stone, South Boston Y. C.; T. E. Jacobs, Hull Y. C.; Meas., James Bertram, 330 Broadway, Boston. The book of the Association, just issued, contains its rules, under which all the associated clubs will race, the allowance tables, specially revised last year by F. N. Bemis, tide tables and miscellaneous information.

While materially better than the older rules of its kind under which previous attempts have failed, the rule adopted is very far from satisfactory in that length also is included, it being the same rule originated and used by the Atlantic N. Y., of Brooklyn, some ten years since, the length taken at some fixed distance above the actual waterline; in this case 3in. for all yachts within the limits which the Association aspires to cover, of 80 ft. l.w.l. length. Whatever may be urged in favor of a "mean length" rule, by which yachts are taxed (especially where sail goes free), as a concession to old craft of the back number type, we believe that no valid reason can be given to-day for the taxation of overhauls, and that some restriction of sail is a necessity. In view of the widespread and successful usage of the Seawanhaka rule, the Association would certainly have done nothing radical or dangerous in adopting it, and it is now a question how soon all the clubs will have to go still further in the same direction of judicious restriction in the introduction of a third factor in the formula tending to produce a greater displacement. If, as is generally recognized, the Seawanhaka rule is inadequate in stopping the prevailing tendency to reduce displacement and to sacrifice necessary strength, then the mean length rule is still more inadequate. We hope that a comparatively brief experience will show the possibility as well as the desirability of replacing the present rule by the one used by nearly all American clubs, that of length on the waterline and sail area.

The classes under the rule are: First class, 25ft. and under 30; second class, 21 and under 25ft.; third class, 18 and under 21ft.; fourth class, 15 and under 18ft.; fifth class, under 15ft. There is also a knockabout class, under the restrictions already published in the FOREST AND STREAM. The limit of crews is: First class, 7 men; second, 6 men; third, 5 men; fourth, 4 men; fifth and knockabout, 3 men. Shifting ballast is of course prohibited. The list of scheduled races is a long one, forming part of our list of fixtures, and included some clubs not members of the Association, but which give certain races under its rules. The very neat book of rules is, we presume, largely the work of the secretary, who has done a great deal toward the successful organization of the Association. A system of fixed numbers has been adopted, the numbers below 100 being allotted to the fifth class, those from 100 to 199 to the first class; 200 to 299 to the second; 300 to 399 to the third, and 400 to 499 to the fourth, the knockabouts being numbered from 500 up. It is also provided that when a special class is added the numbers from 60 to 99 shall be used for it.

The Thames Races.

The match races of the New Thames Y. C., from South End to Harwich, were sailed on May 30. The sky was cloudy, and there was a contrary tide, with the wind from the northeast. The start was made at 9:55 A. M. In the race for the large raters Satanita crossed the line 10 seconds ahead of Britannia, who was followed by Ailsa, Caress, Isolde, Corsair and Hester.

In the race for twenty-raters Penitent crossed the line first and Niagara last. Afterward Britannia and Niagara overhauled the leaders in their respective classes.

Following are the times of the yachts at the finish: Satanita, 4:34:32; Britannia, 4:37:37; Ailsa, 4:41:56; Hester, 5:18:21; Isolde, 5:27:04; Corsair, 5:44:15.

In the race for the twenty-raters Niagara finished at 5:04:14, and Penitent at 5:57:47. Britannia won the larger rater race on time allowance by 17 seconds. Britannia's new rating is 97; Satanita's, 100.1, and Ailsa's, 100.1.

DECORATION DAY, 1896.

SATURDAY, MAY 30.

WITH clear and pleasant weather and good breezes, the yachting season of 1896 was opened most auspiciously. Many races were sailed and the yacht clubs generally celebrated the day by receptions at the club stations. The day passed off pleasantly, with no serious mishaps among the pleasure fleet.

Harlem Y. C. Annual Regatta.

CITY ISLAND—LONG ISLAND SOUND.

THE Harlem Y. C. was scheduled for the first open race of the Yacht Racing Union, and with a big fleet and a good S.W. breeze the day was most successful. The courses were from a starting line off Belden's Dock, City Island, out on the Sound, the classes of 25ft. and upward sailing first around Throgg's Neck buoy, then around Matinnicock buoy and home, 20 miles. The smaller classes sailed a 16-mile course and the 20ft. cats one of 12 miles. The wind gave a run down the Sound and a beat home. The times were:

The winners were Sasqua, Reliance, Theresa, Nomad, E. J. Sloat, Americus, Mollie Bawn, Tuesday, Emma S. and Starling. Starling won the Directors' cup for making the best time over the course.

The judges were J. C. Summers, Atlantic Y. C.; J. W. Rough, New Rochelle Y. C.; and G. W. Fuller, Harlem Y. C.

The regatta committee included F. A. Wendel, chairman; F. W. Creagan, sec'y; T. C. Allen, W. Towner and R. H. Wylie.

The steamer Cygnus carried a large number of members and guests.

Seawanhaka Corinthian Y. C.

OYSTER BAY.

THE formal opening of the Oyster Bay station of the Seawanhaka Corinthian Y. C. took place on Saturday, a large number of members and guests being present. In the harbor was the flagship Iroquois, Com. Rouse, with a number of steam and sailing yachts and quite a fleet of 15-footers. The visitors who came by train found their way readily from the railway station in Oyster Bay over a wide board walk to a landing stage close by at the head of the new canal, where the club steamer was waiting—a very great improvement over previous means of transit. Promptly at noon the colors were hoisted on the bluff and on the yachts at anchor. The races began at 12:30 with the 15-footers, nine starting:

Trilby, G. G. Tyson; Hope, Arthur Iselin; Willada, W. G. Newman; Terrapin, W. S. Peters; Olita, H. C. Rouse; Two Step, W. H. Jennings; Gnome, F. M. Hoyt; Paprika, C. S. Hoyt.

Most of the boats were sailed by their owners, but Trilby was sailed by her designer, Chas. Olmstead, and Olita by L. B. Huntington. Hope was sailed by her owner, but L. D. Huntington, her builder, sailed as crew. The course was from off the club float out past Plumb Point and around a mark near Lloyd's Neck, back up the harbor and around the buoy off Moses Point, then to the line, this course being sailed twice, after which the yachts were to sail the short triangle between the float, the black buoy abreast it, and Moses Point. The wind was S.W., a puffy whole sail breeze, making a run out to the first mark and a beat back to Moses Point each time. A good start was made, in spite of a couple of outside yachts in the way on the line, Olita crossing first, followed by Hope, Terrapin and Two Step. Two Step took the lead from the start and was soon well out ahead of the fleet. She held first place for a mile or more, until well outside of the harbor, but no mark was in sight for her to turn. As it subsequently appeared, the mark, a triangular float with red ball, had capsized and then gave up and returned.

The committee hailed each boat and ordered a new start, the course being changed—one round of the long course and two of the short. Two Step was carrying a new and larger mainsail, just bent, and no ballast, finding the breeze pretty strong in the puffs. She turned in a reef just before the start, the others keeping whole sail. The start was given at 1:48. Two Step worked cleverly about, just on the line, and was first away with gunfire, again taking the lead and holding it, with Hope and Olita chasing her. She led at the outer mark, a steam launch sent out for the purpose. Gnome started, but soon gave up. The second leg was to windward and against a strong ebb tide. Hope soon took second place, and as the leaders neared Plumb Point she was to windward, with Willada on her lee beam and Two Step just to leeward of Willada. Hope, with Mr. Huntington as pilot, worked close in under the point, while the other two kept further off. In a very little while Hope was far ahead, while Trilby, after being near the end of the procession, had run up into second place on the windward work. In the beat from Plumb Point to Moses Point buoy Hope improved her position, and the order at this mark was: Hope, Trilby, Willada, Olita, Paprika, Terrapin and Two Step. Off the wind Two Step shook out her reef, but was still in the rear when the first round finished. The yachts were obliged to sail through the fleet at anchor, and the next mark, the black buoy, though but a short distance out, could not be seen. Hope twisted her way in and out and picked it up, but Trilby started in the wrong direction, though recalled and set straight. When Two Step came along she made the same mistake as Trilby, but did not discover it, luffing out and crossing the bows of the steam yacht Oneida instead of going well under the stern. She continued to the finish, but was out of the race. Terrapin also missed a mark and withdrew. The order of the leaders was unchanged in the last two rounds, the final times being, start 1:53:00:

	Finish.	Elapsed.
Hope.....	3 55 10	2 02 10
Trilby.....	3 58 30	2 05 30
Willada.....	3 58 53	2 05 53
Paprika.....	4 02 53	2 09 53
Olita.....	4 05 11	2 12 11
Two Step.....	Did not finish.	
Gnome.....	Did not finish.	
Terrapin.....	Did not finish.	

Hope wins first prize and Trilby second. Question was not entered, but sailed the course with the others, carrying her racing number.

After the 15-footers were well away for the second time the four club catboats started over the shorter course, the skippers being D. Le Roy Dresser, J. F. Tams, J. B. Murray and E. A. Rutherford. Mr. Dresser's boat won, finishing at 3:24:25, Mr. Murray's at 3:24:40, Mr. Tams' at 3:26:23, and Mr. Rutherford's at 3:28:47.

Atlantic Y. C.

BAY RIDGE—NEW YORK BAY.

THE fleet of the Atlantic Y. C. turned out in force to celebrate the day, the opening ceremonies being supplemented by a race down the Bay. Com. Gould was aboard Vice-Com. Adams's schooner Sacem, the two flagships, Atalanta and Vigilant, not being yet in commission. The weather in the Bay was less favorable than that in the Sound, the fickle S.W. wind dropping entirely at times and then coming in hard, once bringing a rain squall. The start was marred by a calm, in which the yachts could make no headway against the tide. The times were:

SCHOONERS—CLASS 2.				
Length.	Start.	Finish.	Elapsed.	
Sachem.....20.61	11 10 00	Did not finish.		
Emerald.....21.51	11 10 00	3 01 00	3 51 00

Squaw.....11 20 00	11 20 00	2 52 30	3 32 30	
Sayonara.....11 20 00	11 20 00	Did not finish.		

CLASS 2.				
Length.	Start.	Finish.	Elapsed.	
Presto.....11 20 00	11 20 00	4 06 25	4 46 25	
Tabitha.....23.30	11 20 00	4 36 20	5 16 20	
Streak.....24.50	11 20 00	4 09 12	4 49 12	
Ethel.....20.66	11 20 00	4 07 23	4 47 43	
Iris.....19.30	11 20 00	Did not finish.		

Ventura parted a shroud and Feydeh lost her topmast. The winners were Emerald, Eclipse, Choctaw, Sultan, Lynx, Squaw and Presto. The prizes were \$30 each.

Indian Harbor Y. C.

The winners were: Class A, J. B. Denham; Class B, Leontine; Class C, Pastime; Class D, Harvest; Class E, Madeline; Class F, Spray; Class G, Paragon; Class H, Ida May. Leontine also wins the special prize for elapsed time.

South Boston Y. C.

SOUTH BOSTON—BOSTON HARBOR.

The South Boston open regatta on Saturday brought out a fine fleet of racing craft in the smaller classes. There was plenty of wind at all times, and some to spare for a while during a lively rain squall.

The courses were: First, second and third classes from starting point to buoy 7, off Fort Independence, leaving it on the starboard, to S. B. Y. C. barrel, off Long Island wharf, leaving it on starboard, Sculpin Ledge buoy on starboard, to S. B. Y. C. barrel off Moon Head, leaving it on starboard, buoy off eastern end of Thompson's Island on port to buoy off Fort Independence, leaving it on port to Cow Pasture buoy, leaving it on starboard, to finishing point, 10 miles.

Fourth, knockabout and special classes—From starting point to buoy 7, off Fort Independence, leaving it on starboard, leaving buoy 1, off eastern end of Thompson's Island on starboard to S. B. Y. C. barrel off Moon Head, leaving it on starboard, leaving buoy 1 off eastern end of Thompson's Island on port to buoy 7, off Fort Independence, leaving it on port, to Cow Pasture buoy 6, leaving it on starboard, to finishing line.

Fifth class, distance five miles—From starting point to buoy 2, leaving it on port, to buoy 7, off Fort Independence, leaving it on port, to buoy 3, leaving it on starboard, to mark showing red ball off L street, leaving it on starboard, to finishing line.

The times were:

Jonah protests Alpine on measurement. The judges were Arthur Fuller, Hiram Cherrington, James T. Ball, W. H. Godfrey, Thomas Christian, John F. Berrigan and Frank Williams.

Fall River Y. C. Open Regatta.

FALL RIVER—MOUNT HOPE BAY.

The open regatta of the Fall River Y. C. was sailed on Saturday in a fresh breeze that brought to grief several yachts, including the new Herreshoff 30-footer Esperanza, who lost her topmast. Two of these yachts started: Esperanza, A. S. Van Winkle, sailed by Capt. Aubrey Crocker, and Asahi, Bayard Thayer, the latter sailed by Capt. Nat Watson. There were many minor mishaps. The times were:

FIRST CLASS—SLOOPS OVER 30FT. SAILING LENGTH; COURSE, 10 1/4 MILES.			
Length.	Elapsed.	Corrected.	
Asahi, Bayard Thayer.....	34.09	2 23 08	2 22 18

Larchmont Y. C.

The formal opening of the season took place at Larchmont on May 30 with appropriate ceremonies. In the absence of Com. Gillig, Vice-Com. Postley presided. The following programme for the Larchmont week has just been issued:

SATURDAY, JULY 18.	
Open regatta for all classes.	
Second race of series for 34ft. rating class.	
Second race of series for 30ft. special class.	
Special race for schooners in cruising trim.	
MONDAY, JULY 20.	
Special race for schooners in racing trim, in one class.	
Special race for schooners in cruising trim, in one class.	
Third race of series for 34ft. rating class.	
Third race of series for 30ft. special class.	
Special race for 21ft. class.	
Race for half-raters.	
TUESDAY, JULY 21.	
Four-oared gig race for "Hen and Chickens Colors," presented by Commodore Gillig.	
Two-oared gig race for "Dauntless Colors," presented by Mr. H. B. Seeley.	
Dinghy race for "Execution Colors," presented by Mr. H. B. Seeley.	
Race for naphtha launches exceeding 21ft. l.w.l.	
Race for naphtha launches 21ft. l.w.l. and under.	
Race for the "Eastward and Westward Challenge Cup."	
Tub races and water sports.	
WEDNESDAY, JULY 22.	
Open regatta for all classes.	
Fourth race of series for 34ft. rating class.	
Fourth race of series for 30ft. special class.	
THURSDAY, JULY 23.	
Race for Class 5 yachts, with cabin trunks.	
Fifth race of series for 34ft. rating class.	
Fifth race of series for 30ft. special class.	
Race for cabin cats, all in one class.	
Race for special 21ft. class.	
Race for half-raters.	
FRIDAY, JULY 24.	
Schooner race, all in one class.	
Race for Class 5 yachts, with flush decks.	
Race for Class 6.	
Sixth race of series for 34ft. rating class.	
Sixth race of series for 30ft. special class.	
Race for special 21ft. class.	
Race for half-raters.	
SATURDAY, JULY 25.	
Open regatta for all classes.	
Seventh race of series for 34ft. rating class.	
Seventh race of series for 30ft. special class.	

Southern Y. C. Annual Regatta.

NEW ORLEANS—LAKE PONCHARTRAIN.

Saturday, May 23. The 47th annual regatta of the Southern Y. C. was sailed on May 23 in a light northerly breeze, the times being:

SCHOONERS.			
Length.	Elapsed.	Corrected.	
Nepenthe.....	5 00 40	5 00 40	
International.....	Did not finish.		
FIRST CLASS—CABIN SLOOPS.

St. John.....	5 14 35	5 10 16	

Preceding the sailing race was a race of steam launches. Frolic had no competitor, and Idylle beat Hattie in a very unsatisfactory race.

VIEW OF THE GROUNDS.

—that is, from over the head—it for a time entirely conceals the object to be shot at as it comes between the eye and the object. No one will object to the statement that the object of revolver practice is to make one properly proficient with the weapon for practical purposes of offense or defense; in times of peace, for the latter purpose as a matter of course. Granting that such is the purpose, the manner of practice should conform to the best manner of actual use. In such use, the time lost in whirling the revolver over the head, and the embarrassment to the aim from the hand coming in front of the eye and concealing the object, might be fatal in an actual combat with a criminal who used a simpler and more direct method—one less stagey and spectacular, but more precise. The simpler method is this: The arm extended is brought up from below the line of vision, directly the opposite of the common method recommended by your correspondent. Thus the object to be shot at is always in view of the shooter's eye, a matter of the very first importance, and the arm can be aligned as it is raised into position. Also in adopting this method the motion is natural and there is not the loss of time as in swinging the pistol over the head. In quick snap shooting it is safe to say that a shooter could shoot by this method three or four times faster than could the shooter who employed the more theatrical method first mentioned, and with incomparably more precision. It moreover is an easier matter to bring the arm into position by an intelligent action, and steady the muscles in the same manner, than it is to trust to the more indolent method of trusting to the force of gravity to settle the arm in position.

.45 CALIBRE.

Walnut Hill Scores.

WALNUT HILL, Mass., May 23.—The scores given below were made to-day by members of the Massachusetts Rifle Association. The German ring target was used in one event for the first time on this range. Scores:	
Silver Military Medal.	
Won on 10 scores of 42 or better by	
A J Litchfield.....	45 42 43 42 43 43 42 42 44
Silver Eagle Pistol Badge.	
Won on 10 scores of 88 or better by

New Manhattan Revolver Club.

THE members of the revolver club organized in connection with the New Manhattan Athletic Club commenced their shooting for the summer season at the club's grounds, Columbia Oval, Williamsbridge, on May 23. These grounds are located on the line of the Harlem Railroad, trains leaving the Grand Central Station every half hour. Mr. James S. Conlin writes us that all who are interested in revolver shooting are cordially invited to visit the club's grounds and try their skill with the pistol.

Rifle Club Constitutions.

WE would be obliged if secretaries of rifle clubs would favor us with copies of constitutions and shooting rules, that we may send them to other clubs seeking such information.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 8-13.—BUFFALO, N. Y.—New York State shoot, under the auspices of the Buffalo Audubon Club; \$3,000 in merchandise prizes in State and open events; \$1,100 of cash added to purses. Experts eligible to first and second moneys only. C. S. Burkhardt, President.

June 9-11.—DAVENPORT, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—DAYTON, O.—Annual tournament of the Ohio Trap Shooters' League. Ed. Taylor, Sec'y.

June 9-11.—URBANA, Ill.—Annual tournament of the Crystal Lake Gun Club, for amateurs only. Targets. Frank L. Bills, Manager.

June 10-11.—FARGO, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

June 16.—SPRINGFIELD, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Union Gun Club.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 18-20.—SPOKANE, Wash.—Twelfth annual tournament of the Sportsman's Association of the Northwest, under the auspices of the Spokane Rod and Gun Club. H. Bolster, Sec'y of Association.

June 23-26.—PITTSBURG, Pa.—Tournament of the Pittsburg Gun Club; targets; \$500 added money.

June 30-July 2.—WOPSONONOCK, Pa.—Fourth annual tournament of the Altoona Rod and Gun Club; targets. W. S. Bookwalter, Sec'y.

July 4.—SPRINGFIELD, N. J.—Annual tournament of the Union Gun Club; live birds and targets. E. D. Miller, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Jack Parker writes that he will give his sixth annual international tournament at Detroit, Mich., Aug. 11-14 inclusive. Jack's tournaments have always been popular ones and we can vouch for it, having talked to Jack as recently as the Hazard tournament, that he is now at work figuring on novelties for the one in August.

The June tournament of the New Jersey Trap-Shooters' League will be held at Springfield, N. J., June 16, under the auspices of the Union Gun Club of that place.

The sixth annual tournament of the Arkansas State Sportsmen's Association will be held at Hot Springs, Ark., July 4-5. The local club, under whose auspices the shoot will be given, will donate \$200 in cash to the purses.

The third annual tournament of the Schmelzer Arms Company will be held at Kansas City, Mo., Sept. 15-17; \$750 added money.

The local club at Pleasant Hill, Mo., announces that it will have an all-day shoot on July 4.

Enoch D. Miller, the well-known secretary of the Union Gun Club, of Springfield, N. J., wishes us to call attention to the fact that his club will do its best to give its guests a good time on July 4. Targets will be used in the morning, live birds in the afternoon.

The twelfth annual tournament of the Sportsman's Association of the Northwest will be held at Spokane, Wash., June 18-20. We have made a note of the programme elsewhere.

If all signs do not fail, the New York State shoot at Buffalo will be a very large one. The Audubon boys have worked hard for that success which now seems assured.

While at the Binghamton, N. Y., tournament last week, Mr. C. A. Tuttle, of Auburn, informed us that Auburn is out for the State shoot in 1897. We published in these columns some time ago a notice from W. P. Rayland, of Rome, stating that his club was anxious to have the honor of running the State shoot next year. Thus there are two Richmonds in the field, and it remains for the delegates to the annual convention to decide between the two. This convention will be held on Monday evening, 8 P. M., in the Colonial parlors of the Genesee hotel.

The Chamberlin Company's shoot at Cleveland, O., which follows immediately on the heels of the New York State shoot at Buffalo, has been mentioned so frequently and so favorably in these columns that we will give the following from Paul North's pen without additional comment: "From all indications we are going to have a larger attendance this year than ever before on account of throwing targets free of charge, the desire to see the Maugstraps work and the Lindsay handicap, which will undoubtedly give the ordinary shot more fun for his money than the old style of shooting. The only objection I can see to the handicap is the inducement to drop for place, and we will watch that very closely this year and fire bodily any one detected in dropping. After programme is shot out each day we will continue to throw targets for extra events free of charge just the same. We want everybody to come and shoot all the blue rocks that we can throw in the three days, and we will keep throwing them as long as it is light enough to shoot. We hope to equal the Hazard shoot in point of attendance."

While at the Hazard tournament we heard several shooters discussing the enormous number of entries at that tournament, and comparing that number with the entries at the Cleveland tournaments of 1892 and 1893. At the time we pointed out that the tournaments were so dissimilar in form that no accurate comparisons could be made. With the idea of getting some certain data to go upon we asked Paul North to look up his books on his return to Cleveland and give us the figures for those shoots. This is what he sends, for which he will please accept our thanks: "As per your request I have looked up the records of the old Chamberlin tournaments and find that we had 41 entries for the first, 89 for the second, 171 for the third and 185 for the fourth and last. These tournaments were all 100-bird races and the attendance is very large considering the comparatively small number of shooters there were at that time and the length of the race." The above figures for 1892 and 1893 are, as Mr. North says, truly remarkable considering the condition of trap-shooting.

Lloyd O. Ellison, secretary of the newly organized gun club at Alma, Mich., sends us the following note regarding his club: "At the recent organization of the Alma, Mich., Rod and Gun Club, the following officers were elected for the ensuing year: President, Dr. E. A. Bagley; Vice-President, G. S. Young; Secretary, Lloyd O. Ellison; Treasurer, Chas. Caple. The club is now in good running order, and we have a club shoot every Friday."

In our notice of the programme of the New York State shoot we have given the list of those shooters who have been classed as experts by the shooting committee of the tournament.

Drivers and Twisters, like many other items of interest to the readers of FOREST AND STREAM's trap columns, have had to suffer owing to the deluge of other matter that reached this office at an extremely late date if insertion in the current issue of June 6 was desired.

Paul Litzke writes us that a canvass of the guns, powders and shells used at the Limited Gun Club's tournament last week shows as follows: Guns—Parker 14, Smith 13, Winchester 10, Lefever 9, Francotte and Spencer 2 each, Baker and Whitmore 1 each. Powders—DuPont 25, E. C. 18, Hazard and Schultze 4 each, King's Smokeless and W-A. 1 each. Shells—Smokeless 34, Leader 16, Rapid 4, Peters 1.

FOREST AND STREAM's tournament squad pads have evidently hit the mark. The first issue has vanished from our shelves, but its place has been taken by another and still larger issue. Send for prices and samples; they are just what you need when running a tournament, and we can save you good money.

JUNE 2.

EDWARD BANKS.

Souvenirs of the Hazard Tournament.

THE accompanying illustrations are from photographs taken at the Hazard tournament.

One of the pictures shows very well the arrangement of the grounds, the location of the three sets of traps, etc. Another, while giving excellent portraits of Rolla Heikes, Ralph Worthinton (Redwing) and Charlie Budd, the three winners of the special Hazard prizes, also shows the high board fence that made the background, the photo being taken from the score of No. 2 set of traps looking out over the screen for that set. On the screen itself was the motto, "We welcome you to the Blue Ribbon tournament."

The third shows the manager of the tournament, Mr. R. S. Waddell literally covered with glory—Old Glory.

R. S. WADDELL COVERED WITH GLORY.

Sept. 7.—MARION, N. J.—Sixth annual tournament of the Endeavor Gun Club. Targets. J. A. Creveling, Sec'y.

Sept. 8-11.—HARRISBURG, Pa.—Annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Harrisburg Shooting Association. H. B. Shoop, Sec'y.

Sept. 15-16.—KANSAS CITY, Mo.—Third annual tournament of the Schmelzer Arms Company; \$750 added money.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

October (second week).—BALTIMORE, Md.—Baltimore claims this week for her tournament. Dr. Samuel J. Fort, Sec'y.

Gilbert Defeats Deiter.

CHICAGO, Ill., June 1.—Special to Forest and Stream.—After a most exciting and interesting match, Fred Gilbert, of Spirit Lake, Ia., succeeded in defeating George Deiter, of Milwaukee, by the score of 84 to 83. The match was the outcome of Deiter's challenge for the Du Pont trophy, and was at 100 live birds.

PAUL R. LITZKE.

THE HAZARD PRIZE WINNERS.

Coming Events and their Shadows.

The list of important fixtures for the month of June has caused us many a moment of anxiety. Ordinarily we think it worse than bad policy to borrow trouble, believing that bald heads and snowy locks may sometimes be traced to that failing.

The first week of June caused us little trouble. The twenty-second annual tournament of the Illinois State Sportsmen's Association at Chicago will be well taken care of. The Interstate tournament at Natchez, Miss., under the auspices of the Gaillard Sporting Club, will also be reported by a correspondent who is perfectly satisfactory. In our own immediate vicinity everything is quiet; there's no trouble here.

The second week is where the mischief comes in. Here's the list:

June 8-13.—Buffalo, N. Y.—New York State shoot, under the auspices of the Buffalo Audubon Club; \$3,000 in merchandise prizes in State and open events; \$1,100 of cash added to purses. Experts eligible to first and second moneys only. O. S. Burkhardt, President.

June 9-11.—Davenport, Ia.—Annual tournament of the Iowa State Sportsmen's Association. R. B. Cook, Sec'y.

June 9-11.—Dayton, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

June 9-11.—Urbana, Ill.—Annual tournament of the Crystal Lake Gun Club, for amateurs only. Targets. Frank L. Bills, Manager.

June 10-11.—Fargo, N. D.—Second annual tournament of the North Dakota State Sportsmen's Association; targets; \$500 added money. W. W. Smith, Sec'y.

The following week contains two important fixtures:

June 17-19.—Cleveland, O.—Third annual tournament of the Chamberlain Cartridge and Target Company. Targets thrown free; \$770 in cash also added to the purses.

June 18-20.—Spokane, Wash.—Twelfth annual tournament of the Sportsman's Association of the Northwest, under the auspices of the Spokane Rod and Gun Club; H. Bolster, Sec'y.

The tournament of the Pittsburg, Pa., Gun Club, \$500 added money, takes place the fourth week of June.

Among the many programmes received recently is that issued by the Audubon Gun Club, of Buffalo, for the

NEW YORK STATE SHOOT,

which event will be held, as stated above, June 8-13. The programme for this important fixture is one that has taken considerable care in compilation, and reflects the greatest credit on the management. When the convention of 1895 voted to intrust the thirty-eighth annual tournament to the Audubon Gun Club, of Buffalo, the gentlemen representing that organization at Saratoga stated positively that the club would do its best to make the State shoot of 1896 a record breaker in its line. The announcement, therefore, that the club would add \$3,000 in merchandise prizes and \$1,100 in cash, while in itself remarkable, was not totally unexpected when one took into consideration the number and quality of the men who go to make up the membership roll of the Audubon Gun Club.

At this late date, and with so much other equally important matter engrossing the attention of trap-shooters, it is impossible to do more than notice superficially the contents of a work that consists of 64 pages besides the cover.

The most important portion of the programme is that which refers to the

KNOWN EXPERTS, OR PROFESSIONALS.

The programme states that "every known expert or professional shooter must get into first or second place, or he will not be entitled to any part of the money. This form of handicap absolutely prevents dropping for place. This rule guarantees to amateurs that they will get over one-half of all purses, as experts cannot drop into their class, and every time an amateur shoots up he gets a part of the experts' end of the purse."

In connection with the above statement we have received the following communication from the Audubon Gun Club, through its president, C. S. Burkhardt: "The handicap committee of the New York State shoot, to be held at Buffalo June 8-13, 1896, have classed the following gentlemen as experts: R. O. Heikes, Fred Gilbert, J. A. R. Elliott, E. D. Fulford, Sim Glover, O. R. Dickey, J. L. Brewer, B. A. Bartlett, F. Van Dyke, Ralph Trimble, C. M. Grimm, E. D. Miller, Neaf Apple, B. LeRoy, Ralph Worthington, D. A. Upson, W. Wagner, C. W. Budd, H. McMurchy, H. B. Whitney, A. G. Courtney, John Parker, Ed. Rike, C. A. Young, J. W. Connor, Thomas Marshall, W. G. Sergeant, F. S. Parmelee. The committee wishes to add a few words of explanation to experts: The large amount of added money and the daily and general averages will fully compensate you for the reasonable handicap imposed on you."

The list of State events is a large one and should prove very attractive. But in addition to the State events a full programme of 7 open events will also be decided each day. All these events, except No. 5, will be at 20 targets, \$2.50 entrance; \$15 is added to the purses in Nos. 1, 2, 4 and 7; No. 5 each day is a special event. On Tuesday, June 9, it is known as the Gold Dust event, all contestants using Gold Dust powder loaded and provided by W. L. Colville (Dick Swiveller); entrance in this event is only \$2, including price of shells and targets, while the prizes offered by Mr. Colville aggregate about \$100.

On Wednesday, June 10, event No. 5 is the E. C. Powder Co.'s cup contest; entrance, including targets, \$3; \$50 cash and the cup added. On Thursday, June 11, this event is entitled the *Daily and Sunday Times* event, the *Times* adding \$125 cash to the purse; entrance, targets included, \$3. On Friday, June 12, event No. 5 will be the Buffalo Audubon Club event. This contest will be a handicap event with 8 very valuable merchandise prizes; the handicaps in this contest will be based on the work of the shooters during the week. The entrance fee is \$5, with an additional optional sweep of \$5.8 moneys.

Saturday, June 13, will be devoted to the decision of the Dean Richmond championship cup team contest at live birds.

OHIO TRAP-SHOOTERS' LEAGUE.

The tenth annual tournament of the Ohio Trap-Shooters' League will be held at Dayton, O., the home of the Buckeye Gun Club, on June 9-11. The Buckeyes add \$200 to the purses.

On the first day the State events consist of six 15-target events, \$1.50, \$10 added to each purse; one 20-target event, \$2.50 added; and the special contest, event No. 8, for the *Ohio State Journal* trophy. On the second day the programme is the same, with the exception that event No. 8 is the contest for the L. C. Smith cup. On the third and last day the programme of State events is as follows: The first five events will be 15-target events precisely similar in every respect to those on the two previous days; No. 6 will be the contest for *Sportsmen's Review* cup, two-men teams; No. 7 will be the 50-target handicap for the E. C. Powder Co.'s cup.

The programme of open events for each day is ten 15-target events, unknown angles, \$1.50 entrance.

CRYSTAL LAKE GUN CLUB.

Frank L. Bills, manager of the Crystal Lake Gun Club, of Urbana, Ill., has gotten up a very varied programme for the third annual tournament of his club, which will be held June 9-11. This tournament is open to amateurs only, and Mr. Bills has naturally catered to this class of shooters, there being several 10 and 15 target events on the card for each day. The merchandise prizes announced to be given away are really valuable and well worth trying for. The Crystal Lake Gun Club issues a cordial invitation to all amateurs.

SPORTSMAN'S ASSOCIATION OF THE NORTHWEST.

The programme for the twelfth annual tournament of the Sportsman's Association of the Northwest, which takes place June 18-20, at Spokane, Wash., announces that \$700 cash, \$483 in merchandise prizes and \$925 in trophies will be distributed at that shoot. The above is a large list of valuable prizes and speaks well for the interest shown in the far Northwest for the sport of trap-shooting.

The Spokane Rod and Gun Club, under whose auspices the tournament will be held, offers a welcome on behalf of the Sportsman's Association to Montana, Idaho, Oregon, Washington and British Columbia. The club adds, "We promise you a dead square shoot and may the best man win."

The Limited Gun Club's Tournament.

INDIANAPOLIS, Ind., May 28.—It was the writer's good fortune to be present at the 1896 tournament of the Limited Gun Club, of this city. The dates were May 26, 27 and 28. No tournament of a like magnitude has attracted such general attention, and the result of few has been more eagerly looked for. The club announced in its programme that there would be no added money at this shoot, and stated furthermore that it thought that added money was an injury to the sport. It said that at this tournament it would endeavor to demonstrate that it was possible to have a successful tournament without added money. The only inducements the club offered, and which it has great cause to pride itself on, were its grounds and equipments, which are without doubt the finest in the West.

Twenty minutes' ride from the heart of the city by an electric car lands the shooter right at the gate of the park. There he finds one of the neatest, cosiest little club houses that has ever been designed. It is a story and a half structure, painted white, with a broad veranda extending around the entire building, and another smaller one above, from which an excellent view can be had of the shooting. The grounds in front of the club house are perfectly level and no sign of a screen is to be seen. The way the traps are arranged here is entirely different from that found anywhere. The targets seem to start right out of the ground. This idea is entirely original with the Limited Gun Club and is well worth imitating. The trench in which the trappers stand is deep enough so that a tall man can stand up in it and yet be invisible to the shooter at the score. The traps are fas-

tened to heavy timber right on the edge of the trench, the ground in front having been slightly cut away, and the traps are at such a height that the trapper finds his work much easier than behind the screen. All the above has been so deftly done that no sign of the work is noticed by the shooter at the score; the only thing he sees is the numbers on the sward, showing him where his target is to start from. It is no little advantage to be able to see one's target the instant it starts; under these conditions it is easier to make a good score than when hampered by screens and other devices.

The attendance was not large, though entirely satisfactory to the management. Royal Robinson said that he would much rather have forty shooters than a hundred, as they are much easier to handle. The shoot was one that was as smoothly and nicely conducted as it has been my good fortune to attend. Altogether it reflects much credit on Mr. Royal Robinson and his fellow club members.

The programme called for three days of shooting, and for two days the entries were entirely satisfactory to the management; but on the third day very little shooting was done, none but the club members taking part, and then all kinds of sweeps were shot.

The shooters were divided into two classes, A and B, and each shot from a separate set of traps. A class shot from traps pulled in the reverse order, Nos. 1 and 5 throwing known angles, and Nos. 2, 3 and 4 throwing unknown angles. The B class shot at everything known. Both sets of traps threw a very regular, even target, though the A class were perhaps a trifle harder. Despite the handicap three experts made the best average for the two days. Heikes, first, with 90 per cent.; McMurchy, second, with 88.8 per cent.; Raymond, third, with 88 per cent.

FIRST DAY, MAY 26.

The first day of the Limited Gun Club shoot opened bright and clear. The attendance was good, and must have been very gratifying to the management. Despite the severe handicap a number of crackjacks were here, and as usual carried off the honors. Rolla Heikes had his good eye with him, and notwithstanding that he had the misfortune to break his best gun, he finished with the excellent percentage of 92. Next came Ripp, who shot in the amateur class, with 91.6. McMurchy, another one of the crackjacks, was third, with 91.3. The standing of the rest of the contestants can be found in the table below, placed in the order of merit. Aside from the names that appear in the table, the following shot only in one event: Snipley 11, Ball 11, Swift 8, Morris 8, Smith 8, Townsend 6, and Moore 12.

In all 61 shooters participated in the programme events of the day, the entries ranging from 27 to 43.

SECOND DAY, MAY 27.

The second day of the tournament opened up even more favorably than its predecessor. True, some of the shooters had returned home, as a number of them had only come to stay one day. This was, however, offset by the appearance of the Greenburg delegation and C. N. Fox, of Detroit, and the entries ran nearly as high as on the day previous. When the averages of the day had been computed it was found that R. L. Trimble was on top of the heap with a percentage of 90.6, closely followed by C. W. Raymond, whom he led by 1 target, and who averaged 90 per cent. Bush and Fugate also averaged 90 per cent., but only shot in a few events. Aside from the above there was also a little match between Partington and Livinguth, 50 targets per man, with the following result: Partington 46, Livinguth 45.

The Binghamton Tournament.

The tournament of the Binghamton (N. Y.) Gun Club, held May 28-29, has gone down into history as one of the pleasantest little tournaments ever given by this energetic organization. The club itself is composed of business men who find that all work and no play is just about as bad as it is represented to be, and who have taken up trap-shooting as a sport and as a means for the recreation which every business man really needs. The tournaments of this club are not of the same nature as those where large amounts of added money are announced. The men who go to a shoot at Binghamton do not go for the money there is in it, but for the sake of seeing just how much pleasure they can secure by indulging in honest rivalry at the traps, and in meeting and associating with the men who go to make up the personnel of the home club. The exceptions to the above rule, if there are any, are extremely few and far between; still everybody prefers to be a little ahead to being behind the game.

A visit to Binghamton, too, would do anybody good. It's a lovely city, a city of homes, located in some of the prettiest scenery on the face of the earth. The trip to Binghamton from New York city, by way of the Erie Railroad, is far from tedious; the views from the car windows as the train follows the path of the Delaware River, and later the crooked bed of the Susquehanna, being calculated to drive away all those feelings of ennui usually incident to a railroad trip.

LOCATION OF THE SHOOTING GROUNDS.

The location of the shooting grounds is both easy of access and very picturesque. Ten minutes' ride by a Leroy street electric car (the car passing the door of the Arlington Hotel every few minutes) lands the shooter right at the grounds. No walking half a block or three or four blocks; 50 yds. is the limit, and that means a great blessing when the shells are heavy and the day is warm. The club house is not a pretentious building, but it is large enough for all the purposes it is put to. As the club is liable to have to vacate its present location at any time, owing to the extensive building operations now going on in and around Binghamton, it would be almost worse than folly to launch out with a full-fledged club house of one or two stories.

The background is by no means good; that's a fact; but then one can't expect to have everything, and after all it's the same for everybody. Rolling hills to the right, left and in front of the score do not aid the shooter in getting on to his target quickly, but to our mind this very difficulty adds a spice of sport to target shooting that is very refreshing. The ground too slopes away from the traps very rapidly, making it hard to gauge the speed of the targets. Under all these conditions, added also to the wind that blew during the shoot, Fulford's general average of over 92 per cent. for 385 targets shot at (not including the extras on the first day) must be ranked very highly.

FULFORD WITHOUT A GUN.

It may not be out of place to state while referring to Fulford's shooting that he actually did not own a gun while at Binghamton. At the Hazard tournament at Cincinnati, Fulford sold every gun he possessed and landed in Utica gunless. To enable him to take part in the Binghamton tournament he borrowed H. L. Gates's gun, the old Greener hammer gun sold by him to Gates. It was with this old gun that he has in times now past done some of his best work, and it was with this gun that he made his records on both live birds and targets at the Binghamton tournament of 1896—the shoot we are now describing. Before leaving for home Fulford expressed to us his determination to try and buy back his old favorite.

THE MANAGEMENT OF THE TOURNAMENT.

The tournament was under the management of H. W. Brown, manager of the club. Mr. Brown kept things moving and also shot along in every event, holding up his end well at targets and also winning outright the silver cup donated by the E. C. Powder Company. He was ably assisted by his cashier, H. S. Vance, secretary of the club, who found no difficulty in taking entries, making up squads and paying out promptly the money coming to each individual in the different events shot each day. The latter fact is worthy of especial note, since the purses were all divided under the Rose or "straight out" system so often and so urgently advocated in the trap columns of FOREST AND STREAM, a system that has been said to be complicated.

THE ROSE SYSTEM.

We have claimed for this system of division of purses everything that its parent, A. R. Rose, of Salida, Col., claims for it, and after personally inspecting the workings of the system at this tournament we are still more emphatic in our declaration that the Rose system is all that it is represented to be. A system that pays a man according to his work with the gun; a system that spreads the money around more evenly than the present percentage system does; and a system that absolutely prevents all dropping for place, pooling of issues and combines, making men be good because it pays them better to be so; that is the system on which to divide purses at tournaments. And the Rose system possesses all those excellent qualities.

One of those who spoke to us in terms of high praise when referring to the system of dividing purses at this tournament was E. D. Fulford. He was, putting it mildly, enthusiastic over it, and if there was anybody at this tournament who would have been benefited by the usual system of division of purses, Fulford was that man. Look at his scores. If he was thoroughly satisfied with it, the system must have merits that will bring it to the front. When it gets there, the "dropper" will drop no more. He will be good because he has to be.

MANY VISITORS PRESENT.

Although the unsettled condition of the weather prior to and during this tournament undoubtedly kept many shooters away, the attendance was very gratifying to the club. Among those who were present were: W. L. Colville (better known to shooters as Dick Swiveller), of Batavia, N. Y., the Eastern representative of the United States Smokeless (Gold Dust) Powder Co., of San Francisco; E. D. Fulford, Utica, N. Y.; A. G. Courtney, Syracuse, N. Y., representing the Lefever Arms Co., of that city; A. M. Schermerhorn (A. M. S.), also of that city; C. W. Tuttle, George Corning, Jr., and J. J. Carr, Auburn, N. Y.; J. F. Paddelford, L. D. Brainard and F. Conley, Sherburn, N. Y.; Tom Ely, Dorranecetown, Pa.; H. D. Swartz, Scranton, Pa.; G. F. Nesbitt and W. T. Payne, Wilkes-Barre, Pa.; Fisher Wells, Wyalusing, Pa.; F. T. Montanye, Towanda, Pa.; W. S. Birdsall, Whitney Point, N. Y., etc. The

BIRD CLUB

turned out well, the following taking part in some or all of the events on the programme: G. W. Kendall, C. W. Hobbie, N. W. Waldron, H. W. Brown, M. E. Boss, E. L. Rose, C. F. McHenry, Snell, Johnson, Parsons, Doolittle, etc., etc. A good showing for any club. Of the above-mentioned club members none is more popular than G. W. Kendall. Usually a capital shot, Mr. Kendall has always held his own at such gatherings; but just now he is suffering from an evil influence that persists in making his gun point elsewhere than at the target. This going off in form on the part of shooters has often been noticed before, and Mr. Kendall's case is by no means exceptional. It is, however, none the less a cause for regret on the part of his friends and fellow club members, not one of whom would ever grudge him the honor of coming out on top.

During the two days of trap-shooting one set of 5 bluerock traps was kept constantly in use, North's electric pull being used to pull the traps. Empire targets were thrown from the above traps and the combination did not disagree in the slightest. That the boys were there to shoot is shown by the statement that nearly 8,000 targets were thrown at the tournament.

FIRST DAY, MAY 28.

To-day's programme consisted of eight 15-target events, \$2 entrance, and two 20-target events, \$3 entrance; targets extra in all programme events at 2 cents each. From what we can learn of the weather conditions they were decidedly unfavorable for target shooting, Fulford's record of 91.2 being looked upon by those taking part in the events as a remarkably excellent showing under the circumstances. The popular representative of the Lefever gun, Col. A. G. Courtney, kept up his end very well indeed, breaking 86.2 per cent. out of 160 shot at in the programme events. H. W. Brown, of the home club; J. J. Carr, of Auburn, and F. Conley, of Sherburn, all did good work. Below are the

SCORES OF MAY 28.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

EXTRA EVENTS.

During the day eight extra events at 15 targets each were shot off with the following results:

- No. 1, 15 targets: Brown 14, Fulford 12, Kendall 12, Brainard 11, Conley 10, Waldron 8.
 No. 2, 15 targets: Waldron 14, Brown 14, Fulford 13, Conley 13, Brainard 12, Johnson 9.
 No. 3, 15 targets: Waldron 15, Brown 15, Fulford 14, Kendall 10, Colville 9, Boss 7.
 No. 4, 15 targets: Waldron 13, Fulford 13, Kendall 12, Brown 12, Johnson 7.
 No. 5, 15 targets: Brown 13, Fulford 13, Boss 13, Waldron 10, Johnson 8.
 No. 6, 15 targets: Waldron 15, Fulford 15, Brown 13, Johnson 10, Kendall 10, Colville 6.
 No. 8, 15 targets: Fulford 15, Brown 15, Schermerhorn 12, Courtney 11, Johnson 11, Colville 9.
 No. 9, 15 targets: Fulford 15, Brown 14, Kendall 13, Carr 13, Boss 11, Corning 7.

SECOND DAY, MAY 27.

This can hardly be said to have been a day favorable to high scores, the wind blowing strongly in the shooters' faces nearly all the time, while bursts of brilliant sunshine were interspersed with periods of gloom when rain threatened to fall every minute. Add the above drawbacks to a remarkably dark background, and we have conditions liable to make the best fall down. E. D. Fulford, however, would not be denied, but shot his old hammer gun for keeps, making the excellent average of 93.7 for 225 targets shot at. In the table of scores for this day events Nos. 9 and 10 were shot prior to commencing the programme events; it will thus be seen that Fulford broke 156 out of his last 160! His 15 straight in No. 13 was perhaps the best piece of work he ever did, the wind blowing a gale and demolishing the awning over the shooters' heads while the event was in progress. Hobbie, A. M. S. and Brown shot well all through the day.

THE E. C. CUP CONTEST.

The main feature on to-day's programme was the 100-target handicap event for the E. C. Powder Co.'s cup, a trophy presented to the Binghamton Gun Club by the American E. C. Powder Co. The conditions of this event were: 100 targets per man, unknown angles, handicap allowance of extra targets to shoot at, entrance price of targets, optional sweep of \$2 on each 25.

For this event there were 18 entries, about two-thirds taking part in the optional sweeps. Fulford did splendid work in this event, running 65 straight before losing a target, and finishing his last string of 25 by losing his 100th target, a target which actually cost him the cup, although he broke 97 out of his 100!

The handicapping was done by Messrs. Waldron and Brown, of the home club, and by the representative of FOREST AND STREAM, that is to say, this committee of three awarded handicaps to everybody but themselves; the question of their allowances was left in the hands of A. G. Courtney. No one knew his allowance until he had reached the limit and was called out. Brown broke 89 out of his 100 by capital shooting, and being awarded 10 extra to shoot at, had every chance to win out. He broke 8 out of 10 and tied Fulford. The tie was shot off at 25 targets, even up, Brown winning by the score of 23 to 21. Fulford's comparative failure in this shoot-off was unquestionably due to his being over-careful, as he was extremely anxious to win the trophy. As stated above, the loss of his 100th target, a low-flying right-quarter from No. 5 trap, actually cost him the cup.

Of the others who shot in this race A. M. S. was well up with 93 out of 107, Hobbie also doing some good work by breaking 90 out of 104, G. F. Nesbitt and Fisher Wells, both men new to tournament business, and J. J. Carr, all were well in line.

In regard to the scores in this event, it should be stated that the wind almost died away while the first three series of 25 targets were being shot at. The scores in the cup race, showing the records made in each 25 and in the allowances, were as follows:

	1st 25.	2d 25.	3d 25.	4th 25.	cap.	Total.
E. D. Fulford (0).....	25	25	23	24	..	97

Conley	11	9	12	9	22	17	16	17	6	5	180	124	68.8
Tuttle	16	18	16	17	..	13	7	10	..	145	97	66.8
Nighthawk	14	16	19	17	..	9	10	130	85	65.4
Kendall	6	12	11	8	13	18	17	15	..	5	12	10	10	215	137	63.7
Snell	10	9	30	19	63.3
Montanye	6	8	12	14	18	18	10	17	7	7	5	195	122	62.5
Courtney	9	11	12	7	19	12	19	19	..	5	8	9	4	215	134	62.3
Swiveller	10	5	..	8	3	55	31	56.3
Payne	11	..	8	40	23	55
Birdsall	9	10	14	16	100	49	49

In addition to the above events Dick Swiveller got up a Gold Dust event at 25 targets, providing shells and targets free. An optional sweep of \$2 was also shot in connection with this event, the scores of those who put in their \$2 being as follows:

Carr and Courtney 22, Edwards and Nighthawk 21, Fulford and Nesbitt 20, Hobbie and Montanye 19, A. M. S. 18, Corning and Tuttle 17, Wells 16, Paddelford 13, Payne 9, Yess 8.
 Of those who shot for practice only, Brown with 20, Boss 19, Winans 18 and Parsons 17 were the top scorers.

THIRD DAY, MAY 28.

This was at the outset a most unpropitious day for live-bird shooting. Heavy lowering clouds swept up the valleys and deluged Binghamton with rain. The wind, however, was about right, blowing very strongly from the south, getting under the tails of straightaway birds, and sending them off the traps in a manner very unusual with summer birds. By noon the wind had blown about all the worst of the rainclouds away to the north, and the afternoon proved to be about as good for live-bird shooting as the club could have had if made to order.

Manager Brown acted as scorer and referee, both duties being so far as we could ascertain perfectly satisfactorily discharged. The entry lists were not heavy, the bad weather of the early morning keeping many away. So well did the birds fly and so sharply was everything hustled along that by 1:30 P. M. a 5-bird, a 7-bird and a 10-bird sweep had been decided. The latter was an extra event, the conditions being 10 birds, \$7.50 entrance, birds included, 4 moneys, class shooting. The other two were regular programme events, No. 1, 5 birds, \$5, birds included, class shooting, 3 moneys, 28 yds. all. No. 2, 7 birds, \$7, birds included, 4 high guns, 28 yds. all.

At 1:30 P. M. event No. 3, 15 birds, \$15, birds extra, handicap rise, class shooting, 4 moneys, was started. This event had 11 entries, the handicapping being entrusted to FOREST AND STREAM's representative, Fulford, who had been shooting at the 20 yds. mark all the morning, was put back 1 yd., but ultimately won first money alone on 14 out of 15. Wells won second money alone with 13, three men tying for third money and two for fourth money.

Missouri's Great Shoot.

NOTWITHSTANDING the big counter attraction of the Hazard Powder Co. tournament at Cincinnati, which was held on the same dates as this shoot, the nineteenth annual tournament of the Missouri State Fish and Game Protective Association was the most successful in the history of the organization. Not only did the entries exceed those of any of its predecessors, but for general satisfaction and congeniality it will bear favorable comparison with those held by any similar organization. Regardless of the fact that this was a five-days' shoot, the interest never flagged, but kept up wonderfully well until the close of the shoot. So large were the entry lists in the live-bird events that it became necessary to cut out all the little sweeps; and even then it was impossible to finish the programme in one week. As a matter of fact, the shoot had to be continued on Monday in order to finish the State events.

It was impossible for me to remain until the close of the shoot if I wanted to be in Indianapolis, Ind., by Tuesday morning, but through the kindness of Mr. Chris Gottlieb I am able to give the scores made in the State events.

ARRANGEMENT OF THE GROUNDS.

The tournament was held at Washington Park, a favorite shooting resort run by the Elliott Brothers, of Kansas City. The park is about eight miles from the city and is reached by cable and electric cars in about forty minutes. The system for trapping live birds is superior to that most generally found. Underneath the traps a large excavation has been made, about 6 ft. wide and extending the entire length of the line of traps. This compartment is sufficiently large to hold three trappers and several hundred pigeons comfortably. The traps are filled from below and in this way much time is saved. They consider it no great feat to trap 1,200 pigeons in one day with one set of traps. Another peculiar feature of these grounds is the natural amphitheater in the rear of the live-bird score, where there is a high ridge or a bluff that rises about 20 ft. high, being perfectly level on top. Here the club house is situated, and from this an excellent view of the shooting below can be had. To the left of the club house the target traps are placed, two sets of empires being used, the targets being thrown out over the bluff. This makes it possible for both kinds of shooting to go on at the same time. The target-shooters are so high that the pigeon-shooters below are in no danger whatever. Two kinds of targets were used, empires and red birds.

HUSTLERS AT THE SHOOT.

To the efforts of no one person is so much of the success of the shoot due as to those of Mr. Granville M. Walden, president of the Association. Not only did he labor hard and incessantly, but he also contributed much of his time and money to further the interests of the organization. Next to him comes Mr. W. V. Reiger, Billy, as he is familiarly called, who acted as referee in the live-bird events. It was a very arduous task to sit for six days in all kinds of weather and call the result of each shot, and then to refrain from indulging in a sport which according to his own views is the peer of them all. No more painstaking and conscientious referee could be found anywhere; his decisions were always impartial and well received. The others who also contributed their share of work were the Porter brothers, Jim and Lee, Walter Halliwell, Karl Guinotte, George Schrader, Lill Scott, C. J. Schmelz-r, J. H. Durkee and a number of others whose names I cannot at present recall.

FIRST DAY, MAY 19.

The first day of the tournament opened gloomily. The weather was threatening, and the atmosphere was heavily-laden with moisture. The threats of the early morning materialized later into a heavy wind and rainstorm, that put a stop to target shooting for about an hour. The live-bird shooters did not seem to mind the elements, but kept steadily at work. The attendance, considering the inclement weather, was something remarkable, 107 shooters taking part in the programme events of the day.

The programme consisted of 11 events—3 live-bird events and 8 target events. The first live bird event, a 7-bird sweep, had 63 entries, and of this number 12 killed straight. The 10-bird event had 53 entries, the scores showing the same number of straights. In this event we had another illustration of the present unfair system of dividing the purses. Only one man scored 6, and this paid \$22.50, while none of the other places paid a shooter the amount of his entrance money—\$5. The third live-bird event, a 15-bird sweep with \$10 entrance, was not all finished on this day and had to go over until the next day. There were 40 entries in this event, but only 4 straights, Miller, Elliott, and the two Porters, Lee and Jim.

The seventh event was a 50-target event, and in addition to first money the Winchester Arms Co. awarded one of their finest guns to the high man. Jim Elliott captured both the money and the gun on a score of 47. He also made the best average for the day, as the scores given below show.

In the table that follows, owing to the large number of entries and the length of the shoot, no account has been taken of men who shot in only one event or who did not make 60 per cent or better.

SECOND DAY, MAY 20.

The weather on the second day of the tournament was not very pleasant. A cold, raw wind was blowing and those who were fortunate enough to have overcoats were sporting them. Unfortunately mine was down in Arkansas, and my other garments were also rather light for weather of this kind. But I was not the only one to have this experience, as the majority of the visitors were in a similar fix.

The feature of to-day's programme was the interstate live-bird race. This event did not begin until about 11 o'clock, and as there were 63 entries, it was not finished until late the next day.

There were nine target events to-day. The sixth event, a 50-target race, \$5 entrance, \$50 added, was cut in two, two 25-target events being shot in place of it, with an entrance of \$25 and \$25 added to each. Elliott again led with an average of 95.5. Eighty-four shooters took part in the target events. Of this number fifty-two, as the table below shows, shot in two or more events, and made an average of 60 per cent, or better.

Events:	1	2	3	4	5	6	7	8	
Targets:	15	20	25	15	20	25	15	20	25 Shot at. Broke. Av.

THIRD DAY, MAY 21.

To-day started out much more favorably than its predecessors, and ultimately proved to be the best of the week. All of the live-bird sweeps had to be cut out, as it took nearly the whole day to finish the interstate event.

Eighty shooters took part in the target events. Thirty of this number failed to take part in more than one event, or else did not make an average of 60 per cent, or better. Latshaw only shot at 35 targets, but he broke them all, and therefore he went out with 100 per cent. Bartlett, who shot through the entire programme and made an average of 94.4, really did the best work. Elliott was third, just one target behind, and then came Wallace and Trotter, who scored one target less than Elliott. The programme was precisely the same as on the previous day.

SCORES OF MAY 21.

Events:	1	2	3	4	5	6	7	8	9	
Targets:	15	20	25	15	20	25	15	20	25	Shot at. Broke. Av.

MISSOURI STATE TEAM CHAMPIONSHIP.

Nine teams entered in the Missouri State team championship contest. The conditions of the event were: Open only to one team of four belonging to any club who are members of the Missouri State Association, 15 birds to each man, making 60 birds to the team, entrance \$20 for each team, birds extra, \$100 to go to the club last holding the medal and \$100 additional guaranteed that is to be divided among the second, third, fourth and fifth highest teams in the race, in sums equal to 40, 30, 20 and 10 per cent.

The Kansas City Gun Club's team put up the great score of 57 out of 60 and won by 2 birds from the O. K. Gun Club's team. Three of the Kansas City team made straight scores. The teams finished in the following order:

Kansas City G. C.: Swinney 15, Gordon 15, Schrader 15, Durkee 12—57.

O. K. G. C.: Whittier 14, Hickman 14, Gottlieb 14, Wilson 13—55.

Metropolitan G. C., of St. Joe: Batcheller 15, Webster 14, Hinckley 13, Garner 11—53.

Stock Yard G. C.: Campbell 14, Wills 14, Overly 12, Stockwell 12—52.

Washington Park G. C.: Rickmers 14, Dave Elliott 13, C. C. Smith 13, Norton 11—51.
